But, sir, there are others who have a right to know. The American people are even more deeply and vitally concerned, if possible, than the people of the Philippine Islands. The memorial addressed to you by the Federal party, which comprises the organized friends of American sovereignty in the Philippines, and which is headed by the three native members of the Philippine Commission, sets forth what they expect and desire from the United States. Their aspirations are also plainly and unequivocally set out in the report of the Philippine Commission for the year 1901. This report sets out the principles of the Federal party, which embrace full constitutional rights, American citizenship, to be followed by statehood in the American Union. That is what they desire, that is what they expect, and that is what they ask in the memorial that lies on your table.

Now, sir, we put the question to you, not in the name of the despised Filipinos, but in the name of the American people, do you contemplate the incorporation of eight or ten million Malays into your citizenship? Do you contemplate the admission of an Asiatic archipelago to statehood in the Union? Do you contemplate the addition of 50 or 60 Malay members to the Congress of the United States? I asked Governor Taft whether or not he favored such a proposition, and he said that it was a question which at this time he was not ready to answer. Hon. Luke E. Wright, acting governor of the Philippines in the absence of Governor Taft, seems to be a little more explicit.

Governor Taft still hesitates and is in doubt, but Mr. Wright made a statement in a public address to the Federal party in which he fully indorsed that party's principles and declared that they were in harmony with the intentions of this Government. As I have already shown, the avowed purposes of that party embraced full citizenship for the Filipino people to be followed by statehood in the Union. This address was published in a Manila newspaper and I regret that it is among some papers which I have temporarily mislaid. I will hereafter insert it in the RECORD.

Mr. President, I know Governor Wright. He is a man of great ability and high character, and he is a man who speaks with deliberation and who measures his words. When he said in that address that the Federal party correctly interpreted the intentions of this Government, when he held out to them the promise of American citizenship and the hope of statehood in the American Union, I do not believe his words were intended simply to deceive. He spoke what he believed to be the thought of the Administration and the party in power as well as his own.

Thus, sir, we have the two leading members of the Philippine Commission either hesitating upon or supporting the policy of incorporating 10,000,000 Malays into the body of our citizenship and admitting their country into this Union. We have all the friendly Filipinos organized into a political party demanding that this shall be done. You can not ignore a question that comes to you in this shape. We ask you, and we challenge you to answer. Do you intend to do it? I have offered an amendment to this bill declaring against statehood for the Philippines.

I questioned the Senator from Massachusetts [Mr. LODGE] upon that proposition, and he finally said that he would answer the question when he addressed the Senate in his own time. He has addressed the Senate, and has failed to answer. He and his associates will have yet another opportunity when they come to vote upon the amendment, and I call upon them to answer then the question the Senator from Massachusetts [Mr. LODGE] has declined to answer, Do you intend to clothe the people of the Philippines with full rights of American citizenship and admit them to statehood in the American Union? You may evade it when the question is put to you, but you must answer "yes" or "no" when you come to vote.

Mr. President, the Filipino rebellion against Spanish tyranny antedated our war with Spain. Before we began our war to free Cuba the people of the Philippines were struggling to free themselves. The Senator from Wisconsin [Mr. SPOONER] seems to think that he has found an excuse for subjugation when he says that the Filipinos at that time did not demand absolute independence. I think the Senator is mistaken. The official statements of Consul Williams, at Manila, and of Consul-General Pratt, at Singapore, show that he is mistaken. "A republic is organized here as in Cuba." Such was the language of Consul Williams with respect to the status of the Philippine insurrection before the outbreak of the Spanish-American war. Aguinaldo had proclaimed a republic, and while it had gone down in defeat he had wrung important concessions and honorable terms from his adversaries.

The Senator created considerable merriment by his ridicule of this Philippine republic. Sir, republics have frequently been the object of ridicule, and I want to remind the Senator that this Republic, even after its victory over the greatest power of the world, was the object of ridicule and contempt by all the nations of the earth. Where could you find a more ridiculous spectacle than that of a republic whose congress fled from the seat of government after vainly appealing to the local authorities for protection

from a local mob? The history of his own country should have taught the Senator from Wisconsin [Mr. SPOONER] to beware how he sneers at the beginnings of a republic.

It may be true, sir, that at first the Filipinos were willing to accept something less than independence, but they were in arms against the tyranny of Spain and they demanded a larger measure of political freedom. Experience shows that when a people rise in arms against tyranny, when the spirit of liberty begins to struggle against its chain, no half-way measure will satisfy its desires. The American colonies would have accepted much less than independence at first; indeed, they demanded much less than independence; but as the idea grew, as the desire for liberty took hold on the minds of the people, their aspirations broadened and expanded until they found perfect expression in the Declaration of Independence.

General MacArthur says that for many years the democratic idea had been growing in the Philippines. General Funston says that whenever Spain made a concession of local self-government to a Filipino community, it invariably resulted in the growth and agitation of a sentiment for independence. He warns this country that like concessions by us will be followed by like results. I am inclined to think that he is right. The Philippine Commission, in the enactment of its sedition laws, has recognized this one fact of human nature. If you would keep down the spirit of human liberty, you must bind it so that it can not move and gag it so that it can not speak.

But, Mr. President, whatever may have been the aspirations of the Filipinos in the beginning, it is established beyond all intelligent doubt that at the time we entered into cooperation with them they were fighting for independence, and we knew they were fighting for independence. They did not seek our aid—we sought theirs. Their inclination was to conduct independent operations, believing that they could thereby more quickly secure a recognition of their independence, and distrusting the intentions of the United States. We thought that such independent operations would be embarrassing to us, and therefore we sought their cooperation. We begged them to join their arms with ours, with a full knowledge that they were fighting for independence.

I ask the question here, and I challenge an answer from any Senator upon the other side of the Chamber: Is it true or is it not true that when our movement against Spain in the Philippines was projected Aguinaldo and his associates were planning an insurrectionary movement of their own with a view to securing the independence of their country? Is that true or not? I say it is true. I challenge any Senator upon the other side of the Chamber to deny it.

Then I ask this question: Is it true or is it not true that the American consul-general at Singapore, Mr. Pratt, sought out Aguinaldo, dissuaded him from conducting independent operations, and persuaded him to cooperate with the American forces? I say that it is true, and I challenge any Senator upon the other side of the Chamber to deny it.

At that conference was it distinctly declared by Aguinaldo and his associates and understood by Consul-General Pratt that the Filipinos were cooperating with us for no other purpose except to secure the absolute independence of the Philippine Islands? I assert that this is true, and I challenge any Senator upon the other side of the Chamber to deny it.

Is it true that the Filipino leaders openly and publicly proclaimed that the Philippine people would be given independence as a reward for supporting the arms of the United States? Was the Government at Washington officially informed of this fact? And is it true that there was never one word or act proceeding from this Government indicating a contrary purpose? I assert that all this is true, and I challenge any Senator upon the other side of the Chamber to deny it. I assert that it was not until after we had the full benefit of the Filipino arms that we gave them any reason to suspect that we intended to seize their country.

Is it true or not that Aguinaldo was carried on an American vessel to the Philippines and was aided and encouraged by us to organize an army for the avowed purpose of fighting for the independence of his country? I assert that this is true, and I challenge any Senator upon the other side of the Chamber to deny it.

Is it true or is it not true that upon his arrival there he issued a proclamation calling upon the people to rally to his standard, and telling them that the Americans were there to help them achieve their independence? Was that proclamation duly transmitted to the Government at Washington and was it allowed to pass without protest or denial on the part of this Government or any of its officers in the Philippine Islands? I assert that all this is true, and I challenge any Senator upon the other side of the Chamber to deny it.

Was it enthusiasm for independence and a firm belief that they were to secure it that brought that army around the standard of Aguinaldo, or was it simply a desire to become the slaves of a new and unknown master?

Sir, there is no room for doubt upon this question. The Administration's own witnesses tell us of the almost fanatical enthusiasm which the idea of independence had awakened in the Filipino minds. Mr. Barrett, late minister to Siam, one of the strongest imperialists in the country, tells of how the idea went abroad that the Americans were to make them a free and independent people, and brought them by the thousands to Aguinaldo's standard. Our military officers unite in their testimony that Aguinaldo's army rendered us great and important service. They were fighting and shedding their blood, as they believed, for liberty.

The Senator from Wisconsin [Mr. SPOONER] in attempting to show that there was no great love for us among the Filipinos says that Aguinaldo was compelled to appeal to them not to unite their arms with Spain against this country. I have no doubt this is true. They had no particular love for us, for they knew nothing of us. But I ask Senators to consider the significance of this statement. While they had been in arms against Spanish tyranny, the Senator from Wisconsin [Mr. SPOONER] tells us that as between Spain and the United States, as a mere choice of masters, they preferred Spain. Her rule had been harsh and cruel, but they preferred to bear those ills they had rather than fly to others that they knew not of. That was their feeling in the beginning. By what means did Aguinaldo persuade them to rally with such unanimity and enthusiasm to the standard of the United States? Simply by telling them that we would make them an independent people. Upon no other promise could this aid have been secured.

Mr. President, I assert that our conduct toward the Filipinos was equivalent to a pledge of independence. We sought their cooperation with a full knowledge that they were fighting for independence. We helped them to organize an army for the avowed purpose of fighting for independence. We knew that the belief was universal among the people that independence was to be the reward of their cooperation with us. After they had fought and shed their blood and had driven the last Spanish soldier from every foot of ground except the city of Manila, after Spanish resistance in the Philippines had been destroyed by their aid, and after their military services were no longer needed, then we turned upon them with scorn and contempt.

Mr. President, I have some old-fashioned notions; I may not be in accord with what is called the spirit of the age; but I believe that a nation's honor is a priceless heritage, and I do not believe that a coaling station in some distant sea is worth as much to any country as the right to be trusted when it has given its word.

Mr. BEVERIDGE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Tennessee yield to the Senator from Indiana?

Mr. CARMACK. Certainly.

Mr. BEVERIDGE. Does the Senator think that this country gave its word——

Mr. CARMACK. Yes, sir.

Mr. BEVERIDGE. And then violated it?

Mr. CARMACK. Yes.

Mr. BEVERIDGE. When did it give its word and to whom? I understood the Senator to say that no notice was taken of all this.

Mr. CARMACK. Oh, well, the Senator from Indiana is pleading the statute of frauds.

Mr. BEVERIDGE. I can not hear what the Senator from Tennessee says.

Mr. CARMACK. The Senator is pleading that there was no written promise. He is trying to hide the Government of the United States behind a technicality. I think the conduct of the United States as I have stated it constitutes an obligation that is binding upon its honor and upon its conscience.

Mr. BEVERIDGE. Then, Mr. President, the Senator admits that this country gave no word as he says, and then violated it.

Mr. CARMACK. I admit that it did not make an affidavit, if that will satisfy the Senator.

Mr. BEVERIDGE. If the Senator is satisfied with that reply, I am certain the majority are.

Mr. CARMACK. I am entirely satisfied, Mr. President.

Mr. BEVERIDGE. Then we are all agreed.

Mr. CARMACK. Mr. President, I have spoken of the eagerness of Senators to justify their own conduct by blackening the character of the Filipinos. This eagerness in some cases has been so great as to override discretion. For instance, the Senator from Wisconsin characterizes Aguinaldo's army, which our own officers admit to have rendered us very great service, as a horde of robbers. That army, sir, came to our aid and fought our battles. Does it lie in our mouths to defame them? This army took the field in answer to our appeal; it fought and bled and suffered in our cause. In return, we call it an army of thieves. Is this the measure of gratitude and of appreciation the Filipinos are to expect from us in return for loyal and faithful service?

Mr. President, it is amazing to me that Senators who profess such sensitive regard for the honor of the American Army and American officers should in their eagerness to discredit the Filipinos seek to put an indelible stain upon the honor of one of the greatest heroes in all our history. Who called that army of thieves into existence? Who helped to arm and organize it and put it in the field? Admiral Dewey brought Aguinaldo to the Philippines and helped him to organize that army. At that time there was not an American soldier in the islands to check or restrain it. The country was filled with Spanish noncombatants, including women and children, who were absolutely at the mercy of the Filipino forces.

If under such circumstances Admiral Dewey helped to arm and organize a horde of savage cutthroats, outlaws, and professional robbers, and turned them loose upon the country, he outrageously violated the rules of civilized warfare, and he disgraced his rank and his uniform. More than that, the Government and the Administration that consented to his act must share his infamy. The Senator does not seem to understand that in making this charge he is accusing his own Government, his own party, his own country. I trust, sir, that the future historian will not take one of his chapters from the speech of the Senator from Wisconsin [Mr. SPOONER], and say that this country organized an army of robbers and cutthroats and turned them loose to work their own sweet will upon helpless communities. That army, sir, whatever it was, was our army, and if the Senator from Wisconsin can make good his charge, he will only succeed in convicting his own Government of an act of infamy.

The answer to the Senator's charge is that he is mistaken. It is the only answer that can save the nation's honor. The acts of that army prove that he is mistaken. They overran the whole country. They captured thousands of prisoners, including a number of Spanish ladies. They held many towns. The testimony from both Spanish and American sources is universal that they dealt kindly with their prisoners. It is shown by the reports of our own officers that they did not rob nor loot nor plunder. The Senator says they wanted to enter Manila simply to loot it. Did they loot any of the other places they held? When the entire island of Luzon, except Manila, was in their hands, did we hear of any stories of plunder and pillage? Our own officers show that nothing of the kind occurred. Did they loot Iloilo? When General Miller was threatening to bombard that place the foreign residents assured him that the Filipino forces then in possession were orderly and well conducted, and that they gave to the citizens all the protection they could desire.

Oh, Mr. President, it is easy to make charges against men who are the victims of your own wrongs. It is necessary to blacken their character in order to clear your own. When our Republican friends were casting about for some excuse that would serve them in a court of conscience they held a very different language from that now uttered by the Senator from Wisconsin [Mr. SPOONER]. When the distinguished presiding officer of this body was a member of the Peace Commission he seemed to be as eager to prove the great services rendered by Aguinaldo and his army as the Senator now is to prove that that army was an aggregation of thieves. "He [Aguinaldo] was our ally and we are bound to protect him." Such was the answer made by Commander Bradford to a carefully prepared question put to him by Mr. FRYE, for the evident purpose of eliciting just such an answer.

Our military officers were brought before the Commission to prove how great and valuable were the services of Aguinaldo and his army. The kindness and generosity of the Filipinos in their dealing with Spanish prisoners was clearly set forth. The argument then was that the Filipinos were such a noble people, had rendered such effective service to American arms, were so deserving of our love and gratitude, that we must not leave them to the mercy of Spain; but the very moment they made it plain that they would insist on their original demand for independence, that they would not be satisfied with a change of masters, the Republican leaders turned upon them and denounced them as a race of savages who had no rights that a white man was bound to respect.

Mr. President, it can not be denied that we are becoming accustomed to tolerate things that would once have shocked the nation's conscience. I was forcibly struck by one remark of the Senator from Wisconsin [Mr. SPOONER]. He said he had opposed the annexation of Hawaii as the "first long step." I think he was wise in his generation. I think his characterization of that act was pregnant with meaning. It is the "first step" that costs. A step aside from the path of duty, whether long or short, is a perilous step for a nation. A wrong once committed must have its advocates and defenders, and if persisted in it becomes a precedent for the future. The Senator's own present attitude illustrates the danger of the first wrong step. He strenuously resisted that first step. He reluctantly consented to the second. He will probably be found leading the third.

Captain Mahan, describing the effect of territorial conquest, says that "England is gorged with land; her statesmen are weary of looking after it, and of the insistence with which one advance compels another." Probably that was in the mind of the Senator from Wisconsin when he spoke of the danger of taking the first long step. Once cultivate in the minds of the people an appetite for territorial acquisition and it becomes as uncontrollable as the appetite of a drunkard. We were first urged to annex Hawaii because it would give us the control we desired of the Pacific. Then the very possession of Hawaii became an argument for the annexation of the Philippine Islands; and some of our insatiable annexationists have already suggested that we should take a "slice" of China.

Sir, shall we turn back now while we may, or shall we go on until, like Macbeth, we are "in blood stepped in so far returning were as tedious as go o'er."

The Senator from Indiana [Mr. BEVERIDGE] says that the nation "will not beat a retreat." That sounds fine, it sounds brave, but is it a retreat to turn from a wrong path and go back to the right? If so, it is a brave man's retreat, of which only cowards need be afraid. There is neither heroism, nor wisdom, nor statesmanship in refusing to "retreat" from the bog to the highway.

The Senator from Iowa [Mr. DOLLIVER] admits that our Philippine problem is a "burden too grievous to be borne;" but so long as the Democratic party expresses a like opinion he scorns to lay the burden down. The Senator can not entirely control the operations of his mind, but he can control his conduct. Even though the one may be in sympathy with the policy of the Democratic party, he is determined that the other shall not be. Is party prejudice stronger than a love for the Republic? I say to-night with all the sincerity of my soul that I should be delighted to see the triumph of the principles for which I contend though it should defeat the Democratic party. To me the party to which I belong is but a means and an instrument for promoting the welfare of the Republic, and I would not for its sake or through prejudice against any other party lay upon this Republic a "burden too grievous to be borne."

Mr. President, the burden we are bearing in the Philippine Islands is indeed a burden "too grievous to be borne," for it is a burden of guilt and a burden of shame. Senators on this side of the Chamber have felt constrained to deal freely and fully with the conduct of the war we have been waging in that unhappy country, and Senators upon the other side have sought to break the force of it by charging us with assailing the honor of the American Army. The Senator from Alabama [Mr. MORGAN] says that the Army "resents" what the Senator himself seems to consider the officious intermeddling of Senators in affairs that do not concern them.

In the view of the Senator from Alabama [Mr. MORGAN] it is no business of Congress to have or express an opinion with respect to torture and massacre and the murder of little children, provided it is done by the military authorities. The Senator tells us that the Army is more representative of the American people than the Congress of the United States. Mr. President, if I held this view I should agree with the Senator from Alabama, and I should say that we not only had no right to express our opinion as to the conduct of a military officer, but that we should surrender to the military arm of the Government the right to make and administer its laws.

It seems to me, sir, that we have proceeded very far in the path of imperialism and of militarism when the Army is openly exalted above the civil authority and held to be exempt from criticism or correction by the people or those chosen to represent them. It may be true that in the degenerate days of Rome the Roman army represented all that was left of Roman virtue, but I do not believe that we have yet fallen on such degenerate days. It was but a short time since that in another Republic some who cried out against a great national wrong were met with the counter cry that they were defaming the army; but the men who brought Dreyfus back from Devils Island did more for the honor of France than his persecutors did for the honor of the French army.

I do not know, sir, to what extent this "resentment" prevails. It may be true that there are men in the Army who resent any pretensions of the civil authorities to meddle with military affairs. If so, I for one resent such arrogance, and I think it is time such officers and some other people should learn that the Army belongs to the Republic and that the Republic does not exist for the sake of the Army. I am ready to give all proper honor to those who hold commissions in the Army of the United States, but it ought to be understood once for all that the American uniform can not honor the man who disgraces the uniform. I am not ready to agree with the Senator from Alabama [Mr. MORGAN] that the man who wears the epaulets of an Army officer represents a majesty greater than the majesty of the law.

It has been charged that we are defaming the Army when we

are simply dealing with the natural and inevitable consequences of the policy you have adopted. It is charged that we are doing this in order to discredit the Administration. If we were really assailing the Army we should be defending the Administration and its policy. If these atrocities are due simply to the innate depravity and ferocity of the American soldiers, then the Admisistration is not to blame, its policy is not to blame, and the Republican party is not to blame; but if, on the other hand, in spite of the fact that American soldiers are merciful and humane the war in the Philippines has become a war of almost unexampled cruelty, a war almost of extermination, then the fact is not due to the cruelty of the American soldiers but to the nature of the task they are set to perform.

And that, sir, is the charge we make. We have not denounced our American soldiers in the Philippine Islands. We have simply denounced the cruel and wicked policy that sent them there. Ah, Mr. President, the authors of this policy have a much harder task to perform than that of defending the honor of the American Army. It is the task of defending their own. The Army is doing what it was sent to do. It was sent to subjugate a people who prefer death to subjugation. It was a bloody and a cruel task and it required bloody, and cruel work. Upon the authors of this war of criminal aggression must rest the guilt; every drop of blood that has been shed is upon their hands and all great Neptune's ocean will not wash them clean.

The men who say that we are defaming the American Army are simply trying to drag the debate down to the level of their own controversial faculties. It is not easy to meet the real facts and the real issue, but to say that one is slandering the American Army is a charge that any fool can utter and any parrot can be taught to repeat. I say that the man who, here or elsewhere, seeks to excuse torture, the massacre of a whole people, the murder of little children, has very little respect for the honor of the American Army, and he has none at all for his own. Why should we not be allowed to criticise General Smith for a brutal and inhuman order? Smith himself would not hesitate one moment to hang a common soldier if he disobeyed his commands. Why may we not express our opinion of Smith when he violates all the rules of civilized warfare, and does it, as he himself admits, against the wishes and feelings of his soldiers?

Mr. President, I am glad that the feeling shown by certain Senators here does not entirely represent public sentiment, even among Republicans. The late Postmaster-General, Mr. Smith, published an article a few days ago, which I regret that I have mislaid, in which he dealt with this question and in which he said that Republican Senators had made a great mistake in not promptly denouncing these infamies which have been perpetrated by Smith and other officers in the Philippine Islands, and he said that they had given a great advantage to their Democratic opponents by permitting them to take the lead upon that question.

Mr. President, it does seem to me that the question of cruelty, the question of torture, the question of slaughtering the people of a whole province, is not a question that should be partisan at all, and there would have been nothing partisan in it if Senators upon the other side of the Chamber had united with us in denouncing it instead of standing up to denounce the men who protested against it.

We are not the only people in this country who do not admire General Smith. His critics are not confined to the Democratic party. Many Republican newspapers from one end of this country to the other, and I say it to their honor, have united in denouncing his order as one of the most brutal and inhuman ever issued in the history of the world.

The New York Tribune said:

> Herod was more merciful. He killed only the children, leaving the parents to live.

The Philadelphia Press, whose owner is the late Postmaster-General, said:

> It is almost incredible that an American officer of any rank could have issued an order so shameful, inhuman, and barbarous, and it calls for instant rebuke, repudiation, and condemnation. We say this before hearing or considering his defense, for no defense can excuse such an order of ruthless and indiscriminate destruction.

The Kansas City Journal said:

> The civilized people of the United States can contemplate such proceedings only with feelings of horror.

The St. Paul Press said:

> General Smith's instant dismissal from the service he has disgraced, by the Government he has disobeyed, will be an inadequate atonement for the dishonor he has brought upon the American name.

Mr. President, it would have been better for all concerned, better for the honor of the American people and of the Government of the United States, if there had not been one voice raised upon the floor of the United States Senate to palliate or excuse this ruthless, brutal and inhuman order of General Smith.

The Senator from Wisconsin [Mr. SPOONER] complains of the partisan spirit shown by the minority in the investigation, and has represented us as advertising for witnesses who will testify to torture, with a declaration that no others need apply. If the Senator had possessed any information whatever with respect to the work of the committee he could not have made a statement so utterly unfair. It is not true that the Democrats of the committee have sought to confine this investigation to the revelation of tortures and similar outrages in the Philippines.

The Senator might have heard the Senator from Massachusetts [Mr. LODGE] declare on the floor that every witness that had been examined before the committee had been summoned at the instance of the minority, except Governor Taft and Professor Barrows; and as a matter of fact Governor Taft himself was the first witness suggested from the Democratic side. We called for Governor Taft, for General Otis, for General MacArthur, for General Hughes, for Admiral Dewey, for General Anderson, and other witnesses of like character, all in sympathy with the Administration and its policy.

Again and again has the Senator and others on that side of the Chamber flaunted in our face the testimony of the very witnesses who were summoned to testify at our instance. We sought to bring before the committee every man who had a knowledge of affairs in the Philippines, and the very first names we suggested were those of leading Army officers and civil appointees of the Administration; and yet, sir, the Senator says that we have sought for no testimony except as to outrages and cruelties.

There has been no partisanship upon our side in this matter. It has been upon the other. We have not advertised for witnesses to outrages in the Philippines. These stories, sir, had been current and notorious for two or three years. They had been published broadcast in every newspaper in the country. Does the Senator say that they should not have been investigated? Does he say they should have been passed in silence? Sir, there would have been no appearance of partisanship in the investigation of these outrages if there had been no partisanship in the attempt to whitewash and suppress them. We have put honorable and truthful witnesses upon the stand who have testified to undisputed facts. There is only one witness upon these matters whose testimony has been called in question. The sin, therefore, which we have committed, if sin there be, is in letting the truth be known.

Indeed, Senators upon the other side have seemed to regard it as a crime to reveal the truth as to what is being done in the Philippine Islands. A distinguished gentleman of honorable character from the State of Massachusetts sent to the committee the name of Mr. Grover Flint with a request that he be summoned as a witness. Mr. Flint came before the committee and told a story of the most terrible tortures inflicted upon a large number of Filipinos who had done no wrong—tortures prolonged in some cases to the point of death. The Senator from Massachusetts [Mr. LODGE] bore witness in his speech to the high character and standing of Mr. Flint, but he emptied the vials of his wrath and scorn upon the head of the gentlemen who had informed the committee of this witness. To the Senator from Massachusetts it seemed an unpatriotic act for a citizen to give to a committee charged with an important investigation the name of an honorable and truthful witness who possessed important information. It is unpatriotic to reveal the truth, and it is patriotic to conceal it—that seems to be the theory upon which some gentlemen are proceeding. We believe that it is our duty to get all the truth.

Mr. President, it is important to know just what Senators mean when they say we are assailing the Army. The Senator from Massachusetts [Mr. LODGE] admits that we are not assailing the private soldiers; he has even taunted us with the accusation that we dare not do it. He said we had confined our attacks to the commanding officers because, as he intimated, we were afraid of the soldier vote. It is a fair retort to say that it is a regard for this same soldier vote that prompts the accusation that we are assailing the Army. I care nothing, sir, for the imputations of the Senator from Massachusetts with respect to our motives. I am only concerned for the statement of fact. The Senator did say that we had not attacked the private soldiers, but have only assailed certain American officers. When Senators, therefore, say that we have assailed the Army we know what they mean. The leading officers constitute the "Army."

Mr. President, in every speech I have made upon this question I have distinctly asserted again and again that the great body of American soldiers were not involved in these acts of cruelty and atrocity; that where they did so act they were driven to it against their own inclinations, and by the command of the higher officers. I wish here to put into the RECORD an extract from my previous speech upon this question:

> Mr. President, the Senator is attempting to shift the responsibility from the commanders to the soldiers. It is not true that these atrocities have been due to rage or to lust for vengeance on the part of the American soldier. I say, as I said the other day, that against their own will they have been driven to it by the orders of their commanding officers.

I referred to a signed letter of General Smith, in which he spoke of his difficulty in overcoming the kindly feelings of his officers and soldiers toward the Filipinos. The cordial relations between soldiers and natives was one of the great difficulties he encountered in the execution of what he himself called his "fire and sword policy."

Mr. President, it has been no pleasure to us to dwell upon these scenes; but it is a duty which must be performed if we would save the nation from an indelible stain. The present time may close its eyes to the hideous spectacle and stop its ears to the cry of mercy, but history will see and hear and tell the truth. It is our hope that passing events may not go into history until something has been done to relieve the nation of the shame and dishonor that is being put upon its record.

These revelations have their proper place in this debate because they are the natural and inevitable developments of the policy of subjugation and conquest.

I have before referred to the testimony of the Federal party, the recognized friends of our sovereignty, that the whole people were united in a bitter and irreconcilable hatred of colonial rule—the hatred described by them as being so strong that even after their armies were dispersed and all hope was gone the people preferred the peace of death and the grave to the peace of submission to the yoke of a foreign government.

Mr. President, in a conflict where the war cry of death or submission is met by the war cry of liberty or death, hostilities must inevitably proceed to the last limits of fury and ferocity. Where the element of race hatred is added to the natural hatred engendered by a war of subjugation there will be bloody deeds and bloody reprisals. When we exhibit the horrors that have been enacted in the Philippines, we simply give the American people a picture of imperialism at work.

Mr. President. I have dealt in general terms with some of the cruelties and tortures that have been inflicted in the Philippine Islands. I wish to put a few extracts in the testimony on this question into the RECORD.

Lieut. Grover Flint, of the Thirty-fifth Infantry, a grandson of the famous late Dr. Austin Flint, a son-in-law of the no less famous late John Fiske, and a graduate of Harvard University, served for about a year and a half in the Philippines—from November, 1899, to April, 1901. He testified before the Senate committee that he was present in May, 1900, when the water torture was administered to about 20 different men by the Macabebe scouts and men of his own regiment. The Macabebe scouts were under a sergeant, a regular American soldier who was on detail duty, and the American officer in command of the forces at the time, one Major Geary, was cognizant of what was going on, but made no apparent effort to stop these atrocities.

The witness testified that he saw men thrown down and heard their groans; that he saw one man who he thought was going to die after receiving this torture, and that he had indirect evidence that one man did die. He also saw the teeth of two old men knocked out by the device which was forced into their mouths during the administration of the torture to hold their jaws apart. He told the committee how the torture is administered, in these words:

> A man is thrown down on his back, and three or four men sit or stand on his arms and legs and hold him down, and either a gun barrel or a rifle barrel or a carbine barrel or a stick as big as a belaying pin (that is, with an inch circumference) is simply thrust into his jaws and his jaws are thrust back, and, if possible, a wooden log or stone is put under his neck so he can be held firmly. His jaws are forced open as a gag. In the case of very old men, I have seen their teeth fall out—I mean when it was done a little roughly.
>
> He is simply held down and then water is poured onto his face, down his throat and nose from a jar, and that is kept up until the man gives some sign of giving in or becomes unconscious; and when he becomes unconscious he is simply rolled aside and he is allowed to come to. I know that in a great many cases, in almost every case, the men have been a little roughly handled. They were rolled aside rudely, so that water was expelled. A man suffers tremendously, there is no doubt about that. His suffering must be that of a man who is drowning, but who can not drown.

The witness said that he had even seen a foot placed upon the victim's stomach as a means of forcing the water out; that he had witnessed the administration of this form of torture to fully 20 men one morning, and that fully 30 had been tortured at the same place and by the same men the night before, making 50 men in all upon whom he knew that this barbarous atrocity had been inflicted by men serving under the American flag in the Philippine Islands, and at that one place. But he testified to having witnessed the administration of the torture to 15 men on another occasion, north of San Miguel, about January, 1901.

The professed object of these tortures was to compel men to give up their arms, but in this latter case no arms were procured and none were asked for. In the language of the witness, it was done simply as a matter of "routine." A number of the natives subjected to this torture had no arms of any kind to surrender and no information they could impart, and these were the ones who suffered most.

Mr. BEVERIDGE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Tennessee yield to the Senator from Indiana?

Mr. BEVERIDGE. Is the Senator through with his reference to the testimony of Flint?

Mr. CARMACK. Yes; I am about through.

Mr. BEVERIDGE. I was going to ask the Senator why he did not refer to that portion of the testimony of Flint with reference to the usual and ordinary conduct of the American officers and soldiers toward the Filipinos, which he testified was uniformly kind and considerate?

Mr. CARMACK. Well, Mr. President, I had already said that myself.

Mr. BEVERIDGE. Why did the Senator mention one portion of his testimony and not mention the other and more important portion of his testimony?

Mr. CARMACK. Mr. President, I am dealing with evils that ought to be stopped. I am not trying to put an end to kindness.

Mr. BEVERIDGE. Is that the reason why the Senator did not mention it?

Mr. CARMACK. I am not trying to stop kind treatment——

Mr. BEVERIDGE. Is that the reason why the Senator did not mention the kind treatment of American officers and soldiers, which has been, according to the testimony of all witnesses, the usual and ordinary course?

Mr. CARMACK. Mr. President, I have said that myself. I did not say that Mr. Flint had said that or that any other particular witness had said it. I say it myself, as my own conclusions from all the testimony of all the witnesses.

Mr. BEVERIDGE. Mr. President——

Mr. CARMACK. But there is no use in my dwelling upon the conceded fact that as a general rule the treatment of Filipinos by officers and soldiers is kindly. I have said that again and again. I am dwelling upon the things I want stopped, and that is cruelty and torture in the Philippine Islands.

The PRESIDING OFFICER. Does the Senator from Tennessee yield to the Senator from Indiana?

Mr. CARMACK. Certainly.

Mr. BEVERIDGE. I do not want to interrupt the Senator, but I should like to ask him if he thinks the fact that he mentions it himself relieves him of the necessity of referring to the testimony of a witness? If that is so, the Senator has mentioned innumerable times the cruelty of our officers and soldiers. Why, then, does he refer to the testimony of Mr. Flint upon that point and not upon the other point?

Mr. CARMACK. Mr. President, there is absolutely no issue between us on that point at all.

Mr. BEVERIDGE. In other words, why does the Senator refer to the testimony of a witness concerning the exceptions, which are the cruelty testimony, and not to the general course and ordinary conduct of American officers and men? Why does he pick out the exceptional cruelty and neglect referred to in the witness's testimony and not refer to his testimony as to the general kindness of American officers and men?

Mr. CARMACK. Both the Senator from Indiana and myself are agreed upon the fact that the majority of American officers and soldiers are kindly and humane in their dealings with the Filipinos. While these things are exceptional in the sense that they are perpetrated by a comparatively small number of soldiers, they have yet prevailed to a very considerable extent and to a sufficient extent to deserve the attention of the American people and the American Congress, and it is our duty to demand that they shall cease. It has been denied by authority that any of these things have occurred, and it is necessary to prove that they have occurred in order to enforce our demand that they shall be stopped. I did not go at length into Mr. Flint's testimony, but said that I would insert extracts from it in the RECORD; if there is any particular part of it the Senator would like to have in, if he will indicate it I will insert it in the RECORD.

Mr. BEVERIDGE. No; I am perfectly willing that the Senator shall put anything in the RECORD he pleases without reading and that he may make such selections as he thinks will sustain his contention. I shall not do as a Senator did this morning when I made a similar request, object to the presentation of testimony of witnesses taken before the committee that is proper or pertinent. The Senator called attention to exceptional outrages, but did not call attention to the general consideration and kindness and courtesy and care, unexampled, I believe, even in the history of civilized warfare, which American officers and soldiers have shown to the Philippine people and prisoners, which is testified to by every witness who has testified upon that point.

Mr. CARMACK. Mr. President, the Senator from Indiana——

Mr. BEVERIDGE. I am perfectly willing that the Senator shall control whatever he wishes to put in the RECORD without objection from me.

Mr. CARMACK. My friend from Indiana is an adroit and

clever debater, but he might descant for a week upon the virtues of the American Army and he might prove to the satisfaction of everybody in the world—and I have no doubt he could do that—that an overwhelming majority of the officers and soldiers in the Philippines are kindly and humane, but that would not be any excuse for Smith. [Laughter.]

Mr. BEVERIDGE. Mr. President, I do not wish to interrupt the Senator.

The PRESIDING OFFICER. Does the Senator from Tennessee yield to the Senator from Indiana?

Mr. CARMACK. Certainly.

Mr. BEVERIDGE. But, Mr. President, it is a good deal of a reply to the attempt to paint the entire American Army, men and officers, as being of the type which the Senator describes, to get the Senator to confess that the reverse is true as to a great majority of the American officers and men. That, Mr. President, is the point. The point is that the Senator has attempted to cast upon the whole military establishment of the Philippines the stigma of his picture of General Smith, and I do not know whether it is an accurate one or not. I did not want to interrupt the Senator a moment ago, but the Senator referred to the order of General Smith. That order he could not produce, and it has not yet been produced, and we do not know whether such an order has been issued or not. It is worth while to show some respect to a man who has spent nearly forty years of his life in defense of his country's flag.

Mr. CARMACK. Mr. President, it may suit the Senator's purpose to say that he has got me to "confess" that a majority of the officers and men are not cruel, but as a matter of fact I have asserted that plainly, distinctly, and unequivocally in every speech I have made. I have repeated that assertion to-night. I had a controversy with the Senator from Iowa [Mr. DOLLIVER] upon the very point that where the soldiers did participate in these outrages it was forced upon them by their superior officers. There never was an army that did not contain enough bad men to spread death and terror and desolation in their path if not kept under proper restraint. What difference does it make, so far as its effect upon the people is concerned, that a majority of the soldiers did not sympathize with the policy of torture and extermination? How many men does it take to burn a village, or a hundred villages? How many does it take to torture unarmed noncombatants? How many does it take to make a "howling wilderness?" No matter how many there were who did not approve of these things, there were enough to do them.

But, sir, to return to the story of these tortures. To illustrate the recklessness with which the water torture was inflicted, here is a case of a guide who had been impressed into the service of the American forces and who had guided them correctly, but when they reached the place the insurgents they were looking for had fled. They knocked the guide down and tortured him until they finally became convinced that he was acting in perfect honesty and good faith.

Sergt. Charles S. Riley, Sergt. Edward J. Davis, and Private William Lewis Smith, of the Twenty-sixth Infantry Volunteers, corroborate each other's testimony before the Senate committee in giving the details of the administration of this horrible torture upon the presidente of Igbaras, Iloilo Province, Panay Island, on November 27, 1900, and the two policemen who were tortured at the same time, and to the burning of the town of Igbaras (containing some 10,000 or 12,000 inhabitants) on the strength of the supposed "confessions" which were wrung from these outraged victims on that occasion, without provocation and in the presence of American officers, who superintended its administration. Private Smith admitted that he set fire to some of the town himself, and that the administration of this water torture was so common that there was a regular "water detail."

Now, sir, as to the provocation for this torture, Private Smith was asked if there had not been a number of murders of American soldiers. He answered: "Not in our district. We never had a soldier injured in our district until after that time; but in other districts they did." In answer to further questions he said that the soldiers condemned these outrages and thought it "very cruel treatment." "I never saw a man killed or injured until after the burning of Igbaras. We occupied five towns, and we had anywhere from 10 to 18 men in each town." Sergeant Davis, who testified to the same facts regarding the water cure and to the burning of this town, declared that they had no trouble with the people, and that they had shown no unfriendliness to the American Army. He also said there was a regular "water detail"—men designated for the special duty of administering this water torture. Yet this whole town of 10,000 inhabitants was burned to the ground after the presidente and police had been subjected to torture.

Sergts. Leroy E. Hallock and Januarius Manning, of the Twenty-sixth Infantry Volunteers, tell substantially the same story about the torturing of some ten or twelve men at Leon, Panay Island, on August 21 and 23, 1900, forcing from such men a confession of their complicity in the "confessed" murder of Private O'Hearn, and in consequence of this alleged confession (thus wrung from them under duress) five or six were shot, one was released, and the others escaped. Sergeant Hallock says that Sergeant Manning ordered the administration of the torture to these men, and Sergeant Manning admits it.

Sergeant Hallock testified that he knew of the burning of as many as a half dozen towns, ranging from 3,000 to 8,000 inhabitants, one of them being the town of Tubungan, about halfway from Leon to Igbaras. These two witnesses differ as to the number shot and the number who escaped—Hallock saying that five or six were shot, one was released, and the others escaped, while Manning says that nine were shot and two escaped. Manning also testified to having seen at least a half dozen barrios, or towns, burned during the summer of 1900, but he could not give their respective names.

Corpl. Daniel J. Evans, of the Twelfth Infantry Volunteers, testified to having seen the water torture administered to a man in the Ilocano Province, at Ilocos Norte, Luzon Island, about August, 1900. This was a most ferocious case, according to the witness. Here is the way he describes it:

> The first thing, one of the Americans—I mean one of the scouts for the Americans—grabbed one of the men by the head and jerked his head back, and then they took a tomato can and poured water down his throat until he could hold no more; and during this time one of the natives had a rattan whip about as large as my finger, and he struck him on the face and on the bare back, and every time they would strike him it would raise a large welt, and some blood would come. And when this native could hold no more water, then they forced a gag into his mouth; they stood him up and tied his hands behind him; they stood him up against a post and fastened him so he could not move.
>
> Then one man, an American soldier, Frank Koehler, who was over 6 feet tall and who was very strong too, struck this native in the pit of the stomach as hard as he could strike him, just as rapidly as he could. It seemed as if he did not get tired of striking him with his clenched fist. He struck him right in the pit of the stomach, and it made the native very sick. They kept that operation up for quite a time, and finally I thought the fellow was about to die.

There was no apparent effort to conceal what was going on, and the commanding officer, Capt. Robert K. Evans, was not over 200 yards away at the time, and, according to this witness, this water-torture practice "has been the talk of almost the whole Army. They do not try to conceal it." The witness could have witnessed other cases of torture if he had desired to do so, and he himself knew of about five barrios being burned. These barrios were villages, and as many as 24 men, women, and children would live in one house together.

Sergt. Isadore H. Dube, of the Twenty-sixth Infantry Volunteers, after being advised by the committee that he would be compelled to disclose the names of any officers who were implicated in administering the water torture, very reluctantly made this statement:

> I was on guard. I don't remember the date nor the month. I was in command of Jaro, Panay, P. I., and some natives were confined in the guardhouse by order of Captain Glenn, who is now, I believe, a major. I think he was judge-advocate of the Department of the Visayas; and I was sent with this native—I don't remember the native's name—to bring him over to Lieutenant Conger's house, which was in that town. I did so. I brought the native over, and Lieutenant Conger and Captain Glenn and two or three privates of the Eighteenth Infantry administered the water cure to this native. I don't know for what cause; but the native appeared to me to be sort of a wealthy and intelligent native—he had some education.

The witness also told of a woman prisoner being confined in one big room for over three weeks with fourteen or fifteen male prisoners without any possibility of personal privacy. The witness also saw several dwelling houses burned in January, 1900, on Panay Island, as well as great quantities of rice destroyed.

Sergt. Richard V. Hughes, of Company H, Eighth Regular Infantry, told the committee about the administration of the water torture to a native, by order of Lieutenant Merchant, about 6 miles from Magdalena, in Laguna Province, on September 26, 1901. Lieutenant Merchant ordered Private Haler to strike the native and knock him down, and Private Haler did so. The native had no arms and had committed no wrong of any kind, but because he could not or did not give the information demanded of him he was knocked down a second time by order of Lieutenant Merchant. The witness also testified to having seen a guide first whipped severely with the branch of a tree by two privates, in obedience to the orders of Lieutenant Merchant, and then tortured unmercifully with the water cure, in obedience to the orders of the same officer.

The witness saw three houses, occupied by women—one of them a cripple, who was utterly helpless—burned by order of Lieutenant Merchant. Everything in the houses were burned, and the cripple woman was left upon the bare ground. She could not walk; she had to crawl upon her hands and knees. This witness also testified to something quite oriental in the conduct of this same officer, Lieutenant Merchant—that he compelled prisoners of war to act as a pack team in carrying his wife some 7 miles over pretty rough road, from Santa Cruz to Magdelena. This witness

also saw several villages burned outside of Nacarlan, about the 21st or 22d day of May, 1901, and he had heard of many other towns and barrios being burned, but had not seen any others himself.

Then we have the report of the inspector-general and of Generals Wheaton and MacArthur as to the terrible outrages perpetrated by the Macabebes employed in the military service of the United States. It was only by accident, so to speak, that the facts reached General MacArthur, a humane and chivalrous gentleman. There are about 1,500 of these Macabebe savages under American officers. The story as revealed in this report is one of rapine, plunder, rape, and murder. The report shows further that the officers commanding these savages exercised no effective restraint upon them, and when they broke loose in a saturnalia of crime, pillaging a town, beating and killing men, and ravishing women, these officers made no effort to punish, but tried to deny and conceal the fact. General Wheaton, in his report, says that "these Malay savages will always be liable to commit crime alike disgraceful to our service and an outrage upon humanity;" but as they are the only natives friendly to the United States, we must continue to employ them, in spite of the fact, as General Wheaton himself declares, that they will "rob and ravish whenever they have the opportunity." Mr. President, I do not arraign our generals in the Philippines, but I denounce any policy that makes it necessary for us to employ murderers, robbers, and ravishers against any people.

We have also a story set forth by Governor Livingston, of the province of Sorsogon, which has few parallels for cold-blooded atrocity. In this case the governor says that he delayed reporting the facts because the military authorities had justified the acts in question and he desired to make a thorough investigation. The facts revealed in his investigation were that the presidente of a town, an upright and intelligent man, with a policeman in the same town, were taken out into the woods, compelled to dig their own graves, and then shot, having, however, previously been tortured. The governor reports that the charge against this presidente was false and that he was faithful and loyal to the United States.

It has been claimed that these atrocities have been inflicted by way of retaliation. I wonder if the Senator from Massachusetts has ever paused to consider what this defense may lead to in his own country. We have had some terrible scenes in the South, and you have had some in the North, where a whole community, driven to madness, has risen up to execute lawless vengeance for some awful crime. The Senator from Mississippi [Mr. McLAURIN] detailed one especially horrible in its circumstances a few days ago. And yet, sir, the people of that community, as the Senator said, were satisfied to wreak their vengeance upon the criminal himself.

But suppose, sir, in some of these communities the people should be driven to such a pitch of madness that they should not only wreak their vengeance upon the criminal, but upon all the members of his race indiscriminately. Suppose that should be done. Then, sir, they would have a right to expect that the distinguished Senator from Massachusetts would be their apologist and defender. He seemed to think it quite natural that men in the Philippines, because some of their comrades have been murdered, should seize upon innocent people, having no connection whatever with the crime, and subject them to torture, or should lay waste a whole province and destroy a whole people from 10 years old upward. That seemed to the Senator from Massachusetts as a natural act of vengeance.

The apologists for lynching in the South, I have no doubt, will be glad to hear from the Senator from Massachusetts. I am not and never have been of that number. I have never sought to uphold mob law. I have never been a defender of the practice of executing lawless vengeance upon any criminal, no matter how black might be his crime.

We have had, sir, a terrible problem to deal with in my part of the country, and it is an unfortunate thing that while some of us are doing our very best to create a public sentiment that will be effective in putting an end to lynching and to mob law the distinguished Senator from Massachusetts should lend the weight of his great and distinguished name to excuse it.

The Senator from Massachusetts set forth a long and bloody chapter of terrible deeds committed by the Filipinos, and tried to make it appear that whatever wrongs had been perpetrated upon the Filipinos had been for retaliation or revenge. Mr. President, the law of retaliation is a recognized rule of warfare, and its limits are strictly defined. The very order which defines the law of retaliation absolutely forbids the use of torture to extract confessions. These tortures were applied for the purpose of forcing confessions, of securing information, and the surrender of arms. There was no pretense of retaliation in it. People have been tortured who had neither arms nor information, and who had done no wrong. It has been shown by the testimony of witnesses before the committee that the soldiers themselves were opposed to these outrages. It has been shown that throughout an entire district occupied by American troops there had not been a single offense committed against American soldiers until after the water torture and town burning began. So I say there is no retaliation whatever in the business.

Some days ago I denied the statement made upon the other side that these cruelties were inflicted by the American soldiers out of the feeling of hatred or revenge for the murder of their comrades. I declared, on the contrary, that the friendliness of the soldiers toward the natives was the subject of complaint and that they had to be almost scourged to this bloody and atrocious work. There has been an effort to lighten the responsibility of Smith for what took place in Samar by saying that the soldiers had been maddened by the Balangiga massacre. I have already dealt with that affair, which was the act of the inhabitants of a single community taking a horrible revenge for acts of tyranny and oppression inflicted upon themselves. General Smith himself bears witness that the private soldiers had no sympathy with his bloody and remorseless policy.

I wish to call attention to a letter over his own signature in the Manila Critic, speaking of the conditions in Samar:

> It did not take long before it was quite patent to any observer that only the "fire-and-sword" policy could succeed in bringing these people to understand that they must come under the absolute and complete control of the United States. The inhabitants are all our enemies, and those who live near the garrisons do so only to give assistance to the armed ones in the mountains. And it seems almost impossible to impress this fact upon our officers and soldiers, who have the love for the "little brown brothers" ingrafted in their natures.

And so on.

> Little or nothing has been done, owing to a feeling of security and confidence which had been engendered by officers who loved the "little brown brother" and imagined the natives were angels and only needed wings to make them perfect.

That, sir, was the feeling among the soldiers and the subordinate officers toward the Filipinos. It was Smith himself who was constantly attempting to destroy the feelings of friendship and confidence that existed between the soldiers and the natives and driving them to deeds of cruelty.

Our reconcentrado policy in the Philippines has been defended as gentle and humane. I have no doubt that there are some camps that are conducted on humane principles, but the Senator from Georgia [Mr. BACON] read a letter a few days ago from an officer in the Philippines that gave a horrible description of this concentration business. He did not give the name of the officer, but he vouched for him as a man of high character, thoroughly trustworthy, a graduate of West Point. It is a significant fact, sir, that men like the Senator from Georgia [Mr. BACON] and the Senator from Massachusetts [Mr. HOAR] have information from Army officers for whose character they can vouch, but whose names they dare not divulge. We know that officers in the Army do not like to give information that would be unpleasant to their superior officers or to the Administration; but when the Senator from Georgia [Mr. BACON] vouches for the character of any man I do not believe that any Senator in this Chamber will have any doubt whatever as to the integrity of that witness.

Here is an order given by General Smith in November, 1901, in which he says:

> He desires to announce to all the influential natives of the district, and especially to those in the island of Samar, that up to and including the 10th day of November, 1901, those who desire to establish the fact that they are friendly to the American Government can do so in any one of the following ways:
>
> First. By giving information as to the location of any guns used for the purpose of insurrection.
>
> Second. By giving information as to the whereabouts of persons in insurrection.
>
> Third. By inducing persons in insurrection to present themselves with their rifles or other arms to the nearest American official.
>
> They can not establish the fact of their friendship by protestations of any kind.
>
> Those who fail to avail themselves of the opportunity presented will be regarded as distinctly unfriendly to the American Government, and will be treated accordingly.

Mr. President, there are three distinct methods by which the people of that district are to be allowed to prove that they are friendly to the United States. They are to give information as to guns, information as to the whereabouts of persons in insurrection, or induce persons in insurrection to present themselves with their rifles or other arms to the nearest American official, and they must do that within ten days. If within that time these men are not able to give information as to where any insurgents are secreted or where any of their arms are hidden, and if they are not able to induce any of them to surrender, then, as we are further informed, they are to be banished to the island of Guam, their wives and their children are to be driven into the mountains, and their houses and the whole town in which they live are to be burned to the ground. That is mercy and humanity!

Here, sir, is a description of the process of establishing a concentration camp, by the Manila News, a paper entirely in sympathy with the practice and with the military authorities:

The transport *Lawton* returned yesterday afternoon from a two weeks' cruise, touching at Catbalogan, Cebu, Perang-Perang, and Davao. On her outward passage she took 200 Ilocano scouts for the Samar service.

On the arrival of the *Lawton* at Catbalogan Brigadier-General Smith had been in Samar about ten days, and his strong policy was already making itself felt. He had already ordered all natives to present themselves in certain of the coast towns, saying that those *who were found outside would be shot and no questions asked. The time limit had expired when the Lawton reached Catbalogan, and General Smith was as good as his word.* His policy of reconcentration is said to be the most effective thing of the kind ever seen in these islands under any flag. All suspects, including Spaniards and half-breeds, were rounded up in big stockades and kept under guard. Among these were numerous presidentes of some towns on the western coast of Samar, who assisted in smuggling rill to the insurrectos. A number of these rascals were gathered in and made to give up the proceeds of their traffic, amounting to thousands of dollars, which were confiscated.

General Bell issues the same kind of an order, in which he declares that all the people of influence, all the wealthy people, and especially all the priests, are to be regarded as enemies of the United States. The priests are to be regarded as worse than anybody else, worse than the armed insurgents. If there is the slightest ground of suspicion against these people, whether there is proof enough to convict them or not, they are to be arrested; and, finally, if they can not find any ground of suspicion against them, they must arrest them anyhow, because it is said, "If you arrest a man and put him in jail, sometimes you can get evidence against him when you could not get it against him if he were free." So men are arrested and put in jail not because there is any proof against them, but because there is not; and in the meanwhile the common people are to be arrested for trivial offenses and put in jail and held there on the promise of freedom if they will testify against the rich people. Whom could you not convict under such practices as these?

Mr. President, I have no doubt that there were many horrible atrocities perpetrated by the Filipinos; perpetrated, some by insurgents, some by mere outlaws and robbers and ladrones in the Philippine Islands; but, sir, when we find cruelties perpetrated under the command of American officers, cruelties not perpetrated for the purpose of retaliation, but perpetrated in cold blood, for the purpose of extorting information and as a mere system of warfare, we have no right to say that the Filipinos were the first to begin this business.

Mr. President, we have only been hearing one side of this business. We have refused to hear the other side. I want to call attention to the fact that from the very beginning of hostilities there has been a deliberate conspiracy of suppression and falsification with respect to everything that has occurred in the Philippine Islands. I have shown heretofore that the censorship there was conducted simply and solely upon the principle of suppressing everything that might hurt the Republican party. Those were the express orders given to the censor. Under those orders he excluded an item of news with reference to the currency on the ground that it would encourage the silver men in the United States and that his orders were to "let nothing go that would hurt the Administration."

The representative of the Associated Press, after he came back to this country, made a statement with respect to this very matter. We remember that during the early part of the hostilities many stories became current here in the newspapers of the mutilation of the bodies of American soldiers by the Filipino insurgents. After this correspondent returned he made a statement in which he said that the first mutilation of the dead was perpetrated by some miscreants from the American Army, and that there never had been a case of mutilation by the Filipinos until after this occurred. All this was excluded. It could not get past the Administration censor there. The effort from the very beginning was to do everything, to publish everything, that could excite hatred and loathing and distrust on the part of the American people toward the people of the Philippine Islands.

That policy has been responsible for the whole business, and to-day the War Department has been engaged in looking up every outrage, every crime perpetrated by Filipinos against Americans, and it has been just as busy in suppressing everything in the way of outrage upon the Filipinos themselves.

General MacArthur testified that the Filipinos by nature are a gentle, a kindly, and a generous people. The first Philippine Commission in one of their reports declared that the natives of the Philippine Islands are a gentle race, kindly, docile, and normally obedient to authority. Governor Taft says that they are gentle and kindly until their ferocity is aroused by war. Well, Mr. President, a great many people are gentle and kindly until their ferocity is aroused by war.

It is admitted that Aguinaldo dealt kindly and gently with the Spanish prisoners. It is admitted that he dealt kindly with American prisoners. The savagery and brutality began when the people were driven to the last ditch, when they were fighting with the fury and ferocity of despair. Who would answer for the mercifulness of the American people if we could imagine them making their last stand for liberty against a powerful invader? Sir, I want to call attention to the fact that the very last act and order of Aguinaldo as commander of the Philippine forces was to give bread to starving Americans and to command that they should be kindly treated.

The story of that transaction, as related by the heroic Funston, presents a contrast that should bring the blush of shame to every American cheek. Funston's party, disguised as a body of Filipinos with some captured Americans, were exhausted and starving. They sent to Aguinaldo for food, and he sent them food, with orders to treat the American prisoners well. In his speech before the Lotus Club General Funston tells of all this, and then presents his own conduct in vivid contrast. He tells how they rushed upon Aguinaldo and his body guard and fired upon them. One of Aguinaldo's officers, wounded in the shoulder, jumped into the river, but Funston's valiant Macabebes "fished him out and kicked him all the way up the bank and asked him how he liked it." A wounded man, Mr. President; a prisoner of war; a man who had just given them bread when they were starving. They kicked this wounded prisoner and asked him how he liked it; and as Funston related this humorous incident the overfed degenerates of the Lotus Club patted their fat hands together and laughed with delight. "Give them food; treat them well"—it was the despised Filipino who said that. "They kicked him up the bank and asked him how he liked it"—it was a general in the American Army who said that.

Mr. President, the gravamen of the accusation in this matter is that there has been no real effort on the part of the Administration or on the part of the War Department to put an end to these atrocities.

I spoke the other day with respect to the inadequacy of the punishments inflicted for these crimes. I declared that there had been practically no punishment whatever for torture in the Philippine Islands. The Senator from Iowa [Mr. DOLLIVER] sharply contradicted my statement and presented a list of punishments for other offenses. I have here a table that was sent to our committee from the War Department, the memorandum showing trials of officers, enlisted men, and camp followers for offenses of cruelty against natives in the Philippines and for violations of the laws of war.

Here is Second Lieut. William M. Capp, Sixth Artillery, charged with the offense of firing into a town and looting it, and the punishment of Lieutenant Capp for firing recklessly into that town and looting it was a reprimand.

Here is Lieut. Bissell Thomas, Thirty-fifth Volunteer Infantry, who was charged with assaulting prisoners and cruelty. The cruelty in this case amounted "almost to acute torture." He was fined $300 and received a reprimand.

Here is the case of Second Lieut. Francis J. Ellison, Thirtieth Volunteer Infantry, for looting and encouraging the same, and his punishment was a reprimand.

Capt. Isaiah H. Baker, of the Forty-sixth Volunteer Infantry, who was charged with permitting looting, received a reprimand.

Capt. George W. Brandle, Twenty-seventh Volunteer Infantry, charged with torture by causing natives to be hung by the neck for ten seconds—reprimand.

Second Lieut. Alvin S. Perkins, Twenty-seventh Volunteer Infantry, charged with torture by causing natives to be hung by the neck for ten seconds—reprimand.

Mr. RAWLINS. Will the Senator permit me?

Mr. CARMACK. Certainly.

Mr. RAWLINS. The Senator will notice that even that punishment was inflicted about two years ago, in 1900, and he will notice that since 1900 not even a reprimand has been inflicted upon any person for putting people to torture.

Mr. CARMACK. That is what I was going to say. Those were the punishments for torture. Up to that time they did mildly reprimand people for hanging and torturing prisoners of war. They did, up to two years ago, reprimand them; and one man, who probably kept the prisoners hanging a little too long, was fined $300; but they have abandoned all that. There is not a single case upon the record of any man, officer or soldier, having been punished for inflicting the water torture; there is no evidence that any effort whatever has been made to put an end to it, and the facts in regard to this matter have been notorious for the last three years; they have been published broadcast through the press of the country from one end of it to the other, and they have been again and again brought to the attention of the War Department with request for investigation.

Mr. President, we have had some so-called investigations based upon letters from soldiers in the Philippines that had been published in the United States. These investigations were ordered by the War Department and conducted by Army officers in the Philippine Islands. I said with respect to these investigations

that their only object was to wring from the soldiers a retraction of their statements and that such had been the result of every such investigation. A great wave of horror swept over the other side of the Chamber and a deep and shuddering groan went up when I made the statement. Some Senators on the other side seemed to think that I had made a wild and rash and reckless accusation.

Mr. President, I did not speak rashly or recklessly, and I say now, with all the deliberation and gravity that should accompany such a statement, that every such investigation has been a farce and a fraud, and that the only end in view has been to obtain by some means a withdrawal of the charge by the soldier who made it. The distinguished Senator from Massachusetts [Mr. HOAR] said in the course of his speech "that you will never get officers or soldiers in the standing Army, as a rule, to give testimony which they think will be disagreeable to their superiors or to the War Department." And the Senator subsequently put a very pertinent and very significant question when he asked: "When Theodore Roosevelt, an officer of volunteers, told his story about the canned beef and the military supplies, and every officer in the Regular Army, who knew the facts just as he did, contradicted him in the investigation, does he believe that Theodore Roosevelt or the officers of the Regular Army told the truth?"

If a man should answer that question in such a way as not to reflect upon the honor of the President of the United States, some people might say that he was reflecting upon the honor of the American Army. It seems a hard thing to say, sir, that you can not get officers and men in the Regular Army to give testimony that would be displeasing to the War Department, and yet I believe that every Senator in this Chamber is conscious of the fact that the Senator from Massachusetts [Mr. HOAR] has correctly stated the case. How does it happen that he and other Senators have declared that they have statements from Army officers for whose character they can vouch, but whose names they are not at liberty to divulge? What influence is operating upon these officers except the apprehension that by telling what they know they might incur the displeasure of the powers that be?

For several years, sir, letters have been published broadcast through the press of the country, letters from soldiers who claim to be eyewitnesses of the scenes described, telling of some very horrible things in the Philippine Islands. It was a reflection upon the Administration and upon the War Department in particular if such things had occurred. The revelations were recognized and resented as a reflection upon the Administration; but the special attention of the War Department was directed to them so persistently that it finally undertook an investigation. The result of that investigation was sent to Congress by the Secretary of War. He had inquiry made as to certain very grave charges made in the letters of soldiers, and he summarized the result by a statement that in every case the story was shown to be either false or grossly exaggerated.

In a previous investigation of a statement made by Sergeant Riley—of which case I shall have something more to say—after reciting that Riley had made a retraction, and that the officers of his regiment had united in saying that there was no truth in his statements, the Secretary added that this had been the "invariable result" of every investigation made by the War Department of "sensational" letters written by soldiers in the Philippines. In none of the cases did they find that the truth had been told. In every case they obtained a retraction. If they failed to obtain a retraction in any case, they failed to report the fact. Some of these retractions were not very complete, as when a soldier who had told of how they had killed wounded Filipinos with the butts of their guns admitted that his statement was "exaggerated;" but it seemed to satisfy the War Department, and they let it go at that. They did not find one single case of torture or other outrage committed upon the Filipinos. Retraction—retraction—retraction—that was the entire result of the War Department's investigation.

Then a committee appointed by the Senate took up the matter. A majority of the committee is entirely in sympathy with the Administration. Very little of its time has been devoted to investigating these atrocities. It is 10,000 miles from the scene. It could call only such witnesses as it could find in the United States, for it has refused to call any others. Yet, sir, this imperfect investigation, conducted under such embarrassing circumstances, has revealed numbers of cases of torture practiced upon unarmed and helpless people, upon peaceful noncombatants, of an organized system of torture; practiced as a recognized means of warfare for the purpose of obtaining information or confession; practiced upon people against whom there were no grounds of suspicion, and practiced, as has been shown, upon people who were without information, upon people who were innocent, and upon people who were faithful and friendly.

We have proved the wholesale burning of towns and villages as a regular practice, leaving women and children without food or shelter; upon the principle openly avowed by General Hughes that the best way to punish the men was to inflict misery and suffering upon the women and children. The desolation of whole provinces, an order for the extermination of a whole people, the massacre of little children, such are the facts that have come to light since this investigation began; and there are a number of witnesses yet to be examined, and we are yet on the very edge of this investigation.

Contrast, sir, the results of this imperfect and embarrassed investigation with that conducted by the War Department. That Department is thoroughly equipped for a complete investigation. All the officers in the Philippines, there at the very scene, are at its command and under its control. Yet when it comes to report the result of its inquiry it says in substance: We have not found a single case of torture, we have not found a single case of cruelty, we have not heard of the burning of a single town. Every story of this kind that we have investigated is absolutely false. Every time we have started on an investigation we have "invariably" come back with a retraction.

I wish to call the attention of the Senate to one very significant fact. These letters and statements of outrages have come, some of them, from soldiers who are still in the Philippines, and some from soldiers who have returned to the United States. The Senate committee has of necessity confined its investigation to stories given out by soldiers who have come home, who have served out their time, and are no longer in the Army. The War Department has confined its investigation to the letters of soldiers who are still in the Philippines. The significant fact to which I wish to direct attention is that with one exception every story investigated by the Senate committee is found to be absolutely true, while every investigation conducted by the War Department has resulted in a retraction.

As the Secretary of War says, this has been the "invariable result." The entire committee, without exception, admits that the statements of the witnesses before it are truthful and correct. How does it happen that in every case where the story was told by a returned soldier it is proven and admitted to be an honest and truthful statement, while in every case where the soldier is still in the Philippines it is denied and retracted? If there were cases in which the Department failed to secure denials and retractions, those cases were not reported. Mr. President, the conclusion is irresistible that the investigations of the War Department were conducted for no other purpose than to secure retraction from soldiers by whom the charges were made.

Mr. President, I have referred to the case of Sergeant Riley. That was the one case where the Department undertook to deal with the statement of a soldier who was no longer in the service. Sergeant Riley's letter, written from the Philippines and detailing cases of outrage and torture, had been published in the United States, and it had been brought to the attention of the War Department with a request for investigation. Sergeant Riley was examined at San Francisco upon his return from the Philippines by an officer instructed to perform that duty by the Secretary of War. The matter was discussed in the public press, and finally, more than a year ago, the Secretary of War made a statement as follows:

> The Department has looked into this matter, with the result that the officers of Sergeant Riley's regiment, including the major commanding his battalion, the captain of his company, and Sergeant Riley himself, assert positively that no officers or soldiers of the regiment took part in any water-cure proceedings or other threats against the natives on the occasion in question. This has been the invariable result of the investigations that have repeatedly been made as to the foundation for sensational stories sent home by soldiers n letters to their relatives.

Now, sir, this statement given out by the War Department was intended to create the impression that Sergeant Riley had made a full retraction. I do not doubt that the Secretary of War believed it to be such. As a matter of fact, it is simply a statement that he had not seen these things done by members of his regiment. But Sergeant Riley's letter did not say that it had been done by his regiment, but that he had seen it done by members of another command. When he was brought before our committee, he told the whole story. The officer who saw him at San Francisco upon his return asked him whether he had seen the water torture inflicted by members of his own regiment, and he said that he had not, but had seen it inflicted by others.

The officer, in making his report to the War Department, deliberately omitted the latter statement. Sergeant Riley told the whole story of the infliction of torture as he had seen it, and other witnesses corroborated his story, until finally the majority of the committee said that it was useless to call other witnesses. They admitted the absolute accuracy of every statement he had made. When the majority made this admission, they admitted not only the truth of Sergeant Riley's statements as to the water torture, but that the so-called investigation made by an Army officer under instruction from the War Department was dishonestly conducted and untruthfully reported. Now, sir, I can understand how the Department might have been deceived, but if

it really wanted an honest investigation and a truthful report, how does it happen that no punishment, not even a reprimand, has been administered to the officer who admittedly made a dishonest investigation and an untruthful report?

Mr. President, there have been some very singular things about these investigations. There was a charge made involving Major Metcalf in the killing of prisoners of war. Statements and affidavits were made by soldiers and officers who claimed to be eyewitnesses of the deed. A private by the name of Huskey, being called upon, made an affidavit to the effect that he saw Metcalf kill the prisoners, and afterwards stubbornly persisted in this statement when questioned by Metcalf himself. A Lieutenant Fergusson, in a signed statement, declared that he heard a shot, and, turning around, saw a Filipino prisoner fall to the ground and Major Metcalf standing over him with a smoking pistol, and he believed that Metcalf killed him. Both of these witnesses subsequently retracted their statements. Yet both of them were allowed to remain in the Army, and one of them is still there as a commissioned officer. Now, sir, the thing that is incomprehensible to me is that men who, by their own confessions, have given false and perjured affidavits, charging their superior officers with an infamous crime, should be allowed to wear the uniform and to hold commissions in the Army of the United States. Why does not some man who makes a specialty of protecting the honor of the Army demand their discharge?

Captain Bishop was also involved in this charge of killing prisoners. A private by the name of Branner had written a letter that was published in the United States, in which he spoke of having seen prisoners killed by order of Captain Bishop at the battle of Caloocan. The matter gained considerable notoriety through the press and an investigation was made by Insp. Gen. John S. Mallory. His report is set forth at length in the hearings before the Philippine Committee, beginning at page 1428. It recites the testimony of a number of witnesses, several of whom testified that Bishop gave the order directly for the killing of these particular prisoners, and that the order had passed down the line that no prisoners were to be taken.

That the prisoners were in fact murdered was admitted, and a private by the name of Putnam testified that he was one of the squad that killed them under orders. In summing up the evidence in the case, the Inspector-General said that the evidence as to whether Captain Bishop was personally present and ordered the killing of the prisoners was "conflicting, his assertions in the negative being at variance with statements alleged under oath to have been made by him on previous occasions." Brenner in the meanwhile had retracted his statement to the extent of saying that he had not witnessed the killing of the prisoners, but had heard the statement from Bishop himself.

Now, sir, what was the upshot of this investigation? When the report of the facts reached Asst. Adjt. Gen. Thomas H. Barry, he ignored all the evidence implicating Bishop, the officer, and recommended that Private Putnam, who admitted that he had helped to do the killing under orders, be tried by court-martial. But when this came to the attention of Judge-Advocate E. H. Crowder he saw that this would make trouble, and so he made the following recommendation:

> The offense of Private Putnam, if he has committed one, is manslaughter. His only defense would be a lawful order of his superior officer. If put on trial, it is probable that facts would develop implicating many others. I doubt the propriety of his trial, and am of the opinion that considerations of public policy, sufficiently grave to silence every other demand, require that no further action be taken in this case.

Crowder recommends that no action be taken against Putnam on the express ground that his defense would be that he had orders from his superior officer and that the trial would develop facts implicating many others. Thus, sir, the investigation was hushed up for the very reason that it would bring some ugly facts to light if it were prosecuted.

The recommendation of Judge-Advocate Crowder was then passed on to General Otis, who made his indorsement as follows:

> I doubt the wisdom of a court-martial in this case, as it would give the insurgent authorities a knowledge of what was taking place, and they would assert positively that our troops had practiced inhumanities, whether the charge should be proven or not, as they would use it as an excuse to defend their own barbarities; and it is not thought that this charge is very grievous under the circumstances then existing, since it was very early in the war and the patience of the men was under great strain. Nothing of the kind has happened of late.

They did not mind hanging or shooting the poor devil of a private, but to punish him would involve the conduct of his superior officers. It was all right to hang the poor volunteer, but be careful how you sully the honor of the "Army" by exposing the criminal conduct of a regular officer!

This is how the "invariable results" which the War Department flaunts in our face are secured.

How many more of such things are hidden among the arcana imperii of the War Department? We have had a few of them brought out by accident where the manifest intention has been to suppress and conceal them. How many more are yet to be revealed?

These things show us, sir, the spirit and the purpose of the investigations made by the War Department. The attitude of the military authorities has been one of pronounced hostility to any real investigation, and yet, sir, we have been told that we should leave the investigation of all these matters to the Army officers themselves, under the instructions of the War Department. When the General of the Army made a very mild statement about the severity of our measures in the Philippines the Secretary of War turned upon him with a bitter and stinging rebuke.

Major Gardener made a report as civil governor of Tayabas Province in which he severely criticised the conduct of officers in that province. The report was suppressed, and when it came to light in spite of the War Department, an investigation was ordered to be conducted by the persons accused, to determine whether or not they were guilty. The order from the War Department to General Chaffee contained the distinct statement that Major Gardener's report cast reflections "not only upon officers of the Army, but the general conduct of affairs and the military branch of the Government." In other words, Chaffee was ordered to enter upon that investigation with a distinct forewarning that if it sustained Gardener's statement it would be regarded as a reflection upon the Administration, upon the War Department, and upon Chaffee himself. It is not at all surprising that the very next thing we heard was a complaint from Major Gardener, a gallant and honorable soldier, that the so-called investigation had become a persecution of himself. Who does not know that we should have served the cause of truth if Major Gardener had been permitted to come and testify before the committee?

Mr. President, some remarkable lines of defense have been adopted for this policy. One, as I have indicated, has been to suppress the truth and deny it. Another has been to bring in review all the bloody pages and diabolical deeds of history to brighten by contrast or justify by precedent the wrongs and outrages perpetrated in the Philippine Islands. The Senator from Massachusetts [Mr. LODGE] recited the cruelties of Nero and Attila the Hun, and then came on down the bloody track to the story of the Ku Klux Klan and the lynching of negroes. I judge from the President's address on yesterday that this last will be the main ground of defense.

When Senators upon the other side of the Chamber began to wave the bloody shirt again, I confess I mistook their object. I thought they were trying to revive the old spirit of sectional hate. I understand their purpose a little better now. They used to make a specialty of Southern outrages in order to hold up to execration the Democratic South. They are doing the same thing now in order to find precedents for the course and conduct of the Republican party. "You are lynching negroes in the South. We are lynching them in the Philippine Islands. You let us alone and we will let you alone." That seems to be the real significance of the argument; and there is a little implication that if we do not stop talking about affairs in the Philippines they will make trouble for us in the South.

As I have said before, I have never been an apologist for mob law, but if I could find any excuse whatever for executing lawless vengeance upon a particular criminal for a particular crime, I could not find in that any excuse whatever for inflicting torture or murder upon an absolutely innocent person for no other reason than that he belongs to the same race to which the criminal belongs. The President and his party have made themselves apologists for lynching to no purpose whatever. It has no bearing upon the question of our policy in the Philippine Islands. We went to the Philippines, 10,000 miles away, in order to subjugate a people and possess their country. What relation is there between cruelties that have been perpetrated in a war which we deliberately provoked and the lynching of a negro ravisher in Mississippi or Louisiana?

The President evidently wants it understood that this is simply the same old rebel yell; that the sons of the men who used to vilify Lincoln and Grant are now speaking disrespectfully of the great and magnanimous Smith. But, Mr. President, how does that affect the real question? Does any man deny Smith's barbarous order? Does any man defend it? Does any man deny the use of torture upon helpless noncombatants? In what way does it meet these just and truthful accusations to say that Lincoln and Grant were falsely accused?

Mr. President, the defense, brought down to its last analysis, is that the cruelties perpetrated in the Philippines are an inevitable part of such a war. That is true, sir, in a measure; but while it may serve to palliate or excuse the acts of officers and soldiers, it is no excuse whatever for those who sent them forth upon this bloody and remorseless war. You may account for a great deal of suffering and ruin and desolation by the plea that "War is hell;" but surely that is no answer to the question, "Why have you sent the hell of war upon a people who only asked you to let them alone?" You knew that a war for the subjugation of another race must inevitably become sooner or later a most cruel and ferocious war.

In May, 1898, at a time when the Filipinos regarded us as their best friends, Gen. Wesley Merritt warned you that as a result of attempting to seize the Philippines the majority of the people would "regard us with intense hatred, born of race and religion." You can not wash your hands of responsibility by saying that such wars are always bloody. There was no need for this war. You entered upon it in order to destroy the liberties of the people who had done you no harm, who had committed no offense, unless to love liberty is a crime.

And what, sir, do you gain? You are wasting thousands of lives and hundreds of millions of dollars upon a war that is as barren of profit or advantage as it is of honor. The Senator from Wisconsin [Mr. SPOONER], in his able speech on the ratification of the treaty, showed that from a military standpoint the islands would be a source of weakness instead of strength. He said:

Permanent dominion over the Philippines by the United States as a part of this country means to me an endless and vast burden upon the industries of our people. We would be as sacredly bound to protect that distant people living under our flag in a part of our territory as we would the people living on the coast of Maine or the people living around Boston Harbor.

In the event of war the most distant outpost where our flag could be found would be the point of first attack, and we would be obliged, in my judgment, to maintain a navy adequate to protect the millions of people in the Philippines, 7,000 miles away, Hawaii, and our Atlantic and Pacific coasts. If our Navy were not adequate to all that, our ships being sent far away, our home coasts would be unprotected. This would involve an awful increase of taxation.

Admiral Sampson expressed the same idea when he said that possession of our new territory would increase by 100 per cent our dangers of a foreign war. The Senator also told the plain truth with respect to the supposed commercial profits of this venture when he said in the same speech:

It is insisted that we must have permanent territorial expansion in order to extend our trade. Mr. President, I do not think so. I have been strongly inclined to think that in the long run, with all the embarrassments and complications and dangers it will bring upon our people, it will retard rather than develop the foreign trade of the United States. We have been growing rapidly in our trade without territorial expansion. To acquire distant, nonassimilable peoples in order, through permanent dominion, to force our trade upon them seems to me to be the poorest imaginable national policy. How far will that be carried? We want the trade of the world, and we intend to have our share of it. Are we, therefore, to obtain it by carrying this doctrine of expansion to the uttermost parts of the earth? If territorial expansion means national trade, if it be necessary to national trade, where are we to stop?

I think, Mr. President, the trade of the world will go where its interest leads it in the long run, and the best avant-courier of civilization is a merchant ship carrying the products of civilization and teaching the wants of civilization.

Such, sir, is the policy upon which you have entered. It will be no help, it will be an embarrassment, to our commerce. It will impose a heavy burden of taxes upon the people. It will bring us into constant danger of conflict with foreign powers as well as of insurrection in the Philippines themselves. It will be of no benefit whatever to anybody except to a few carpetbag adventurers, who will go there to exploit the country and to misgovern the people, thereby inciting future insurrections to be put down at the cost of the blood and treasure of the American people.

Mr. President, sooner or later we must come face to face with the real consequences of this policy. It is the part of wisdom to face them and consider them now.

APPENDIX.

CONTAINING EXCERPTS FROM THE EVIDENCE, BOTH OFFICIAL DOCUMENTS AND TESTIMONY, BEFORE SENATE COMMITTEE, WITH RESPECT TO THE CHARGES OF CRUELTIES ALLEGED TO HAVE BEEN PERPETRATED IN THE PHILIPPINE ISLANDS.

[Proceedings Senate Committee on Philippines, pp. 71, 75.]

Governor Taft admits that if these charges of cruelty are true they form the basis of proper charges against the management of the Army; and he then admits that the charges are true; but he only supposes that some of the perpetrators have been punished by the American authorities in the archipelago.

Senator PATTERSON. Several of the Senators have suggested getting information from you as to the use of the so-called water cure in securing surrenders of guns. That seems to be in direct connection with what you are now discussing.

Governor TAFT. I had intended to speak of the charges of torture which were made from time to time, and have been made in letters written from the Philippines by soldiers and others, and which would be made, if they were true, the basis for proper charges against the management of the Army.

* * * * * * * *

What I am trying to do is to state what seemed to us to be the explanation of these cruelties—that cruelties have been inflicted; that people have been shot when they ought not to have been; that there have been in individual instances of water cure, that torture which I believe involves pouring water down the throat so that the man swells and gets the impression that he is going to be suffocated and then tells what he knows, which was a frequent treatment under the Spaniards, I am told—all these things are true.

* * * * * * * *

The CHAIRMAN. Do you know of any case where men were punished for cruelty or oppression of Filipinos?

Governor TAFT. I suppose there were.

[Proceedings Senate Committee on Philippines, pp. 884-885.]

Major Cornelius Gardener, Thirteenth United States Infantry, in his report of December 16, 1901, as governor of the province of Tayabas, admits that such cruelties and outrages have been committed and points out some of the results. * * *

Of late, by reason of the conduct of the troops, such as the extensive burning of barrios in trying to lay waste the country so that the insurgents can not occupy it, the torturing of natives by so-called "water-cure" and other methods in order to obtain information, the harsh treatment of natives generally, and the failure of inexperienced, lately appointed lieutenants commanding posts to distinguish between those who are friendly and those unfriendly and treating every native as if he were, whether or no, an insurrecto at heart, this favorable sentiment above referred to is being fast destroyed and a deep hatred toward us engendered. If these things need be done they had best be done by native troops, so that the people of the United States will not be credited therewith.

Almost without exception soldiers, and also many officers, refer to the natives in their presence as "niggers," and the natives are beginning to understand what the word "nigger" means.

The course now being pursued in this province, and in the provinces of Batangas, Laguna, and Samar, is in my opinion sowing the seeds for a perpetual revolution, or at least preparing the people of these provinces to rise up in revolution against us hereafter whenever a good opportunity offers. Under present conditions the political situation in this province is slowly retrograding, and the American sentiment is decreasing and we are daily making permanent enemies.

In the course above referred to, troops make no distinction often between the property of those natives who are insurgents or insurgent sympathizers and the property of those who heretofore have risked their lives by being loyal to the United States and giving us information against their countrymen in arms. Often every house in a barrio is burned.

* * * * * * * *

The attitude of the Army, thereby meaning most of its officers and soldiers, is, however, decidedly hostile to the provincial and municipal government in this province and to civil government in these islands in general. In Manila especially it is intensely so, even among the higher officers. The work of the Commission in the establishment of provincial governments is ridiculed, even in presence of the natives. It is openly stated that the Army should remain in charge for the next twenty years. Outrages committed by officers and soldiers against natives in an organized municipality and province, when reported by the presidente or governor to the military authorities, are often not punished. This, in my opinion, is unfortunate, because loyal natives begin to fear that local self-government promised them will not last long, and that any slight disturbance in a province may at any time be made the pretext to again place it under military rule, and this is just the thing the insurgents at heart most desire.

It has been stated that a Filipino or any Oriental does not appreciate just or kindly treatment, and that he considers it an evidence of weakness, and that severe and harsh measures are the only ones that are permanently effective with Filipinos. I have found that just and kind treatment, uniform and continued, is the only way by which these people can be made permanently our friends and satisfied with United States sovereignty.

Having been stationed six years on the Rio Grande, I am well acquainted with the natives of the State of Tamaulipas, Mexico, and while stationed in the province of Santa Clara, Cuba, I visited every town in that province, and was able to observe the intelligence and education there. I believe that the people of Tayabas Province are in every way superior in education, intelligence, morals, and civilization to the people of Tamaulipas or Santa Clara.

As an officer of the Army, I regret that my duty as civil governor of this province impels me to state the attitude of the majority of my fellow-officers toward civil government in these islands and its effect upon the people, but I feel that the interests of the Government involved and the future of these people, for whose welfare we are responsible, are of such vast importance that I ought to report things as I see and know them, in order that my civil superiors may be able intelligently to order what the situation demands.

Very respectfully, your obedient servant,

CORNELIUS GARDENER,
Major, Thirteenth Infantry, United States Army, Provincial Governor.

ASSAULTS, EXTORTIONS, RAPES, AND ATTEMPTS AT RAPE COMMITTED BY MACABEBE TROOPS UNDER AMERICAN AUTHORITY IN MONTALBAN, AND REFLECTED IN OFFICIAL REPORTS AND IN ACCOMPANYING AND TRANSMITTING PAPERS.

[Proceedings, Senate Committee on the Philippines, pp. 1755, 1757, 1758, 1761.]

EXTRACTS FROM REPORT OF MAJ. FRANK B. M'KENNA, INSPECTOR-GENERAL, UNITED STATES VOLUNTEERS.

MANILA, P. I., *March 5, 1901.*

* * * A great many more witnesses were anxious to be heard, but I ascertained that their testimony was generally of the same character as the above, and consisted of assaults, extortions, rape, and attempted rape, but in no cases except those mentioned could the assailants be identified, but all stated positively they were Macabebe soldiers.

Among other witnesses, seven young women from Montalban appeared before me at San Mateo, and said they were afraid to return to their homes in Montalban; that upon the arrival of the Macabebe soldiers propositions were made to them, which they declined; unless they consented, they were told they would be killed and the houses of their families burned. They were afraid to complain, and in fright fled to San Mateo. * * *

Capt. F. H. Cameron, Philippine Cavalry, commanding officer at Montalban, believes that the greater part of the complaints on the part of the people are fabricated, by reason of their intense hatred for his soldiers and because on the night of February 25 a number of the friends and relatives of the principal people were found among the alleged insurgent recruits discovered. There may be something in this, but I hardly think it would cause over 300 families to leave town, as the presidente of San Mateo declared to me was the case. Moreover, the witnesses that I examined impressed me for the most part with their earnestness, and on some were still visible the bruises of alleged assault. At least 200 people desired to make complaints, and I examined over 50, until I found that the evidence was merely cumulative. There can be no doubt, whatever the cause, that the utmost dislike and hatred is felt on the part of the people toward the present Macabebe garrison at Montalban. It probably had its origin in the fierce tribal rancor that exists between Tagalo and Macabebe, but has unquestionably been largely increased by the conduct of the soldiers themselves, and unless the sternest discipline is imposed upon these native troops by the American officers their usefulness as a pacifying agent for the United States in the vicinity of Montalban or San Mateo is gone.

* * * * * * * *

In conclusion, I find, if the almost unanimous testimony of the natives is to be considered, that the Macabebe garrison at Montalban has committed numerous outrages against them; that these acts of violence commenced almost with the arrival of the Macabebes and occurred at intervals until the night of February 25, when on that night they must have indulged themselves in a saturnalia, almost, of rapine and violence under the guise of looking for insurgents; that the responsibility for the acts on the night of February 25

belongs to First Lieut. Dennis P. Quinlin; that the subsequent responsibility for not making searching investigation and bringing to punishment the guilty is due to Captain Cameron, Philippine Cavalry.

The sternest discipline should henceforth be imposed upon the Macabebe soldiers to prevent repetition of the acts that have been related.

Capt. Duncan Henderson, Forty-second Infantry, United States Volunteers, commanding San Mateo, being duly sworn, states that he knows from his own knowledge nothing of the reported acts of aggression of the Macabebes, but that it is his firm belief that the people are afraid of them on account of their many acts of robbery and violence. He has known the people about here for some time, and believes their statements in this respect. In the last week he reports that the presidente of San Mateo told him that between 200 and 300 families had left Montalban and are now residing in San Mateo, Mariquina, or Manila. He states that if some investigation had not been made into the constant reports that he heard of acts of violence toward the people in the post of the Macabebes he deemed it his duty to report the matter to the district commander.

[Proceedings Senate committee, p. 1753, accompanying above reports.]

HEADQUARTERS DEPARTMENT NORTHERN LUZON,
Manila, March 14, 1901.

* * * I do not agree with the district commander in the opinion that these crimes are the result of the bitter feeling between Macabebes and Tagalos. All native troops, when they can escape the immediate control of their officers, are liable to commit murders, and many will rob and ravish whenever they will have the opportunity.

The squadron of Philippine Cavalry was sent to Montalban, San Mateo, and vicinity to replace the Twenty-seventh Infantry, United States Volunteers, when withdrawn to be sent home for muster out. No other troops were available for duty there. The necessity of affairs here oblige us to employ native troops, and these Malay savages will always be liable to commit crime alike disgraceful to our service and an outrage upon humanity. All engaged in the crimes related in these reports will be punished to the full extent of military law, after due trial and conviction.

In this connection I desire to call attention to the necessity for the greatest care and caution in the organization of native troops. We can rely in some measure upon the loyalty of the Macabebes. There are, so far as I know, no other tribes that would not be liable to turn against us whenever they imagined that there was any prospect of successful treachery or treason.

LOYD WHEATON,
Brigadier-General, Commanding.

[Proceedings Senate committee, p. 1750—Transmitting above reports.]

HEADQUARTERS DIVISION OF THE PHILIPPINES,
Manila, P. I., March 16, 1901.

SIR: The accompanying record is submitted as indicating the difficulties in disciplining native troops and suggesting that the organization thereof, as provided by recent law, should be conducted under very conservative restrictions and very careful administrative control. The employment of a large number of natives has been absolutely necessary in order to relieve the volunteers and return them to the United States in time. The Macabebes, as far as loyalty to the United States is concerned, are absolutely reliable. I therefore authorized the employment of 1,500 as an emergency measure of temporary nature to tide over the transitory period, well knowing at the time that we were taking considerable risk as to their getting out of hand and committing excesses.

In spite of every precaution the deplorable incidents occurred which are narrated in accompanying papers, and all that is left for us to do in the premises is to apply punitive remedies, which will be done without mercy to the guilty parties. * * *

Very respectfully,

ARTHUR MACARTHUR,
Major-General, U. S. A., Commanding.

The ADJUTANT-GENERAL UNITED STATES ARMY,
Washington, D. C.

THE MAYOR OF A TOWN AND A POLICEMAN WERE ARRESTED, TORTURED AND REQUIRED TO DIG THEIR OWN GRAVES, AND THEY WERE THEN SHOT AND PUT INTO THE GRAVES WHICH THEY HAD BEEN REQUIRED TO DIG FOR THEMSELVES.

[Extracts from the official report of J. G. Livingston, governor of the province of Sorsogon. Proceedings Senate Committee on Philippines, pp. 2825-2828.]

PROVINCE OF SORSOGON, P. I.,
OFFICE OF THE GOVERNOR,
Sorsogon, January 7, 1902.

The EXECUTIVE SECRETARY,
UNITED STATES PHILIPPINE COMMISSION, *Manila, P. I.*

SIR: I have the honor to report that Ysidro Gallanosa, presidente of the town of Santa Magdalena (Busainga), province of Sorsogon, was shot and killed by a detachment of Company I, Fifteenth Infantry, on November 7, 1901, under the following circumstances so far as known:

For several months previous to the date above the province had been considerably disturbed by a movement of the ignorant mountain people, who had organized themselves to resist the Government. Santa Magdalena is a small isolated town in the southeastern corner of the province. It had never been garrisoned, and the people had never felt the protection of troops nor come into contact with Americans. The presidente was an intelligent man, having property interests in his town, and I believe was endeavoring to do all in his power to rebuild it after its destruction during the insurrection about a year ago.

The leader of the adjoining town of Matnog had been asking the Commission that Magdalena be reunited with it as a barrio, as formerly, which movement was naturally resisted by Magdalena, and the presidente of the latter was doing all in his power to keep his town in good condition, as he had been told that his conduct and that of his town would decide whether Magdalena would remain as it was, independent, or return to Matnog as a barrio. I state this to show that he probably knew and realized that it was of vital interest to him not to act in any way contrary or hostile to the existing government. For the purpose of consulting with me on the above matter he came to Sorsogon in the latter part of September, and while here the disturbed portion of the province was pretty well patrolled by the military, and officers and soldiers passing through Magdalena did not meet the presidente, he being here.

At the regular quarterly assembly of the presidentes at the capital in October I brought to their attention the conditions existing at the time, and explained to them that they themselves were largely to blame, endeavoring to impress upon them that if they ever wanted the province to advance, or if they cared to live in peace and tranquillity they would have to take matters into their own hands and work for the public good, and that to their efforts would be largely due what might be accomplished in this direction. * * * I appointed a committee of seven prominent men from the towns involved and directed them to take such action themselves as they thought best toward capturing the leaders, which they did, bringing in later nearly all the leaders.

One of this committee, Francisco Frivaldo, of Magdalena, after a day in the mountains looking for bad men, November 5, returned in the evening with several prisoners and a lot of anting anting papers, and on arrival went straight to the presidente's house to report. During the presidente's absence in Sorsogon the town had been temporarily garrisoned by a detachment of Company L, Fifteenth Infantry, commanded by a corporal, and while the presidente was examining the prisoners and papers just brought in the corporal and some of the detachment entered, and on seeing the papers concluded the presidente was an insurgent and arrested him and all present, later taking them to Matnog, to Lieut. F. W. Harker, Fifteenth Infantry, commanding the company. Lieutenant Harker does not understand Spanish and I do not think any of his men have a sufficient knowledge of the language to interpret well. * * *

The next day the presidente and Gamit were taken out in the woods and hung up until their feet were nearly off the ground, and were asked if they would "talk;" to which they replied that they would, naturally. They were returned to Matnog, where the secretary was again questioned by Lieutenant Harker as to the conduct and character of the presidente. * * * He was returned to the jail, and later he, with the presidente and Ciriaco Funes, a policeman of Magdalena, were again taken to the hills, being compelled to carry a rope, a pick, and a spade, and on reaching a certain spot the presidente was put to work digging what would appear to be a grave. Then the presidente was bound and shot in the back. The secretary states he saw all of this himself, and also saw the policeman bound in the same way and a little later heard shots, which he presumed were fired at the policeman, as he was also killed. The only eyewitness to the murder, therefore, was the secretary, other than the soldiers. I inclose herewith the sworn statements of Gamit and Francisco Frivaldo, which I believe to be in the main points true.

* * * * * * *

This matter was not officially reported at the time by me, as I thought it best to await a reply to my requests to the military authorities for the results of their investigation, they claiming at the time that the arrest and subsequent killing were justifiable, and I considered it best to have both sides of the question when the case was reported.

Upon careful consideration of the whole question, from my knowledge of the conditions existing at the time and from my personal knowledge of those most directly concerned, I am forced to the opinion that the original arrest of these men was absolutely unwarranted, possibly due to malinterpretation and overzealousness on the part of the corporal; that the two prisoners killed did not attempt to escape, and that their killing was murder.

Very respectfully,

J. G. LIVINGSTON, *Governor.*

ADMINISTRATION OF THE WATER TORTURE, THE BURNING OF TOWNS AND BARRIOS, SHOOTING PRISONERS OF WAR AND OTHER OUTRAGES COMMITTED BY AMERICAN TROOPS, AS BROUGHT OUT IN TESTIMONY BEFORE SENATE COMMITTEE ON PHILIPPINE AFFAIRS.

[Proceedings Senate Committee on Philippines, pp. 1527-1538.]

TESTIMONY OF CHARLES S. RILEY.

(Sworn by the chairman.)

By the CHAIRMAN:

Q. Are you now in the Army of the United States?
A. No, sir; I am not.
Q. You have been in the Army?
A. Yes.
Q. What regiment?
A. I was in the First Connecticut in 1898 for six months, and afterwards in the Twenty-sixth Infantry Volunteers for twenty-two months.
Q. While you were in the Twenty-sixth Volunteer Infantry were you in the Philippine Islands?
A. Yes, sir.
Q. During the whole period of your service?
A. For eighteen months.

By Senator RAWLINS:

Q. You have given your place of residence, I believe.
A. Northampton, Mass.
Q. When did you arrive in the Philippine Islands?
A. October 30, 1899. That is, we arrived in the harbor of Manila on the 25th and we arrived at outstation October 30.
Q. And when did you arrive in San Francisco?
A. April 20, 1901.
Q. During your service in the Philippine Islands what position in the Army did you hold?
A. I held all the positions from private to first sergeant. I was discharged as the first sergeant of the company.
Q. During your service there did you witness what is generally known as the water cure?
A. I did.
Q. When and where?
A. On November 27, 1900, in the town of Igbaras, Iloilo Province, Panay Island.
Q. Was your company stationed at Igbaras?
A. One detachment of 15 men garrisoned the town.
Q. And what building did you occupy?
A. It was known as the convent, the convent in connection with the church. It was a convent or a school.
Q. Did you occupy the first floor or the second floor?
A. We occupied the entire building.
Q. How was the second story reached?
A. By stone steps.
Q. You may state whether or not there was a corridor at the head of the stairway.
A. There was a corridor on the right, and then we went through another corridor into the room we called our squad room, known as the quarters of the soldiers.
Q. Did you arrive there the morning of the 27th?
A. Yes, sir; at daylight.
Q. Who were with you at the time you arrived there?
A. There were from 12 to 14 men of Company M, Twenty-sixth Infantry, and about 40 men of the Eighteenth United States Infantry, a mounted detachment known as the Gordon Scouts.
Q. Did you pass that morning into the upper floor of this building?
A. Yes, sir.
Q. What soldiers and officers were there?
A. Taking all the men, there must have been about 40 of the Twenty-sixth and about an equal number of the Eighteenth Infantry, regulars, about 40 of each.
Q. About 80 men in all?
A. Yes.

Q. Who commanded your company?
A. Captain McDonald, of the Twenty-sixth Infantry—Capt. Fred McDonald.
Q. What other officers connected with the regulars?
A. Captain Glenn, captain, Twenty-fifth United States Infantry, judge-advocate Department Visayas, commanded the forces, consisting of detachments of Eighteenth United States Infantry and the Twenty-sixth United States Infantry Volunteers.
Q. Was he judge-advocate under General Hughes?
A. Yes; that was General Hughes's department. Then there was Lieutenant Conger, commanding the scouts, and the contract surgeon, Lyons.
Q. Did you pass up the stairway into the corridor above that morning, into the main hall?
A. Yes.
Q. And as you passed up, you may state what you saw.
A. I saw the presidente standing in the——
Q. Whom do you mean by the presidente?
A. The head official of the town.
Q. The town of Igbaras?
A. Yes, sir.
Q. A Filipino?
A. Yes, sir.
Q. How old was he?
A. I should judge that he was a man of about 40 or 45 years.
Q. When you saw him, what was his condition?
A. He was stripped to the waist; he had nothing on but a pair of white trousers, and his hands were tied behind him.
Q. Do you remember who had charge of him?
A. Captain Glenn stood there beside him and one or two men were tying him.
Q. You may state whether or not there was a water tank in the upper corridor.
A. Just at the head of the stairs on the right there was a large galvanized-iron tank, holding probably 100 gallons, about 2 barrels. That was on a raised platform, about 10 or 12 inches, I should think, and there was a faucet on the tank. It was the tank we used for catching rainwater for drinking purposes.
Q. As you passed up, did you pass through the corridor into the hall?
A. Yes; directly through the hall into the squad room.
Q. And you may state whether or not soldiers were passing up and down.
A. Yes, sir; men were congregated around the door, and they were passing back and forth from downstairs upstairs and from upstairs downstairs.
Q. You first saw the presidente under the condition you describe, with his hands being tied behind him?
A. Yes.
Q. What else did you observe being done with him?
A. He was then taken and placed under the tank, and the faucet was opened and a stream of water was forced down or allowed to run down his throat; his throat was held so he could not prevent swallowing the water, so that he had to allow the water to run into his stomach.
Q. What connection was there between the faucet and his mouth?
A. There was no connection; he was directly under the faucet.
Q. Directly under the faucet?
A. Directly under the faucet and with his mouth held wide open.
Q. Was anything done besides forcing his mouth open and allowing the water to run down?
A. When he was filled with water it was forced out of him by pressing a foot on his stomach or else with their hands.
Q. How long was his mouth held open?
A. That I could not state exactly, whether it was by pressing the cheek or throat. Some say that it was the throat, but I could not state positively as to that, as to exactly how they held his mouth open.
Q. About how long was that continued?
A. I should say from five to fifteen minutes.
Q. During the process what officers were present, if anybody?
A. Lieutenant Conger was present practically all the time. Captain Glenn walked back and forth from one room to the other, and went in there two or three times. Lieutenant Conger was in command of water detail; it was under his supervision.
Q. You may state whether or not there was any Filipino interpreter present.
A. There was a native interpreter that stood directly over this man—the presidente—as he lay on the floor.
Q. Did you observe whether the interpreter communicated with this presidente?
A. He did at different times. He practically kept talking to him all the time, kept saying some one word which I should judge meant "confess" or "answer."
Q. Could you understand what was said?
A. No, sir; I could not understand the native tongue at all.
Q. At the conclusion, what then was done?
A. After he was willing to answer he was allowed to partly sit up, and kind of rolled on his side, and then he answered the questions put to him by the officer through the interpreter.
Q. You say they pushed the water out of him. How was that done—what was the process?
A. I did not see the water forced from him. Some said it was forced by the hand, and others by placing the foot on the stomach; I didn't see the water forced from him.
Q. After he got up what did you next see?
A. It was after he gave all the desired information. He was then untied and allowed to dress, and taken downstairs in front of the quarters.
Q. Where did they take him?
A. They took him downstairs outside the building, and he stood in front of the building, waiting for his horse. He was to guide the expedition up into the mountains.
Q. While standing on the sidewalk what took place?
A. More information was sought for; and as he refused to answer, a second treatment was ordered.
Q. Where were you at that time?
A. I was in front of the building at the time, on the sidewalk.
Q. In front?
A. Yes; on the stone walk. They started to take him inside the building, and Captain Glenn said, "Don't take him inside. Right here is good enough." One of the men of the Eighteenth Infantry went to his saddle and took a syringe from the saddlebag, and another man was sent for a can of water, what we call a kerosene can, holding about 5 gallons. He brought this can of water down from upstairs, and then a syringe was inserted, one end in the water and the other end in his mouth. This time he was not bound, but he was held by four or five men and the water was forced into his mouth from the can, through the syringe.

By Senator BURROWS:

Q. Was this another party?
A. No; this was the same man. The syringe did not seem to have the desired effect, and the doctor ordered a second one. The man got a second syringe, and that was inserted in his nose. Then the doctor ordered some salt, and a handful of salt was procured and thrown into the water. Two syringes were then in operation. The interpreter stood over him in the meantime asking for this second information that was desired. Finally he gave in and gave the information that they sought, and then he was allowed to rise.
Q. May I ask the name of the doctor?
A. Dr. Lyons, the contract surgeon.
Q. An American?
A. Yes, sir.

By Senator RAWLINS:

Q. Was it Captain Glenn who said not to take him in?
A. Captain Glenn.
Q. How long did the second infliction of this torture continue?
A. About the same as the first; from about five to fifteen minutes. I could not tell you the exact time.
Q. How many men held this Filipino down when the first torture was inflicted?
A. About four men; one to each arm and one to each leg.
Q. Was this same interpreter present at the second infliction of the torture?
A. Yes; he was.
Q. What did he do?
A. He stood over him asking him—the same language used before until he was willing to confess, and then they stopped the water. As soon as he made a sign, or as soon as he answered that he would confess, he was allowed to get up.
Q. Do you know what information they obtained from him?
A. The question asked, the information they sought for, was as to whether runners or messengers had been sent out notifying the insurgents of our arrival; and not giving a satisfactory answer, or he refusing to answer, he was given this treatment; and then he acknowledged that he had done so, and as we entered the lower gate one of his police went out at the upper gate notifying the insurgents that reenforcements were in the town, to be on the watch.
Q. First Lieutenant Conger and Captain Glenn were of the Regular Army?
A. Captain Glenn and Lieutenant Conger; yes, sir.
Q. Captain McDonald and the men with you were of the volunteers?
A. Yes, sir.
Q. You went on an expedition, did you, after that?
A. Yes, sir; the entire force that came there, except those who garrisoned the town, went on the expedition to the mountains.
Q. Did you yourself ever witness any other infliction of the water cure?
A. I did not.
Q. Did you have any conversation with the regulars who were present on that occasion?
A. They talked freely as to other treatments that had been given by them other times previous to that.
Q. How large a town was this village of Igbaras?
A. I do not know how many acres it covered.
Q. I do not mean how many acres, but about how many houses?
A. From 400 to 500 native shacks or bamboo houses.
Q. How long were you there after your arrival that morning?
A. We were there until about 8 o'clock the next morning. We were in the immediate vicinity of the mountains back of the town. We left there between 8 and 8.30 the next morning.
Q. What was done with the town?
A. After returning from the mountains the town was burned that night.
Q. By whose order?
A. By order of Captain Glenn.
Q. How many houses were destroyed?
A. Practically the entire town, with the exception of the church, the quarters of the soldiers, and about twenty or thirty houses in the lower section of the town.
Q. How were those houses occupied?
A. They were occupied by native families.
Q. Men, women, and children?
A. Men, women, and children; yes, sir.
Q. Do you know what reason, if any, was assigned for burning the town?
A. On account of the condition of affairs exposed by the treatment.
Senator BEVERIDGE. How was that?
A. It was burned on account of the exposition of the affairs in the morning, the information received from the presidente, from the officials, and the town was burned in consequence.

[Proceedings, Senate Committee on the Philippines, pp. 1538 to 1547.]

TESTIMONY OF WILLIAM LEWIS SMITH.

(Sworn by the chairman.)

By Senator RAWLINS:

Q. Were you at Igbaras, Iloilo Province, island of Panay, on or about the 27th of November, 1900?
A. Yes, sir.
Q. What regiment were you connected with?
A. Twenty-sixth Volunteer Infantry.
Q. How long had you been in the service at that time?
A. Since July 17, 1899.
Q. Where is your home?
A. Athol, Mass.
Q. You may state whether or not you witnessed what is known as the water cure.
A. I did, sir.
Q. And where did you see it?
A. At the town of Igbaras.
Q. On what day?
A. November 27, 1900.
Q. Upon whom was it inflicted?
A. Upon the presidente of the town and two native police.
Q. Did you observe it inflicted more than once?
A. I saw part of it at one time and the whole of it the second time.
Q. Describe what you saw on the first occasion.
A. We arrived at the town about daylight in the morning. It was just breaking day. There was an outpost put all over the town, so that no people could leave town by the gates, and we proceeded to quarters. A detachment of our company was stationed there. The company that we joined was commanded by Lieutenant Conger, of the Eighteenth Infantry, known as Gordon's Scouts. We proceeded to quarters, and I was one of a detail that was sent out to ask the presidente to come over to the quarters. On the way we met him and proceeded to the house of the padre, the priest of the town, to get him. He was not at home.
The presidente went along over to the quarters. When I got back to the quarters, the boys were sitting around, and I went upstairs, and the first that I saw of the presidente was that he was stripped. He had nothing on

but his pants. His shirt and coat were off, and his hands were tied behind him, and Lieutenant Conger stood over him, and also a contract doctor by the name of Dr. Lyons, and as we stopped there they proceeded to give him what is known as the water cure. It was given from a large tank. I should say the tank held—well—a hundred gallons, anyway. I do not know whether it was full at the time, but the tank would hold about that—two barrels of water I should think, surely. He was thrown on his back, and these four or five men, known as the water detail of these Gordon Scouts, held him down. Water was administered by the opening of the faucet. We could not get close enough to see exactly how it was done, because if we would congregate there at all the officers would tell us to pass on. We had to go upstairs to get into our squad room, and if we would congregate there they would tell us to pass on. We would go back and forth and see it at times.

The second time I saw it after he had confessed what they wanted—I do not know whether he confessed or not, I only saw a part of that—but downstairs they asked him through an interpreter, they all stood over him at the time, and they asked him if he sent any word out to the insurgents when the troops arrived in town. One of the native police in the meantime disclosed that he had, that he had sent him personally, so in order to get that from him Lieutenant Conger called for the water detail. This time it was given by means of a syringe. Two men went out to their saddlebags and obtained two syringes, large bulbs, a common syringe, about 2 feet of common hose pipe, I should think, on either end. One was inserted in his mouth and the other up his nose. We could all stand by there and see that. When this doctor said to get a pail of water, and they started into the building with him, Captain Glenn was there, and he said, "No, this is good enough right here on the outside." So we all had a chance to witness it that time; and as the water did not seem to have the desired effect, the doctor stood over him and said to get a cup of salt. One of the men went upstairs and procured a cup of salt and it was thrown into the water, and the interpreter stood there all the time, and after he had had it some time he did disclose what they wanted, and he said he was willing to guide us out there. We went out and stayed the greater part of the day, but did not see anything of the insurgents. That is what I saw of the water cure.

Q. What became of that town?

A. It was burned about 8 o'clock, under orders of Captain Glenn. Lieutenant Conger started out with his men—that is, the Eighteenth Infantry—to burn part of the town. Captain McDonald, of the Twenty-sixth, took his men and went to the lower end of the town. We started burning after they started burning at the other end, in order to give the natives time to get out before their buildings were burned.

Senator DUBOIS. Did you personally do any of the burning?

The WITNESS. Yes; I did set fire to some buildings.

By Senator RAWLINS:

Q. How were those occupied?

A. By native men, women, and children alike. Nearly all of the buildings were bamboo and nipa, and all you have to do is to light this nipa roof and it is gone in a short time.

Q. What became of the furniture and household effects?

A. They do not have a great deal of furniture or household effects. They sleep on the floor. Only the better class there have beds. They sleep on the floor as a rule. Of course what few tables and benches they had were destroyed. They only had time to save the clothes that they wore at the time.

Q. Was any discrimination made as to whose buildings should be burned and whose not?

A. The church was to be saved and the quarters occupied by our men, and five large buildings that were not made of this bamboo construction but were made of wood—good buildings. They were to be saved for the occupancy of the women and children after the rest of the town was burned.

Q. You have already stated, I think, that this water cure was inflicted by Lieutenant Conger of the regulars, by scouts under his command?

A. Yes, sir. The way he had of ordering it done was, "Water detail;" that is all I heard him say. The men went on then and did the rest of it. The men stood over, as did Captain Glenn and Dr. Lyons, and witnessed it both times.

Q. After the town was burned and after you returned the presidente what became of him?

A. He was taken to Iloilo for trial; I don't know what his sentence was.

Q. How old a man was he?

A. He was a man 45 or 50 years old, I should think; 45 years old, anyway

By the CHAIRMAN:

Q. This was the only case you witnessed?

A. The only case I witnessed; the only case I saw with my own eyes.

Q. Were there any other applications of the water cure by men of your regiment that you know of?

A. No, sir.

Q. This is the statement of your colonel:

"Major Cook, Captain McDonald, and Sergeant Riley state that no officers or soldiers of this regiment took part in the so-called water-cure proceedings or other threats against the natives on the occasion stated."

A. At Igbaras they did not, otherwise than burn the town. They had nothing to do with the water cure.

Q. That related to water cure, of course?

A. Yes, sir.

Q. Your own regiment was not guilty at all?

A. Not that I know of; our company, at least, was not.

By Senator BURROWS:

Q. I did not understand clearly by whose orders this village was burned.

A. Captain Glenn; he was at that time judge-advocate of the island, under General Hughes.

Q. What was the population of the town?

A. I should say 25,000; a good many people, often 12 or 14, live in one of these little shacks. I may estimate it high, but I have heard it estimated as a population of 25,000.

By the CHAIRMAN:

Q. Is it as much of a town as Athol?

A. I should think so.

Q. That is a good ways from 25,000.

A. But they live differently there. They live 12 or 14 people in the house.

Senator BURROWS. I want to ask you——

A. (Continued.) I do not think there are quite as many as that in the town itself. It was estimated as 25,000, but that includes all of the barrios; and only part of the barrios were burned. We burned everything we passed going to the mountains. The town is estimated on the map to be 25,000.

The CHAIRMAN. It is a sort of a township, like they have in Massachusetts?

The WITNESS. Yes.

Senator BEVERIDGE. You mean the township contains in all about 25,000?

The WITNESS. Yes; that is what I mean.

The CHAIRMAN. It is like our townships in Massachusetts, comprising a large area?

The WITNESS. Yes, sir.

By Senator BURROWS:

Q. Then I will ask you the population of the village, not of the township.

A. At least 10,000.

Q. You say children are very numerous there?

A. Yes, sir.

Q. What time of the evening was this village fired?

A. Between the hours of 8 and 8.30.

Q. Notice was given, of course, before that time to the inhabitants of the town?

A. Notice was given in this way: When Lieutenant Conger and his men started to the upper end of the town, they warned the people in that end that they were going to burn the whole town. Notice was not given before that.

Q. They commenced at one end——

A. They commenced at one end, and that gave the people a chance to get out.

Q. How did they notify them?

A. By four or five interpreters.

Q. Did they go along crying out?

A. Yes, sir.

Q. Is that the way they did, or did they go into the houses and warn the people?

A. They cried out.

Q. That would give an opportunity for the women and children to get out?

A. Yes, sir.

Q. The fire burned very rapidly, did it not?

A. Yes, sir; by 12 o'clock the town was entirely destroyed.

Q. It was fired between 8 and 9 o'clock, and by 12 o'clock it was entirely wiped out?

A. Yes, sir; it was smoldering, but not a building was left that could be occupied, except those I mentioned were saved.

By Senator DIETRICH:

Q. There had been a great many assaults upon American soldiers; American soldiers had been murdered in a great many ways?

A. Not in our district. We never had a soldier injured in our district (until after that time); but in other districts they did.

Q. Did you condemn at the time this water cure?

A. Yes, sir.

Q. Did other soldiers condemn it?

A. Yes, sir; they thought it was very cruel treatment.

By the CHAIRMAN:

Q. Did you remain there until the conclusion of your service?

A. No; I was mustered out in San Francisco.

Q. I mean after this period.

A. Yes; I remained there from November 27 until March 4.

Q. Of the following year?

A. The following year; yes, sir.

By Senator RAWLINS:

Q. How long had you been there prior to November 27?

A. Since October 30, 1899.

Q. And you had been at Igbaras or in that vicinity about a year?

A. Yes, sir.

Q. And during that time you say there had been none of the American soldiers killed?

A. No one. I never saw a man killed or injured in our company until after the burning of Igbaras. We occupied five towns, and we had anywhere from ten to eighteen men in each town.

* * * * * * *

Q. Did you see the water cure administered to the police?

A. Yes, sir.

Q. When?

A. In the evening, under the tank, as they took the presidente the first time.

Senator BURROWS. What is that?

The WITNESS. In the evening they administered it to two of the police. They gave them the water cure under this large tank as they did to the presidente the first time, without the means of the syringe.

Senator RAWLINS. Who did that?

The WITNESS. The water detail, Lieutenant Conger and this Dr. Lyons. Captain Glenn was not there in the evening at that time. This was before the burning of the town. It was about 7 o'clock. We got to Igbaras about 5 o'clock, and this was about 7 o'clock.

By Senator CULBERSON:

Q. When they administered the water cure by means of the syringe, how many applications of the syringe were necessary in order to fill the men up with water?

A. It usually took about three, or four, or five minutes. They never stopped at all; they do not take it out at all; they keep it up, but they watch the man, and I noticed the doctor touched his heart once in a while. I noticed that.

Q. The doctor would watch the process?

A. Yes, sir.

Q. To see what effect it was going to have upon the man's heart?

A. Yes, sir.

Q. And you say they administered the water also through the nose?

A. Yes; one syringe up the nose and the other in the mouth.

By Senator BURROWS:

Q. What was this water cure administered to these two policemen for?

A. They swore that the whole police force of the town of Igbaras had sworn allegiance to the presidente any time they were called to take arms against the American troops in the town.

Q. They swore to that—when?

A. That evening.

Q. Before the water cure was administered?

A. No, sir; afterwards.

Q. Is it your understanding that this water cure was administered as an infliction upon these people because outrages had been perpetrated on our troops in other localities?

A. I do not understand it so.

Senator RAWLINS. It was administered for the purpose of compelling information.

The WITNESS. It was for the purpose of compelling information; yes.

[Proceedings, Senate Committee on Philippines, pp. 1726-1736.]

TESTIMONY OF EDWARD J. DAVIS.

Sworn by the chairman.

By the CHAIRMAN:

Q. You have been in the Army of the United States?

A. Yes, sir.

Q. In what regiment?
A. Twenty-sixth United States Volunteers.
Q. And what was your rank?
A. Sergeant.

By Senator RAWLINS:

Q. Mr. Davis, when did you enlist in the Army?
A. I enlisted the 15th of July, 1899.
Q. What time did you arrive in the Philippines?
A. October 3, 1899.
The CHAIRMAN. What is your residence, if I may ask?
The WITNESS. Greenfield, Mass.

By Senator RAWLINS:

Q. I ask you how long you resided in Greenfield?
A. Going on fourteen years.
Q. Were you at Igbaras on or about the 27th of November, 1900?
A. Yes, sir.
Q. Were you acquainted with Sergeant Riley?
A. Yes, sir.
Q. Of Northampton, Mass.?
A. Yes, sir.
Q. Are you acquainted with William L. Smith?
A. Yes, sir.
Q. When did you first arrive at Igbaras?
A. I had charge of that detachment at Igbaras; I do not remember the date I went over there. I was in Igbaras myself about seven months, and I had charge of the detachment there, a detachment of 15 men.
Q. Fifteen men were under you?
A. Yes, sir.
Q. You had been there how long prior to the 27th of November.
A. I had been there going on seven months.
Q. About how large a town was Igbaras?
A. I should say it had about 10,000 inhabitants.
Q. Were there any regulars there at your station?
A. No. sir.
Q. Did any arrive on or about the 27th of November?
A. Yes, sir.
Q. How many?
A. Well, I should judge that there were 75 or more; I can not state the exact number.
Q. Who were the officers in command?
A. Captain Glenn was in command, Lieutenant Conger was in command of the scouts, and Dr. Lyons was there; he was the contract surgeon.
Q. What time did they arrive?
A. It was just daybreak.
Q. Was it about the 27th of November, 1900?
A. Yes, sir; it was somewhere about that.
Q. You may state whether or not the presidente or mayor of Igbaras was taken into custody that day.
A. He was.
Q. And where was he brought?
A. He was brought to the convent. I went for him myself.
Q. By whose order was he arrested?
A. Orders from Captain Glenn.
Q. Where did you take him?
A. I took him to the convent.
Q. After he arrived there about what time in the morning was it?
A. It was about 7 o'clock, I should judge.
Q. After he was taken there what was done with him?
A. He was taken out into a big hall in the convent there, his clothes were all taken off, his hands were tied behind him, and he was asked for information in regard to runners being sent up into the mountains; asked if the scouts had arrived there. He would not give this information, so they took him to this water tank. It was a tank holding about a hundred gallons of water. They held him under the faucet and he was made to take this water into his mouth at the command of Captain Glenn.
Q. How many men were engaged in that operation?
A. There were two.
Q. What process did they resort to?
The CHAIRMAN. Were they men of your regiment?
The WITNESS. No, sir; they were the Eighteenth Regulars.

By Senator RAWLINS:

Q. How was his mouth kept open?
A. It was kept open with a stick; but I can not describe just how the stick was, because they had their hands over his mouth most of the time.
Q. And after he was filled up with water, what else was done with him?
A. After they filled him up with water he swelled way up and then these two soldiers would roll the water out of him. They had an interpreter over him, and they asked him if he would tell what information they were after. He told some, and then after they released him and he had walked away and they were going out in the mountains somewhere, and they got downstairs, they wanted further information out of him in regard to these runners going out into the mountains, and he would not give it. So they took him down right there and they took a syringe and squirted water up his nostrils. He would not give the information then and they put salt in the water. Then he was willing to tell.
Q. Was he thrown down the last time?
A. Yes, sir; his clothes were not taken off, but he was thrown down on the outside of the convent.
Q. On his back?
A. Yes, sir.
Q. Who administered the cure the last time?
A. Dr. Lyons.
Q. Who was Dr. Lyons?
A. He was a contract doctor.
Q. State whether Captain Glenn was present at that time.
A. He was; and Lieutenant Conger was present.
Q. How many men held him?
A. Two men, the same as when he took the water cure upstairs.
Q. About how long was this continued, how long was he kept bound?
A. When he was under the tank of water he was kept there as much as five or ten minutes. They filled him clear up, and it would swell his stomach until all through here would be good and hard [indicating], and then they would roll him, would roll the water out of him.
Q. What was that process?
A. They took their fists like that [indicating].
Q. On his stomach?
A. Yes, sir.
Q. His body was not rolled over?
A. No, sir.
Q. But they would double up their fists in the way you indicated?
A. Yes; they would double up their fists and water would squirt out of his mouth.
Q. What, if any, manifestation of pain did he show?
A. He screeched terribly and his eyes were all bloodshot from, I suppose, taking the water.
Q. Was the same process gone through with on the sidewalk below?
A. Yes, sir.
Q. Both times?
A. Yes, sir.
Q. How old a man was he?
A. The presidente was, I should judge, a man of 40 years of age.
Q. Sergeant Davis, you had been there how many months prior to this time; how long had you been at this town?
A. I should judge about seven months.
Q. Had you had any trouble there?
A. No, sir; we had no trouble there at all.
Q. Had any attack been made on your troops?
A. No, sir.
Q. Any American soldiers killed or wounded?
A. No, sir.
Q. Had any of the inhabitants, as far as you know, given any offense?
A. No, sir.
Q. And by whose command did you go out and arrest presidente?
A. Captain Glenn's order.
Q. What position, if any, did Captain Glenn hold on General Hughes's staff?
A. He was judge-advocate of the Department of Visayas in Iloilo.
Q. What was the nearest point, during the time you were stationed there, at which there was any trouble prior to the 27th of November, at the time of this occurrence?
A. We never had any trouble. There was some trouble in one town some miles away.
Q. You say there were about 10,000 people in this town of Igbaras?
A. Yes, sir; the town was burned——
Q. How soon was it burned?
A. After the column went up into the mountains, and about half an hour after they returned the town was burned.
Q. Do you know by whose order it was burned?
A. By order of Captain Glenn.
Q. Were any of the houses left unburned?
A. Yes, sir; there were, I should judge, 15 houses left in the town.
Q. Out of about how many houses altogether?
A. I do not know. I could not tell you.
Q. Were there any other villages in the neighborhood of Igbaras burned at that time?
A. Yes, sir.
Q. How many?
A. One; a town called Tigbauan.
Q. How large a town was that?
A. It was a town of probably 12,000 or more. It had more inhabitants than Igbaras.
Q. How far distant from Igbaras was it?
A. Ten miles, I should say, over the mountains; I could not tell for sure.
Q. You know it was burned?
A. Yes, sir.
Q. Do you know whether there had been any disturbance at that town?
A. No, sir; there had not been.
Q. How long did you remain in the islands?
A. I remained there until our departure home.
Q. How many men were present on each of these occasions and witnessed this torture?
A. Do you mean taking the whole?
Q. Yes; for instance, the one that occurred in the corridor or the hall—upstairs, as I understand it.
A. There were perhaps 15 or 20 men. They were up and down there all the time.
Q. How many down on the sidewalk?
A. I could not say, for I was upstairs. I was going up and down several times attending to the guard and giving orders and went in and out.
Q. You were acting under command of Captain Glenn?
A. Yes, sir.
Q. You saw the occurrence downstairs; you saw them proceeding with it, as I understand it?
A. Yes, sir.
Q. Do you know where General Hughes was at that time?
A. No, sir; I do not. I believe he was in Iloilo.
Q. How far is Iloilo away from there?
A. About 30 miles from Igbaras.
Q. Did your company, the volunteers, take any part in this?
A. No, sir.
Q. What do you know, if anything, about a water detail connected with the regulars, under the command of Captain Glenn?
A. That was these two men that gave the water cure, what they called the water detail, as regards to tying their hands behind them and stripping them and putting them under the tank and holding them. That is what they called the "water detail."
Q. Did you talk with those regulars as to whether this had been done before?
A. Yes, sir.
Q. What did they say about it?
A. They said they had, that is all; they did not say where, and I did not ask them.
Q. Do you know whether this was inflicted afterwards?
A. I do not think so. He left our town that day.
Q. Do you know where he went?
A. He went to Iloilo.
Q. Captain Glenn?
A. Yes.
Q. That was the headquarters of General Hughes?
A. Yes, sir.

[Proceedings Senate Committee on Philippines, pp. 1765 to 1784.]

TESTIMONY OF GROVER FLINT.

Sworn by the chairman.

By the CHAIRMAN:

Q. You served in the Army in the Philippines?
A. I did, sir.
Q. And you held a commission there?
A. I did; as first lieutenant of the Thirty-fifth Infantry.
Q. How long were you there?
A. I was there somewhat over a year and a half; that is, from November, 1899, until my regiment moved home, in April, 1901.
Q. Where were you stationed during that time?
A. For a greater part of that time at Baliuag, Luzon.
Senator DIETRICH. What province is that in?
The WITNESS. Bulacan Province.

By the CHAIRMAN:

Q. That is up in the center?

A. It is the third largest town in the province; it is after Malolos and Bulacan.

Q. Is that one of the Igorroti provinces?

A. Oh, no; it is Tagalo.

Q. I called you here because Mr. Herbert Welch informed the committee that you would be able to testify as to the cruelties practiced on the natives by our troops. Now, if you have any statement to make in regard to that the committee will hear it.

A. I can only answer any specific question on that point.

Q. Were you present on any occasion when the "water cure" or any other torture was inflicted upon the Filipinos?

A. Yes, sir.

Q. When was that?

A. It was early in May; I do not remember the exact date, because I did not keep a diary at the time.

Q. Early in May, 1900?

A. Yes, sir; my company with another company from Baliuag. These two companies were part of the force that made a clearing up of the Candaba Swamp, which lay to the left of the Rio Grande, between us and Pampanga Province. There were supposed to be a great many arms concealed there. We moved out, and we had an advance guard of Macabebe scouts. The small hamlets that lay in our path were surrounded, and the Macabebes corralled these men and put them through this ordeal, and gathered a great many guns thereby.

Q. What men were they?

A. I do not know who was in command.

Q. The Macabebe scouts took these men prisoners?

A. As the towns were approached a little skeleton cordon was thrown out. In some cases our companies moved out and formed it. The Macabebes would then enter the houses and pull out these men and talk with them and take them down to the well and put them through this test, and then the men would go off and get the guns. That was the thing that I saw at that time on that special evening.

Q. They tortured them, you say, to get knowledge of the guns, where the guns were concealed?

A. Yes, sir.

Q. Was this done entirely by the Macabebe scouts?

A. On that evening it was done entirely by the Macabebe scouts, but on the following morning we kept on our march, and we collected all the countrymen in the barrios, and a little farther along——

By Senator BEVERIDGE:

Q. Just a moment before you go any further. Did you get the guns?

A. Yes, sir.

Q. After the application of the test you got the guns?

A. Yes, sir.

Q. Go ahead.

A. Of course I could not testify as to the number; I was in the background. On the following day this thing was repeated and our men took quite a little part in it, apparently as volunteers. They were not ordered to do so, I know that.

By the CHAIRMAN:

Q. They were not ordered to do so?

A. No.

Q. They were men of your regiment?

A. Yes; men of my regiment.

Q. Was any effort made to prevent it by the officer?

A. Not the slightest.

Q. Did you witness any specific case?

A. I witnessed some twenty specific cases.

Senator PATTERSON. What was that, Lieutenant?

The WITNESS. I witnessed quite a number of cases, because I was acting as a sort of an aid to the officer in command of our two companies, Major Geary. The Macabebes who were detailed with us were not under a commissioned officer at this time. They were with us and they were under a sergeant.

The CHAIRMAN. Was he a Macabebe?

The WITNESS. He was a white man. He was an American.

Senator BURROWS. Was he in the United States service?

The WITNESS. Yes; he was a regular soldier, but detailed. I do not remember his name, sir. And I saw this being done, and I told Major Geary. I went over and said to Major Geary that no commissioned officer seemed to be in charge there or seemed to be observing it, and that I would stay there for a while if he wished me to. He said: "All right, if you want to." So in that way I happened to see this performed on about, I would say, something over 20 men. This was on the second morning. The things that I had witnessed the night before I had witnessed only casually here and there. I was not what you might call a spectator.

The CHAIRMAN. Did the men subjected to this torture die?

The WITNESS. I never saw a man die. But I saw a man who I thought was going to die once, and I had indirect evidence that a man had died in another case; but nothing that I could testify to.

By Senator CULBERSON:

Q. You stated the night before you only casually saw it, and then you were going on to state what you saw in the morning.

A. In the morning I actually witnessed it. I saw men thrown down and heard their groans and that sort of thing.

Q. Please tell the committee what you actually saw.

A. That is, you want me to describe one individual case of a man being put through the water cure?

Q. Yes; I would like you to do that, sir.

A. Very good, sir. A man is thrown down on his back and three or four men sit or stand on his arms and legs and hold him down, and either a gun barrel or a rifle barrel or a carbine barrel or a stick as big as a belaying pin—that is, with an inch circumference——

Senator BEVERIDGE. As big in its diameter?

A. (Continued.) Yes; is simply thrust into his jaws and his jaws are thrust back, and, if possible, a wooden log or stone is put under his head——

Senator PATTERSON. Under his head or neck?

A. (Continued.) Under his neck, so he can be held firmly.

Senator BURROWS. His jaws are forced open, you say? How do you mean, crosswise?

The WITNESS. Yes, sir; as a gag. In the case of very old men I have seen their teeth fall out—I mean when it was done a little roughly. He is simply held down, and then water is poured onto his face, down his throat and nose, from a jar, and that is kept up until the man gives some sign of giving in or becomes unconscious, and when he becomes unconscious he is simply rolled aside and he is allowed to come to. That is as near a description as I think I can give. All the cases were alike I saw on that occasion.

By Senator CULBERSON:

Q. Is the water allowed to remain in the man or is it any way expelled from him, by any method?

A. Well, I know that in a great many cases, in almost every case, the men have been a little roughly handled; they were rolled aside rudely, so that water was expelled. A man suffers tremendously; there is no doubt about it. His suffering must be that of a man who is drowning, but who can not drown.

Q. Did you ever see a man place his foot on a man's stomach to force the water out?

A. Yes, sir; but I can not think of any special case at this moment. I was trying to be as accurate as I possibly could.

The CHAIRMAN. When this was being done by our troops, did you attempt to stop it?

The WITNESS. No; I did not, because I had no right to. These troops were traveling through the country with definite orders. I do not know from whom the orders came or anything about that; but I simply made myself a witness, to check anything very much beyond the line. You understand what I mean. I simply thought while that thing was going on a commissioned officer ought to be there who could be responsible in some way for anything that might happen.

The CHAIRMAN. Do you mean these men of your regiment were acting under orders?

The WITNESS. No; the men did not. They simply assisted the Macabebe scouts in this. They simply volunteered their assistance.

By Senator BURROWS:

Q. Whom were the Macabebe scouts acting under?

A. They were under a sergeant whose name I do not know, but they moved through that country under orders from their headquarters.

Q. From whom?

A. From their headquarters.

Q. I would like to know the name of the officer under whose orders they were acting.

A. I think the only officer who could have given any orders of that kind was General Grant.

By Senator DIETRICH:

Q. You say you were there to stop excesses?

A. Yes, sir.

Q. Where would you draw the line?

A. Anything that seemed to be actually killing him or hurting him or more than ordinarily rough.

Q. You were the ranking officer present?

A. Yes; but I went to my major and said, "Does it not appear to you, sir, that some commissioned officer should be here while this thing is going on?" and he said, "You can be, if you want to."

Senator BEVERIDGE. Major Gary, was it not?

The WITNESS. Yes, sir.

By Senator PATTERSON:

Q. Where was your major?

A. Sitting about 60 yards away.

Q. Then the major accompanied the companies out on this work?

A. Yes; he was in command of our two companies of white troops; the volunteer infantry.

Q. And quite conversant with what was going on?

A. Yes; absolutely.

By the CHAIRMAN:

Q. Did he give orders that it should be done?

A. No, sir. These men were working on their own orders and instructions. Our attitude was entirely passive, you understand.

Q. That is the attitude of the officers and men of your regiment?

A. Yes; except these men whom I have said volunteered the assistance of this thing.

By Senator PATTERSON:

Q. Under whose orders were the Macabebes?

A. That I do not know.

Q. Were they subject to the orders of the major?

A. They certainly were, because he commanded the column.

Q. And the Macabebes constituted a part of that force?

A. They constituted a part of that force.

Q. And you all went out together?

A. Exactly.

Q. Did you continue together?

A. We continued together for something like twenty-four hours.

Q. That was during that time that these things occurred?

A. Yes, sir.

By Senator BURROWS:

Q. In this case where you say the water cure was administered to some twenty persons, I want to ask you what offense these people had committed?

A. They were supposed to be insurrectos. I did not at the time know enough of the language to understand the conversation between them and the Macabebes, who were putting them through this ordeal. All I know is that they would take a man and throw him down and work on him for a while, and then he would run off and get a gun or a bolo.

Q. The man who had been tortured?

A. Yes.

Q. He would go and arm himself?

A. No; he would go and get a gun and deliver it.

Q. Then this was done, as I understand you, for the purpose of compelling these people to surrender weapons, to disarm that portion of the country?

A. Exactly.

Q. I wanted to find out what it was done for——

A. (Continuing.) And the effect was immediate.

By Senator PATTERSON:

Q. About how many were subjected to this torture the first night?

A. I could not say. I should rather think—well, the only answer I could give would be a guess.

Q. Give your best judgment.

A. According to my best judgment, I should think about 30 were put through it the first evening, because it kept on for a long time until daybreak. I should say 20 the next morning under my personal observation.

Q. What was the name of the village in which this torture was inflicted that night, if you know?

A. It was a little barrio; it was not what you might call a village.

Q. About how many houses?

A. I think about a hundred houses. I have it on my map that I drew, but I can not remember the name of it now.

Q. And those upon whom the torture was inflicted were apparently residents or citizens occupying that little barrio?

A. They were.

Q. They did not appear to be soldiers, but were simply residents living in those little places—that is what they appeared to be?

A. It is impossible—well, of course, I understand your question, but it is not a fair question, because none of them appeared to be soldiers. I mean it

is absolutely impossible to judge from the appearance of a native whether he is a soldier or not.

Q. Were there women and children in those barrios as well as men?

A. There were.

Q. They were occupied by families?

A. Yes. They were to all intents and purposes country people—peasants, or whatever you want to call them.

Q. To all intents and purposes they were peaceable barrios or villages?

A. Yes.

Q. Now, from certain men did they succeed in getting guns?

A. I don't know about that, because I don't know the number except by offhand hearsay—

Q. But you understood when you started out that this was a method to be adopted to get the guns?

A. Well, when I started out I didn't understand anything about it. I was simply a soldier, and was following orders. I did not know anything, and did not want to.

Q. And when they reached these places this was the process they adopted apparently as a matter of course?

A. Yes; and it struck me very forcibly, because it was the first time I ever saw it done.

The CHAIRMAN. Did you see it done on any other occasion?

A. Yes; once up north of San Miguel.

Senator CULBERSON. On how many people was it done there?

The WITNESS. I think about 15 men were put through on that occasion.

Senator BEVERIDGE. Did they get the guns there?

The WITNESS. No; they did not get any guns at all.

Senator MCCOMAS. Fix the date if you can.

The WITNESS. I can not do that.

Senator CULBERSON. What place was it?

The WITNESS. I can not do that, because I was only using my own memory. It was very early in January——

The CHAIRMAN. 1901?

The WITNESS. 1901; and simply one of our ordinary routine scouts from San Miguel de Mayuma.

By Senator CULBERSON:

You stated a while ago that in one of the cases you thought a man was going to die?

A. Yes, sir.

Q. Did you see that yourself?

A. I saw that he was entirely unconscious, and I simply saw the Hospital Corps men working on him, and they had his feet wrapped up in blankets and were apparently trying to save him. That is all I know about his case.

Q. Where was that?

A. On the trip I mentioned first.

Q. What month and year was that, if you remember?

A. That was in May.

Q. 1901?

A. Yes, sir.

By the CHAIRMAN:

Q. In 1900, was it not?

A. 1900; I beg your pardon.

Q. In this second case were they American troops?

A. Yes, sir.

Q. Of your regiment?

A. Yes, sir.

Q. Who was in command?

A. The officer in command of the party was Captain Ruggles. He took no interest in this thing whatever; it was left to the second lieutenant, who——

Senator CULBERSON. What was his name?

The WITNESS. His name was Lieutenant Hard.

By Senator CARMACK:

Q. You say in the first case the men who had been put through the torture would go and get a gun or a bolo?

A. Yes, sir.

Q. Do you remember in what proportion they surrendered guns and what proportion were bolos?

A. Almost every man seemed to have a bolo. Of course in a great many cases the men were led off——

Q. If they could not get a gun they got a bolo?

A. Yes. I don't know just how many guns we got, because they did not come under my observation at all; I did not count them; I had other things to do; but I understood that our column collected about 50 guns. These guns would be reported as captured.

The CHAIRMAN. Did you suggest to Major Geary or Captain Ruggles to stop this thing?

The WITNESS. No, sir.

By Senator BURROWS:

Q. In this last instance, where there were 15 subjected to this treatment, you say you secured no arms of any kind?

A. No; we did not.

Q. Was any inquiry made before the torture was inflicted as to whether or not they had arms?

A. I do not know. No; they seemed to be put through as a matter of routine.

By Senator BURROWS:

Q. You spoke about their being thrown on the ground. You do not mean to say that they threw them down, do you? They laid them on their backs gently, did they not?

A. That was simply a matter of the men.

Q. I want to know what you saw; whether they requested them to lie down or took them by force, as you said?

A. I have seen a man thrown down; yes.

Q. How?

A. I have seen a man seized and thrown down; grasped by the neck or simply thrown down; that is all.

Q. Did any of them resist that you saw?

A. Yes; but of course those men are not very powerful.

Q. What was done in a case where a man resisted?

A. They would simply be held tighter, that is all.

Q. You mean when they resisted being thrown?

A. Yes; they were simply thrown down in those few instances that I have described.

Senator PATTERSON. Give us some idea of the amount of water they would force into them.

The WITNESS. I can not give you any idea of that at all. Of course, a man being held down and water being poured into him constantly, one could not have much idea of the amount he could actually retain.

But, of course, the torture was in checking the breath and rather inducing strangulation, I should think. It did not seem to be anything that really permanently hurt these people at all.

By Senator MCCOMAS:

Q. And when they would get up and they would go out and get their guns, would they run or walk?

A. What I mean to say is that in the case of the men I described first, who were put through this by the Macabebes, the Macabebes would whisper in their ear and ask them, ask each man, "Where is your gun?"—"Sa andur barril?"—to that effect, and they would have a somewhat pleading tone, and then finally the man would give some sign that he had yielded, and then he would be allowed to get up and two of them would run off with him to his house or little bamboo thicket, and they would come back with a gun or bolo or some ammunition.

Q. He would be able to get up and run with these two men, would he, directly after this treatment?

A. He would, unless he was put through a very hard siege.

What I mean to say is that some men would yield almost instantly and would not be put through as brutal methods as I have described, while other men would have more courage, or, perhaps, would be more ignorant, and they would be put through the stage where they were unconscious or almost drowned.

Q. Did that happen to a few or many of these men?

A. A rather small proportion, because by far the greater part, I should say probably two-thirds, of the people I saw did not get this severest treatment. In those cases it did not get to the point of great brutality. They simply would get up and run off and get their guns; and other men fought it out and would not yield until they had been subjected to severe treatment, and there was one man who absolutely refused.

Senator DIETRICH. You think it was the men who were the most ignorant who resisted the hardest, and those who seemed more intelligent yielded quickly and did not receive such harsh treatment?

The WITNESS. No; I think the men who were more courageous or perhaps did not have any guns suffered the most. By ignorant I mean that they did not really know anything to tell us.

Senator CARMACK. You say you saw one man who never did yield?

The WITNESS. One man was pointed out to me as being an alleged insurgent lieutenant, and he was pointed out as being absolutely unyielding.

Senator MCCOMAS. You did not see that?

The WITNESS. I saw his condition. They had worked pretty hard on him. He was pointed out simply as being a most gallant man——

Senator CARMACK. He was pointed out as what?

The WITNESS. A man of great courage; that he had been absolutely unyielding and had simply defied us; that is all.

Senator BEVERIDGE. When this man was pointed out, what condition was he in?

The WITNESS. He was almost fainting. I did not see him worked upon, but I simply saw him being led around, and I think Major Geary sent word not to have anything to do with that man any more. I mean to let him pass; not to bother him any more; to let him go.

Senator CULBERSON. What do you mean by being led around?

A. He had to be assisted.

By Senator PATTERSON:

Q. You say in the case of this particular man the major gave orders not to punish him any more?

A. Yes, he did; I am morally sure of that. Wait a minute—yes, I heard him say to the sergeant, "Let that man go."

Q. After they had punished him to the extent you have suggested?

A. Yes. Of course I do not wish for a moment to testify that I saw this man—I simply saw his condition; did not see the efforts expended in his case.

Q. You say that in the cases of old men their teeth were knocked out?

A. Yes; I saw that in one or two cases.

Q. On account of the gag?

A. Yes; it was thrust in pretty roughly in that instance.

Q. When they got this gun barrel or stick in a man's mouth, how did they hold that there?

A. Two men would get on either side of him.

Q. And hold it in?

A. Simply hold it down, and a half dozen men would sit over a man.

Q. What is your business?

A. I am writing. I am independent to a certain extent. I am now writing a biography of my father-in-law, the late John Fisk.

By Senator CULBERSON:

Q. Where do you reside?

A. In Cambridge, Mass.

Q. Are you a native of that State?

A. No; I am a New Yorker by birth.

Q. Are you a son of Dr Austin Flint?

A. No; a grandson of the late Dr. Austin Flint.

By Senator CARMACK:

Q. Referring to the occasion of that water cure administered when Major Geary was there; this was done with his knowledge and, as I understand it, you did not feel that you had any authority to stop the application of the water cure, Major Geary being your superior officer?

A. That is correct.

Q. In witnessing it you did not feel that you had any authority whatever to stop the application of the water cure, if I understand you, but you simply exercised your judgment and prevented its going to the length where it was liable to produce death or where it was used upon prisoners who, in your opinion, did not know, did not have any knowledge, and could not give any information; you exercised your judgment in regard to that, as I understand it? Is that correct?

A. Yes, sir.

Senator MCCOMAS. What was your answer to that?

The WITNESS. It was yes.

The CHAIRMAN. I have one more question to ask. You made a suggestion to Major Geary, as I understand it, that there ought to be a commissioned officer present?

A. I did.

Q. And he assented and let you go?

A. Yes, sir.

Q. Now, was there any objection to your making a similar suggestion to him as to stopping it, having made the first suggestion?

A. Yes, sir; inasmuch as it had been going on all the night before, and furthermore, that I was a subaltern.

Q. But the point I want to get at is this, that you made one suggestion, that there ought to be a commissioned officer there. Why was it not proper to make another suggestion, if you saw fit to do so?

A. Because to suggest that there was any impropriety in that would have been a suggestion against our very presence in that country. We went out in that country, as I understood it, without knowing anything about the orders, to get guns, that is all.

By Senator DIETRICH:

Q. You state that the reason that you did not stop some of those cruelties was because Major Geary was present?

A. Yes, sir.
Q. Then why did you ask him that you should be detailed to be present if he was already present?
A. When I said that he was present I meant he was 60 or 80 yards away—simply at what he called his headquarters under a tree, where his horse and saddle were. This thing took place at a well which was a little distance away, and I went to the well to be personally present.
Q. He was not present there?
A. No; he kept away. He did not like to see it at all, I know.
Q. And that put you in command by the well?
A. Yes, sir; by the well.

By Senator BURROWS:

Q. I presume I am asking a question that has been asked, but I want to know about it. Were these men who administered this water cure under the command of Major Geary?
A. Yes; they were.
Q. They were under his command?
A. That is, he was the ranking officer.
Q. They were subject to his orders?
A. They were subject to his orders and they were under his earshot, almost. Yes; he was the ranking officer of the whole column.

By Senator CULBERSON:

Q. When did you enlist in the Thirty-fifth Regiment?
A. I think the date of my acceptance was August 3.
Q. 1900?
A. 1899.
Q. How long did you serve in the Philippines?
A. About a year and a half or a little over.
Q. How many engagements or battles were you in?
A. Only under gun fire once.
Q. And you got the wound that you have spoken about?
A. Yes, sir; I mean what we really call gun fire.
Senator PATTERSON. Where were you educated?
The WITNESS. Harvard University.

[Proceedings, Senate Committee on Philippines, pp. 1969 to 1985.]

TESTIMONY OF LEROY E. HALLOCK.

(Sworn by the chairman.)

By the CHAIRMAN:

Q. You were in the Army?
A. Yes, sir.
Q. In what regiment?
A. Twenty-sixth Volunteers.
Q. In what company?
A. Company I.
Q. What rank did you hold?
A. Sergeant.
Q. When were you mustered out?
A. On May 13, 1901.
Q. How long were you in the Philippine Islands?
A. I arrived there October 27, 1899, and left there March 6, 1901.
Senator CULBERSON. Where do you reside, Mr. Hallock?
The WITNESS. Boston, Mass.

By the CHAIRMAN:

Q. Did you enlist from Massachusetts?
A. Yes, sir.
Q. At Framingham?
A. At Worcester.
Q. Were you living at Worcester at that time?
A. No, sir.
Q. Where was your regiment stationed during the period you were in the Philippine Islands?
A. The first three months I was stationed at Iloilo. After that the headquarters of the company was Leon, Panay.
Q. Did you see any cases of water cure or torture applied to the natives?
A. Yes, sir.
Q. Where?
A. At Leon.
Q. State the circumstances, please.
A. There were about ten or a dozen natives captured that were thought to be implicated in the murder of one of the members of our company.
Q. O'Hearn?
A. Yes, sir.
Q. It was stated in one of the reports that he was roasted over a slow fire and then hacked to death with bolos.
A. That is the confession of the natives; yes.
Q. And these men were captured who were believed to have had something to do with that?
A. Yes, sir.
Q. Now you may go on and state the circumstances.
A. What led to the capture of these natives, it was reported that Captain Glenn or some soldiers under his orders gave the water cure to a native and he confessed and told who the others were that took part in the killing of O'Hearn, and these members of our company captured these natives and gave them the water cure, and they confessed it.
Q. Who inflicted this punishment upon the natives?
A. The members of Company I.
Q. Were they ordered to do so?
A. Yes, sir.
Q. Who ordered them to do so?
A. The first sergeant.
Q. Who was the first sergeant?
A. Januarius Manning.
Q. Do you know him?
A. Yes, sir.
Q. Is he now a resident of Boston?
A. Yes, sir.
Q. You saw the water cure inflicted?
A. Yes, sir.
Q. Did you take part in it?
A. No, sir.

By Senator RAWLINS:

Q. Who was in command of this company at that time?
A. Alexander Gregg.
Q. How many troops were at Leon at the time this occurred?
A. About half of the company, I should say.
Q. Was Captain Gregg there at the time?
A. Yes, sir; he was there at the quarters.
Q. How far from the quarters was this torture inflicted?
A. Less than a hundred yards.
Q. Did all the command know about it at the time?
A. Yes, sir.
Q. Captain Gregg knew about it?
A. I do not know how he could help knowing it.
Q. You say that a member of your company had been reported killed?
A. Yes, sir.
Q. That information, I understand you to say, was derived from Captain Glenn?
A. I think a detail of our company was out looking for O'Hearn, and they made a detail under Captain Glenn, and they got some native and gave him the water cure and he confessed and gave the others away and told who took part in it.
Q. That was, as you nnderstand it, the result of the application of this torture; as a result of that torture some native, to relieve himself, stated he had taken part in the killing of this soldier?
A. Yes, sir.
Q. I am asking if that was not what was reported to you; that, as a result of this torture, this native stated he had participated in this killing?
A. Yes, sir.
Q. And named about a dozen other natives?
A. Yes, sir.
Q. And these twelve who were also reported by Captain Glenn to have been named by this native after the water cure had been given to him, where did they live?
A. In the vicinity of 5 or 6 miles from our quarters.
Q. And upon that information they were arrested?
A. Yes, sir.
Q. And brought to Leon?
A. Yes, sir.
Q. And they were taken out and the water torture applied to each of them?
A. Yes, sir.
Q. You may state whether it was given to them more than once.
A. It was given to them on two different days; it was given to them on August 21, 1900, and on August 23, 1900, to the best of my recollection.
Q. And what was the purpose of subjecting them to the torture?
A. To see if they had participated in the murder of O'Hearn.
Q. The first day they did not get all the information they desired—was that it?
A. Yes, sir.
Q. And so the torture was repeated the following day?
A. Yes, sir.
Q. And on the following day, as I understand you, these persons who were subjected to this torture confessed that they participated in the killing of the soldier?
A. On the 21st and 23d of August.
The CHAIRMAN. Was this 1900?
The WITNESS. Yes, sir.

By Senator RAWLINS:

Q. What was the effect upon these natives of giving this water cure?
A. They would swell up—their stomach would swell up pretty large—and I have seen blood come from their mouth after they had been given a good deal of it.
Q. And on the second day, do you know what information they gave; how was it obtained?
A. No, sir; only that they confessed to having had a part in it.
Q. Was the communication from these prisoners subjected to this torture given through an interpreter?
A. Yes, sir.
Q. A native interpreter?
A. Yes, sir.
Q. You could not understand what they said, I suppose?
A. I could understand some of it.
Q. Can you give anything that any one of these men subjected to this torture said; what their language was?
A. No, sir.
Q. Did the company detailed to subject these men to this torture get any information the first day from these 12 men, or any of them?
A. The first day they gave them the water treatment?
Q. Yes.
A. Yes, sir.
Q. Do you know what information they got the first day?
A. It was in regard to the killing of O'Hearn. There were 12 of them that were given this water treatment, and I do not think they got through with all of them on the first day, and they finished it on the second day, the 23d of August.

By Senator ALLISON:

Q. That is, they did not repeat it on those that had taken it the day before?
A. Yes, sir; some of them.
Q. On some of them they repeated it?
A. Yes, sir.

By Senator RAWLINS:

Q. What was done with these 12 men after they had been subjected to the water cure?
A. They were confined there in the guardhouse. Some of them escaped and some of them were killed while trying to escape.
Q. How many of them were shot to your knowledge?
A. I should say five or six.
Q. You know of five or six of them having been shot?
A. Yes, sir.
Q. How soon after the infliction of the water torture?
A. I could not state the exact time. It was before we left there.
Q. About how long?
A. I should say some of them were shot within four or five months.
Q. Where were those men confined?
A. At the guardhouse, in quarters at Leon.
Q. Can you describe that guardhouse?
A. It was a room about 20 or 25 feet by 25 feet, with iron bars at the windows; there was one window and two doors entering the room. The doors were kept locked by means of a padlock, and there were iron bars at the window.
Q. How many soldiers stood guard?
A. At the guardhouse?
Q. Yes.
A. This guardhouse was at the guard quarters and the sergeant or corporal who was in command of the guard was stationed at the door all the time, and then there was the number one sentry who stood right in front of the quarters, and at night he stood at the door. So there were one or two there all the time, besides the door being locked.
Q. And how near were the soldiers stationed to the guardhouse?
A. The soldiers' quarters were right above on the next floor, upstairs.
Q. In the same building upstairs?

A. Yes, sir.
Q. How many soldiers were there?
A. It varies. I should say from 30 to 50 all the time.
Q. How many prisoners were kept in this guardhouse—natives, I mean?
A. Some of the time there were ten or a dozen and sometimes as high as eighteen, I should say.
Q. Do you remember the occasion when any of these particular natives who had been subjected to the torture tried to escape?
A. I could not give the date, but I remember times they did.
Q. Did they succeed in getting out of the building?
A. It was not when they were in the building they tried to escape; it was while they were working down at the river, taking a bath.
Q. Who had them in charge at that time?
A. Sentries.
Q. How many altogether were shot at that time?
Senator BEVERIDGE. Five or six were shot while antempting to escape; although I have no objection to his repeating it.

By Senator RAWLINS:

Q. These attempted, you say, to escape; how many of those were killed?
A. I do not know what time you mean.
Q. As I understood you, on some occasion after this torture was inflicted some of these native prisoners while out from the guardhouse attempted to escape, and some of them were killed. I want to know, if you know, how many were killed at that time?
A. There was one occasion, one night, somewhere about 5 or 6 o'clock, that they were taken down to the river for a bath. I think there were five or six of them. They tried to get away while down there and one of them was shot and three or four escaped. Then on another occasion they were out working and there were four shot at that time while trying to escape.
Q. Did all these prisoners escape that were confined?
A. No, sir.
Q. How many of them were killed altogether?
A. I can not give the exact number. Five or six.
Q. Were all killed who did not escape?
A. I think so. There may have been one that was given his freedom. I won't say for sure. It seems to me there was one who was let go.
Q. With the exception of one all escaped or were killed?
A. Yes, sir.
Q. Are you sure as to whether that one was given his freedom or not?
A. Yes, sir.
Q. While you were there were there any villages burned?
A. Yes, sir.
Q. How many?
A. I was only present at the time one was burned; but I have known of as many as half a dozen being burned.
Q. How large were these villages?
A. The one that I witnessed being burned I should say was three or four thousand people; that that many people lived there.
Q. How large were the others that you know of having been burned?
A. There was a town about 8 miles from Leon which was burned. I think there were eight or ten thousand people there.
The CHAIRMAN. Was that Igbarras?
The WITNESS. No, sir. The name of that town was Tubungan; that is about half way from Leon to Igbarras.
Senator RAWLINS. What others were there that you know of? You have named two, I think, one of 3,000 and one of 8,000.

By Senator BEVERIDGE:

Q. Do you know of these towns being burned simply by hearsay?
A. I witnessed one of them?
Q. But the others; do you know of their being burned simply by hearsay?
A. I know of their being burned by the members of the company talking about them.

By Senator RAWLINS:

Q. I will ask the witness this: You observed the flames in the distance, did you?
A. The smoke; not the flames.
Q. And you saw the smoke of the villages that you did not see being burned?
A. I saw smoke from this town of Tubungan when that was burned.
Q. Have you been over the ground where these towns were that you learned were burned? Have you been over that ground since they were burned?
A. Yes, sir.
Q. And what have you observed there at those towns; were they left or were they burned?
A. They appeared to be deserted; everything was burned, houses and shacks, with the exception, perhaps, of a few on the outside of the town, on the roads or trails, that would not be burned, that were close to the town.
Q. I will ask you—you have been around in that vicinity and you had occasion from time to time to visit around while you were stationed at Leon and Panay—what, if any, towns were left unburned?
A. The town of Tigbaüan, the town of Oton, the town of Alimodian, the town of San Miguel, the town of Arevalo, and a good many smaller barrios.
Q. And how many towns were burned; that is, towns you know by having learned that the towns were burned and afterwards having been over the ground and seen that they were burned?
A. There was only one that I was a witness to.
Q. But you know the others by reputation, and you say that you had occasion to visit them afterwards, as I understand it, and saw that they had been burned?
A. Tubungan is the only large town that I know of. If we were out on a march over the mountains if we found any evidence of insurgents being there we burned the small barrios as we went along.
Senator BEVERIDGE. Did I understand you to say after having been there that you personally know of these six towns you mentioned having been burned?
The CHAIRMAN. Those were the six towns not burned that he mentioned.

By Senator RAWLINS:

Q. What became of these people who inhabited these towns that were burned?
A. I think they went into other towns. They didn't build up the towns at all.
Q. They did not attempt to rebuild the towns?
A. Not to my knowledge.
Q. Do you know whether or not they were permitted to rebuild these towns that were destroyed?
A. I could not say.
Q. Do you know of any attempt on the part of the natives to rebuild any town that was destroyed?
A. No, sir.
Q. Did you know of any natives around Leon who were begging for food?
A. Yes, sir. They have a market day there in those towns once a week, and on that day a good many beggars would be around.
Q. You may state to what extent the burning went in the case of these towns that were burned—whether it extended to food and household articles and things of that description.
A. Yes, sir.
Q. Did it so extend?
A. The one that I witnessed being burned, they did not have time to get anything out to speak of; they might have had time to get what valuables they had out, but they did not have time to move their furniture or food.

By Senator ALLISON:

Q. You only witnessed the burning of one town?
A. Yes, sir.
Q. And that was done rapidly?
A. Yes, sir.

By Senator RAWLINS:

Q. This burning you have described and the infliction of the water torture—you may state whether or not it was a matter of common repute among the soldiers with whom you came in contact that those things were practiced.
The WITNESS. It was reported that if the soldiers wanted to get any information out of the natives they gave them the water cure, and in any town where there was any evidence of being insurgents the town was burned.

By Senator RAWLINS:

Q. Then, as I understand it, that was a matter of common repute; the inflicting of this water torture and the burning of these towns was a matter of common repute?
Senator ALLISON. If you understand it, you do not understand it from the witness.
Senator RAWLINS. I asked the witness whether or not it was a matter of common repute, and he said it was reported among the soldiers that whenever they wanted to get information they applied the water torture, and when they obtained the information and they found that a town contained insurgents they burned the town. Let it rest at that.
Senator ALLISON. I think that is right.

By Senator RAWLINS:

Q. Now, I want to recur. Whom did you ever hear say that this soldier—I believe he was a member of your company?
A. Yes, sir.
Q. Whom did you hear say that that soldier was burned to death?
A. That is what these natives confessed to.
Q. Have you no other source of information except the confessions of these men who were subjected to this torture?
A. What the natives confessed to is the only information we had.
Q. What the natives confessed to is the only information you had. Did they confess to that before or after the infliction of the torture?
A. After. After we had found his bones—the bones of O'Hearn.
Q. You found the bones of what you understood to be this missing member of your company?
A. Yes, sir.
Q. Where were they found, or do you know—were you present?
A. I was not present when the bones were found.
Q. You do not know, then, of your own knowledge, in what condition the bones were when found?
A. Only by hearsay.
Q. Do you know whether those remains were brought to Leon?
A. The bones were brought to Leon.
Q. Did you see them after they came there?
A. Yes, sir.
Q. Was there anything left except the mere skeleton?
A. Only pieces of bone, the head and different parts of the skeleton.
Q. What was their condition?
A. They were all in small pieces; the head was the largest piece, the piece that seemed to be the most intact.
Senator CULBERSON. How did you know that skeleton was the skeleton of the deceased soldier?
The WITNESS. The surgeon who was stationed at the quarters said that he was very sure it was O'Hearn's body by a front tooth being missing.

By Senator RAWLINS:

Q. The only means of identification was the absence of one front tooth; is that it?
A. Yes, sir; and the testimony which the natives gave that there was where they buried the bones.
Q. As I understand it, you had obtained the remains before the torture—or afterwards?
A. This native that was given the water cure first by Captain Glenn, as I heard, testified where the bones were, and they took the bones up and got the rest of the natives who testified that they had taken part.
Q. They had discovered the remains before they inflicted the torture on these 12 men?
Senator BEVERIDGE. He did not say anything of the kind. This witness is attempting to testify very clearly.

By Senator RAWLINS:

Q. I am not insisting upon the form of the question. What I want to know is, whether or not the remains had been discovered before the torture was inflicted upon these 12 men; that is what I want to know.
A. I am positive the bones were brought in the same night that the men were brought into the quarters.
Q. Then it was before the infliction of the tortures?
A. Upon these 12 men, yes.
Q. That is what I wanted to arrive at. Therefore, these 12 men who were subjected to the torture did not give the information which led to the discovery of these remains or these bones?
A. The native to whom Captain Glenn gave the water cure, as testified a while ago, told who the other ones were that took part in it.
Senator BEVERIDGE. So that the discovery of the bones was the result of the water cure first administered to this one man.

By Senator RAWLINS:

Q. That you have no information about it except by hearsay, as I understand it; that is, what the others told you?
A. What the members of the company talked about and told to each other.
Q. All you know about it is what the others told you?
A. I was not a witness to it.
Q. How many men of your company had been killed during the entire time you were stationed at Leon in Panay—you were there all the time?
A. Yes, sir; on the island of Panay.
Q. How many men were killed?
A. Two men.
Q. Two men altogether?
A. Yes, sir.

Q. How many natives were killed during the same time by American soldiers?
A. I could not state the number.
Q. About how many?
A. It would be very hard for me to tell.
Q. Give us a general idea, if you can.
A. Well, if we got into a skirmish we could not tell how many men were killed or wounded.
Q. Were there a good many killed?
A. There were more killed than there were Americans.
Q. How many do you know of yourself having been killed?
A. Do you mean altogether in the fights we had there?
Q. Yes.
A. That the regiment participated in?
Q. That your company participated in—yes; the regiment.
A. In the neighborhood of 200 or 300, I should say, for a guess.
Q. How many fights did you yourself participate in?
A. Three, I think, sir.
Q. And in those 3 fights how many natives were killed?
A. In the neighborhood of 200, I should say.
Q. How many Americans were killed in those 3 fights?
A. I should say 20.

Senator BEVERIDGE. What means have you of knowing how many Filipinos were killed?

The WITNESS. The only means I have is the official report.

By Senator BEVERIDGE:

Q. The official reports?
A. Yes, sir. I only say this; that I guess that number.
Q. Then you are not attempting to quote official reports; you are making your estimate?
A. Yes, sir.

By Senator RAWLINS:

Q. How many wounded, Mr. Hallock, in those fights?
A. I could not say.
Q. Apart from the information that was derived from natives as a result of torture, do you know how this soldier met with his death?
A. The only information we had was what we got from the natives; what the natives confessed.
Q. The circumstances, therefore, of his death, what led to it, or how it occurred, all you know about it is what you have stated, that obtained from the natives as a result of application of torture?
A. Yes, sir.

By the CHAIRMAN:

Q. Did you witness any other cases of water cure?
A. No, sir.
Q. These were the only cases that you saw?
A. Yes, sir.
Q. Did the natives confess that O'Hearn was burned before he was murdered?
A. They confessed—perhaps I had better tell you the story of his capture and everything.
Q. Yes; tell the whole story.
A. O'Hearn, in company with two other soldiers from our company, was sent to Iloilo after the mail, I think, and when they arrived back within about five or six miles of the company, or where the company was stationed, they were ambushed by about 100 insurgents, and two of them were captured. O'Hearn made a break to get away. This was on June 30, 1900. He made a break to get to the quarters, or at least we thought he did, and fell in, as we supposed, with friendly natives. They captured him, and on the next day, July 1, he was tied to a tree at 7 o'clock in the morning, and was tortured by cutting with bolos and by slow fire until 5 o'clock at night. So the natives confessed.
Q. The natives confessed to that?
A. Yes, sir.
Q. When they applied the water cure to these natives in order to get their confession, did you know that he had been tortured before being killed?
A. No, sir; we did not know anything about it. The confession was gotten from the natives by means of the water cure.
Q. But did they ask them whether he was burned or whether he was murdered?
A. They asked him through the interpreter how they killed him.
Q. And they confessed to the statement which you have just made?
A. Yes, sir.
Q. These men were subjected to the water cure in order to extort this confession. Did they die under the water cure?
A. No, sir.
Q. Were any of them executed subsequently for it?
A. Before given the water cure?
Q. I mean after they confessed, were any of them taken out and shot?
A. No, sir.
Q. They were simply confined in prison?
A. Yes, sir.
Q. What was the general attitude of the soldiers toward the natives? I mean toward the friendly natives among whom you lived. How did they treat them in ordinary life?
A. They treated them very well if they thought they were friends.

Senator PATTERSON. When I use the word torture I mean the water cure. Did they commence the torture of this man, the first man, for some definite purpose?
A. I don't know.

The CHAIRMAN. You have testified you were not present at the torture of the first man?

The WITNESS. Yes, sir.

By Senator PATTERSON:

Q. Do you know whether this man denied any knowledge of the missing soldier before they applied the water torture to him?
A. I could not say, sir.
Q. Were you present when the water torture was applied to the other twelve?
A. I was present in most cases.
Q. Do you know whether, before it was applied, they had denied any knowledge of the affair?
A. I think they did deny it.
Q. Were they given to understand what they were to confess to to avoid the water torture?
A. Yes, sir.
Q. What was it they were given to understand they were to confess to?
A. They were given the water cure and then asked questions through this interpreter what they knew about the killing of O'Hearn.
Q. They could not very well have known that they were charged with participating in the killing of O'Hearn unless they were told so, could they?
A. I don't see how they could.
Q. If they had not denied having knowledge of the killing of O'Hearn, they would not have applied the water torture, would they?
A. They applied the water cure to see what they did know about it.
Q. And if they had not denied knowing anything about it, would they have applied the water torture?
A. No, sir.
Q. If they had persisted in knowing nothing about the killing of O'Hearn, do you know how many times the water torture would have been applied?
A. I do not.
Q. They were relieved from further torture when they stated that they knew about the killing of O'Hearn; is that when they were relieved from the water torture?
A. Yes, sir.
Q. The means of identification, as stated before, was simply the loss of a tooth, a missing tooth?
A. The loss of a tooth and what the natives told, that they confessed where they buried him.
Q. I understand that; but independent of what the natives said, it was simply the loss of a tooth?
A. Yes, sir.
Q. These natives that underwent this torture were kept in the prison about five or six months?
A. Before they were given the water cure?
Q. No; after they were given the water cure.
A. I could not state exactly the time; I should say from three to seven or eight months.
Q. Were they ever brought to trial?
A. I do not think they were, sir.
Q. There was never any court-martial over the affair at all that you have any knowledge of?
A. There were some officers came up from headquarters, from Iloilo, and they had a hearing over at the officers' quarters at one time.
Q. Had a what?
A. Had a hearing about it.
Q. When was that?
A. I could not state the time; it was some time after the water cure was given to them.
Q. Then, what did you mean when, in response to a question, you said these Filipinos had never been brought to a trial?
A. They never had, to my knowledge.
Q. You say, then, the Filipinos were never brought to a trial, but you say something of some officers coming up from Iloilo and some proceedings. What was that?
A. I could not say. It was reported that it was something with reference to these prisoners.
Q. Simply the officers by themselves?
A. Yes, sir.
Q. Do you know why it was, if these natives confessed to the killing and the torture of O'Hearn, and the officers of the company or the regiment believed they had the correct men, that they were not tried and executed for the murder?
A. I could not say.

By Senator CULBERSON:

Q. You have testified, I believe, that five or six of these men were killed in attempting to escape?
A. Yes, sir.
Q. Do you know whether or not their effort to escape was encouraged by the American officers and soldiers?
A. I do not know, sir.
Q. What I wanted to find out was whether it was a bona fide effort on their part to escape, or whether they were ever encouraged to make the effort for the purpose of affording an opportunity to shoot them. How was that?
A. All that I know is that it was reported that they were killed while trying to escape.

By Senator BURROWS:

Q. I am not clear in my own mind about one thing. You said there were 12 of these men placed in the guardhouse after the water cure had been administered to them?
A. Yes, sir.
Q. Do you know of your own knowledge—not from hearsay, but from your own knowledge—what became of them?
A. I saw four of them after they had been shot by the sentries while trying to escape.
Q. You saw four bodies out of the twelve after they had been shot?
A. Yes, sir.
Q. They were shot while attempting to escape?
A. Yes, sir.
Q. What do you know about the others, of your own knowledge?
A. I did not see the other men.
Q. There were eight others?
A. Some of them escaped, and I think there was one more shot.
Q. Of the eight some of them escaped, and you think one more was shot. Did you see the shooting?
A. No, sir.
Q. Then what makes you think one man was shot aside from the four. Did you so understand it?
A. I saw them when they were taken down to the river and heard the reports, and they came back and the sentries said they shot this man.
Q. Why did they shoot him?
A. He attempted to escape.
Q. So the five, while attempting to escape while under guard, were shot?
A. Yes, sir.
Q. And you saw the bodies of four?
A. Yes, sir.
Q. What became of the other seven—were they released?
A. I think the rest of them got away, with the exception of one, and I think he was released.
Q. One released and the balance escaped?
A. Yes, sir.

Senator DUBOIS. One released and five shot and six escaped?

Senator BURROWS. Yes; that is as he states it.

[Proceedings, Senate Committee on Philippines, pp. 2060 to 2069.]

TESTIMONY OF D. J. EVANS.

(Sworn by the chairman.)

By the CHAIRMAN:

Q. Give your full name.
A. Daniel J. Evans.
Q. And you have been in the Army?
A. Six years.
Q. In the regulars?
A. Yes, sir.

Q. In what regiment?
A. My first enlistment was in the First Cavalry, for three years; my second enlistment, two years and seven months in the Twelfth Infantry, and transferred to the artillery stationed at Honolulu.
Q. Are you a resident of Kansas?
A. Yes, sir.
Q. Concordia, Kans., I believe?
A. Yes, sir.
Q. Were you born in Canada?
A. Yes, sir.
Q. And Concordia is your home?
A. Yes, sir.
Q. And did you serve in the Philippines?
A. Yes, sir; for two years.
Q. From when; when did you go there?
A. I got there in April, 1899, and left about the 1st of February, 1901.
Q. Where did you serve during that time; what part of the islands?
A. The island of Luzon.
Q. What was your rank?
A. Private, at the time of enlistment.
Q. And your rank at the time of your discharge?
A. Corporal.
Q. You received an honorable discharge, did you?
A. Yes, sir.
Q. The committee would like to hear from you in regard to the conduct of the war, and whether you were the witness of any cruelties inflicted upon the natives in the Philippine Islands; and if so, under what circumstances.
A. The case I had reference to was where they gave the water cure to a native in the Ilicano Province at Ilocos Norte.
Q. That is in the extreme northern part of Luzon?
A. Yes, sir. There were two native scouts that were with the American forces. They went out and brought in a couple of insurgents. They were known to be insurgents by their own confession, and, besides that, they had the mark that most insurgents in that part of the country carry; it is a little brand on the left breast, generally inflicted with a nail or head of a cartridge, heated. They tried to find out from this native——
Q. What kind of a brand did you say it was?
A. A small brand put on with a nail head or cartridge.
Senator BEVERIDGE. A scar on the flesh?
The WITNESS. Yes, sir.
They tried to get him to tell where the rest of the insurgents were at that time. We knew about where they were, but we did not know how to get at them. They were in the hills, and it happened that there was only one path that could get to them, and we did not get to them that time. They refused to tell this one path and they commenced this so-called "water cure." The first thing one of the Americans—I mean one of the scouts for the Americans—grabbed one of the men by the head and jerked his head back, and then they took a tomato can and poured water down his throat until he could hold no more, and during this time one of the natives had a rattan whip, about as large as my finger, and he struck him on the face and on the bare back, and every time they would strike him it would raise a large welt, and some blood would come. And when this native could hold no more water, then they forced a gag into his mouth; they stood him up and tied his hands behind him; they stood him up against a post and fastened him so he could not move. Then one man, an American soldier, who was over 6 feet tall, and who was very strong, too, struck this native in the pit of the stomach as hard as he could strike him, just as rapidly as he could. It seemed as if he didn't get tired of striking him.

By Senator ALLISON:

Q. With his hand?
A. With his clenched fist. He struck him right in the pit of the stomach, and it made the native very sick. They kept that operation up for quite a time, and finally I thought the fellow was about to die, but I don't believe he was as bad as that, because finally he told them he would tell, and from that on he was taken away, and I saw no more of him.
Q. Did he tell?
A. I believe he did, because I didn't hear of any more water cure inflicted on him.

By Senator RAWLINS:

Q. How many were present then?
A. This was an expedition. There were thirty, I think, of our company. We were not at our station at that time; we were on a little expedition down south, and I should think out of the thirty—I should judge that there were about fifteen of our men present, maybe twenty; and out of G Company, of our own regiment, that is the town they were stationed at—there were a greater number of them present.
Q. How many American soldiers altogether were there present?
A. I can safely say there were 50.
Q. Who was in command of them?
A. Capt. Robert K. Evans.
Q. Was he present at the time the water cure was inflicted?
A. He did not see it; no, sir.
Q. What, if any, officer was present?
A. This is a subject that I have debated on, and I can not arrive at a conclusion. It was either Lieutenant Drum or Lieutenant Aloe; and I prefer to think it was Lieutenant Aloe, for the simple reason that our lieutenants were transferred about that time. Lieutenant Drum was promoted from second lieutenant to first lieutenant and transferred to the Twenty-fourth Infantry, and about that time we got Lieutenant Aloe; and which of those two was on that expedition I can not say for certain.
Q. Where was the commander? How far distant from where this business was performed?
A. The captain in charge?
Q. Yes.
A. He was not over 200 yards away.
Senator BURROWS. Captain Evans, you mean?
The WITNESS. Yes, sir.

By Senator RAWLINS:

Q. Was there any effort to conceal it?
A. Not in the least.
Q. Was it a matter of common knowledge?
A. Yes, sir; it has been the talk of almost the whole Army. They do not try to conceal it.
Q. How long has that been the case?
A. Well, it has been practiced, to my knowledge, from along in July, 1900, until the time I left the islands; and, of course, after that time I know nothing about it. I left the islands about February, 1901.
Q. When did this particular case occur?
A. It was about the month of August, 1900. I have not the dates accurate, but it was about that time.

By the Chairman:

Q. Did you witness any other cases?
A. No, sir; I could have witnessed others, but I did not.
Q. Was this man taken by the native scouts?
A. Yes, sir; he was taken by a couple of native scouts.
Senator ALLISON. What do you mean by native scouts?
The WITNESS. They were scouts—they reconnoitered through the country and gained information for the American soldiers.

By Senator BURROWS:

Q. I wanted to ask you if at the time of the administration of this water cure any United States officer was in command of the squad?
A. There was an officer present at the time that this water cure was given, and, as I have said, it was about the time that our lieutenants were transferred, and I would not be positive which it was.
Q. Will you give the name of the lieutenant that you think it was?
A. I think it was Lieutenant Aloe,
Q. Of what company and of what regiment?
A. At the time he was first lieutenant of E Company, Twelfth Infantry.
Q. Was this water cure administered by his directions?
A. I do not know that it was.
Q. Do you know that it was done at the command of any officer?
A. I do not.

By Senator ALLISON:

Q. You spoke of this large man that was using his fist on a prisoner?
A. Yes, sir.
Q. How many times do you suppose he used his fist in that way?
A. I think it would be safe to say that he struck him at least forty times right in the pit of the stomach.
Senator CARMACK. What was that; I did not understand it?
Senator BURROWS. That this man who had been filled with water was hit by a big, strong man; that a strong, large fellow came up and struck him in the pit of the stomach.

By Senator BURROWS:

Q. Did he each time during the infliction of these blows go back and run to get force in his blows?
A. I do not believe I said he ran; he would step back and then strike.
Q. And apparently with great force?
A. Yes; harder than I could strike.
Q. And what officer was present when that was being done?
A. As I said, I believe it was Lieutenant Aloe.
Q. Where is Lieutenant Aloe?
A. I do not know, sir. He was put on staff duty after I left the regiment, and from there I do not know where he went.
The CHAIRMAN. What man was it you said did the striking?
The WITNESS. A man by the name of Frank Koehler.

By Senator BURROWS:

Q. Of what company?
A. The same as mine, the Twelfth Infantry.
Q. Do you know where he is now?
A. I was told he lived in Cincinnati.
Q. He has been discharged from the service, has he?
A. Yes, sir.
Q. Now give me his full name.
A. Frank Koehler.
Q. Spell it.
A. F-r-a-n-k K-o-e-h-l-e-r.
Q. And you think he is in Cincinnati?
A. I think he is.
The CHAIRMAN. Was he a sergeant?
The WITNESS. No, sir; he was a private.

By Senator ALLISON:

Q. This was done under the direction of these native scouts, or who did this work; was it part of the American soldiery, or was it simply these scouts?
A. It was part of each; it was this man Koehler and two native scouts.
Q. They were the ones that did the business?
A. Yes, sir.

By Senator RAWLINS:

Q. Was there any effort on the part of any officer there to prevent this being done?
A. No, sir; none that I saw.
Q. You say it must have been ordered by some officers. Why did you say so?
A. I believe the question was asked me if it was ordered, and I said I did not know.
Q. But you started to say it must have been. Those men that were there were under command of officers, were they not?
A. Yes, sir.
Q. And officers were present?
A. I think it was this Lieutenant Aloe that was present, as I stated before.

By Senator BURROWS:

Q. But the two scouts and this large man were the only ones that participated in the infliction of this water cure?
A. Yes, sir.

By Senator RAWLINS:

Q. You stated you saw natives coming out of the hills with little white flags of truce. What did they do with them?
A. We never molested them. We let them go about their business. On returning we would find them coming back.
Senator RAWLINS. Certain towns were burned?
The WITNESS. Yes; some barrios.
Q. How many towns were burned, if you remember?
A. I know of about five myself being burned.
Q. How large were those towns?
A. They would be what we call barrios, villages.
Q. About how many inhabitants did they contain?
A. I could not make much of an estimate on the inhabitants; there were a great many natives lived in one house, and so it would be a guess to try to tell how many there were altogether.
Q. About how many would be in a house?
A. I have seen as high as 24 in one small house.
Q. When these villages were burned, what became of the inhabitants?
A. They would go out and hide for a while, and then, I suppose, build another one.
Senator ALLISON. What was the character of these houses?
The WITNESS. Bamboo.

[Proceedings Senate Committee on Philippines, pp. 2236 to 2242.]

TESTIMONY OF MR. RICHARD V. HUGHES.

(Sworn by the Chairman.)

By the CHAIRMAN:

Q. You live in Philadelphia, I believe?
A. Yes, sir.

Q. That is your home?
A. That is my home.
Q. And you have been in the Army?
A. Yes, sir; for three years.
Q. In one of the volunteer regiments?
A. In the Regular Army.
Q. In what capacity?
A. I was a private at enlistment and a sergeant on discharge.
Q. In what regiment did you serve?
A. In Company H, Eighth Infantry.
Q. Have you served in the Philippine Islands?
A. Yes, sir.
Q. How long were you there?
A. I was there from October, 1900, until October, 1901.
Q. About a year?
A. About a year.
Q. Where else did you serve?
A. In Cuba, from December, 1898, until July, 1900.

By Senator CARMACK:

Q. What is your business now?
A. I am a representative of a life-insurance company.
Q. I do not remember very clearly what I read in regard to your statement, Mr. Hughes. While you were in the Philippines, did you observe any application of what is known as the "water cure?"
A. Yes, sir; one occasion.
Q. (Continuing.) Or any excesses or brutalities in connection with it? Just relate the whole circumstances in your own way.
A. It was in September, I think it was the 26th of September, if I remember rightly, on a Thursday, 1901. We left Magdelena, in Laguna Province, with a detachment of Company H, under command of Lieutenant Merchant, to capture some rifles supposed to be in a cuartel about 6 miles distant, and also some insurrectos. We arrived there early in the morning and found the bird had flown, as generally was the case. Lieutenant Merchant seemed provoked that the insurrecto leader he hoped to find had gotten away and that we could get no information, and he had a private (Private Haler, who, I believe, resides in Pittsburg) strike this native and knock him down.
Q. Who was this, an insurrecto?
A. An insurrecto they captured at the barrio there.

By the CHAIRMAN:

Q. Who was he?
A. A native Filipino; whether he was an insurrecto or not I can not say He had no arms.
Q. He was knocked down?
A. Yes, sir; by this Private Haler, under orders of Lieutenant Merchant. He then could not give any further information in regard to the wherabouts of this insurrecto leader, and he was knocked down the second time, and after that Lieutenant Merchant saw he could not get any information from him, and he proceeded to the cuartel, which is about ten minutes' walk farther. The guide we took with us from Magdelena told us we would find the arms and the soldiers in that place. As was usually the case, when we got there they had also gone. Lieutenant Merchant was under the impression that this guide was prevaricating, and he lectured him and had him whipped with a branch of a tree. He was whipped by two natives which we took from the post at Magdelena. He also had the water cure administered to him.

As I have said, that case of water cure was the only one I ever witnessed, and, to my mind, while those people are very barbarous, and savage to a certain extent, I do not think we ought to resort to that ourselves. But the statement made in the Philadelphia Times is a little in error, inasmuch as it said that I had said they stripped the native, which was not true; the reporter got that a little wrong. They simply had him remain on the ground—in fact, made him sit down—and they pushed him back and forced this water down his mouth, keeping his mouth open with a stick. He was allowed to get up again, but he could not give any further information. This was the place the insurrectos were at the time, where he was leading Lieutenant Merchant, and Lieutenant Merchant had him whipped again by this native guide, and also had some more water poured down his mouth, to such an extent that he was unable to walk; he was very weak. We remained there for about an hour to allow this man to recuperate, as it were. At that place, at that cuartel, there were three additional houses, occupied by some women, and one of the women was a cripple. On leaving there Lieutenant Merchant had these houses burned, and of course these women had to get out, and he left this cripple woman there without any house, and everything they had was burned.

Q. Was it your impression from what you saw in regard to this guide that he was acting honestly?
A. Yes, sir; he was caught by a detachment, I think a detachment from Company K, and brought into Magdalena, and he gave this information to Lieutenant Merchant, and, as I say, he was supposed to lead us out there to capture those people. He said they were there. He said that he had been there with them the day they were there, and he was sent out there to get some rice for them. On his way back again the detachment of Company K captured him and brought him to Magdalena, and then, as I have stated, we took him out there in order to capture these people; but we were unfortunate; we were unable to get them.

By Senator ALLISON:

Q. How much of a detachment was that?
A. About 35 men.
Q. Thirty-five men from your company?
A. Yes, sir.

By the CHAIRMAN:

Q. Did you see any other cases of water cure?
A. That was the only one I ever witnessed. I knew of several others from hearsay, but I never witnessed any others myself.
Q. What was the general character of the treatment of the natives by the soldiers?
A. In our command they did not treat them harshly at all. In that case they would whip the man, because he had no further information to give them, and you can very readily see that you can tell whether a man is telling the truth or not.

By Senator ALLISON:

Q. How much of a stick was this?
A. A whip about 3 feet long; a thin limb of a tree.
Q. What sort of a tree?
A. I could not tell you.
Q. Simply a switch, was it?
A. Yes, sir; a branch. It was enough to be applied by giving it the power of a man back of it.
Q. He felt it, you think?
A. Oh, yes; because he whimpered and his knees were bent.

By Senator CULBERSON:

Q. What was the character of the stick they knocked him down with?
A. They knocked him down with the man's fist; that is, Private Haler's; they did not knock him down with a stick.
Q. They knocked him down two different times, you said?
A. Yes, sir.
The CHAIRMAN. The man knocked down was not the same man that they hit with a switch?
The WITNESS. No, sir.
Senator CULBERSON. Was the man knocked down the same man they gave the water cure to?
The WITNESS. No, sir.
Senator CARMACK. No; it was a different man.
The WITNESS. He was a guide they administered the water cure to.

By Senator CULBERSON:

Q. You said you had not seen any other water cure administered, although you had heard of others. Did you see any other harsh treatment of Filipinos?
A. No; with the exception of utilizing prisoners to carry an officer's wife 7 miles over muddy roads.
Q. How is that?
A. They carried an officer's wife 7 miles—from Santa Cruz to Magdelena.
Q. How did the natives carry her?
A. A kind of a chair was constructed with bamboo poles, and relays of natives—I think 3 in front and 3 in the back—no, 12 altogether, 3 on each side.
Q. Constituting a sort of a pack team?
A. Somewhat of a pack team. He and Mrs. Merchant and his mother, I believe, came from Santa Cruz up to Magdelena, and they were carried up that way.
Q. How far is that?
A. About 7 miles; using the men, of course, to guard them; that is natural; and also using the native police and the soldiers to guard them from Santa Cruz to Magdelena.
Q. Did you witness any other incident in which the natives were used as pack horses?
A. No, sir; that is the only one.
Senator RAWLINS. Where is Santa Cruz?
The WITNESS. On the Pasig River, about 87 miles from Manila, in Laguna Province, in Southern Luzon.
Senator ALLISON. Was this a mountainous road?
The WITNESS. No, sir; it was rough, but not mountainous at all.

By Senator CULBERSON:

Q. You spoke of certain houses being burned there by order of Lieutenant Merchant?
A. Yes, sir.
Q. How many were burned?
A. Four, if I remember correctly.
Q. Were they the dwelling houses of the people, or what character of houses were they?
A. They were dwelling houses, bamboo shacks, as we called them, made out of bamboo. One of them was the cuartel in which these soldiers resided.
Q. I did not catch what you said about one of these native women. My recollection is that you said one of them was a cripple.
A. Yes; one of them was a cripple; she was unable to walk. It looked to me as if she was paralyzed. She was asleep in the shack at the time we entered the cuartel. We call them a cuartel—nothing but bamboo shacks. She was asleep, and Lieutenant Merchant ordered the houses burned, and ejected her from the house, leaving her to sleep on the ground.
Q. How was she taken out of the house?
A. There was another woman with her, and this other woman helped her down the bamboo steps, probably two or three steps from the ground. Those houses rest on bamboo sticks, 2 or 3 feet from the ground.
Q. She was able to walk, was she?—A. On her hands and knees; she navigated that way.
Q. Where was she left by Lieutenant Merchant?
A. On the ground, say 10 feet away from the house, after it was burned.
Q. Was there any furniture or contents of the house taken out before it was burned?
A. Cooking utensils, and they removed their bedding. It simply consists of a blanket or a light quilt, or perhaps a sheet sometimes. I do not remember exactly what it was, but I remember as to the kitchen utensils being removed—dippers and earthenware, and I think there was a bag of rice removed also. But there was not a house around there within, say, a mile and a half.
Senator RAWLINS. That is, the nearest house was about a mile and a half away?
The WITNESS. Yes, sir.

By Senator CULBERSON:

Q. What is the last you saw of this crippled woman?
A. She was in the bushes right back of the house, where it was burned down. We left her there and marched on.
Q. Who gave the order to burn the house?
A. Lieutenant Merchant.
Q. Who gave the order to administer the water cure?
A. Lieutenant Merchant.
Q. And where is he now?
A. I believe he is deceased; I understand so.
The CHAIRMAN. Did he die in the Philippines?
The WITNESS. I think so; I think he died of dysentery; I believe he was promoted to be captain of the Fifth Infantry.

By Senator CULBERSON:

Q. Do you know of any other houses or barrios or towns being burned by American soldiers?
A. Yes, sir.
Q. State all you saw.
A. I do not remember in what barrio it was; it was outside of Nacarlan; it was some time about the 21st or 22d of May. That was after the attack on Nacarlan, which happened on the 19th of May. That was under Captain Stamper.
Q. Where is he?
A. I believe he is now commissary of the Ninth Infantry.
Q. When was that?
A. That was on the 19th of May, 1901.
Senator ALLISON. What is a barrio?
The WITNESS. Two or three bamboo shacks set up together; may be in a radius of 200 or 300 yards. They call that a barrio.

By Senator CULBERSON:

Q. You said that barrio was burned?
A. Not the whole barrio; there were about three houses, as we passed along there, that were set fire to.
Q. By whose order?
A. By order of Captain Stamper.

Senator ALLISON. Where is he?
The WITNESS. In Santa Cruz, I believe; when I left there he was.

By Senator CULBERSON:

Q. Do you know of any other houses or barrios or town being burned?
A. That is all I have witnessed. I have heard of others being burned, but I have never seen them, and of course I can only say what I have seen.
Q. Did you pass any other barrios or towns or villages that had been burned?
A. Yes, sir; several from Santo Tomas to Magdalena. Who burnt them I can not say. They may have been burned by the insurrectos themselves, because they did that. As this guide said, the native there, the American troops would come to a barrio and take the natives into the guardhouse and keep them perhaps three months, and then let them go; and then the insurrectos would come along and gather them in, and if they did not go with the insurrectos they killed them; so the natives were between two fires.

By Senator RAWLINS:

Q. Was the American Army able to afford protection to those people who took the oath of allegiance or not?
A. Yes, sir; they were in Magdalena.
Q. But you say that they were frequently between two fires?
A. That was away out in the barrios. We could not give them protection away out there; it was absolutely impossible to do so.
Q. And those people suffered, as I understand you, both from the insurrectos and from the American forces?
A. That is, inasmuch as the Americans would gather in a whole barrio, they would probably have some information that they might not give, and they would go in and gather in a whole barrio and keep them two or three months and then let them go again, or if any information came in again that there were any insurrectos there they would repeat that.
Q. What do you mean by taking them in—making them prisoners?
A. Yes, sir; making them prisoners, and if they did not have any charge against them they would set them at liberty.

[Proceedings Senate Committee on Philippines, pp. 2243-2251.]

TESTIMONY OF ISADORE H. DUBE.

Sworn by the chairman.

By the CHAIRMAN:

Q. What is your name?
A. Isadore H. Dube.
Q. Where do you live?
A. In Watertown, Mass.
Q. Have you always lived there?
A. No, sir.
Q. When did you come there to live?
A. I came there in January to live.
Q. In January of this year?
A. January of 1902; yes, sir.
Q. Are you a native of Massachusetts?
A. Yes, sir.
Q. You have always lived in the State?
A. Yes, sir.
Q. You were in the Army?
A. Yes, sir.
Q. In what regiment?
A. Twenty-sixth Infantry, United States Volunteers.
Q. What was your rank?
A. Sergeant.
Q. And you have been in the Philippines?
A. Yes, sir.
Q. How long did you serve there?
A. I was in the Philippines as a soldier about sixteen or seventeen months, and I was in Manila on the metropolitan police force for four months.
Q. Have you witnessed any cases of water cure or other torture applied to Filipinos?
A. Yes, sir.
Q. Will you state to the committee what they were and the circumstances?
A. Am I compelled by the committee to give any of the names of the officers who administered the cure to natives?
Q. Certainly.
A. I was on guard. I don't remember the date nor the month. I was in command at Jaro, Panay, P. I., and some natives were confined in the guardhouse by order of Captain Glenn, who is now, I believe, a major. I think he was judge-advocate of the Department of the Visayas; and I was sent with this native—I don't remember the native's name—to bring him over to Lieutenant Congor's house, which was in that town. I did so. I brought the native over, and Lieutenant Congor and Captain Glenn and two or three privates of the Eighteenth Infantry administered the water cure to this native, I don't know for what cause; but the native appeared to me to be sort of a wealthy and intelligent native—he had some education. I do not think that was necessary; I do not know, of course, what the circumstances were.
Q. You do not know why it was administered?
A. I do not know why it was administered to him.
Q. Is that the only case you saw?
A. That is the only case of water cure.

By Senator CULBERSON:

Q. Did you see any other punishment inflicted on Filipinos besides the water cure?
A. Yes, sir.
Q. State what it was.
A. There was a native woman—I was in command of the guard, and there were about fourteen or fifteen male prisoners in a back room which we used as a cell, and a woman was ordered to be confined among those prisoners, a native woman, and I believe the post commander was Major Anderson, first lieutenant of cavalry. I asked the post commander where this woman was to be confined. He says, "Why, right in with the other prisoners." There was nothing but one room, and I believe she was kept in there for over three weeks. I believe this was by order of Major Glenn.
Q. I asked you to state any other character of punishment that was inflicted within your knowledge on any Filipino. Do you regard what you have stated as a punishment, the woman being confined there?
A. Yes, sir; I think that was a punishment that was uncalled for, totally uncalled for.

By the CHAIRMAN:

Q. Was it intended as a punishment?
A. It was a woman that was confined there and could have been confined elsewhere.
Q. Were you told it was done as a punishment?
A. No, sir. I do not see what else it could be.
Q. That is your inference, then?
A. Yes, sir.
Q. Was there any feeling between your regiment and the Eighteenth Infantry?
A. None at all, that I know of.
Q. They were very friendly, were they?
A. Very friendly, as any other regiment.

By Senator PATTERSON:

Q. What was the age of this woman?
A. Well, I don't know what her age was; I should judge about 40 years old.
Q. And what prisoners were they—native prisoners?
A. They were native prisoners, varying from 15 to 40 years of age.
Q. And you state she was confined with them for about three weeks?
A. Yes, sir.

By Senator CULBERSON:

Q. If this woman was submitted to any indignity by being placed in that confinement with the men you can state it, if you know of it?
A. No, I do not; only that this woman had to do her necessary duties of life right in there with the men. I also know of another case where some of the Eighteenth Infantry men—of course, the Eighteenth Infantry men in the post where I was were only men of Lieutenant Congor's mounted scouts, and I think that Lieutenant Congor had a roving commission, and they did practically anything they wanted to. * * *
Q. Can you state any other indignity, punishment, or cruelty inflicted on Filipinos by American soldiers or officers?
A. No, sir.
Q. Did you see any property of Filipinos destroyed?
A. Yes, sir.
Q. What character of property?
A. Houses.
Q. State to the committee now what you saw.
A. I don't know whether this was right or not; but I was on an expedition from the 1st day of January, 1900, for eight days, and we went through the island of Panay and several houses were burned, dwellings, and so forth, and I do not know whether it was necessary or not. Of course I was not in command.
Q. What was the character of the houses; were they dwellings?
A. They were bamboo houses, and a great quantity of rice was burned also.
Q. Were those houses the dwelling houses of the people?
A. Yes, sir.
Q. State if you saw any other burnings or destruction of property.
A. No, sir.

By Senator CULBERSON:

Q. Were you wounded while you were in the service?
A. No, sir.
Q. I believe you stated that you only saw the water cure administered once?
A. Yes, sir.
Q. Please state how they administered it, what the effect was, and all about it.
A. Captain Glenn ordered some men—three or four men of the Eighteenth Infantry—to give that man the water cure. I didn't know what the water cure was. They put cartridges across his mouth, and the native bit the soft part of the cartridges through; so they put a bar of iron across his mouth—I believe it was a little piece of gas pipe—and they poured water into him. There was a pail there and there was a hose. I don't know whether the hose was used or not, but the pail was used. They pressed on his stomach with their hands; and they got some information from him; I don't know what the information was.
Q. What effect did the water cure have on the native?
A. I didn't see him afterwards.
Q. What effect did it seem to have on him at the time?
A. He was a dark-complexioned native and he turned very white; he turned pale as though he was a picture of death.
Senator BEVERIDGE. As though he was sick at the stomach?
A. Yes, sir.
Senator CULBERSON. Were there any indications of pain; and if so, what were they?
The WITNESS. The native could not stand on his feet; they had to take him up.

By Senator PATTERSON:

Q. You speak of his biting the cartridge. What do you mean by that?
A. Have you ever seen a Krag-Jörgensen cartridge?
Senator PATTERSON. No.
A. (Continued.) There is a soft part to it where the powder is and the native squeezed through it with his teeth.
Q. And that allowed his jaws to close?
A. Yes, sir.

[Proceedings Senate Committee on Philippines, pp, 2251-2259.]

TESTIMONY OF JANUARIUS MANNING.

Sworn by the chairman.

By the CHAIRMAN:

Q. What is your name?
A. Januarius Manning.
Q. You are a resident of where?
A. Boston.
Q. Charlestown?
A. Yes, sir; Charlestown.
Q. Have you always lived there?
A. No, sir.
Q. You are a native of Massachusetts?
A. No, sir.
Q. When did you come to Boston?
A. I came to Boston in 1825.
Q. What State are you a native of?
A. I am a Canadian by birth.
Q. You were in the United States Army?
A. Yes, sir.
Q. In what regiment?
A. First in the Twentieth United States Infantry and afterwards in the Twenty-sixth Infantry Volunteers.
Q. You served in the Regular Army first?
A. Yes, sir.
Q. The full term of three years?
A. No, sir; first in the Spanish-American war.
Q. And then you enlisted in the Twenty-sixth Infantry?
A. Yes, sir.

Q. And what rank did you hold?
A. I was first sergeant during the Philippine campaign.
Q. How long were you in the Philippine Islands?
A. We got into Manila Bay on the 24th of October, 1899, and we left on the 8th of March, 1901.
Q. During that time of service what part of the Philippine Islands were you in?
A. In the island of Panay, province of Iloilo.
Q. In General Hughes's division?
A. Yes, sir.
Q. Were you a witness while you were there to any cruelty or torture of the natives, any application of the water cure?
A. Yes, sir; I saw the water cure.
Q. State when and where and under what circumstances.
A. The first time I saw it was on the 20th of August, 1900.
Q. Where?
A. In the town of Leon, Panay.
Q. You may state the circumstances, why it was administered, and to whom.
A. They were prisoners, captured for the murder of Private O'Hearn, belonging to Company I. They were captured the day before, and to get them to tell what they knew about the murder they had to give them the water cure.
Q. Who gave it to them?
A. Well, members of the company.
Q. Were you engaged in it?
A. Well, I was there. I didn't give it myself; I directed the men to do it.
Q. You directed men to do it; that is, you were a sergeant?
A. Yes, sir.
Q. And you directed the men under your command to administer the water cure? Did you receive any orders from anyone to do that?
A. Yes, sir; the commanding officer.
Q. Who was the commanding officer?
A. Captain Gregg.
Q. He ordered you to give the water cure to those natives; who ordered the men out?
A. He ordered the natives taken out, and he told me to go out and see that they were not abused; to see that they did not get too much.
Q. Did he order you to give them the water cure?
A. I would not swear to that.

By Senator CULBERSON:

Q. Did the captain understand what you were going to do with these people?
A. Yes, sir.
Q. How do you know he understood it?
A. Well, when I came down he had ordered the men out. I don't know what orders he had given, but he told me to go out; that they were going to give them the water cure, and to see that the men did not abuse the prisoners.

By Senator PATTERSON:

Q. Go on and describe it.
A. The men would be laid down and the water cure would be administered.
Q. How? Give us one instance, going through the particulars of some one instance that you have in mind.
A. Take any one of the men—take the leader, for instance—he was laid down on his back, held down; a few men would hold him and something would be put in his mouth to keep his mouth open, and the water would be poured in.
Q. What did they put in his mouth to keep it open, and how did they keep it there?
A. A stick, generally; a small stick would be put in his mouth to keep it open; a little piece of stick, so he could not close it up. Then the water would be poured down, and when he would breathe, of course he would have to take in the water.
Q. How much water would be poured down?
A. I don't know how much. Sometimes it would take a good deal before they would talk, and other times it would not take very much.
Q. Whom did you have there for them to talk to?
A. We had a native, a man that was an interpreter there, who spoke the Filipino language.
Q. Had the remains of the person that was supposed to be Private O'Hearn been found?
A. Yes, sir; the body was recovered on the 19th—the day before.
Q. What was the purpose of taking these men out to give them the water cure?
A. Those men were supposed to be the men who had murdered O'Hearn.
Q. And for what purpose was the water cure inflicted?
A. They were supposed to be the murderers, but we had no direct proof that they were the murderers; we only supposed they were at the time.
Q. And how did you suppose that the water cure would enlighten you on that subject?
A. When we brought them in and put them under oath, they knew nothing at all about it; but the ringleader, the day before, the time his body was recovered, admitted that he had helped to murder him, and he implicated ten or eleven more men.
Q. The ringleader had had the water cure applied to him the day before?
A. So I understand; I was not there.
Q. And then he gave the names of ten or eleven others?
A. Yes, sir.
Q. And you had the testimony of one man against ten or eleven others?
A. Yes, sir.
Q. That being the case, what did you proceed with these ten or eleven others for; what was the purpose?
A. We did not consider the testimony of one man, a self-confessed murderer, would be sufficient to convict the other men, and we wanted to get more evidence.
Q. How did you expect to get more evidence?
A. After the application of the water cure they did tell. They first told on the other men and afterwards they implicated themselves.
Q. How did the water cure get them to implicate themselves, that is what I want to know; how did that induce them to do it?
A. I don't know just what effect it would have on them, but they told.
Q. Was it supposed that the pain and suffering of the application would induce them to tell; was that the theory?
A. Well, I never studied it out; but it seemed to have that effect.
Senator BEVERIDGE. Or the fright?
The WITNESS. I don't know just what it was. They seemed to be pretty much afraid of it after one application.

By Senator PATTERSON:

Q. Did you give these men more than one application?
A. Some of them.
Q. How many?
A. Well, I remember three; there were three brothers.
Q. Why did you give them more than one application?
A. After we gave them some they would not tell on themselves or anyone else.
Q. They denied having any knowledge after the first time?
A. Yes, sir.
Q. And was it the next day you gave it to them again or the same day?
A. I believe it was two days afterwards.
Q. You gave it to them again two days afterwards?
A. Yes, sir.
Senator BEVERIDGE. But in the meantime they had been told on by others?
The WITNESS. Yes, sir.

By Senator PATTERSON:

Q. By the others that the water cure had been applied to?
A. Yes, sir.
Q. And when you applied it to them the second day they stated they had been connected with it?
A. Yes, sir.

By Senator DIETRICH:

Q. This Filipino who first confessed to the murder and torture of O'Hearn also gave the information where the bones could be found, did he not?
A. The first man that gave information was the presidente of the town of San Miguel. He gave the information to the Gordon Scouts; that was a detachment of mounted infantry from the Eighteenth. And then they telegraphed up to the captain to meet them out there the next day near this town. So the captain took a detachment out and they got O'Hearn's body—that is, they got the bones under the roots of a tree in a little hole, and took them in—and they took in, I guess, about somewhere between 15 and 20 prisoners from the barrio of Tauag.
Q. There never was any doubt in your mind, and, so far as you know, in the minds of other Americans present, but what these men that received the water cure were responsible and really did murder and burn O'Hearn, was there?
A. No, sir.

By Senator CULBERSON:

Q. Why were they not executed then?
A. Those men tried to escape before they were sent down to department headquarters. Two of them did escape, and, I believe, nine were shot in an attempt to escape.
Q. How long was it after they were arrested before they tried to escape?
A. I don't remember that. The first man that tried to escape was the ringleader.
Q. Was he killed?
A. Yes; he was killed.
Q. One witness testified the other day that they were in prison five or six months. How is that?
A. I don't think they were there that long.
Q. Well, how long were they in prison before they attempted to escape?
A. If I remember right, I don't think this ringleader was there more than four or five weeks, and the rest of them I don't think were there more than two or three months.
Q. None of them were ever tried, were they?
A. No, sir; none of them were tried.

By Senator RAWLINS:

Q. You mentioned that as the first case of seeing the water cure administered; what other cases do you remember about?
A. The first time I saw it was on that day. I think that was the 20th, and I think it was on the 22d we gave it to some more.

By Senator PATTERSON:

Q. You say the first information of the death of O'Hearn was given by the presidente of the town?
A. Yes, sir.
Q. Did he come in and voluntarily tell about it?
A. No, sir.
Q. How about that, then?
A. It was secured by Lieutenant Conger, who commanded those scouts.
Q. Was the water cure applied to the presidente?
A. I heard it was, but I don't know.
Q. How many of these prisoners did you say escaped?
A. Two escaped and nine were killed.
Q. Those are the men who were charged with the killing of O'Hearn and who had confessed under the pressure of the water cure?
A. And the other prisoners we had were released. We were holding those to send down to department headquarters.
Q. Which other prisoners do you refer to?
A. I think there were somewhere between 15 and 20 brought in the first day, and we only held 11 altogether.
Senator PATTERSON. Of the 11, 9 were killed, and what became of the other 2?
The WITNESS. They escaped; we never captured them again.

By Senator CULBERSON:

Q. Did you ever see any barrios or towns burned over there?
A. Yes, sir; I have seen barrios burned.
Q. Where and when? Tell the committee fully about it.
A. I can not remember the date. I saw most of them in the summer of 1900.
Q. State where it was and how many of them were burned.
A. Oh, I have seen a half dozen or so barrios burned.
Q. How many houses would that include; how many houses in each barrio?
A. Various sizes; from 15 to 30, generally.
Q. You have seen, then, as I understand you, a half dozen barrios burned, with 15 to 30 houses in each barrio?
A. Yes, sir.
Q. What was the character of the houses that were burned; were they dwelling houses or business houses?
A. Dwelling houses.
Q. What became of the people?
A. The women and children who occupied those houses—well, only one barrio, I believe, I saw occupied, and they got out; and the other barrios burned were barrios deserted, and they were supposed to be quarters for the insurgents. That is why they were destroyed. They were within the insurgent lines altogether, or what is supposed to be the insurgent lines. Then I saw a few barrios burned, or know of them being burned, that were burned by the natives themselves—that is, by those bands of ladrones or insurgents or whatever they were.
Q. Did the officers of your command generally know that the water cure was being administered when testimony was desired?

A. I don't know. That is, I have never seen any case of water cure given except the times I have stated, and the officers at that time knew it.
Q. Who was the commanding officer at that time?
A. Captain Gregg.
Q. Do you know whether he reported that to headquarters?
A. I don't know.
Q. You say the adjutant came there to look into it?
A. Yes, sir; Lieutenant Avery, acting adjutant at the time.
Q. Who commanded the Twenty-sixth?
A. At that time Major Anderson.
Q. What did the adjutant find out when he came there? Did he find out that the water cure had been administered to those Filipinos and that they had confessed to this murder?
A. I don't know whether he found out that the water cure had been given to them or not; but he seemed to be satisfied that they were the murderers.
Q. Satisfied from what; what satisfied him?
A. Talking to the men themselves. He brought an interpreter from Iloilo with him.
Q. You do not know whether the men and officers there advised him or informed him that the water cure had been administered or not?
A. No, sir; I do not know.

[Proceedings Senate Committee on Philippines, pp. 2284 to 2310.]

TESTIMONY OF WILLIAM J. GIBBS.

Sworn by the chairman.

By the CHAIRMAN:

Q. You live in Springfield?
A. Yes, sir.
Q. You have served in the Army?
A. Yes, sir.
Q. In what regiment?
A. Company C, Ninth Infantry.
Q. In the Regular Army?
A. Yes, sir; in the Regular Army.
Q. When were you discharged?
A. I was supposed to be discharged February 2 [referring to memorandum].
Q. Of this year?
A. Yes, sir.
Q. Did you receive an honorable discharge?
A. Yes, sir. [Referring to memorandum.] This is the 20th of March.
Q. You had served in the Philippine Islands?
A. Yes, sir.
Q. How long?
A. I served there about three years.
Q. Did you have service in Samar?
A. Yes, sir.
Q. Were you present at the massacre at Balangiga?
A. Yes, sir: I am one of the survivors.
Q. Well, the committee would be glad to hear any statement you have to make.
Senator BURROWS. Tell us the story in full, now.
The WITNESS. When we first left Manila to go to Balangiga, Samar, the captain was somewhat afraid to go to this place in the nighttime, so he waited until morning. After landing he called the officials together and told them he came there to establish peace and to keep out the surrounding bands of robbers.
Q. What was the captain's name?
A. Captain Connell. He told them he wanted them to be peaceable, and if they were not he was all ready and prepared to fight. Things went on in a way that was somewhat strange to a soldier; that is, the natives did not seem to associate with the soldiers the same as they did in the northern provinces, and the soldiers began to think there was something strange. Then the officer, Captain Connell, wanted to have things cleaned up around the town, and he went to work and issued a proclamation to have all of the natives appear the next morning and clean out the town. The natives appeared to be somewhat reluctant in regard to that. They turned out, but they did not work very hard, and then the next morning they refused to come at all. So he went to work and sent the men, each man to a shack, and forced them to come out, and had a guard placed over the men while they were working in the hot sun. He had two Sibley tents, and confined at one time as many as 90 of the natives in two Sibley tents.
Senator BEVERIDGE. What cleaning up did they do?
The WITNESS. Cleaning up the underbrush and the rubbish from under the shacks—under their own shacks as well as ours.

By Senator DUBOIS:

Q. Did he go out and get natives indiscriminately?
A. Yes, sir.
Q. He went out and got everybody and made them go to work?
A. Yes, sir.
Senator BEVERIDGE. Nobody that did not live in the town?
The WITNESS. No, sir. They put the 90 natives in the two Sibley tents, which only held about 16 soldiers; they could not lie down; they had to stand up. There was not room enough to lie down. They stayed there for two or three days. In the morning Captain Connell would line the natives up and would issue them bolos for the purpose of cutting down the underbrush. That is what they used.
The CHAIRMAN. Is it a different bolo from the fighting bolo?
The WITNESS. A different bolo from the fighting bolo, yes, sir; but that morning they used the working bolo in place of the fighting bolo; in case of emergency they used that.
Senator BURROWS. You mean lining up those that were in the Sibley tents.
The WITNESS. Yes, sir; and the sergeant was the one that issued bolos to them by order of the company commander, and then all the men went to their breakfast. There was no order to take their arms any place they went, unless they went——

By Senator HALE:

Q. They were our men?
A. Yes, sir.
Q. The troops?
A. Yes, sir. The troops were not ordered to take their arms unless they went 400 yards from camp. So they went to breakfast that morning without their arms, every man. There was one man left behind, who was unable to get up from his bed.
Q. Tell me the strength of the American forces that landed there.
A. Seventy-two.
Q. Go on.
A. While the men were at breakfast, defenseless, those natives were lying in wait with their bolos, standing up right alongside of us, 30 feet from us, waiting for us to get through our breakfast, so that they could be guarded by us at their work. Everything appeared to be all right, when all of a sudden the native chief of police, who was supposed to be managing the affairs of the natives, while at work, came over and started to pass some flattering remarks in regard to the food, etc., and all of a sudden he let out a yell, and when he did they spread out in all directions and cut the men down at the table and cut the guards down. Of course, I could not see exactly what was done. I was very close to my own quarters and I got up there just as quick as I could. I could just see things at a glance.

By the CHAIRMAN:

Q. Was there any apparent signal given to the natives?
A. No more than that yell. Some say that the bells were tolled, but I did not hear them. I did not hear anything but that yell.
Q. Did they attack all the quarters?
A. Yes, sir; all the quarters.

By Senator HALE:

Q. How many were there of the Filipinos?
A. There were about 75 that were in the Sibley tents, and the 90 that had been in the Sibley tents before had been let go. They were let go to their homes, and the chief of police the day previous brought those other 75 in, and they were put right in the Sibley tents. So in all there must have been about 150 right in the town of Balangiga, and on the outside there were more; how many more I do not know, but it seemed to me there were about 400.
Q. How many engaged in this attack that you describe at the breakfast?
A. They came from all sides, from the woods, from the Sibley tents, and from the shacks.
Q. Had all of these others, the 90 that had been sent off, been given these knives the same as the 75 that were lined up?
A. They all had them in their houses; they took them with them.
Q. You said the sergeant furnished them?
A. He did. There were so many in the shack, and he divided them among the natives.
Q. That had been done with the 90 before, as well as the 75 that morning?
A. Yes, sir; everybody was furnished with a bolo.
Senator BURROWS. To cut down this underbrush?
The WITNESS. Yes; and when the natives would go home they would take the bolos with them, because that was the only thing they had to use in gathering cocoanuts and to chop their wood and to work with.

By Senator HALE:

Q. How did you get away?
A. I was sitting there close to my quarters. We had a little table among ourselves, mostly noncommissioned officers of the quarters we were in, and we had a kind of a little mess of our own, and at the time this happened, of course, we were the farthest away from the natives, and I happened to be on guard, and I got up into our quarters quick and got a gun. I had my belt on, and as soon as I got the rifle, of course, I was pretty near safe then. But I was cut twice in doing so, before I reached the gun—going up the steps I was cut twice.
Senator RAWLINS. Where were you cut?
The WITNESS. In the cheek bone and in the ankle.
Q. You and other soldiers got into the quarters and there made a stand?
A. And there we made a stand; yes, sir. The shack was full of natives when we got in there, and they were hacking a couple of men up, and this Corporal Burke happened to get hold of a revolver, and he grabbed hold of one fellow and started to shoot him in the head, and as soon as they heard the firing they started to try to jump out of the window. I caught another fellow and got a gun away from him, and I shot him, and I shot two or three more, and that fixed that shack; and then we got on the outside and started to shoot the natives that were getting out of the orderly room.
Senator HALE. You say "we." How many of you were there then?
The WITNESS. About three of us—Private Clark, Corporal Burke, and myself.
Q. Were most of them killed at the table?
A. A majority were killed.
Q. Why didn't they get away?
A. They couldn't get away. There was a board for a seat and they had to stick their legs under the table, and in order to get up, they had a little difficulty. They tried to get up, and in some cases you could see where they got their knees halfway out; you could see where their knees were lodged.
Q. Did the force come up back of them?
A. They came back and front too. The natives that were lined up with their bolos in front of the Sibley tents came from the front, but the others came from the back kitchen, right from the woods.

By Senator PATTERSON:

Q. Is Balangiga a town or a village?
A. A village; yes, sir.
Q. About how many people were living there?
A. They say there were 2,000.
Q. How close was the camp pitched, your quarters, to the town?
A. Right in the town. We occupied the main building of the town, right in the center of the town, and the natives just surrounded us.
Q. Did the soldiers occupy the buildings, the main buildings?
A. They occupied the main buildings and three others.
Senator HALE. For quarters?
The WITNESS. For quarters, and the officers occupied the convent, or part of the convent.
The CHAIRMAN. What officers were killed?
The WITNESS. Captain Connell and Lieutenant Bumpus and Major Griswold, the surgeon.

By Senator PATTERSON:

Q. How many Sibley tents were there?
A. Two.
Q. When did Captain Connell commence this cleaning up of brush that you speak of?
A. Just as soon as he arrived there, or the next day.
Q. And when did he order out the first men, the first of the Filipinos?
A. He ordered them out the next day.
Q. And how many came the first day?
A. Well, about half; that was, perhaps, about 50 men. You see a great many of those men were so old they could not work. None were taken but the men who were able to work.
Q. There were about 50 men came out under the first order?
A. Yes, sir.
Q. And they did not appear to work very willingly?
A. No, sir.
Q. And then when did he send to their houses or shacks to get them out in greater numbers; how soon after the first day?
A. Two days afterwards.
Q. And how many came out or were brought out at that time?
A. Everybody was brought out that was able to work, every man. There were about 90.
Q. Old men and young men?
A. Yes, sir.
Q. What ages were included, would you think, as to the youngest and oldest?

A. The youngest was perhaps about 13.
Q. And the oldest?
A. And the oldest was about 45.
Q. You say the Sibley tents were large enough for about 16 men?
A. Yes, sir.
Q. But they had about 45 in each tent?
A. Yes, sir.
Senator HALE. What was the weather?
The WITNESS. The weather was damp, and of course it was the rainy season at that time and it was very unpleasant all right for the natives, and they started to complain about it. They even wanted a little matting to put on the inside of the tent, to keep them from the dampness, from the ground, but he would not allow that at all.

By Senator PATTERSON:

Q. So that was about 45 men in the tent, and under those conditions?
A. Yes, sir.
Q. And that continued for about four days? Then what occurred?
A. Well——

By Senator BURROWS:

Q. May I ask a question right there? I understood you to say that they were compelled to stand up. Did you mean to say that?
A. No, sir; I meant to say they could not lie down. They had to stand on their haunches.
Q. They could not lie down flat?
A. No, sir.

By Senator PATTERSON:

Q. That is the way they passed the night?
A. Yes, sir.
Q. Then did an interval occur before there was more of that work done?
A. The men were allowed to go home after that and appear in the morning, and they did so, although they worked reluctantly all the while; but still he didn't put them in Sibley tents. He allowed them to go home, and they came and worked all day, and then they planned this massacre, I suppose. The chief of the police came to the captain and says——
Q. I haven't come to that yet. Did they resume, after these four days you have spoken of, the putting of the men in the tents at night at any time before the massacre?
A. Yes, sir.
Q. When?
A. They resumed it after the men had come from the mountains—the other men, the men that belonged to some other village.
Q. And that was about how long after the first four days that they were kept as you have described?
A. I can not exactly say, but it was about a week before the massacre that those men were confined, those prisoners from the mountains—they were supposed to be—were confined in the Sibley tents.
Q. How many of these men about a week before the massacre were confined in the Sibley tents?
A. Seventy-five.
Q. For how many nights were they confined in the Sibley tents?
A. From that time, from about a week, up until the time of the massacre.
Q. Had they been confined in the Sibley tents the night before the morning of the massacre?
A. Yes, sir.
Q. There were about 75, then, of these men from the mountains confined in the Sibley tents for a week before the massacre occurred?
A. Yes, sir; I should say a week.
Q. Were they compelled to sleep and pass the night in the same way that the others had been compelled to?
A. Yes; just the same.
Q. What was the character of the weather then?
A. It was the rainy season all the time and it rained more or less during the day.
Q. What accommodations were given to the men in the tents at night?
A. The accommodations that was given to them were just the same as the ones that belonged to the town had had.
Q. I mean was there any matting given them?
A. No matting at all.
Q. (Continuing.) To protect them from the wet ground or anything of that kind?
A. No, sir.
Senator HALE. Was it an ordinary Sibley tent?
A. The ordinary Sibley tent; yes, sir.

By Senator PATTERSON:

Q. Of what age were these 75 men that you speak of?
A. I guess they ranged about the same.
Q. Now, had bolos been given to the first 90?
A. Yes, sir.
Q. They had taken those bolos to their homes?
A. Yes, sir.
Q. And additional bolos were given to these latter 75 men?
A. What was left, yes, sir, were given to the 75; they were all supplied.
Q. Did these men complain of their treatment?
A. Yes, sir.
Q. Did their complaint do any good?
A. They would only make complaints to the soldiers; they were afraid to make them to the officers.
Q. And the soldiers could not relieve them?
A. Some would sympathize with them and others just the opposite.
Q. How far was the place at which you went to breakfast from the buildings where the soldiers were quartered?
A. Some places were 30 feet and others 20 feet—that many yards, I should say.
Q. So the permanent quarters and your meal house, where you took your meals, were approximately together?
A. Yes, sir.
Q. Twenty-five or thirty feet apart?
A. Yes, sir.
Q. Were you one of the two men left on guard?
A. I was one of the men left on guard; yes, sir.
Q. And all of the company but the two men on guard were engaged in taking breakfast?
A. Yes, sir.
Q. Now, the 75 men who were engaged in doing this work were in ranks, you say?
A. In ranks; yes, sir.
Q. How did they come to be in ranks?
A. They were lined up just the same as the men would line up in the morning; just as the soldiers would line up in the morning.
Q. These were brought from the tents?
A. Brought from the tents and took their places in ranks, the same as soldiers.
Q. Were they engaged in doing anything at the time they were thus lined up in ranks?
A. No, sir; they had just finished their breakfast. Their breakfast was brought to them by the natives of the town.
Q. The natives in the town brought their breakfast to them?
A. Yes, sir.
Q. Is that the way they had been fed right along?
A. All the while; yes, sir. We didn't give them anything.
Q. What length of time were they required to work?
A. From 7 o'clock in the morning until 5 o'clock at night.
Q. When noontime came how did they get their noonday meal?
A. They would be brought in under guard to the Sibley tents, and they would line up in ranks there and the women would bring them food.
Q. And at night would they be marched under guard to the Sibley tents?
A. Yes, sir.
Q. And then were they guarded while they were in the Sibley tents?
A. Yes, sir.
Q. By armed soldiers?
A. Yes, sir.
Senator HALE. Did women bring them their suppers?
The WITNESS. Yes; they brought them the three meals each day.

By Senator PATTERSON:

Q. Had any American troops occupied this town before?
A. No, sir.
Q. You say that when they first went to a town that Captain Connell notified them that they came there for peaceful purposes, but if they were not peaceable then they were ready to fight?
A. Yes, sir.
Q. But the day after the company got there this treatment of the men of the village commenced?
A. Of the natives; yes, sir.
Q. And the Filipinos, commencing with the men in that way, did not seem to be friendly?
A. No, sir.
Q. Had you any opportunity before this method of treatment had been commenced to discover whether they would be friendly or not?
A. Well, they did not appear to be friendly from the very first time we landed there until we were massacred.
Q. You said yesterday that you had not seen the water cure administered, but you had seen the water brought in.
A. Yes, sir.
Q. What did you know that indicated, that the water cure was being administered to soldiers?
Senator BEVERIDGE. Do you speak of the water cure in Samar?
The WITNESS. Yes, sir.

By Senator PATTERSON:

Q. What did you know that made you come to the conclusion that it was being administered to the Filipinos?
A. I have seen the men brought down to the place where I know it was going to be administered.

By the CHAIRMAN:

Q. Was this at Balangiga?
A. No, sir; at Catbalogan.
Q. Before you went to Balangiga?
A. No; after the massacre.

By Senator PATTERSON:

Q. Go ahead.
A. Some of my comrades and myself have tried to peep in the windows and see what was going on. We could hear a good many things.
Q. What did you hear?
A. We heard moans from the men which I expect were getting the water cure, and then we could see a kind of a sickly expression on a man's face after coming out.
Q. Did you see them carrying in water?
A. Yes, sir.
Q. Before you heard the moans and before they came out?
A. Yes, sir.
Q. What do you know of the results?
A. One man died in Catbalogan.
Q. Who was that?
A. I don't know.
Q. How do you know he died?
A. I was on guard and heard he died. I was on guard the next day, and heard he died the day afterwards.
Q. Was it generally reported in your company that this man had died?
A. It was generally reported among the soldiers.
Q. Did you see the man which the report related to?
A. No, sir; but I saw his funeral.
Q. And it was generally understood that he died as the result of the water cure?
A. Yes, sir.
Q. How frequently did you see evidences of the administration of the water cure such as you have described, the carrying in of water, and things of that kind?
A. Three times.
Q. Was it commonly reported or understood that the administration of the water cure was usual or common?
A. Yes, sir.

By the CHAIRMAN:

Q. Who were the soldiers engaged in these cases of water cure that you believe were administered?
A. Usually the interpreters and the American scouts.
Q. Who were the American scouts?
A. Men that had been discharged from the service and reenlisted as American scouts.
Q. Were they regulars?
A. No, sir. They were regulars previous to their being scouts, or some of them were.
Q. Were some of them volunteers?
A. I believe so.
Q. Were any of the men in your regiment engaged in it?
A. I could not say.

By Senator PATTERSON:

Q. Were those men brought in to where your regiment was by these scouts?
A. Well, in Catbalogan I did not see any scouts. What I saw there was the interpreter, who was supposed to be the one administering the water cure——
Q. This was right within the lines, was it, where the officers and soldiers were?

A. This place in Catbalogan was right in the officers' quarters—in the rear of the officers' quarters.

Q. What was the character of the water they used for this purpose, and where did they get it?

A. Dirty water was preferable to the cleanest water.

Q. What do you mean by that?

A. They would go to the shore and take a tin pan and dish up sand with water, with the salt water, and if that could not be found they would get something else that was dirty.

Q. Did you hear the question discussed or talked about as to why they used any particular kind of water?

A. Simply to inflict a more severe punishment upon them. That was the reason they got the dirty water.

Q. And why they mixed sand with the water?

A. Yes, sir.

Q. Speaking of this woman who was assaulted, some statement was made——

The CHAIRMAN. Was alleged to have been assaulted.

Q. (Continuing.) Who said she was assaulted, something was said about lack of chasity among the women there. What, if anything, do you know of the chasity of the Filipino women, as you saw them?

A. Filipino women are very virtuous.

Q. How do you gather that, from general information or what?

A. General information and also what I have seen myself.

Q. Is there prostitution among them?

A. Yes, sir.

Q. Have you any knowledge as to how the chastity of the Filipino women, from your observation, knowledge, and conversation, compares with American towns and localities?

A. I think the Filipino women in the towns of the Philippines are more pure than they are in towns of the United States of the same population.

Q. Why do you say that?

A. Because they appear to be that way to me in the small towns.

RECORDS OF COURTS-MARTIAL IN THE PHILIPPINE ISLANDS.

[From the New York Evening Post, June 16.]

To the Editor of the Evening Post.

SIR: The records of courts-martial in the Philippines bring out two facts with terrible distinctness:

(1) The frequency of atrocious crimes against the persons of Filipino men and women by our soldiers; and

(2) The demoralization among the officers who have served on some of these tribunals, as evidenced in their findings and sentences.

Let me give a few examples from the official lists of hundreds of cases which have recently been printed by the Senate Committee on the Philippines:

Julius Arnold, a member of Company M, Twenty-fifth Infantry, was convicted of murdering a Filipino woman by shooting her with a pistol in January, 1900, and sentenced to imprisonment for life. The reviewing authority remarked that he should have been hanged.

Lieut. Bissell Thomas was convicted of using violence to native prisoners and striking one of them who lay helpless on the floor and was bleeding at the nose and mouth. Sentenced to be fined $300 and reprimanded. The reviewing authority said that the conduct of this officer could not be too much deplored nor too emphatically denounced. But he was retained, perforce, in the service. Who had real respect for the "uniform"—the members of the court-martial, who passed such an inadequate sentence, or the reviewing authority, who expressed his indignation at the cowardly and astrocious crime? According to Administration Senators, he should be arrested for "slandering the Army."

Capt. George Brandle and Lieut. Alvin S. Perkins were tried for torturing prisoners, "entitled to protection," by causing them to be hung by the neck with a rope for ten seconds, more or less, thus inflicting wounds and great bodily pain.

There is an old French phrase, "Stupid as a soldier," but it will scarcely be believed that the court-martial who tried these officers substituted for the words "great bodily pain," which were in the specifications, the words "mental anguish," and then found the accused guilty in each case, and sentenced them "to be reprimanded by the reviewing authority!" who fortunately happened to be General MacArthur. It did not seem to that gallant and distinguished officer that when helpless prisoners were strung up by the neck with a rope and left to hang with their whole weight for "ten seconds, more or less," they suffered only "mental anguish," and so, when he issued the reprimand, it bore as severely on the court-martial as on the convicted officers.

He told these military judges that the evidence before them required "a finding of guilty on each of the specifications as laid, without the exceptions and substitutions made by the court," and then he said to the convicted torturers that the assault they had committed was "not only criminal in itself under the laws of war, but in remote consequences well calculated to defeat a carefully considered policy and to inflict permanent injury upon essential interests of the nation."

"The purpose of the United States in these islands," said General MacArthur, "is to introduce and plant republican institutions, based upon the beneficent principles of the Constitution," and those cruelties (he said) had "inflicted incalculable injury upon the interests of the country," and "cast an unwarranted aspersion upon the reputation of the United States Army for sentiments of honor and humanity." But he could not set aside the sentences, and so these officers, like the other convicted assailant of helpless prisoners, were retained in the service, which they had all alike dishonored, as a result of the conspicuous moral or mental incapacity of the courts-martial that had tried them.

General Lawton said, in as many words, in reviewing the proceedings of another court-martial, that the members of it, by passing an entirely inadequate sentence upon convicted looters, had virtually made themselves participants in that abominable and unsoldierly crime.

Our people do not seem to realize what this demoralization means. No so-called anti-imperialist, in demanding that charges against our soldiers should be thoroughly examined and that the strictest discipline should be maintained, has asserted or suggested any such demoralization among the officers of our army in the Philippines as appears from these strictures made by General Lawton and General MacArthur, or in General Chaffee's comments on the acquittal of Waller and Day. What must General Chaffee have thought of the enormity of Major Waller's orders when he censured Lieutenant Day for not disobeying them?

Another commissioned officer was sentenced by one of these preposterous courts to be merely "reprimanded" for causing, without sufficient provocation, shots to be fired from a gunboat on "peaceable natives."

The reviewing authority indignantly declared that ignorance of general orders was no defense in such a case; that "the accused, having been convicted of offenses among the most serious and flagrant known to the rules and laws of war, should have been adjudged a sentence commensurate with his guilt, as established by the evidence." We have come, indeed, to an appalling pass in our subjugation of the Philippines—call it "plain duty," "benevolent assimilation," "providential mission," or any other or blasphemous phrase—when the military judges are in such sympathy with such crimes that they practically give immunity to the criminals, the commanding generals being our authority for this statement.

But the worst feature of the official list to which I have referred is the prevalence of crimes against the persons of women and mere children, and the growing inadequacy of the punishment, on conviction, since the late President commuted the sentences and spared the lives of so many of the convicted offenders.

Benjamin Stanley was convicted and sentenced to be hanged by court-martial for rape, committed in April, 1899, but the President commuted the sentence to twenty years' imprisonment at hard labor—which some other amiable statesman may some day shorten or terminate altogether on the petition of the prisoner's fellow-citizens.

Frank Miller was sentenced to be hanged for rape committed in October, 1899, and again the President deprived the gallows of its prey.

A few months later "Willie Wilson" was sentenced to death for murdering a native woman, and again the President took the properest kind of work out of the hangman's hands, and disheartened the courts-martial, who, it will be noticed, were proceeding bravely in maintaining discipline among the enlisted men.

In May, 1901, Charles Hose was convicted of rape and sentenced, not to be hanged, but to be imprisoned for thirty years, and the penalty was reduced—not by the President this time, but by the reviewing authority—to confinement at hard labor for five years.

In the same month Ernest A. O'Neil was convicted of rape and sentenced to imprisonment for thirty years, which was also reduced by the reviewing authority to confinement at hard labor for five years.

A few months later (July, 1901) James A. Darling was convicted of "felonious assault upon a native woman, with intent to commit rape," and was let off with twelve years' imprisonment, which was afterwards reduced to seven.

Den Wallace was convicted of shooting at two prisoners, not in his charge, with an intent to kill them, and was sentenced to imprisonment for one year.

John Janke was convicted of making insulting propositions to a native woman and trying to intimidate her, and was fined $60 (afterwards reduced to $40) and six months' imprisonment (afterwards reduced to four) and, worse than all, was retained in the service of the United States.

But for robbing natives of money and jewelry, in company with other soldiers of ours, Sylvanus Cobb was dishonorably discharged and sentenced to five years' imprisonment. He assisted, however, in the apprehension of his fellow-thieves, gave evidence against them at their trial, and his imprisonment was reduced to three months.

Roscoe F. Goodfrey "did assault a native woman 70 years old, July, 1901," and was fined $10, imprisoned one month, and retained in the military service of "this great and glorious Republic."

But Jeff Grisby forfeited his pay and allowances and was dishonorably discharged for "taking five chickens from a native by force, and giving for them $1 Mexican without his consent."

Henry Bruce was convicted of assaulting two natives "one a young girl," for which he was fined $20, imprisoned two months, and retained in the service of the United States. What do our patriotic editors and Christian ministers think of this "libel on the uniform."

Edward M. Boodie was convicted of the "murder of a native boy by shooting him with a pistol, November, 1900," and sentenced to imprisonment for life—following the President's commutation of Willie Wilson's sentence (supra).

James F. Caffrey, in the same month, was convicted of the same crime—"murder of a native boy"—and sentenced to the same punishment. In each of these cases the reviewing authority remarked that this was "a crime of peculiar atrocity that might be viewed with horror by the most debased savage."

For "assault and battery upon three natives, and firing revolver into house of native women, etc., June, 1900, John L. Souther was fined $80, and retained in the service without any other punishment. Of this the reviewing authority said: "Sentence inadequate."

John Allen, convicted of "murdering a native by shooting him with a carbine, January, 1901," was sentenced to twenty years' imprisonment. The reviewing authority makes the significant remark on the murder and the punishment in this case: "Due to lax conditions of discipline among the scouts; sentence inadequate."

Elmer W. Placy, convicted of "assaults upon native man and woman without provocation," was retained in the service of the United States and let off with a fine of $60 and six months' imprisonment.

William Harvey, convicted of "raping native woman, aged 60, throwing her to the floor, and bruising her, February, 1901," sentenced to ten years' imprisonment. This was "going" President McKinley ten years "better."

Frederick A. Washington, convicted of "entering a native's house and assaulting a native woman, March, 1902," was fined $20, imprisoned two months, and retained in the service.

Lieut. Preston Brown, charged with murdering "an unarmed, unresisting native Filipino, name unknown, a prisoner of war in his charge," convicted of manslaughter and sentenced to be dismissed from the service of the United States and confined at hard labor for five years, had his sentence commuted to a reduction of 50 files and one-half his pay for nine months, and he was thereupon released from arrest and restored to duty by Theodore Roosevelt, President of the United States. This officer's friends are, of course, trying to have his punishment entirely remitted.

Robert Porter, who was sentenced by court-martial to be hanged, and whose life was saved by President McKinley early in our work of "benevolent assimilation," had not only been convicted of rape, but also of committing an assault with a pistol upon a Filipino, and of breaking into another native's house, and escaping, after his arrest, from the guard.

William Scarborough, who was also saved from the gallows by President McKinley, had not only been convicted of rape, but of "entering the houses of peaceable Filipino residents and terrifying men and women and children by discharging his rifle into and around their houses."

George Danphoffer, whose life was saved by President McKinley, had not only been convicted of rape on a married woman in presence of her daughter, but of breaking into the houses of natives and robbing them on different occasions.

Peter McBennett, whom President McKinley saved from the gallows, was not only convicted of rape, but also of standing guard while two other soldiers broke into the store of a native at night and robbed him of his goods. He was also convicted of breaking into the house of another native at night and robbing him of money.

These horrible crimes are but a few of the hundreds that are tabulated in small type on pages 2073-2096, and continued more in detail on pages 2097-2118 of the printed record of the testimony now being taken by the Senate Committee on the Philippines.

Some of these official records of the outrages upon native women and mere children by our soldiers are too horrible to print.

In regard to one of the latest cases, in which Henry Croxton was convicted

of "making indecent proposals to a native woman and shooting and killing a native man who came to her assistance, at San Marcelino, P. I., November 16, 1901," the sentence (it surely must be misreported) was "three months and $30"—as to which the reviewing authority says, "finding of not guilty of murder disapproved." A murder for such a cause is terrible enough, but not nearly so terrible in its significance or consequences as the demoralization of the officers who could pass such an inadequate sentence. They might as well have murdered native men themselves for defending the persons of native women from the most horrible of outrages.

There are other cases which show that orders against looting are not sustained by public sentiment among the officers. (See p. 2117.)

I will mention but two cases more in which, while justice was done, the reports of such deliberate and devilish cruelty must inevitably have spread far and wide and fired many a Filipino heart (just as these earlier outrages on their women must have done) to take dire revenge whenever opportunity offered:

Harry Cline, who was employed as a teamster, "rode out into the country some 3 miles on a bicycle, where he saw four small native boys gathering grass. With no other apparent motive than natural depravity, he proceeded to shoot these boys with his revolver, severely wounding three and killing the fourth." He was hanged at Manila on the 20th of last September.

In regard to the murder of a Filipino woman, after an attempt upon her chastity, by Julius Arnold, a musician of the Twenty-fifth Infantry, who was sentenced to imprisonment for life, the reviewing authority remarked (p. 2114):

"The evidence set forth in the record shows that the accused murdered and killed a native woman at Magalang, P. I., January 15, 1900. The testimony fails to show any just excuse for his action, or anything that would serve as a basis for mitigation, although during the trial he was defended by able counsel.

"The murdered woman was a virtuous married woman, and after offering her the grossest insult that a man can offer a chaste woman, he killed her, and by his vile act left a nursing infant motherless, when his plain duty, as shown by the honorable uniform he wore, required him to protect his victim.

"In the opinion of the reviewing authority, the sentence should have been 'death,' and the court manifested undeserved leniency. Subject to the above remarks, the sentence is approved and will be duly executed."

These, as I have said, are but a few of hundreds of similar crimes committed by our soldiers in the Philippines, attested by the records of courts-martial, and in many cases so inadequately punished as to justify the strictures which we have cited from the reviewing authorities.

A long list of outrages of similar kinds, committed on a single occasion by the savage Macabebes whom we have armed against our Christian "subjects" in the Philippines, is printed on pages 1750-1765 of the same record, with the evidence and the report of the inspector-general (Major McKenna), who was ordered to make an investigation on the spot. Further reference to these atrocities would be justified by the comments made upon Major McKenna's report by Generals MacArthur and Wheaton, on account of the light they shed on the danger of employing such auxiliaries, and on the utter inadequacy of our own forces, and the real condition of affairs, from a military point of view, in the archipelago. But the purpose of this letter is to invite attention to the evidence furnished in the official records of courts-martial on the moral deterioration of our army in the Philippines. Knowledge of the disease in this case should be half the cure.

CRAMMOND KENNEDY.

SPEECH

OF

HON. CHARLES F. COCHRAN,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 25, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 13895) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1903—

Mr. COCHRAN said:

Mr. CHAIRMAN: In many respects the discussion of the Cuban tariff bill was of advantage to the country. For instance, in the course of the debate the House and our constituents were positively assured over and over again that there exists in the United States at least one trust. I recall a number of very elaborate speeches that have been made in this Chamber since I became a member, which plainly indicated that eminent gentlemen on the other side of the House have heretofore doubted the existence of trusts—that is, combinations effected by the consolidation of, or an agreement between, rival factories and rival interests, having for their purpose the monopoly of the production and distribution and the control of the prices of commodities essential to the daily consumption of the country.

The gentlemen who made these speeches can remain in doubt on this subject no longer. Scores of statesmen have here confessed that the sugar trust exists. The chairman of the Ways and Means Committee [Mr. PAYNE] repeatedly referred to the sugar trust in a way so easy and natural that nobody who heard him doubts that he knows the trust is one of the tariff-fed industries so dear to Republican statesmanship. The gentleman from Ohio [Mr. GROSVENOR] referred to the sugar trust in his usual forcible way. So did the gentleman from Minnesota [Mr. TAWNEY] and the gentleman from Michigan [Mr. WM. ALDEN SMITH]. Indeed, without a single exception the Republicans who participated in that debate referred to the sugar trust as an existing institution. So at last it seems to be definitely understood by the members of this body—even by the Republican leaders—that there is at least one trust in the United States.

It was also asserted by the orators who took part in the discussion that this trust possesses great power. It was argued with much force—in fact, I think it was proven conclusively—that the trust has such a firm grip on the country that it has power to obviate the natural results of Congressional enactments. If so, it can snap its fingers at laws and lawmakers. It was said that reducing the tariff on raw sugar 20 per cent would not help the Cuban sugar planters or the consumers of the United States; that the trust would reduce the price of raw sugar pro tanto and would not reduce the price of refined sugar, and that thus it would rake into its coffers all the benefits of a statute devised for the benefit of the Cubans and the increase of our commerce with the island.

It was pointed out that the sugar trust, being the only buyer, had power to fix the price of raw sugar, and that it would do it, Congressional enactments or no Congressional enactments. It was said also that the consumer of sugar would receive no benefit from the law, because the sugar trust, if not the only producer of the finished product, holds such mastery of the finished product that it controls its price, absolutely, and that it would continue to fix the price. If this is true, then as long as the Dingley tariff props up the throne of the sugar kings, although lower tariffs may give it cheaper raw material, the trust will continue to plunder consumers.

Here, then, we have the admitted facts: There is a sugar trust. It monopolizes the production and distribution of an article of prime necessity, without which subsistence is practically impossible. Its mastery of the traffic is so absolute that it can override and overrule the natural effects of legislation. It can subvert the law of supply and demand, paying what it pleases for raw sugar and charging whatever it pleases for the refined product. And finally it seems to be equally well settled that the only way to get rid of the trust is to repeal the differetial tariff of 15 per cent on refined sugar and compel the trust to meet foreign competition.

So the sugar trust is the creature of protection. There is no longer any doubt about that.

Mr. Chairman, is it not undeniable that other monopolies, equally exacting and equally pernicious, control other industries with an equally masterful hand? Take, for instance, everything that enters into a farmer's fence—barbed wire and all kinds of fencing wire, nails, staples. The arbitrary advance in prices in recent years tells the whole story. Upon these products of another protected trust prices in the United States have been doubled. Meantime, in other parts of the world there has occurred no corresponding advance in prices.

The American farmer buys of a trust which fixes the output, fixes the price, and fixes the terms upon which fencing wire can be bought. The same is true of nails, lumber, salt, and all the great staple commodities. Every one of these monopolies is protected by the Dingley tariff, which effectually bars out foreign competition.

With the Dingley bill on the statute books all that is necessary is a combination between the American producers of a protected commodity and the consumer of trust-made goods is helpless.

Mr. HENRY C. SMITH. Will the gentleman yield for a question?

Mr. COCHRAN. Yes; certainly.

Mr. HENRY C. SMITH. Do you want to find a fence company that is outside of the trust and lives in defiance of it?

Mr. COCHRAN. I want to find a fence company that sells below the trust schedule, in competition with trust prices.

Mr. HENRY C. SMITH. Well, you come to Adrian, Mich., my home, and I will show you the Page Woven Wire Fence Company, which defied the trust, went down to Monessen, Pa., bought its own iron and coal and stands absolutely above and beyond the trust, and I invite you to come to Adrian, Mich., and to buy some fence not made by the trust. [Applause on the Republican side.]

Mr. COCHRAN. And I invite your attention to the fact that this very Adrian fence company is quoting prices a great deal higher than prevailed five years ago—trust prices—the prices charged by the trust.

Mr. HENRY C. SMITH. The gentleman is entirely mistaken.

Mr. COCHRAN. I am not mistaken, because I am the man that tried to buy the fence. [Laughter and applause.]

Mr. HENRY C. SMITH. One other question. We make some difference when we sell to a man on credit.

Mr. COCHRAN. That is about such an answer as I would expect from a Michigan beet-sugar statesman. Everything

manufactured of iron and steel in this country is now sold at prices arbitrarily fixed by monopoly, and these prices are enormously higher than the prices prevailing before the enactment of the Dingley law. I do not say that every factory in the United States is owned by the steel trust, but I do say that the trust dominates the price of steel and iron products; that instead of cheapening these products to the consumer it has advanced prices.

I suppose it will not be denied that we have also a railroad trust, a combination of railroads called by various names, but still it is a combination having for its purpose the prevention of competition. In this connection I direct the attention of the gentlemen on this floor and of the country to this anamolous condition. The Harriman-Hill-Morgan scheme of railroad consolidation was carried on with the greatest publicity. That lawlessness was thus tolerated shows all too plainly the sympathy of those high in authority for these gigantic schemes of our millionaire stockjobbers. Not the least impediment was placed in their way. With a Federal antitrust law on the statute books and antitrust laws in nearly all the States, with Presidents, Cabinet officials, Senators, Congressmen, governors, legislators, jurists, and public prosecutors eloquently inveighing against trusts, these gigantic, unlawful combinations have made no effort to conceal the time, place, and manner of their organization, nor have the men who formed them had the least fear that the public authorities would interfere. What means the supine indifference thus displayed by the servants of the people?

Mr. Chairman, the history of a single legislative enactment and of the attitude of the Congress toward a single tribunal instituted for the correction of these evils tells the whole story.

I refer to the interstate-commerce law, and the fact that by failure to amend it the Congress has allowed it to remain impotent for more than a decade. When the interstate-commerce law was passed, the people believed and had a right to believe that the Commission was clothed with certain plenary powers, and would exercise a potential influence in preventing abuses by the great common carriers of the country. The illusion was short lived, for promptly the Supreme Court of the United States declared that it had not the powers which seemingly had been conferred upon it by the statute.

Now, mark the history of this statute and the Interstate Commission from that day until this. Year after year in its annual report the Interstate Commerce Commission has called attention to its want of power, and requested amendments obviating the effect of this Supreme Court decision and clothing it with authority to perform the duties imposed by the statute creating it—authority which the Congress intended to confer at the time of its creation. Why has this law remained unamended throughout all these years? There never has been a day during all the years that have elapsed since the Interstate Commerce Commission was emasculated by the Supreme Court when, had you polled the individual members of the House of Representatives, each of them would not have said:

Yes; the interstate-commerce law needs amendment. The Interstate Commerce Commission is powerless. It can interpose no effective restraint upon corporations. It has no potent power to protect the people.

Strange, passing strange, is the fact that notwithstanding this unanimity, the law remains unamended!

Individually the people's representatives have for fourteen years been in favor of its amendment, yet collectively they have not acted.

Mr. Chairman, is there any relation between the fact that the general solicitor, the company lawyer at the county seat, and the lobbyists who look after politics and legislatures at State capitals are generally active in the manipulation of primaries and caucuses and conventions, and the failure of the American Congress to amend this law?

Where, if not in the activity of the salaried corporation politician, shall we seek an explanation of the power exercised by the corporations over legislatures and governments? In Republican States the corporation lobby is Republican. In Democratic States it is Democratic. Everywhere it seeks to prohibit and prevent remedial legislation, such as is needed to render useful the interstate-commerce law.

When in his prime and actively engaged in the management of his vast Western interests, Jay Gould was asked by a St. Louis reporter whether he was a Democrat or a Republican. His reply was:

In Iowa I am a Republican, in Missouri a Democrat, and everywhere I am for Jay Gould.

Like master, like man. It is hardly a mere coincidence that in Republican States our Jay Goulds have Republican representatives perched on the front seats among the Republican party managers, while in Democratic States the lobbyist is found prominent in the councils of the Democracy.

Is there any connection between these indisputable facts and the impunity with which the captains of industry engage in lawlessness?

When the party exchequer is depleted, and it becomes necessary to raise means with which to grease the political machinery, the hat is passed and the trusts contribute to Republicans and Democrats alike. In national politics the Republicans fare best, because they are in the saddle; but until 1896 and 1900, it is said that the minority was not wholly neglected. The national Republican organization is in the hands of the partisans, employees, managers, and owners of the trusts and combines. In the States the same influences train with the dominant party. They are "Republicans in Iowa, Democrats in Missouri."

Mr. Chairman, I have felt that somebody should speak the truth concerning this matter. The trusts, syndicates, and corporations are poisoning the very fountain head of good government by controlling the machinery of political parties, and I declare here and now that the American people may hope for no relief from lawmakers, cabinets, courts, or tribunals until there shall be created a public sentiment which will compel an eternal divorcement between the managers and committeemen of party organizations and the corporation lobby and professional corporation politicians.

Mr. Chairman, I know that ridicule is frequently resorted to in attempts to reply to observations such as I am making. Frequently skillful debaters have succeeded in thus silencing criticism of the methods introduced into party management by salaried agents of "the business interests." But the fact remains that as long as party primaries, mass meetings, caucuses, and conventions are manipulated by the corporation lobby we may expect the trusts to flourish and tribunals devised for their control and statutes enacted for their suppression to be ineffective.

A wonderful statesman appeared upon the horizon of American politics a year or two ago. He hailed from the great State of Indiana and promptly took upon himself the task of leading the propaganda in favor of the trust régime. In the Senate and at the capital of his State he has declared that trusts are good or bad as they are conducted on right or wrong lines. He forgot to mention a trust that has fallen into the former category or one that does not belong to the latter. His sentiments have been echoed on this floor. Others older than he, here and elsewhere throughout the country, and many of the great newspapers and magazines have taken up the same cry. A little later ethical objections to disturbing the monopolies will be heard.

The stocks and bonds of the great steel syndicate have all been placed on the market and sold. J. Pierpont Morgan and his associates have pocketed their profits and these stocks and bonds now form part of the assets of individuals and estates. Later the insurance companies and probably some of the savings banks will be loaded up. Then it will be said that these stocks and bonds are in the hands of innocent purchasers whose holdings are so large that to assail the trusts would be a shock to the business interests as well as the robbery of investors. And finally whoever dares to assail the trusts will be denounced as a crank and a demand for the suppression of the trusts will be denounced as an assault upon the financial structure at its very foundation.

If the process of railroad consolidation goes on until one or two companies hold the highways of the country and the diffusion of the corporation shares among thousands of holders, it will be easy to find arguments against interfering with a monopoly which will control absolutely the development and business of the continent. Every step in the direction of this monopoly is a violation of State and Federal laws and of the common law. Yet the stockjobbers go on, seemingly fearless of statutes, prosecutors, and courts.

I notice that the Louisville and Nashville, one of the great railroads of the country, has gone the way of the Burlington and the Great Northern and other Western properties that were merged in the first consolidation. It is stated that the Southern Railroad is to control it. The amazing statement is made that capitalists in London and in New York have organized a corporation to take over the ocean carrying traffic as well as that upon the land.

Mr. Chairman and gentlemen of the House of Representatives, again I inquire: Is there any relation between the fact that the great corporations are powerful helpers in politics and contributors to the campaign fund and the further fact that Presidents have reached the point where they choose Attorneys-General from legal representatives of the great combines and corporations and the district attorneys throughout the United States from the same source? Further, I challenge attention to the fact that upon the woolsack and wearing the ermine of the Federal judiciary are numerous ex-solicitors for corporations chosen from the same circle.

Now, one of two things is true. Either these men are placed in those positions because their education, environment, and sympathies are opposed to anticombination legislation or they are

placed there on account of their great capacity as lawyers and jurists. The country is wondering whether it is in order that their former employer may be exempt from the lash of the law or on account of the fact that they have demonstrated great capacity by their service in the private walks of life.

Taking the facts as they are, what do you think, gentlemen, at the bottom of your hearts, tends to induce these selections?

The Attorney-General has just now moved against the beef trust. He has just discovered the beef trust. He has just now discovered that traffic in the meat products of this country is monopolized by half a dozen men. This is a new discovery I suppose! Amazing discovery! How do you suppose he made it? I wonder if he suspects that other trusts, far worse, are levying exactions upon the people equally galling? I wonder whether he has ever even thought of proceeding against the billion-dollar steel trust?

Oh, no, Mr. Chairman. The prosecution of the beef trust, forced upon the Administration by a clamor growing out of temporary conditions, will degenerate into a farce.

And there is no danger that the other trusts—those having headquarters in Mr. Morgan's countingroom—will be seriously assailed.

I know that it is said that he who criticises the Federal judiciary is a disturber of the peace and an enemy of good order. Yet I state what everybody knows to be true when I charge, as I now do upon my responsibility as a representative of the people, that were a Federal judge to drop dead in the streets of Washington to-day before his widow had dried her tears the lobbyists and general solicitors of the corporations and syndicates would put their heads together, pick out his successor, and he would be appointed. Gentlemen, every one of you know that I speak the truth.

It sounds well to say we must respect the courts, but it seems to me that it is our duty to try to make the Federal courts respectable. It is easy to say that to criticise a judge of a court is to be an enemy of order, but the fact remains that the influence of special interests in politics, by controlling the selection of our judicial officers, is doing more to break down respect for the judiciary than all others combined.

I spoke a little while ago about the recent formation of great railroad combinations. I did not mean to convey the impression that this is the first railroad trust the country has known. Of course we had combinations before. How have these combinations been organized? Secretly? Have the great financiers sought to conceal the facts? By no means. Unlawful combinations affecting all the business interests and every locality and shipper in the country have been formed publicly, at meetings of the presidents, general managers, freight agents, and passenger agents of railroads, held with open doors in the parlors of the great hotels. Newspaper reporters have been invited to be present, and the people, as well as the Attorney-General, have had notice of it the next morning at the breakfast table.

The truculence of Presidents, Cabinets, judges, and public prosecutors under such circumstances has led the great millionaire lawbreakers to treat all statutes affecting them as void and of no effect. I see an interview is reported in one of the papers in which a great New York financier says that when the Hill-Harriman syndicate began operations the millionaires had no right to expect a law which by common consent had become obsolete—a dead letter upon the statute book—would be resurrected and enforced.

Mr. Chairman, he spoke the truth. Laws against monopoly have remained upon the statute books so long unheeded and unenforced that the mere suggestion that an effort is to be made to enforce them has the appearance of the resurrection of the dead.

Why is the law a dead letter on the statute book? Ah, gentlemen, when we recollect that corporation solicitors are charged with the duty of punishing corporation Presidents, we have no right to expect anything else.

Even more significant is the zeal with which laws useful to monopoly are enforced. Why, even the interstate-commerce law is not so bad after all. I call attention to the fact that after the Debs strike in Chicago half a dozen brakemen and baggagemen were arrested in proceedings under a section of this statute and sentenced to serve a considerable period of imprisonment for contempt of court. A law fitting the offense of the strikers was found in a law intended for the punishment of the managers of the railroads!

Furthermore, at the very time the attorneys of the railroad companies, with the authority of the district attorney, were prosecuting the brakemen for contempt, at one of the hotels in Chicago the general freight agents of the railroads were publicly making a compact to fix freight rates! If the judge on the bench and the district attorney had been as anxious to prevent a combination against the interests of the people as he was to punish the recalcitrant brakemen and baggagemen, possibly some law could have been found to prevent the freight agents from entering into an unlawful combination.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. COCHRAN. I would like ten minutes more.

Mr. LAMB. I will yield to the gentleman ten minutes.

Mr. COCHRAN. We are not left wholly in the dark as to the extent of the wrongs resulting from the abuses and lawlessness practiced by the managers of the great railroads. In Counselmen's case, involving the rebates granted to the great packers of Chicago by the railroads, an old-fashioned judge presided during the investigation by the grand jury. Books, documents, and other papers bearing on the rebates were desired as evidence against the persons accused, and the custodians of the papers appeared and interposed the plea that they did not desire to testify for fear they would criminate themselves.

Judge Griswold overruled this plea and compelled them to testify. It was discovered, without great difficulty, that in a single year rebates aggregating many thousands of dollars had been, in fact, allowed by a single corporation—the Nickel Plate Railroad, running from Chicago to Buffalo. The discoveries made in the course of this examination justified the belief, then expressed by the newspapers, that in the same year the aggregate sum of the rebates allowed to the same shippers by all the railroads reached up into millions.

Is it strange that we have no packing houses in small towns? Here is an explanation of the fact that this great industry is confined to four or five places in the United States. It is because the railroads will not, and do not, afford the same facilities for packers at competing points, and so competition is impossible. Here, gentlemen, is found the secret of the power of the beef trust.

Mr. Chairman, I have not discussed this subject from the standpoint of a partisan. It is a subject which demands the attention of patriotic men of all parties. In every county seat, in every judicial circuit, in every Congressional district, in every State in this Union the paid political agents of corporations have identified themselves with the managers of political party machinery, and are influential in proportion to the importance of the railroads they represent. In some parts of this country their opposition is fatal—everywhere their support is effective.

We should be honest with one another on this subject. There is not a Congressman here who does not know that I am speaking the truth. It is the power of the lobby in politics that has given to special interests supreme influence in the affairs of government. Is it any wonder that the public service is largely composed of colorless, timid, timeserving wards, or the hired political agents of these corporations? Who has not seen in legislative bodies, State and national, the colorless man against whom no direliction can be charged, yet who would shudder at the thought of antagonizing the political bosses who are paid by the corporations to superintend political caucuses and manipulate political committees?

The colorless statesman is in the majority in some localities. He is a very convenient kind of gentleman to have in State legislatures. He is respectable. He is known as a very conservative man. From the ranks of the colorless frequently come lawmakers, governors, and occasionally a President. Next to the colorless statesman, the favorite of the lobby is the impractical reformer, whose "gumption" is so limited that he could not do anything if he would—harmless and impotent, because incapable of effective work. And last, but not least, is the wriggling and squirming special agent of special interests, who at critical junctures throws off the disguise and espouses openly the cause of his masters.

I claim no exemption of my State or my party from the evils I have here denounced. I appeal to you as Americans, not as Democrats or Republicans, to say whether you are willing that this mastery of political machinery, this mastery of the destiny of the greatest Government the world ever knew, shall remain in unclean hands.

Parliamentary rules, binding although not enforcible, prohibit that I should specialize in my remarks; but I will say that we have witnessed in the august Senate of the United States during the last thirty years a gradual encroachment of a class dangerous to free institutions. It is notorious that in some of the States Senatorships are bought and sold just as the produce on the market place is bought and sold. What does it mean?

I do not charge responsibility upon the Republican party or upon any particular party. Is there anybody here who doubts the fact that one State in the Union is at this time unrepresented in the United States Senate because a bargain can not be struck for the purchase of a Senatorship in that State? Does anyone believe that the title to other Senatorships is clear from the brand of the dollar mark?

It is said that a source of danger to this country is the lower order of voters—the "rabble," as they are called. I challenge

attention to the fact that when enormous sums of money are expended in overthrowing the free expression of the public will through the medium of the ballot box it can not be done unless the enterprise of buying offices is capitalized somewhere in uppertendom; and here again the corporation manager makes his appearance as an enemy of good government and pure politics. The overgrown campaign fund is not the contribution of the slums. It is placed in the hands of political boodlers by the corporations. [Loud applause on the Democratic side.]

Mr. Chairman, I hope the time will come, and speedily, when the gentlemen on the other side of the Chamber will ponder more seriously upon the danger which menaces government and politics and look less complacently upon political management which relies chiefly upon the campaign fund contributed by the trusts and corporations who are in control of political party machinery in a majority of the States.

In addition to plundering the people, these vast combinations are debauching politics, controlling party caucuses and conventions through the agency of hired emissaries, dictating legislation through the evil influence of hired lobbyists, selecting the judges of our courts and undermining the foundations of public order and representative government. [Loud applause on the Democratic side.]

The Efficiency of the Militia.

SPEECH

OF

HON. WILLIAM L. STARK,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1902,

On the bill (H. R. 11654) to promote the efficiency of the militia, and for other purposes.

Mr. STARK said:

Mr. SPEAKER: Early in the session there were two bills introduced and referred to the Committee on Militia, both seeking to promote the efficiency of the militia. They were carefully considered, and on February 21, 1902, by instruction of the committee, Mr. DICK, the chairman, introduced this bill, and the other bills were laid on the table. This bill was further considered until March 20, 1902, when it was unanimously reported with amendments. A copy of the bill, together with the report thereon, was mailed to every governor, adjutant-general, and field officer of the organized militia throughout the States and Territories, and a request made for any suggestion that might be deemed proper in the premises. Copies were also furnished in great numbers to the press of the country, and invitation given to make comment.

In response to these invitations a large number of replies were received, and nearly all of them were commendatory. The practical question arises, How much appropriation does the bill carry? and responding thereto will say that the only money appropriated from the Treasury is in section 13, which provides for the Government paying the expense of exchanging the arms now in use by the militia for the standard service magazine arm, commonly called the Krag-Jörgensen, and is estimated at $10,500 for packing, cartage, and freight charges. Your committee is informed that the Government now has on hand about 300,000 magazine arms not in use, and it is submitted that it is preferable to have the arms in the hands of the militia rather than have them kept in stock in some supply depot of the United States. After this one exchange is made, any further requisition for arms will be charged against the State or Territorial allotment of the general militia appropriation, which is the annual appropriation of $1,000,000 made by section 1661, Revised Statutes, as amended.

This bill provides in several sections for charges against that appropriation which have not been heretofore authorized, but does not increase that amount at all. It authorizes an appropriation for the National Volunteer Reserve, whenever the Congress of the United States desires to make the same from the annual appropriation for the support of the Army, and, unlike the appropriation for the maintenance of the militia, must be acted upon at every session of Congress. The militia, under our form of government, is the military force of the State and may be called forth by an act of Congress, and in certain specified cases, by the President of the United States, to become a part of the military force of the nation. By reason of its dual obligation, it should be supported in part by the State and in part by the nation. The first direct aid by way of money appropriation furnished by the United States in support of the militia will be found in the act of April 23, 1808, which received the executive approval of Thomas Jefferson, then President of the United States. The provision was for $200,000 annually, and continued until February 12, 1887, when it was increased to $400,000 annually, and by the act of June 6, 1900, to $1,000,000. By the operation of the foregoing enactments the following sums have been appropriated:

Act of April 23, 1808, from 1808 to 1887	$15,800,000
Act of February 12, 1887, from 1888 to 1900	5,200,000
Act of June 6, 1900, from 1901 to 1902	2,000,000
Total	23,000,000

For a number of years the States have appropriated nearly $3,000,000 annually for the support of the militia, or about seven dollars to every one dollar appropriated by the United States, and since the act of June 6, 1900, nearly three dollars to every one dollar appropriated by the United States.

One of the most intelligent gentlemen who appeared before the committee was Col. Edward E. Britton, of New York, whose statement is as follows:

EXHIBIT A.

186 REMSEN STREET, BROOKLYN, N. Y., *May 16, 1902.*

Hon. WILLIAM L. STARK,
Committee on the Militia, House of Representatives, Washington, D. C.

MY DEAR SIR: In compliance with your request that I submit a statement of the comparative cost of maintenance of the organized militia by the States and the National Government, I beg to say that only approximate figures can be given, for the reason that the various State appropriations, which are known, are supplemented in many States by county and town allowances, the amount of which can not be accurately learned. However, I presume the following calculations are fairly illustrative.

For purposes of comparison I have grouped the 45 States geographically, have omitted Territories and the District of Columbia, and have used the figures of active militia and State appropriations for 1897, those being the latest accessible at the moment and have been little subsequently varied. These are combined with the present United States annual appropriation, increased under your bill of 1900 from $400,000 to $1,000,000, allotted to the States, etc., in proportion to Congressional representation.

Group of 10 Eastern States.—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, and Delaware.

Group of 14 Southern States.—Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Kentucky, Tennessee, and Arkansas.

Group of 12 Middle Western States.—Ohio, Indiana, Illinois, Minnesota, Wisconsin, Michigan, Iowa, Missouri, Kansas, Nebraska, North Dakota, and South Dakota.

Group of 9 Western States.—Montana, Idaho, Wyoming, Colorado, Nevada, Utah, Washington, Oregon, and California.

	10 Eastern States.	14 Southern States.	12 Middle Western States.	9 Western States.	Total.
Organized militia, 1897	39,771	30,763	31,245	9,574	111,353
State appropriations, 1897	$1,454,400	$201,600	$776,000	$241,250	$2,673,250
United States appropriation	$259,000	$300,157	$333,377	$78,250	$970,784
Total appropriation	$1,713,400	$501,757	$1,109,377	$319,500	$3,644,034
State appropriation per head of organized militia	$36.56	$6.55	$24.83	$25.19	*$23.28
United States appropriation per head of organized militia	$6.46	$9.75	$10.66	$8.18	*$8.76
Total appropriation per head of organized militia	$43.02	$16.30	$35.49	$33.37	*$32.04
Population, census 1900	21,231,430	23,269,683	26,333,004	3,773,108	74,607,225
State appropriation per head of population	$0.068	$0.0086	$0.029	$0.064	$0.0424

*Average.

It will be noted that the appropriations of the States average per man $23.28, and of the United States $8.76, or slightly more than one-third of that of the States, the total appropriation per man being $32.04, which is less than 5 cents per head per annum of population defended. The cost of maintenance of the volunteer organizations of Great Britain was, prior to the South African war, $4,000,000 per annum—about 12 cents per head of population defended.

The figures show that in the group of 14 Southern States the State appropriations are less than one-quarter of the average State appropriations per head of organized militia in the other States, and that the allotment of the annual United States appropriations to these States is 50 per cent greater than the State appropriations. In the 10 Eastern States the States appropriate more than five times the amount of the United States allotment; in the 12 Middle Western States more than twice as much; in the 9 Western States more than three times. The small appropriations of the Southern States is accounted for by the circumstance that they have to provide homes and care for disabled ex-Confederate soldiers, widows, and children. While we may not sympathize with the "lost cause" as a cause, it would be unworthy the brave Southern men of this generation, who so gallantly rallied round the flag in the war with Spain and in the Philippines, if they did otherwise.

Outside of the Eastern States and a few others in which the men are transported, subsisted, and paid out of appropriations during camp and field service, there has been little, if any, of that most essential duty performed. Particularly in the Southern States, in the rare cases when field practice is had, the men have received no pay. Transportation and subsistence have been furnished by means of private and local subscriptions. All of this is provided for in the legislation under consideration.

I will take advantage of this opportunity to invite your attention to the following: The cost of the United States Army for the fiscal year ending June 30, 1897, was upward of $23,600,000, including only expenditures directly chargeable to maintenance of the military establishment, which was then

about 23,900 officers and men present for duty. That is at the rate of $1,000 per man per annum. On a peace basis the present increased establishment would cost about $700 per man per annum, so that 10,000 regulars cost yearly $7,000,000.

It is surely a fact that one-half that amount distributed annually among the States and properly applied, as it would be under the new proposed law, would make a very well-trained and efficient organized militia of 100,000 men, who would be in times of peace at least as valuable to the country as 10,000 regulars. These latter would in ten years cost $70,000,000. In that time, allowing 10 per cent per annum of discharges, the country would have 20,000 trained regulars. For half the money, allowing 20 per cent of discharges per annum from the organized militia, the country would have 300,000 trained militiamen, or for an equal expenditure, 600,000 trained militiamen. The above figures are based on the cost of maintenance of the best equipped, drilled, and instructed National Guard to be found in any State.

I thank you most heartily for your kind reference to my prize essay of the Military Service Institution of the United States, of 1899, on "In what way can the National Guard be modified so as to make it an effective reserve to the Regular Army in both war and peace?" As you say, I presume it is authoritative, the board of award having consisted of President Theodore Roosevelt, then governor of New York; Maj. Gen. Thomas H. Ruger, United States Army, and Maj. Gen. Joseph W. Plume, National Guard, New Jersey. It was especially gratifying as being the only gold medal ever awarded outside the Regular Army.

Permit me to congratulate your committee, with all my heart, on having brought out a bill which has met with the general approval of the Executive, the War Department, and the military authorities of 50 States and Territories. The country has awaited such a measure for one hundred and ten years. It has been left to your committee and to the Fifty-seventh Congress to fulfill the prophecy of President Washington in 1794: "The devising and establishing of a well-regulated militia would be a genuine source of legislative honor and a perfect title to public gratitude."

Very respectfully,

EDWARD E. BRITTON,
Chairman Executive Committee Interstate National Guard Association.

After a great deal of consideration by the committee as to some method that would more fairly divide the cost of maintenance of the militia force between the Government and the several States and Territories, it reached the conclusion that the States should have full and complete control of their militia force and a separate class of militia should be authorized to be maintained by the Government of the United States if Congress desired to make the necessary appropriation annually. The provisions in that behalf are in sections 23 and 24 of this bill. The Constitution provides for appropriations for the support of the Army and Navy. It further provides for organizing, arming, and disciplining the militia, thus authorizing an appropriation for the common defense. All that is undertaken by sections 23 and 24 of this bill is to provide who shall constitute the national volunteer reserve. They do not become a part of the standing army of the United States. All that could be done would be, under the direction of the Secretary of War, to provide for their organization, drill, inspection, instruction, and give authority in time of threatened war to call them out; and upon declaration of war by Congress to make them a part of the volunteer force of the United States.

The greatest care has been taken in framing this measure that there be no innovation on the rights of the States or the appointment of the officers for their organized militia. I affirm here and now that the States and Territories have every right under the provisions of this bill that they have heretofore enjoyed, together with additional privileges. Under the terms of the bill, before the militia can be called forth, the President must use the other forces at his command. The period of their service can not exceed nine months. Their pay shall commence from the day of their appearing at the place of company rendezvous. They shall be armed with a standard service magazine arm instead of with the Springfield rifle. Their officers may attend and pursue a regular course of study at any military school or college of the United States, and such officers shall receive from the annual appropriation for the support of the Army travel allowance, quarters, and $1 a day for "board and washing." They shall be made fit not only in the art of war but in military hygiene and sanitary regulations, so that when our boys are called to the colors they will have skilled commanders in time of conflict and experts to look after their health and welfare when in camp. As to the advantage to the enlisted man in having a Krag-Jörgensen rifle, I submit the following letter from Gen. George B. Davis:

EXHIBIT B.

WAR DEPARTMENT,
OFFICE OF THE JUDGE-ADVOCATE-GENERAL,
Washington, June 3, 1902.

MY DEAR MAJOR STARK: I have obtained from the Chief of Ordnance the data upon the subject of the magazine rifle now in use in the Army, with which it is proposed to supply the National Guard, and send it to you for your information; and I remain,

Faithfully, yours,

GEO. B. DAVIS,
Judge-Advocate-General.

Hon. WILLIAM L. STARK, M. C.,
House of Representatives.

ADVANTAGES OF THE KRAG-JÖRGENSEN UNITED STATES MAGAZINE RIFLE OVER THE CALIBER .45 SPRINGFIELD RIFLE.

1. Breech mechanism.—The Krag-Jörgensen has the bolt system of breech closure, which renders it superior as a single loader in ease of manipulation, facility of loading, and rapidity of fire to an arm of the block system, like the Springfield, and it has the additional advantage of a magazine, which can be held in reserve while single fire is delivered, magazine fire being available at any moment.

2. Weight of ammunition.—One hundred rounds metallic cartridges for the caliber .30 Krag-Jörgensen rifle, 6 pounds 5 ounces; 100 rounds metallic cartridges for caliber .45 Springfield rifle, 11 pounds.

It is thus seen that, due to the lightness of ammunition, nearly double the amount of ammunition for the Krag-Jörgensen rifle can be carried by the soldier.

3. Character of ammunition.—The ammunition for the Krag-Jörgensen being smokeless, this rifle has the great advantage over the Springfield of not exposing the position of the troops using it and attracting the fire of the enemy. The breech mechanism of the Springfield rifle, caliber .45, was designed for black-powder ammunition, and the efforts to procure a proper smokeless-powder cartridge for it were not successful.

4. Muzzle velocity.—The muzzle velocity of the Krag-Jörgensen rifle is 2,000 feet per second; that of the Springfield rifle 1,315 feet per second. The maximum range of the Krag-Jörgensen is 4,000 yards. The maximum range of the Springfield, caliber .45, is 3,500 yards. The trajectory of the Krag-Jörgensen rifle is very much flatter than that of the Springfield for all ranges, resulting in increased accuracy. For a 500-yard range the greatest height of trajectory above the ground is 4.12 feet for the Krag-Jörgensen rifle, and for the Springfield, caliber .45, for the same range it is 8.4 feet. The total danger space within which a foot soldier would be hit at this range is 181.56 yards for the Krag-Jörgensen and only 66 yards for the Springfield.

5. Penetration.—The penetration of the bullet of the Krag-Jörgensen rifle into white pine at a distance of 500 yards is 19.85 inches. The penetration of the Springfield rifle at the same distance is 10.6 inches. The energy of recoil (kick) of the Krag-Jörgensen rifle is less than one-half of that of the Springfield.

The small-caliber, jacketed bullet of the Krag-Jörgensen rifle, while disabling, does not produce a cruel wound like that of the caliber .45 Springfield, soft bullet.

To the end that the enlisted man may become proficient in the use of that arm, it is provided in section 21 that ammunition shall be furnished and an officer shall be selected to instruct in firing and target practice.

The cost of the National Volunteer Reserve would first be submitted in the estimates from the War Department to Congress, then considered and recommended by the Committee on Military Affairs, then voted on by both branches of Congress, and then receive Executive approval; and this whole proceeding would have to be gone through for each annual appropriation for the support of the Army. By way of an estimate I submit the following letter from Gen. George B. Davis, Judge-Advocate-General:

EXHIBIT C.

WAR DEPARTMENT,
OFFICE OF THE JUDGE-ADVOCATE-GENERAL,
Washington, April 4, 1902.

Hon. WILLIAM L. STARK, M. C.,
House of Representatives.

MY DEAR MAJOR: I beg to acknowledge the receipt of your favor of the 2d instant. As to the cost of assembling the National Volunteer Reserve, I should say that its approximate cost per man would be as follows:

Subsistence	$2.50
Pay	4.50
Other allowances	3.00
Transportation	10.00

making a total of $20 per man for a period of ten days' service. I do not imagine that it has been contemplated to embody in any one year the entire reserve. The number to be called out each year would depend upon circumstances which would be pointed out to the proper Appropriation Committee, by the War Department, when its plans for any particular year have been prepared and decided upon; and I remain,

Faithfully, yours,

GEO. B. DAVIS,
Judge-Advocate General.

Mr. HAY, a member of the Committee on Military Affairs, who has given much study to the expense of maintaining our present military establishment, has just declared that to keep one soldier in the Philippine Islands costs $1,500 per year. A regiment of infantry in the regular establishment consists of 838 officers and men. For the purposes of an estimate and so that it can be easily solved by mental arithmetic, we will consider a regiment as having 800 officers and men. Taking the minimum figures of maintaining the soldiers per capita in time of peace and all within our borders as $700 per soldier, we have an annual expenditure for just one regiment of $560,000. I do not wish to be understood as taking issue with Mr. HAY'S statement—all of us know him to be a very honorable gentleman, having special knowledge on this subject. My object is to call attention, by the most conservative estimate possible, to the immense expense of a standing army.

It is a matter of history and common knowledge that the volunteer citizen soldiers have been the "fighting men" in the wars of this Government. By that statement I do not mean to criticise the valor of the regular establishment, but heretofore their number has been so few in comparison with the volunteers that they could be but a small factor in the conflict. During the war with Spain the organized militia responded at once to the President's call and served with credit to themselves and honor to the State and nation.

The argument was made in Congress that provision should be made for a United States volunteer force to take the place of the State volunteer force, for the reasons that the organized militia were not uniformly armed and equipped in the different States nor with the Regular Army.

The organizations of the militia in the different States were unlike, and none of them strictly conformed to that of the Regular Army. I am not discussing whether these reasons were of sufficient weight to warrant the Congress of the United States to increase the Regular Army to 65,000 enlisted men and to authorize

the raising of a force of not more than 35,000 volunteers, to be recruited from the country at large. The thought that I desire to impress on you all is, that is what Congress did. By the enactment of this law of March 2, 1899, the State volunteer organization passed away and a national volunteer organization, recruited from the country at large, took its place.

This bill meets every argument that was made for setting aside the State volunteer organization, for it provides:

First. That the organization of the militia shall conform to that of the Regular Army.

Second. That the organized militia shall be uniformly armed, equipped, and furnished with the same class of military stores as the Regular Army; that they shall be inspected by officers of the War Department, who shall make a report as to organizing, arming, and disciplining the militia to the Secretary of War, who shall furnish a copy thereof to the governor of the State or Territory, to the end that there may be uniformity.

Third. This bill repeals the obsolete sections of the general militia law, which are sections 1626, 1627, 1628, 1632, 1635, 1639, 1641, 1645, 1647, 1649, and 1660. We have amended and brought up to date, to the best of our ability, those sections of the Revised Statutes affecting the militia which should continue to have operative force, namely, sections 1625, 1630, 1631, 1634, 1636, and 1638, and added provisions for the National Volunteer Reserve.

It is the unanimous opinion of the committee that, with this bill enacted into law, the volunteers at large must go and in their place we will have a State volunteer organization, as the First Nebraska National Volunteer Reserve.

We will have outside of the Regular Army a National Guard and a volunteer organization that will be made up among the respective States and Territories, and when called into the service of the United States will bear in its official title notice of the fact that it is a trustee of the courage, loyalty, patriotism, and devotion of a State or Territory toward this Union of ours. It is a matter for congratulation that this measure is in complete accord with the Democratic platform adopted at Kansas City in 1900, one plank of which is as follows:

In time of danger the volunteer soldier is his country's best defender. The National Guard of the United States should ever be cherished in the patriotic hearts of a free people. Such organizations are ever an element of strength and safety. For the first time in our history, and coeval with the Philippine conquest, has there been a wholesale departure from our time-honored and approved system of volunteer organization. We denounce it as un-American, undemocratic, and unrepublican, and as a subversion of the ancient and fixed principles of a free people.

The Republican party had no declaration upon this subject in their national platform of 1900, but to the end that the truth of history may be conserved I deem it proper to say that the Committee on Militia, by whom this bill is reported, is made up of 8 Republicans, 4 Democrats, and 1 People's Independent—and that one is the gentleman now submitting these remarks—and they are unanimous in support of this measure. They considered this bill, without reference to partisanship, as patriots endeavoring to reach the highest possible standard for the good of this God-blessed country of ours. All the way through in the preparation of this bill and its report it was, How can we best work and best agree?

Over and above all other considerations is this: What shall the policy of this Government be? Shall it be to have a great standing Army, or shall it have a small Army and a large body of citizen soldiers, equipped, trained, and ready to meet every foe? Speaking for myself, I am absolutely committed to the latter policy. To my mind our institutions are the best served by having a small Regular Army as a nucleus, garrison duty, and the first line of defense; then for the support to be first called out, the organized militia, commonly called the "National Guard;" then, for the third line, the national volunteer reserve, that, under the provisions of this bill, have seen military service and are trained in the art of war. Then comes the reserve militia, which includes all the able-bodied men between the ages of 18 and 45.

I think every good citizen will agree to the wish that conditions were such that we needed no armed force whatever. Unhappily such conditions do not obtain. To meet the vices of greed, selfishness, and brutality that appear to be moving forces in the world at this time, a government that expects to endure must have a physical force that will resist invasion and preserve the public peace, and that force should be made up of the citizen soldier instead of the professional. I have great confidence in that force which moves the American people which we commonly call "public opinion," and when it appears to the people that we have a sufficient armed, equipped, and trained body of citizen soldiers to maintain our liberties, public opinion will demand, and its voice will be heard, that a great Regular Army become a thing of the past and cease to eat up our substance.

APPENDIX.

EXHIBIT D.

[House Document No. 252, Fifty-seventh Congress, first session.]

MILITIA FORCE OF THE UNITED STATES.

Letter from the Secretary of War, transmitting the militia returns of the United States.

February 3, 1902, referred to the Committee on Militia and ordered to be printed.

WAR DEPARTMENT,
Washington, February 3, 1902.

SIR: As required by section 232, Revised Statutes, I have the honor to transmit herewith an abstract of the returns of the adjutants-general of the several States of the militia thereof, received at the office of the Adjutant-General of the Army, for the year 1901.

Very respectfully,

ELIHU ROOT, *Secretary of War.*

The SPEAKER OF THE HOUSE OF REPRESENTATIVES.

H. C. CORBIN,
Adjutant-General, Major-General, U. S. A.

ADJUTANT-GENERAL'S OFFICE,
Washington, D. C., February 3, 1902.

EXHIBIT E.

[Circular.]

WAR DEPARTMENT, *Washington, August 27, 1901.*

The following acts of Congress, amending section 1661, Revised Statutes, making annual appropriation to provide arms and equipments for the militia, the latest regulations respecting the distribution of the arms and equipments therein provided for, and the apportionment of the militia appropriation for the fiscal year ending June 30, 1902, are published for the information of all concerned:

* * * * * * *

SECTION 1661, REVISED STATUTES, AS AMENDED BY ACTS OF FEBRUARY 12, 1887, AND JUNE 6, 1900.

Be it enacted, etc., That section 1661 of the Revised Statutes be, and the same is hereby, amended and reenacted so as to read as follows:

"SECTION 1. That the sum of $1,000,000 is hereby annually appropriated, to be paid out of any money in the Treasury not otherwise appropriated, for the purpose of providing arms, ordnance stores, quartermaster stores, and camp equipage for issue to the militia. (So amended by act of June 6, 1900, 31 Stats., 662.)

"SEC. 2. That said appropriation be apportioned among the several States and Territories under the direction of the Secretary of War, according to the number of Senators and Representatives to which each State respectively is entitled in the Congress of the United States, and to the Territories and District of Columbia such proportion and under such regulations as the President may prescribe: *Provided, however*, That no State shall be entitled to the appropriation apportioned to it unless the number of its regularly enlisted, organized, and uniformed active militia shall be at least 100 men for each Senator and Representative to which such State is entitled in the Congress of the United States. And the amount of said appropriation which is thus determined not to be available shall be covered back into the Treasury.

"SEC. 3. That the purchase or manufacture of arms, ordnance stores, quartermaster's stores, and camp equipage for the militia under the provisions of this act shall be made under the direction of the Secretary of War, as such arms, ordnance, and quartermaster's stores and camp equipage are now manufactured or otherwise provided for the use of the Regular Army, and they shall be receipted for and shall remain the property of the United States, and be annually accounted for by the governors of the States and Territories, for which purpose the Secretary of War shall prescribe and supply the necessary blanks and make such regulations as he may deem necessary to protect the interests of the United States.

"SEC. 4. That all arms, equipments, ordnance stores, or tents which may become unserviceable or unsuitable shall be examined by a board of officers of the militia, and its report shall be forwarded by the governor of the State or Territory direct to the Secretary of War, who shall direct what disposition, by sale or otherwise, shall be made of them; and, if sold, the proceeds of such shall be covered into the Treasury of the United States."—Became a law February 12, 1887, without the President's approval (1 Sup. Rev. Stats., 537).

MILITIA REGULATIONS AND APPORTIONMENT.

WAR DEPARTMENT, *Washington, August 27, 1901.*

By direction of the President of the United States, the following regulations are prescribed for the distribution of arms, ordnance stores, quartermaster's stores, and camp equipage to the States, Territories, and the District of Columbia, and the appropriation for the fiscal year ending June 30, 1902, is apportioned among the several States, Territories, and the District of Columbia as follows:

REGULATIONS.

1. The appropriation made by section 1661, Revised Statutes, as amended by the acts of February 12, 1887, and June 6, 1900, will be apportioned among the several States and credited to them on the books of the War Department in accordance with said acts, except such portion as may be allotted to the Territories and the District of Columbia; but the allotment to any State will not be available for use until a satisfactory return has been made to the Secretary of War showing that the State has the number of "regularly enlisted, organized, and uniformed active militia" specified in section 2 of said act of February 12, 1887.

2. Arms, ordnance stores, quartermaster stores, and camp equipage will be issued on requisitions made direct to the Secretary of War by the governors of the States and Territories and by the senior general of the militia of the District of Columbia present for duty. Returns shall be made annually by the senior general of the District militia in the manner required by sections 3 and 4 of the said act of February 12, 1887, in the case of States and Territories.

3. It is forbidden to make issues to States, Territories, or the District of Columbia in excess of the amount to their credit under the provisions of section 1661, Revised Statutes, as amended by the acts quoted above.

4. When a requisition is received at the War Department, the Ordnance Department and the Quartermaster's Department will be required to give the money value of the stores called for, and the War Department will determine and order which of said stores, number and character, shall be issued and will so advise the Chief of Ordnance and Quartermaster-General.

5. All the public property issued under the provisions of said acts shall be accounted for under the same regulations that now govern the accountability for public property in the Army, and the Chief of Ordnance and the Quartermaster-General will furnish the governors of the several States and Territories and the senior general of the District militia the necessary blank forms for making the required returns of the public property issued under the provisions of said acts, and said annual returns shall be made on the 31st of December of each year, and shall be sent to the War Department for examination and settlement.

6. The Chief of Ordnance and the Quartermaster-General will issue the necessary instructions for the safekeeping, preservation, and accountability of all public property issued.

7. The examination of the unserviceable or unsuitable public property provided for in section 4 of said act of February 12, 1887, shall be made at least annually and the proceedings of the board of officers of the militia will show in detail opposite each article on the inspection report in what respect the property is unserviceable or unsuitable, and will also indicate in each case the disposition recommended by the board of inspection; and should the board recommend sale of the property, the recommendation will state whether by auction or by inviting bids from dealers or others likely to purchase such articles, stating reasons; and in the case of any public property rendered unserviceable through causes other than the ordinary incidents of service, the board will investigate and report the causes and recommend to the Secretary of War the necessary action as to personal responsibility for the damages in each case.

8. The order of the Secretary of War directing the sale of condemned property will indicate the method of advertisement, which will generally be by means of circulars posted in public places and sent by mail to dealers and others likely to purchase, but if advertisement in newspapers is indicated the provisions of A. R. 579-585 apply, and request for special authority to advertise must be made upon prescribed forms, designating the newspapers in which advertisement is desired.

9. The net proceeds of a sale of condemned property, after deducting necessary and reasonable expenses of advertising and auctioneer's fee, will be deposited by the governor, or by the senior general of the district militia, in a United States depository to the credit of the Treasurer of the United States. If received from sales of condemned quartermaster's supplies the funds must be deposited as "Miscellaneous receipts on account of proceeds of Government property;" if from sales of condemned ordnance stores the deposit must be made on account of "Sales of condemned ordnance stores."

10. Immediately after a sale of condemned property an itemized report will be made by the governor, or by the senior general of the District militia, to the chief of the bureau to which the property pertains, showing date and place of sale, quantity and kind of articles sold, prices obtained, names of purchasers, expenses of sale, and gross and net proceeds, and accompanied by a copy of the order authorizing the sale and receipted vouchers for expenses of sale. The report to the Quartermaster-General will be made on Form No. 94, Quartermaster's Department, "Account of sales at auction;" that to the Chief of Ordnance on Form No. 8, Ordnance Department, "Abstract of sales," in duplicate.

11. Any regulations established hitherto which in any way conflict with these are hereby revoked.

ELIHU ROOT, *Secretary of War.*

The following act of Congress, approved February 24, 1897, is also published for the information of those concerned:

"An act authorizing the Secretary of War to issue Springfield rifles to each State and Territory for the National Guards thereof, in exchange for other rifles now held.

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the Secretary of War is hereby authorized to issue to the governors of the several States and Territories such number of Springfield breech-loading rifles, caliber 0.45 of an inch, as are now required for arming all of the regularly organized armed and equipped militia (generally known as the National Guard) of each State and Territory that are not already supplied with this arm: *Provided*, That each State or Territory be required on the receipt of the new arms to turn into the Ordnance Department, United States Army (without receiving any money credit therefor), an equal number of the arms now in its possession, except its Springfield rifles, caliber 0.45 of an inch.

"SEC. 2. That each State and Territory shall hereafter make an annual return to the Secretary of War of all the arms issued to them under this or any former act of Congress as provided for in the act of February, 1887, making a permanent annual appropriation for arming and equipping the militia.

"SEC. 3. That any State or Territory may, in addition to the stores and supplies issued under the provisions of this act and the act of February, 1887, purchase for the use of its National Guard or reserve militia, at regulation prices for cash at place of sale, such stores and supplies from any department of the Army as, in the opinion of the Secretary of War, can be spared."

By order of the Secretary of War:

JOHN C. SCOFIELD, *Chief Clerk.*

EXHIBIT F.

GENERAL ORDERS, No. 155.

HEADQUARTERS OF THE ARMY, ADJUTANT-GENERAL'S OFFICE, *Washington, November 27, 1901.*

The following order has been received from the War Department:

WAR DEPARTMENT, *November 27, 1901.*

With a view to maintaining the high standard of instruction and general training of the officers of the Army and for the establishment of a coherent plan by which the work may be made progressive, the Secretary of War directs that the following general scheme be announced for the information and guidance of all concerned:

THE SYSTEM OF INSTRUCTION.

There shall be besides the Military Academy at West Point the following schools for the instruction of officers of the Army:

1. At each military post an officers' school for elementary instruction in theory and practice.

2. Special service schools—

(*a*) The artillery school at Fort Monroe, Va.

(*b*) The engineer school of application, Washington Barracks, D. C.

(*c*) The school of submarine defense, Fort Totten, N. Y.

(*d*) The school of application for cavalry and field artillery at Fort Riley, Kans.

(*e*) The Army medical school, Washington, D. C.

3. A general service and staff college at Fort Leavenworth, Kans.

4. A war college for the most advanced instruction at Washington Barracks, D. C.

The war college shall be under the immediate direction of a board of five officers detailed from the Army at large and the following ex officio members:

The Chief of Engineers.

The Chief of Artillery.

The Superintendent of the Military Academy.

The commanding officer of the General Service and Staff College.

The War College Board shall exercise general supervision and inspection of all the different schools above enumerated, and shall be charged with the duty of maintaining through them a complete system of military education, in which each separate school shall perform its proper part. Such officers as shall be requisite to assist the board in performing its duties will be detailed from time to time for that purpose. It should be kept constantly in mind that the object and ultimate aim of all this preparatory work is to train officers to command men in war. Theory must not, therefore, be allowed to displace practical application.

The officers' schools at military posts and the General Service and Staff College will be open for instruction to officers of the National Guard of the several States, to former officers of volunteers, and to graduates of military schools and colleges which have had officers of the Army as instructors.

The special service schools will be open to officers of the National Guard and former officers of volunteers who shall furnish evidence to the War Department of such preliminary education as to enable them to benefit by the courses of instruction.

The college staff at the General Service and Staff College, Fort Leavenworth, will make report for the information of the Secretary of War of qualifications of officers of the National Guard, ex-volunteers, and graduates of military schools and colleges who shall have attended the college or shall apply for examination, and shall further certify whether or not they are qualified for service as officers of volunteers, specifying the character of service, whether line or staff, for which they are specially qualified. A special register of the names of persons so reported as qualified will be kept in the War Department.

A register shall also be kept in the War Department in which shall be entered the names of officers of the Regular Army below the grade of colonel, as follows:

(*a*) Officers who have heretofore exhibited superior capacity, application, and devoiton to duty, the names to be selected by a board of officers to be convened for that purpose.

(*b*) Officers who shall be reported as doing specially meritorious work in the above-mentioned schools other than the officers' schools at posts.

(*c*) Officers who at any time specially distinguish themselves by exceptionally meritorious service.

It will be the aim of the Department to make this register the basis of selection for details as staff officers, military attachés, and for special service requiring a high degree of professional capacity.

OFFICERS' SCHOOLS AT POSTS.

5. No officer of the line shall be excused from the work connected with the officers' school at any post, except under such circumstances as would exempt him from any other duty. The commanding officer, subject to the usual supervision of the department commander, shall have immediate charge of the instruction, which, to secure uniformity, will be regulated by special instructions issued by the War Department. These instructions may be changed from time to time as experience may develop the necessity therefor.

Systematic recitation will be required ordinarily only from officers of the grade of first and second lieutenant in administration, drill regulations, manual of guard duty, small arms firing regulations, troops in campaign, minor tactics, military law, field engineering, military topography and sketching, international law, hippology (for cavalry and field artillery), a general knowledge of methods, materials, and implements essential to coast defense (for coast artillery).

All captains of the line of less than ten years' service, except those possessing diplomas as graduates of the Infantry and Cavalry School at Fort Leavenworth, Kans., or the Artillery School at Fort Monroe, Va., will be required to qualify in the course herein prescribed.

Every officer will be required to fit himself thoroughly for the responsible duties of his grade, and to that end commanding officers will afford ample opportunities to each one taking the course to familiarize himself practically with post and company administration, the duties of quartermaster, commissary of subsistence, ordnance officer, etc. To that end, officers will in turn be assigned to duty as assistants to the post staff officers for such periods as the commanding officer may deem necessary to acquaint them with the various duties.

Thoroughness should be the guiding principle in this instruction, which is intended to be carried on from year to year. No more will be undertaken than can be thoroughly completed during the school season.

At the close of each school season every commanding officer will appoint a board of competent officers to examine each officer as to his proficiency in the subjects completed during the course. Whenever a board certifies to the proficiency of an officer in any subject and the proceedings are approved by the commanding officer a statement to that effect shall be entered in the post records, a copy of which shall be furnished to the officer concerned and which shall entitle him thereafter to be excused from further recitation in that particular subject.

Whenever the number of officers in any garrison is so small that a sufficient number can not be secured to conduct the examinations of officers who have pursued any portion of the course laid down for their instruction, the examinations will be deferred until opportunity occurs for ordering them to appear before a proper board. Department commanders are authorized to order officers to adjacent posts for the purpose of examination, or to order specially qualified officers from adjacent posts to complete the number required for an examining board, which shall in all cases consist of three members. Those officers who exhibit the most aptitude and intelligence in the course pursued will be reported to their respective regimental or corps commanders with a view to their detail at the General Service and Staff College at Fort Leavenworth, Kans., for further instruction.

Those who fail to acquire a proper degree of efficiency in any subject will be required to repeat the course, and in the event of a second failure special report will be made by the commanding officer with a view to its consideration by the board which may be thereafter designated to examine the officer as to his fitness for promotion.

THE GENERAL SERVICE AND STAFF COLLEGE.

6. The Infantry and Cavalry School at Fort Leavenworth, Kans., shall be enlarged and developed into a General Service and Staff College and shall be a school of instruction for all arms of the service, the designation of which shall be "The General Service and Staff College," and to which shall be sent officers, preferably of the grade of lieutenant, who have been recommended for proficiency attained in the officers' schools conducted in the various posts. The college will be opened September 1, 1902, and for the present the instruction will be limited to a period of one year, and such additional time as may be necessary to complete the annual maneuvers which it is contemplated shall be carried out each autumn conjointly with such garrisons as may be assembled for the purpose. The permanent garrison for the General Service and Staff College will consist of 4 companies of engineers, 4 troops of cavalry, 3 batteries of field artillery, 12 companies of infantry, a band, Signal Corps detachment, Hospital Corps detachment, post noncommissioned staff, and such field officers, instructors, and student officers, in addition to those belonging to the organizations serving at the post, as may be ordered from time to time.

In order that the accommodations of the post may be utilized to their fullest capacity in the immediate future for student officers, instructors will as far as practicable be detailed from officers on duty with troops composing the garrison. In order that these details may not unduly deplete the quota of officers necessary for duty with organizations at the posts, officers pertaining thereto who are on detached service may be relieved or transferred, so that as nearly as possible a full complement may be present at all times. Officers possessing special qualifications as instructors will be detailed as heretofore.

Upon the conclusion of the annual examinations the college staff will recommend such student officers as have especially distinguished themselves for further instruction in the War College. Such recommendations will make mention of any special qualifications or attainments of individual officers.

A board of officers will be convened prior to the date fixed for opening the college to establish a theoretical and practical course to be pursued, and thereafter the college staff will make recommendations for such amendments or changes from time to time as experience may dictate as desirable.

THE ARMY WAR COLLEGE.

7. A college is hereby established for an advanced course of professional study for Army officers, to be known as the Army War College. Such buildings and grounds as may be available and necessary will be assigned to its use on the reservation at Washington Barracks, D. C.

The executive head of the college will be an officer of the Army, not below the grade of field officer, who will be known as the president of the Army War College, and will preside over the War College Board. A course of instruction embracing the higher branches of professional study will be arranged by the board, and this board will also prepare and submit for the approval of the Secretary of War such regulations for the government of the college as it shall deem necessary.

The officers to be detailed to pursue the course at the War College will be of two classes:

(*a*) Those who have been recommended as distinguished graduates of the General Service and Staff College.

(*b*) Such field officers and captains as may be specially designated by the War Department for instruction.

It is intended that the officers who have uniformly shown the greatest interest and most proficiency in the theoretical and practical courses prescribed for the officers' schools at posts, the General Service and Staff College, and the War College shall have high consideration of the War Department, with a view to the utilization of their abilities as military attachés, or on special missions abroad, and for the higher duties of general staff work.

SERVICE SCHOOLS.

8. The Artillery School at Fort Monroe, Va., the School of Application for Cavalry and Field Artillery at Fort Riley, Kans., the Engineer School of Application at Washington Barracks, D. C., and the School of Submarine Defense, Fort Totten, N. Y., will be conducted under special regulations promulgated from time to time for their government.

No detail to any of the above-mentioned schools or boards shall continue more than four years, nor shall any officer be permitted to pass from one school to another without an intervening tour of service with troops proportionate to the period of his previous school service.

Careful study and consideration of what has been accomplished in the past and what appears to be desirable for the future leads to the conclusion that the system of training for officers should begin with a course at each post and thence to the General Service and Staff College, from which the distinguished graduates should be sent for the higher instruction contemplated in the Army War College. Especial attention will be paid to the record made by individuals at each step of this progressive course, in order that those most deserving shall be given further opportunity for perfecting themselves in the profession of arms, and in order that the nation may have at all times at its disposal a highly trained body of officers and may know who they are.

It will require time and experience to bring the details of this progressive scheme to perfection, but the Secretary of War indulges the hope that the hearty sympathy and cooperation of all officers of the Army will be enlisted, to the end that full success may be attained.

ELIHU ROOT, *Secretary of War.*

By command of Lieutenant-General Miles:

H. C. CORBIN,
Adjutant-General, Major-General, United States Army.

EXHIBIT G.

[House Report No. 1094, Fifty-seventh Congress, first session.]

EFFICIENCY OF THE MILITIA.

The Committee on Militia, to whom was referred House bill 11654, recommend the passage of the same with amendments.

In submitting this bill and report, the chairman of the committee desires

to express his high appreciation of the earnest cooperation of the members of the committee in their preparation. From the very first there has been entire unanimity of feeling in the desire to prepare a bill which would be acceptable to all interests involved, and would result in greatly improving the efficiency of the National Guard as the second line of the country's defense in time of war. With this spirit animating every member of the committee, there was no difficulty in harmonizing differences of opinion. The one object sought has been kept clearly in view and the members of the committee have worked earnestly and faithfully to that end. Many conferences have been had between members of the committee and the Secretary of War and the heads of the various bureaus of the War Department and representatives of the National Guard.

The approval of the Secretary of War is set forth in the following communication:

"WAR DEPARTMENT, *Washington, March 18, 1902.*

"SIR: I have to acknowledge the receipt of a copy of House bill No. 11654. It is the object of the bill, as indicated by its title, to promote the efficiency of the militia. I have examined the measure with great care, and approve the wise and patriotic endeavors of the committee to frame an enactment which seems to me well calculated to accomplish the purpose set forth in its title.

"The bill, which has been exhaustively considered in committee and which meets the approval of those most directly interested in the development of the constitutional militia, makes reasonable and proper provision: (1) For the ordinary training and discipline of the militia as a force belonging, in time of peace, to the several States; (2) for its special employment by the General Government as a part of the constitutional military forces in time of war or public danger, such use being made the subject of special statutory limitations in respect to time, place, and occasion of its employment; (3) for its acceptance by the United States, in the form of complete organizations, as a part of any volunteer forces that may be authorized to be raised and embodied in the event of war, and (4) for the volunteer service of its individual members, with preferential rights of appointment and enlistment in any volunteer forces that may be authorized by Congress, in an emergency of war, in excess of or in addition to the organizations of militia which may tender their services as such, under the authority of their respective States.

"With a view to secure that uniformity of instruction which can only be attained by an entire uniformity of armament and equipment, I approve of the gratuitous issue of small arms of the latest and most approved types in exchange for the arms of obsolete patterns with which the militia of the several States is now armed and equipped.

"It is believed that the operation of sections 23 and 24 will be especially beneficial as measures of preparation for national defense. Section 23 undertakes to provide for the preparation of a register of persons whose ability to exercise command in the line or to render corresponding services in the staff has already been established by the test of actual military experience. The capacity of those candidates whose military education or previous service in the Army or militia entitles them to consideration is required to be tested by an examination conducted by a competent military board, which is required to certify its opinion as to the fitness of such candidates for appointment in the volunteer forces. The immediate result of such certificate is to place all candidates who have obtained certificates in a class from which officers of any volunteer forces which may be authorized by Congress in pursuance of section 24 are required to be selected.

"In section 24 the attempt has been made to remedy a defect which is inherent in the voluntary system of recruiting, which has been hitherto relied upon by the United States as a means of maintaining its military establishment in time of peace. It is the purpose of this section to utilize the services of those who have served at least one term of enlistment in the regular or militia forces by the establishment of a national volunteer reserve. The force so designated is to be composed of men of considerable military experience who are to be embodied, in time of peace, for occasional brief tours of duty, not exceeding ten days in length, and whose services are to be utilized in time of war only when the volunteer forces authorized by Congress exceed in number the organized commands of militia who may enlist in bodies, in pursuance of section 6, act of April 20, 1898.

"In conclusion, I venture to express the hope that the carefully prepared clauses of the bill, which provide for a larger measure of cooperation on the part of the War Department than has hitherto been regarded as practicable, will operate to bring about that close and intimate contact between the several branches of the constitutional military establishment which is so necessary to their mutual and harmonious development.

"Very respectfully,

"ELIHU ROOT, *Secretary of War.*

"Hon. CHARLES DICK,
"*Chairman Committee on the Militia, House of Representatives.*"

The present law governing the militia has been on the statute books for one hundred and ten years and has long since been inoperative and obsolete.

The Constitution gives to Congress the power (art. I, sec. 8)—

"To provide for organizing, arming, and disciplining the militia and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress."

For over one hundred years Congress has made no adequate provision for organizing, arming, and disciplining the militia, and the matter has been left entirely in the hands of the States and Territories. It is true that Congress has made annual appropriations for the purpose of aiding in the support of the militia of the States and Territories, and the Fifty-sixth Congress increased this annual appropriation from $400,000 to $1,000,000. This annual appropriation has been available for the issue of arms, ordnance stores, quartermaster stores, and camp equipage, but otherwise the United States has assumed no control or supervision over its expenditure. The principal expense of maintaining and supporting the organized militia of the States and Territories has been borne by the States and Territories themselves, and while these troops are generally known and described as the National Guard, they are in no proper sense a national guard, but are strictly State militia, and are not subject to the call of the President nor to supervision and control by the War Department. It was fondly believed that these State troops would be promptly available for national defense in case of an emergency. The experience of the country during the war with Spain showed that these expectations were not fully realized.

The following extracts from chiefs of the bureaus, made to the Secretary of War in 1898, are pertinent:

[Extracts from reports, 1898.]

"INSPECTOR-GENERAL UNITED STATES ARMY.

"Recent experiences have shown that our militia system could advantageously be reconstructed and a more intimate relation established between it and the National Government.

"The great number of volunteer regiments moving to the centers of concentration without arms or uniforms, and the subsequent difficulties in meeting their needs promptly, suggest the establishment of reserve or supply depots at convenient points in order that each State on call can put its quota in the field in condition for service, at least as far as arms and equipments go.

"To secure better cohesion between the National Guard and Regulars and the greatest efficiency of the troops in the field, funds should be provided for combined encampments and periodical military maneuvers and experimental mobilization in times of peace, as is customary with all first-class European powers. One of the most serious defects noted during the Spanish-American war was the inexperience and utter disregard for the most elementary principles of military life in large camps.

"SURGEON-GENERAL UNITED STATES ARMY.

"Considerations of domestic economy and sanitation in the companies and regiments were not given proper attention, and men who were being taught to meet the enemy in battle succumbed to the hardships and unsanitary conditions of life in their camps of instruction.

"CHIEF OF ORDNANCE UNITED STATES ARMY.

"When the first call for volunteers from the States for the war with Spain was made it was decided to take as many of the regiments of the National Guard as possible, already armed and equipped by the States. * * * The supposition was that * * * the State troops, being already armed and equipped, would be ready for immediate service. This was based on the supposition that the arms and equipments were in good condition, an expectation not generally realized during the war. It is probable that the troops would have been ready for service as quickly by being equipped anew.

"As these troops (volunteer, first call) were mainly from the National Guard of the different States, it was understood that they were well equipped, * * * which supposition was not realized."

In addition to the failure of the National Government to exercise its power to organize, arm, and discipline the militia, and to make the various State troops a national guard in fact as well as in name, the following causes also operated to prevent the successful operation of the existing militia law:

1. The several clauses of the general law never became fully operative, as their execution depended upon State legislation which was never obtained.

2. The terms of the statute were too sweeping, and the attempt to include all able-bodied males of military age was practically impossible of execution. The statute not being applicable to a smaller or more restricted class, was thus rendered inoperative.

3. The organization prescribed having been fixed in the original statute, soon became obsolete and failed to furnish a uniform standard of composition for the militia embodied from time to time by the legislatures of the several States. The modifications brought in by the legislation of 1862 are now completely at variance with those prescribed by law for corresponding organizations in the Army of the United States.

The Presidents of the United States, from Washington down to the present time, have recognized the inadequacy and inefficiency of legislation on the subject of the militia, and have repeatedly recommended the repeal of the old law and the substitution of something practical. Almost without exception they have recognized that the main support and defense of the country in time of danger must rest upon its volunteer forces, and have repeatedly called the attention of Congress to the necessity of making proper provision for organizing, arming, and disciplining the militia.

The following are extracts from messages of Presidents relative to the militia:

[Extracts from messages of Presidents relative to the militia.]

"PRESIDENT WASHINGTON, 1789.

"Along with this object (the preservation of peace and tranquillity on the frontiers) I am induced to suggest another, with the national importance and necessity of which I am deeply impressed; I mean some uniform and effective system for the militia of the United States. It is unnecessary to offer arguments in recommendation of a measure on which the honor, safety, and well-being of our country so evidently and so essentially depend; but it may not be amiss to observe that I am particularly anxious it should receive as early attention as circumstances will admit, because it is now in our power to avail ourselves of the military knowledge disseminated throughout the several States by means of the many well-instructed officers and soldiers of the late Army, a resource which is daily diminishing by death and other causes. To suffer this peculiar advantage to pass away unimproved would be to neglect an opportunity. * * *

"PRESIDENT WASHINGTON, 1790.

"Among the many interesting objects which will engage your attention, that of providing for the common defense will merit particular regard. To be prepared for war is one of the most efficient means of preserving peace.

"A free people ought not only to be armed, but disciplined, to which end a uniform and well-digested plan is requisite.

"PRESIDENT WASHINGTON, 1791.

"The first (militia) is certainly an object of primary importance, whether viewed in reference to the national security, to the satisfaction of the community, or to the preservation of order.

"PRESIDENT WASHINGTON, 1793.

"They are incapable of abuse in the hands of the militia, who ought to possess a pride in being the depository of the force of the Republic, and may be trained to a degree of energy equal to every military exigency of the United States. But it is an inquiry which can not be too solemnly pursued, whether the act more effectually to provide for the national defense by establishing a uniform militia throughout the United States has organized them so as to produce their full effect; whether your own experience in the several States has not detected some imperfections in the scheme, and whether a material feature in an improvement of it ought not to be to afford an opportunity for the study of those branches of the military art which can scarcely ever be attained by practice alone.

"PRESIDENT WASHINGTON, 1794.

"The devising and establishing of a well-regulated militia would be a genuine source of legislative honor and a perfect title to public gratitude. I therefore entertain a hope that the present session will not pass without carrying to its full energy the power of organizing, arming, and disciplining the militia, and thus providing, in the language of the Constitution, for calling them forth to execute the laws of the Union, suppress insurrections, and repel invasions.

"PRESIDENT WASHINGTON, 1795.

"With the review of our Army establishment is naturally connected that of the militia. It will merit inquiry what imperfections in the existing plan further experience may have unfolded. The subject is of so much moment, in my estimation, as to excite a constant solicitude that the consideration of it may be renewed until the greatest attainable perfection shall be accomplished. Time is wearing away some advantages for forwarding the object, while none better deserves the persevering attention of the public councils.

"PRESIDENT JEFFERSON, 1801.

"These considerations render important that we should, at every session, continue to amend the defects which from time to time show themselves in

the laws for regulating the militia, until they are sufficiently perfect. Nor should we now, or at any time, separate until we can say we have done everything for the militia which we could do were an enemy at our door.

"PRESIDENT JEFFERSON, 1802.

"Considering that our regular troops are employed for local purposes, and that the militia is our general reliance for great and sudden emergencies, you will doubtless think this institution worthy of a review, and give it those improvements of which you find it susceptible.

"PRESIDENT JEFFERSON, 1804.

"Should any improvement occur in the militia system, that will be always seasonable.

"PRESIDENT JEFFERSON, 1805.

"I can not, then, but earnestly recommend to your early consideration the expediency of so modifying our militia system as, by a separation of the more active part from that which is less so, we may draw from it, when necessary, an efficient corps for real and active service, and to be called to it in regular rotation.

"PRESIDENT JEFFERSON, 1806.

"A militia so organized that its effective portions can be called to any point in the Union, or volunteers instead of them, to serve a sufficient time, are means which may always be ready, yet never preying on our resources until actually called into use. They will maintain the public interests while a more permanent force shall be in course of preparation. But much will depend on the promptitude with which these means can be brought into activity.

"PRESIDENT JEFFERSON, 1808.

"For a people who are free, and who mean to remain so, a well organized and armed militia is their best security. It is therefore incumbent on us at every meeting to revise the condition of the militia and to ask ourselves if it is prepared to repel a powerful enemy at every point of our territories exposed to invasion. Some of the States have paid a laudable attention to this subject; but every degree of neglect is to be found among others. Congress alone has power to produce a uniform state of preparation in this great organ of defense; the interest which they so deeply feel in their own and their country's security will present this as among the most important objects of their deliberation.

"PRESIDENT MADISON, 1809.

"Whatever may be the course of your deliberations on the subject of our military establishments, I should fail in my duty in not recommending to your serious attention the importance of giving to our militia, the great bulwark of our security and resource of our power, an organization the best adapted to eventual situations for which the United States ought to be prepared.

"PRESIDENT MADISON, 1810.

"These preparations for arming the militia having thus far provided for one of the objects contemplated by the power vested in Congress with respect to that great bulwark of the public safety, it is for their consideration whether further provisions are not requisite for the other contemplated objects of organization and discipline. To give to this great mass of physical and moral force the efficiency which it merits and is capable of receiving, it is indispensable that they should be instructed and practiced in the rules by which they are to be governed. Toward an accomplishment of this important work I recommend for the consideration of Congress the expediency of instituting a system which shall in the first instance call into the field, at the public expense and for a given time, certain portions of the commissioned and noncommissioned officers. The instruction and discipline thus acquired would gradually diffuse through the entire body of the militia that practical knowledge and promptitude for active service which are the great ends to be pursued. Experience has left no doubt either of the necessity or of the efficacy of competent military skill in those portions of an army in fitting it for the final duties which it may have to perform.

"PRESIDENT MADISON, 1812.

"A revision of the militia laws, for the purpose of rendering them more systematic and better adapting them to emergencies of war, is at this time particularly desirable.

"PRESIDENT MADISON, 1813.

"The militia being always to be regarded as the great bulwark of defense and security for free States, and the Constitution having wisely committed to the national authority a use of that force, as the best provision against an unsafe military establishment, as well as a resource peculiarly adapted to a country having the extent and the exposure of the United States, I recommend to Congress a revision of the militia laws for the purpose of securing more effectually the services of all detachments called into the employment and placed under the Government of the United States.

"PRESIDENT MADISON, 1814.

"I earnestly renew at the same time a recommendation of such changes in the system of the militia as by classing and disciplining for the most prompt and active service the portions most capable of it will give to that great resource for the public safety all the required energy and efficiency.

"PRESIDENT MADISON, 1815.

"And I can not press too much on the attention of Congress such a classification and organization of the militia as will most effectually render it the safeguard of a free State. If experience has shown in the recent splendid achievements of militia the value of this resource for public defense, it has shown also the importance of that skill in the use of arms, and that familiarity with the essential rules of discipline which can not be expected from the regulations now in force. With this subject is intimately connected the necessity of accommodating the laws, in every respect, to the great object of enabling the political authority of the Union to employ promptly and effectually the physical power of the Union in the cases designated by the Constitution.

"PRESIDENT MADISON, 1816.

"An efficient militia is authorized and contemplated by the Constitution and required by the spirit and safety of free government. The present organization of our militia is universally regarded as less efficient than it ought to be made, and no organization can be better calculated to give to it its due force than a classification which will assign the foremost place in the defense of the country to that portion of its citizens whose activity and animation best enable them to rally to its standard. Besides the consideration that a time of peace is the time when the change can be made with the most convenience and equity, it will now be aided by the experience of a recent war, in which the militia bore so interesting a part.

"PRESIDENT MONROE, 1817.

"An improvement in the organization and discipline of the militia is one of the great objects which claims the unremitted attention of Congress.

"PRESIDENT MONROE, 1822.

"I have to add that in proportion as our regular force is small should the instruction and discipline of the militia, the great resource on which we rely, be pushed to the utmost extent that circumstances will admit.

"PRESIDENT MONROE, 1823.

"As the defense and even the liberties of the country must depend in times of imminent danger on the militia, it is of the highest importance that it be well organized, armed, and disciplined throughout the Union.

"PRESIDENT ADAMS, 1825.

"The organization of the militia is yet more indispensable to the liberties of the country. It is only by an effective militia that we can at once enjoy the repose of peace and bid defiance to foreign aggression; it is by the militia that we are constituted an armed nation, standing in perpetual panoply of defense in the presence of all the other nations of the earth. To this end it would be necessary so to shape its organization as to give it a more united and active energy. There are laws for establishing a uniform militia throughout the United States and for arming and equipping its whole body. But it is a body of dislocated members, without the vigor of unity, and having little of uniformity but the name. To infuse into this most important institution the power of which it is susceptible, and to make it available for the defense of the Union at the shortest notice and at the smallest expense of time, of life, and of treasure, are among the benefits to be expected from the persevering deliberations of Congress.

"PRESIDENT ADAMS, 1826.

"The occasion was thought favorable for consulting the same board, aided by the results of a correspondence with the governors of the several States and Territories and other citizens of intelligence and experience, upon the acknowledged defective condition of our militia system and of the improvements of which it is susceptible. The report of the board upon this subject is also submitted for your consideration.

"PRESIDENT JACKSON, 1832.

"If in asserting rights or in repelling wrongs war should come upon us, our regular force should be increased to an extent proportioned to an emergency, and our present small Army is a nucleus around which such force could be formed and embodied. But for purposes of defense, under ordinary circumstances, we must rely upon the electors of the country. Those by whom and for whom the Government was instituted and is supported will constitute its protection in the hour of danger, as they do its check in the hour of safety.

"But it is obvious that the militia system is imperfect. Much time is lost, much unnecessary expense incurred, and much public property wasted under the present arrangement. Little useful knowledge is gained by the musters and drills now established, and the whole subject evidently requires a thorough examination. Whether a plan of classification remedying these defects and providing for a system of instruction might not be adopted is submitted to the consideration of Congress. The Constitution has vested in the General Government an independent authority upon the subject of the militia which renders its action essential to the establishment or improvement of the system, and I recommend the matter to your consideration, in the conviction that the state of this important arm of the public defense requires your attention.

"PRESIDENT JACKSON, 1835.

"Occurrences to which we, as well as other nations, are liable, both in our internal and external relations, point to the necessity of an efficient organization of the militia. I am again induced by the importance of the subject to bring it to your attention. To suppress domestic violence, and to repel foreign invasion, should these calamities overtake us, we must rely in the first instance upon the great body of the community whose will has instituted and whose power must support the Government.

"PRESIDENT JACKSON, 1836.

"In this connection it is also proper to remind you that the defects in our present militia system are every day rendered more apparent. The duty of making further provision by law for organizing, arming, and disciplining this armed defense has been so repeatedly presented to Congress, by myself and my predecessors, that I deem it sufficient on this occasion to refer to the last annual message and to former Executive communications in which the subject has been discussed.

"PRESIDENT VAN BUREN, 1837.

"It is not, however, compatible with the interests of the people to maintain, in time of peace, a regular force adequate to the defense of our extensive frontiers. In periods of danger and alarm we must rely principally upon a well-organized militia, and some general arrangement that will render this description of force more efficient has long been a subject of anxious solicitude. It was recommended to the first Congress by General Washington, and has since been frequently brought to your notice, and recently its importance strongly urged by my immediate predecessor. The provision in the Constitution that renders it necessary to adopt a uniform system of organization for the militia throughout the United States presents an insurmountable obstacle to an effective arrangement by the classification heretofore proposed, and I invite your attention to the plan which will be submitted by the Secretary of War, for the organization of volunteer corps and the instruction of the militia officers, as more simple and practicable, if not equally advantageous as a general arrangement of the whole militia of the United States.

"PRESIDENT VAN BUREN, 1838.

"I would again call your attention to the subjects connected with and essential to the military defenses of the country, which were submitted to you at the last session, but which were not acted upon, as is supposed, for want of time. The most important of them is the organization of the militia on the maritime and inland frontiers. This measure is deemed important, as it is believed that it will furnish an effective volunteer force in aid of the Regular Army, and may form the basis for a general system of organization for the entire militia of the United States.

"PRESIDENT VAN BUREN, 1839.

"The present condition of the defenses of our principal seaports and navy-yards, as represented by the accompanying report of the Secretary of War, calls for the early and serious attention of Congress, and, as connecting itself intimately with this subject, I can not recommend too strongly to your consideration the plan submitted by that officer for the organization of the militia of the United States.

"PRESIDENT TYLER, 1843.

"In all cases of emergency the reliance of the country is properly placed in the militia of the several States, and it may well deserve the consideration of Congress whether a new and more perfect organization might not be introduced, looking mainly to the volunteer companies of the Union for the present and of easy application to the great body of the militia in time of war.

"PRESIDENT LINCOLN, 1861.

"The recommendation of the Secretary (of War) for the organization of the militia on a uniform basis is a subject of vital importance to the future safety of the country, and is commended to the serious attention of Congress.

"PRESIDENT HAYES, 1880.

"Attention is asked to the necessity of providing by legislation for organizing, arming, and disciplining the active militia of the country, and liberal appropriations are recommended in this behalf.

"PRESIDENT ARTHUR, 1882 AND 1883.

"I invite the attention of Congress to the propriety of making more adequate provision for arming and equipping the militia.

"From the reports of these (United States Army) officers I am induced to believe that the encouragement of the State militia organizations by the National Government would be followed by very gratifying results and would afford it in sudden emergencies the aid of a large body of volunteers educated in the performance of military duties.

"PRESIDENT HARRISON, 1890.

"The encouragement that has been extended to the militia of the States should be continued and enlarged. These military organizations constitute in a large sense the Army of the United States, while about five-sixths of the annual cost of their maintenance is defrayed by the States.

"PRESIDENT CLEVELAND, 1896.

"The appropriations for its (organized militia) support by the several States approximate $2,800,000 annually, and $400,000 is contributed by the General Government. Investigation shows these troops to be usually well drilled and inspired with much military interest, but in many instances they are so deficient in proper arms and equipment that a sudden call to active duty would find them inadequately prepared for field service. I therefore recommend that prompt measures be taken to remedy this condition and that every encouragement be given to this deserving body of unpaid voluntary citizen soldiers, upon whose assistance we must largely rely in time of trouble.

"PRESIDENT ROOSEVELT, 1901.

"Our militia law is obsolete and worthless. The organization and armament of our National Guard of the several States * * * should be made identical with those provided for the regular forces. The obligations and duties of the guard in time of war should be carefully defined. * * * It is utterly impossible in the excitement and haste of impending war to do this satisfactorily if the arrangements have not been made long beforehand.

"* * * the State troops, being already armed and equipped, would be ready for immediate service. This was based on the supposition that the arms and equipments were in good condition, an expectation not generally realized during the war. It is probable that the troops would have been ready for service as quickly by being equipped anew.

"As these troops (volunteer, first call) were mainly from the National Guards of the different States, it was understood that they were well equipped, * * * which supposition was not realized."

Your committee has endeavored to provide a plan as simple and practical as possible to place the militia of the country upon an adequate and satisfactory footing, so that in time of danger it would be immediately available for national defense. The committee believes that that end can be accomplished without changing, or attempting to change, the long established relations between the General Government and the States, and with that end in view that such legislation as is recommended should be in substantial conformity to the following conditions:

1. The obsolete and inoperative sections of the general militia law should be repealed.
2. Those portions of the original statute which continue to have operative force should be brought into conformity with existing military conditions.
3. The organization and discipline of the militia should, for the sake of uniformity of instruction, comform to that prevailing in the Army.
4. The cooperation of the Federal Government should be so regulated as to make it reasonably certain that its expenditures for the maintenance and armament of the militia should hereafter be conditioned or made to depend upon such return, in the way of improved organization and increased efficiency, as will be calculated to justify its liberality in the matter of appropriations.

THE GENERAL MILITIA LAW OF 1792.

The original enactment on this subject was the act of May 8, 1792 (1 Stat., 271), and is embodied, with some modifications presently to be discussed, in the revision of the statutes in 1874 as Title XVI, sections 1625 to 1661, of the Revised Statutes.

The sections of the proposed enactment will be discussed in the order in which they are recommended for adoption.

"*Be it enacted, etc.*, SECTION 1. That the militia shall consist of every able-bodied male citizen of the respective States, Territories, and the District of Columbia, and every able-bodied male of foreign birth who has declared his intention to become a citizen, who is more than 18 and less than 45 years of age, and shall be divided into three classes—the organized militia, to be known as the National Guard of the State, Territory, or District of Columbia, or by such other designations as may be given them by the laws of the respective States or Territories, the National Volunteer Reserve as provided in this act, and the remainder to be known as the Reserve Militia."

This section prescribes the basis of enrollment, conforming in that regard to the corresponding definition of the obligation of citizens, and of aliens who have declared their intention to become such, which is embodied in the act of April 22, 1898.

The original enactment contemplated the establishment of militia districts in the several States composing the Union. In each of these a company of militia was to be maintained, which was to be under the supervision of a captain, the territorial area composing such district being indefinitely described in the statute as "the bounds of his company." It is fair to presume that the districts so created were more exactly described in the legislation of the several States in respect to their militia, adopted subsequently to the enactment of the general militia law, but such enactments were not general, and legislative interest in militia matters languished until, in the first quarter of the nineteenth century, it became practically obsolete as a part of the constitutional military establishment.

The first section of the act of May 8, 1792, assuming the existence of the company district above described, makes every able-bodied male citizen of the respective States resident therein who is of the age of 18 years and under the age of 45 years a member of the "enrolled" as distinguished from the "embodied" militia—a distinction which will be presently explained. The same section provided for the enrollment, which was to be made by the captain, and the second section specifically described the persons or classes of persons who are exempted from enrollment. It is only necessary to observe in respect to the foregoing provision for enrollment that it has been obsolete, in fact, for nearly a century; and is entirely impracticable at the present time, if for no other reason because it makes a demand upon the citizen for military service which is, in some respects, considerably more extensive than any which prevails in the continental states of Europe, where military forces are raised by conscription; for where a system of conscription exists a considerable portion of the able-bodied male population, by drawing fortunate numbers, escape military service, which would have been impossible under a rigorous enforcement of the enrollment clauses of the legislation of 1792, the operation of which would have called into the militia service the entire able-bodied male population of the United States.

The national volunteer reserve provided for is a new subject of proposed legislation, and we believe it is warranted for strategic purposes.

History shows that within the one hundred and seventy-one years from 1700 to 1871, inclusive, less than ten instances have occurred in which declarations of war have preceded hostilities. On the other hand, 107 cases are recorded in which hostilities have been begun by Europe or by the United States of America without previous declaration of war.

"HISTORICAL EXTRACTS SHOWING WHERE HOSTILITIES BEGAN WITHOUT DECLARATIONS OF WAR.

"The year 1700 opened with profound peace, yet on March 12, without public declaration of war, 40,000 Saxons under General Fleming swept down before Riga, then belonging to Sweden.

"In the month of December, 1700, French troops arrived by night and took possession of the strongest places in Spanish Flanders.

"On July 28, 1701, Marshal Catinat, with a French corps d'armée, took possession of the Alpine passes and descended into Lombardy.

"During the early part of the winter of 1701 Prince Eugene seized, without declaration of war, Canneto and other places in the territories of Guastalla, Parma, and Modena.

"Throughout 1701 a naval war was carried on by England and Holland against France, but a formal declaration of war was not declared for several months after hostilities had been carried on.

"In 1708 the Pope of Rome attacked by surprise a body of German imperial troops and ordered them cut to pieces with great barbarity; also,

"In 1708 the English fleet suddenly appeared at Civita Vecchia and by surprise dictated terms to the Pope.

"In 1714 the Turks by sudden invasion seized from Venice the Morea without declaration of war.

"In 1715 England in peace seized Swedish provinces.

"In August, 1717, during peace, a fleet of war vessels carrying 9,000 men left Barcelona secretly for Sardinia. Cagliari, the capital, was surrendered to the Spaniards.

"In 1719 Spain secretly prepared an expedition and seized Messina and the greater part of Sicily.

"The first case in the eighteenth century when declaration preceded war was in 1719, when France and England joined in war against Spain.

"In 1726, without declaration of war, a British squadron under Admiral Hosin was sent to the West Indies and blockaded Porto Bello.

"In 1727 Spain, at peace with England, laid siege to Gibraltar from February 11 to November 23.

"In 1733 Russia invaded Poland without a declaration of war.

"In 1739 reprisals preceded war between Spain and England. War was declared by England October, 1739.

"1740, the first Silesian war.

"1741, naval fights between France and England without declaration of war.

"1742, without declaration of war, Naples, by action of an English admiral, forced to become neutral.

"On June 27, 1743, the battle of Dettingen was fought, at which time no declaration of war had been made, nor was it made until March 20, 1744, when France declared war against England.

"On August 9, 1744, Saxony and Bohemia were invaded by Frederick without declaration of war.

"In 1747, sudden invasion of Holland by the French, in which the French secured all the advantages of sudden attack.

"In 1754, France and England put forth hostile claims in America without declaration of war or notice. Fighting commenced between English and Virginia troops on the one hand and French on the other.

"On May 17, 1756, England declared war on France.

"In August, 1756, Frederick the Great suddenly invaded Saxony with 75,000 men. He did not publish a declaration until after crossing the frontier.

"In 1759, the Dutch commenced hostilities in India against the English without proclamation of war.

"In June, 1770, 1,700 Spanish soldiers and mariners with five frigates and a train of artillery and ordnance stores arrived at Port Egmont, when only two sloops of war and a miserable blockhouse with four guns constituted all the means of defense. Articles of capitulation were immediately concluded.

"In 1777 Austrian troops numbering many thousands entered lower Bavaria and seized every important place, no declaration of war having been previously declared.

"On February 6, 1778, France signed secretly a treaty with Franklin, engaging to give assistance to the American colonies. France did not then declare war upon England.

"In 1779 Spain joined France in a war against England.

"On April 21, 1784, Austria sent a detachment of troops into Dutch territories and took possession of Fort Lillo.

"On December 20, 1787, before the declaration of war was issued, Austria sent six regiments into Turkey for the purpose of surprising the Turkish fortress Belgrade. Declaration of war was not declared until July 10, 1788.

"In July, 1789, a Spanish frigate of 26 guns captured two English vessels and seized a settlement.

"On April 20, 1792, France declared war against the Empire of Germany.

"On September 28, 1792, the French Republic surprised Nice, Montalbon, and Ville Franche, in the Kingdom of Sardinia, during peace.

"In the same year, without declaration of war, the French Republic ordered invasion of neutral Switzerland.

"On July 1, 1793, France declared war upon England, Spain, and the Netherlands.

"In 1795 England seized Dutch colonies, capturing the island of Ceylon without fighting, no declaration of war having previously been made.

"In 1796 the French republican army, without declaration of war, seized forts and territories of the States of the Church, Naples, Tuscany, Parma, Modena, etc.

"On January 23, 1798, France suddenly invaded Switzerland. Naples moved against France, and France took possession of Navarra, Suza, and Coni. No declaration of war was made in any instance.

"On September 5, 1800, Russia seized two British ships in Russian ports and sent their crews prisoners into the interior without declaration of war.

"On July 14, 1801, reprisals were ordered by the English cabinet. All Swedish, Danish, and Russian vessels in English ports were seized and a

large English fleet under Sir Hyde Parker was dispatched to the Baltic, although there was no declaration of war.

"On March 20 the Swedish inland steamer *Bartholomew*, wholly unprepared for any defense, surrendered at the first summons to a force of three regiments of foot and a detachment of artillery under Lieutenant-General Trigge and a squadron under Rear-Admiral Duckworth.

"In 1802 Napoleon sent a force of 20,000 men into friendly Switzerland and seized by surprise Soleure, Zurich, and Berne.

"On November 23, 1806, the Russian army, during negotiations and after full concessions, suddenly invaded Moldavia and seized Chotsim, Bender, and Jassi.

"In 1806 England sent an expedition against Curaçoa; her fleet suddenly entered the harbor, and Fort Amsterdam was assaulted and captured.

"On March 6, 1807, England sent an expedition, during negotiations, into Egypt, and on the 21st of March the governor of Alexandria accepted terms of capitulation.

"In 1807 the English man-of-mar *Leopard*, 52 guns, demanded of the *Chesapeake*, an American frigate cruising off Virginia, the requisition of some English deserters on board the *Chesapeake*. The American captain denied the right of search, whereupon the *Leopard* fired a broadside, killing and wounding several Americans in time of peace.

"In 1812 Napoleon by sudden attack on troops of Kowno declared war with Russia.

"On June 18, 1812, the United States declared war against Great Britain. During the month of April previous, however, a general embargo was laid by Congress upon all vessels in the harbors of the United States for seventy days.

"In 1815 Murat, King of Naples, attacked Austria without notice.

"In 1816 Portugal invaded the Spanish possessions on the river Plate without explanation or previous declaration.

"In 1818 the United States, during peace with Spain, seized Pensacola and St. Marks.

"In 1821 the United States seized a French ship during time of peace.

"In 1826 the King of Spain carried on hostilities against Portugal with willful falsehood without declaring war, but professing friendship.

"During the same year England, without declaration of war on Spain, dispatched troops to fight the Spaniards.

"In 1827 the Turkish fleet was destroyed by Russia, England, and France without warning of war.

"In 1828 the Russo-Turkish war occurred. Hostilities on both sides preceded declaration of war.

"In the same year France sent an expedition against the Turks in Greece and captured five fortresses.

"In 1831, without declaration of war, Russia fired into, sank, and captured Greek ships and joined in a formal attack upon Poros.

"During this same year a French admiral carried off the whole Portuguese fleet and converted reprisals into war. And the King of Holland pressed his troops into Belgium and in nine days crushed the Belgian forces.

"On February 22, 1832, France sent a squadron with troops and captured Ancona by sudden surprise during absolute peace between France and Rome.

"In 1834 the Spanish army, without notice, crossed the Portuguese frontier and, by a forced march, surprised and defeated the force under Don Carlos.

"In 1835 the inhabitants of Texas raised the standard of revolt against the Mexican Government, and declared themselves independent.

"During the year 1838 an invasion of Canada took place under circumstances described in the United States Congress as such 'That the people were at war while their Governments were at peace.'

"On the 17th of April, 1840, the British ships of war in the vicinity of Naples commenced hostilities and captured a number of Neapolitan vessels, and an embargo was laid on all ports of Malta that bore the Sicilian flag.

"In 1844 hostilities by France against Morocco commenced by Prince de Joinville on not receiving a satisfactory answer to an ultimatum.

"On May 13, 1846, the Congress of the United States passed a resolution that, by virtue of the constitutional authority vested in them, declared that a state of war existed between the Republic of Mexico and the United States. The President in his message recited many and various acts of hostilities prior to any declaration of war.

"In 1847 a revolutionary junta had been established in Portugal and was carrying on a war against the Queen. The war having dragged on for some time, England, France, and Spain agreed to interfere, but no declaration of war was made.

"In 1848 the Italian insurrectionary war broke out; the King of Piedmont at once joined his armies to those of the Italians, and the war, from its nature, was carried on without any formal notice.

"On April 25, 1849, the French General Oudinot entered citadel Civitá Vecchia. The Roman Assembly protested in the name of God and the people against this unexpected invasion. A short time after there followed the siege and capture of Rome.

"In 1850 and 1851 the United States waged the "unofficial" war against Cuba.

"In 1853 and 1854 the Crimean war was waged. Hostilities preceded war as follows: The Russian Government seized the Danubian Principalities.

"On May 31 the order for the passage of the Pruth was passed.

"On June 2, before it was known in London, orders were sent to English and French admirals to move up the Besike Bay.

"On October 22 the English and French fleet, under orders from London and Paris, entered the Dardanelles in express breach of treaty of 1841.

"On October 23 Turkey declared war upon Russia and crossed the Danube to expel the Russians.

"In 1859, France and Italy against Austria. The Austrian Government alleged that the actual commencement of this war was on both sides (as between France and Austria) declared to be due to prior hostile acts, not words.

"On May 5, 1860, Garibaldi sailed from Genoa with 2,000 troops to wrest Sicily from the King of Naples.

"In 1863 war between Austria and Prussia on one side and Denmark on the other virtually commenced by the occupation of Holstein and Lauenburg by the troops of the two great powers.

"In 1870, the war between France and Germany, the declaration of war clearly preceded war."

These facts prove the necessity of a wise people being prepared for any emergency. While at present there may be no probability of any foreign power waging war against the United States, yet, as an intelligent nation, we should not in our repose of security lose sight of the possibilities of such an event. Great Britain, if uninterrupted, could place within forty days an army of 100,000 men in the midst of the greatest wheat-producing section of our country.

In addition to the wheat fields, the lumber regions and the ore beds of the Northwest, the entire output of which would be controlled by the presence of an army of occupation moving from Winnipeg south into the United States, and thus cutting the Northern Pacific Railroad, Great Britain would, by means of her light-draft gunboats, have control of the Great Lakes and thus have an uninterrupted water communication, except when the ice of winter prevented, between the left wing of the army of occupation of the Northwest, resting at Duluth, and the right wing of the army of the Northeast, with its right resting probably on Lake Erie.

This army would be composed of the troops of the home garrisons in the United Kingdom and Ireland and of levies from Bermuda and Jamaica and all the militia and volunteers of Canada. Great Britain constantly keeps in her squadron, which is at Bermuda or Halifax, or between these two points, from four to five fine gunboats of such a draft as will allow them to pass through the St. Lawrence system of canals into Lake Ontario, and by the Welland Canal into Lake Erie. These vessels, without infraction of treaty, and indeed probably without our knowledge, can pass so far up the St. Lawrence that the time required for them to enter and cross Ontario and pass through the Welland Canal into Lake Erie must be estimated in hours rather than days. Once there, and even if we succeeded in successfully disputing the passage through the Detroit River and Lake St. Clair into Lake Huron, there would nevertheless lie at their mercy the cities of Buffalo, Dunkirk, Erie, Cleveland, Toledo, Sandusky, and other cities and villages on the south shore of Lake Erie.

Treaty stipulations prevent our having a fleet on the lakes, and to-day in that region the antiquated and obsolete man-of-war (?) *Michigan* not unfitly represents the majesty of our naval power.

Is there any way to prevent the mobilization of this great army and the passage of these vessels? The answer can not be given positively in a word. There is if we have an efficient militia system; there is not if we have not; for our skeleton of an army, numbering less than 65,000 men, scattered from one end of this great country to the other, and from the North to the South, and a large proportion of it serving in the Philippines, Porto Rico, and Hawaii, forms nothing more than a picked guard to sound the alarm. The St. Lawrence canals are all upon the far side of the St. Lawrence from us, with one exception, which is the Beauharnois (called in the local tongue "Barnway").

This, it is true, lies upon our side of the river, although, of course, upon Canadian soil, but its exposed position in case of war is as well known to England and Canada as ourselves, and consequently a canal to replace it has been projected on the other side of the St. Lawrence; surveys have been made, and probably work upon it has already been begun. Still, a bold and efficient force under a dashing leader might reach some of the St. Lawrence canals in time to cripple them; but the natural movement would be upon the Welland. With an effective force of militia such as we should have the Welland Canal can be seized and held, the movement of troops upon the St. Lawrence can be checked, and before the thirty-six days, to which allusion has been made in the first part of this report, have passed the line of the Canadian Pacific Railroad can be in our possession. But that these things should be possible, it is essential that the United States should be able to mobilize a force of 100,000 men in not less than forty-eight hours.

We can have millions if we can spare the time to raise, equip, drill, and discipline volunteers, but time is exactly the element which the wary enemy will not allow us, and therefore our only safeguard lies in a militia which can give us an effective "first line" of 100,000 men in forty-eight hours. It is not reasonable to suppose that for this short notice we can obtain more than 75 per cent of the paper force; and, therefore, while our militia should be 200,000 men, it is absolutely unsafe for it to be less than 150,000. But to have a force of this size more money is needed. The States already appropriate more for the militia than the United States. It is a popular delusion that the money which is annually appropriated by the United States for arming and equipping the militia is money given to the militia.

The law states that this money is appropriated for the purpose of "providing" arms, etc. That is to say, the United States appropriates this money and with it buys or manufactures war material, which material, instead of being placed in storehouses, is intrusted to the National Guard of the States and Territories; and while some of it of course is, of necessity, worn-out in the drilling and disciplining of this reserve of volunteers, all of it that is serviceable—to quote the language of the law—"shall remain the property of the United States," and in the event of need, can be and will be utilized by the United States in arming and equipping its troops. The money thus appropriated should therefore be looked upon not only as money expended for the benefit of the militia, but as funds provided for the very necessary purpose of preparing a reserve stock of war material for use in emergencies.

Reference has been made to how important an element time is. The following is quoted from a lecture delivered by Capt. D. M. Taylor, Ordnance Department, United States Army, at San Francisco in 1885:

"With the introduction of steam, electricity, and arms of precision, the 'pomp and circumstance of glorious war' went out, and with them departed the dignified slowness which characterized military operations of the period when combatants took their time about wars, and their duration was from seven to thirty years. Modern wars are short and sharp. In this connection the following dates are instructive:

Year.	War.	Declared.	Decisive battle.	Days.
1859	France and Austria	May 3	Solferino, June 24	52
1864	Dano-German	Jan. 16	Fall of Duppel, Apr. 18	93
1866	Austro-Prussian	June 16	Sadowa, July 3	17
1866	Austro-Italian	June 20	Lissa, July 20	30
1870	Franco-German	July 15	Sedan, Sept. 2	49

"So that we see in many instances the fate of war has been decided and its decisive battles fought in fewer days from the declaration of war than is needed in shipbuilding England to prepare the plans and let the bids for one class of unarmored vessels."

The Constitution provides for appropriations for the support of the Army and Navy. It further provides for organizing, arming, and disciplining the militia, thus authorizing an appropriation for the common defense.

All that is undertaken by section 24 of the bill is to provide who shall constitute the national volunteer reserve. They do not become a part of the standing Army of the United States. All that could be done would be, under the direction of the Secretary of War, to provide for their organization, drill, inspection, instruction, and give authority in time of threatened war to call them out, and upon declaration of war by Congress to make them a part of the volunteer force of the United States.

This section provides an elastic organization for the embodied militia conforming to the present composition of similar troops in the Army, and changing in the future as Congress may see fit from time to time to make changes in the composition of the corresponding organizations in the Regular Army.

The objects of the provision that "the organization, armament, and discipline of the organized militia * * * shall be the same as that which is * * * prescribed * * * for the Regular and Volunteer Armies of the United States" are twofold.

First, that in time of peace there shall be uniformity of instruction, and second, in time of war organization shall be identical, to avoid confusion.

While at the time of entry into the service of the United States interpretation of the requirement relating to organization might be strict, in time of peace it might properly be liberal, when not interfering with the true intent of the provision.

Thus, while in time of peace a company, troop, battery, battalion, or regiment of infantry or cavalry might, as a necessity of instruction or administration, have assigned or detailed to it extra officers to perform the duties of extra lieutenants, battalion adjutants, and quartermasters, inspectors of small-arms practice, assistant surgeons, etc., these officers, unless subsequently provided for in the regular and volunteer service, would be relieved from duty at the time of entry into the United States service of the organization to which attached, but might conveniently fill vacancies in line or staff at such time or fill other offices of usefulness in the service.

In spite of tradition, the fact remains that all necessities, tactical and administrative, are best met in all cases by requirements of three battalions of four companies each. It is not unreasonable to assume that with the increased public appreciation of the importance of the organized militia under the new law, the necessary increase of companies and recruiting would follow. While a regiment of ten companies might be considered as untactical (except under Upton's discarded tactics), even in the regular service a regiment might properly be left at eight companies pending recruitment to a full regiment or as a ten-company regiment divided into three battalions, two to consist of three companies only.

In case of separate companies of infantry or troops of cavalry, if the organization is similar to that of the corresponding body in the regular service, and conditions are inconvenient to attach them to a battalion, squadron, or regiment existing, it would not appear to be violating section 3 that such company or troop should remain unattached until a larger unit should be created.

As to special numerical or other designation, there appears to be nothing in the new law to conflict with present nomenclature. When forming part of a battalion or squadron or regiment, the present designations might still be preserved.

In cases of existing bodies of engineers or artillery, organized as regiments, conceding the necessity of such organizations for administrative and instruction purposes, this organization does not differ from the Regular Army organization, except in name, which is not important. If the same number of companies of the Regular Artillery or Engineer Corps were assembled permanently at one post they might properly be commanded and administered by detailed field and staff officers and noncommissioned staff, as is the case of National Guard heavy artillery and engineer regiments. In the event of entry into the United States service, if as coast artillery or engineers, neither of these organizations would be brigaded, but split up as the necessities of the service should determine. Therefore no change except in the matter of the detail of extra officers need be contemplated in such organizations.

Uniformity of organization, or at least to an extent that will insure uniform instruction in time of peace and absolute uniformity on entry into the United States service, may well be considered the very essence of the new bill, and any variation or qualification of the terms of section 3 which would open the door to a perpetuation of the lack of uniformity now prevailing would be most injurious to the service. In comparison, the inconvenience involved on the part of the different States in conforming to the spirit and letter of the new law would be very slight.

This section also requires that the "armament" and "discipline" shall conform to "that which is now or may hereafter be prescribed by law for the Regular and Volunteer armies of the United States." The requirements as to a uniform armament needs no explanation. The provision requiring uniformity in discipline replaces a similar requirement of the law of 1792, which provided that:

"SEC. 1637. The system of discipline and field exercise which is ordered to be observed in the different corps of infantry, artillery, and riflemen of the Regular Army shall also be observed in such corps, respectively, of the militia."

From an examination of section 1637 it will be seen that the term "discipline," as used in the section proposed for adoption, relates to the tactics or drill regulations of the different arms or corps, and such other books and manuals as are provided for the instruction of troops, the purpose being to secure uniformity in training in the militia of the several States and at the same time to reserve to the States and Territories, respectively, the duty of training or disciplining their militia in accordance with the methods prescribed by Congress, or by the President under its authority and direction.

Section 3 of the act of May 8, 1792, prescribed a general organization of the militia. Each regiment was to consist of 2 battalions of 5 companies each. A regiment of 2 battalions was to have a colonel, lieutenant-colonel, 1 major, and 1 chaplain. An adequate regimental staff was also provided. A separate battalion was commanded by a major, who was not assisted by either a commissioned or noncommissioned staff. The company of infantry, which was the fundamental unit of the organization, was composed of 1 captain, 1 lieutenant, 1 ensign, 4 sergeants, 4 corporals, 2 musicians, and 64 privates. Each battalion was to have 1 company of "grenadiers, light infantry, or riflemen," and it is not quite clear whether this company was to be in addition to or to be formed out of the 5 by selection or otherwise.

The context would indicate, however, that the latter course was contemplated in the formation of the special company above described. A company of artillery was authorized for each division, and was to be composed of 1 captain, 2 lieutenants, 4 sergeants, 4 corporals, 6 gunners, 6 bombadiers, 2 musicians, and 64 privates. A "troop of horse" was composed of 1 captain, 2 lieutenants, 1 cornet, 4 sergeants, 4 corporals, 1 saddler, 1 farrier, 1 trumpeter, and 64 privates. During the war of the rebellion the organization of the militia was modified by the act of July 17, 1862 (12 Stats., 597), which provided a ten-company organization for the infantry regiment, and required companies of cavalry and artillery to be organized "as in the regular service." This statute is still in force.

The tactical organization of the militia of the several States into brigades and divisions was provided for in section 3 of the act of May 8, 1792 (sec. 1630, Rev. Stat.), by a general requirement that the militia of each State "shall be arranged into divisions, brigades, regiments, battalions, and companies, as the legislature of the State may direct." Each brigade was to consist of four regiments, but the composition of the division was not expressly provided; and the divisions, brigades, and regiments were to be numbered at their formation, the numbering being of record in the adjutant-general's office of the State; and "when in the field or in service in the State each division, brigade, and regiment shall respectively take rank according to its number."

The third section also prescribed the number, rank, and duties of the general and staff officers necessary to the command and administration of the tactical organizations therein provided for. The act of March 2, 1803 (2 Stats., 207), made further provision for the general staff of the militia forces. The organization prescribed for the militia in the act of May 8, 1792, underwent some modification in the act of July 17, 1862 (12 Stats., 598), which prescribed a regiment of infantry of ten companies, fixed the proportions of artillery and cavalry at one company of each arm for each ten-company regiment of infantry, and established a uniform organization for divisions and brigades. This enactment, which is embodied in sections 1645-1647 of the Revised Statutes, is still in force.

An able statement of the reasons why the militia can not be taken out of the United States for the purposes of war is to be found in Ordronaux's Constitutional Legislation, page 501, from subhead "Calling out the militia and its government" to the subhead "Jurisdiction over ceded places," page 506:

"CALLING OUT THE MILITIA AND ITS GOVERNMENT.

"The Constitution distinctly enumerates the three exclusive purposes for which the militia may be called into the service of the United States. These purposes are: First, to execute the laws of the Union; second, to suppress insurrection, and third, to repel invasions.

"These three occasions, representing necessities of a strictly domestic character, plainly indicate that the services required of the militia can be rendered only upon the soil of the United States or of its Territories. Under these circumstances they still remain the militia of their several States, although temporarily in the service of the United States as the superior power constitutionally invoked 'to execute the laws of the Union, to suppress insurrection, and to repel invasions.' In the history of this provision of the Constitution there is nothing indicating that it was even contemplated that such troops should be employed for purposes of offensive warfare outside the limits of the United States. And it is but just to infer that the enumerations of the specific occasions on which alone the militia can be called into the service of the General Government was intended as a distinct limitation upon their employment. (Kneedler *v.* Lane, 45 Penn., 238; Martin *v.* Mott, 12 Wheat., 19; Houston *v.* Moore, 5 ibid., I.)

"Being the ministers of the law to enforce its commands, they can only be summoned by the lawmaking power to act within the extent of its jurisdiction and in the manner prescribed by the Constitution. They can not, consequently, be used to invade the territory of a neighboring country, or to enforce any public rights abroad. While serving as State militia they do not lose their distinctive character beyond becoming the militia of the United States for the time being.

"It was the hereditary fear of standing armies, as a menace to liberty in time of peace, which led the framers of the Constitution to provide that the militia should always remain a militia of the States.[a]

"It was never designed to be a militia of the United States, nor under the control of the President, except when called into actual service under some one of the above-enumerated contingencies. Nor was he even to be allowed to do so at his arbitrary pleasure, but only after the necessity for so doing had been recognized and approved by Congress.

"'Remember always [says Mr. Webster] that the great principle of the Constitution on that subject is that the militia is the militia of the States, and not of the General Government, and being thus the militia of the States, there is no part of the Constitution worded with greater care and with a more scrupulous jealousy than that which grants and limits the power of Congress over it.' (Works, vol. 2, p. 95.)

"Speaking likewise on this question of the government of the militia, the justices of the supreme judicial court of Massachusetts in their opinion upon the subject say that:

"'Were it otherwise, were the General and State governments to have their own militia, the results would have been that there would be, within the bosom of each State, a large embodied military force, not by its organization amenable to the laws, or subject to the orders of the State government; and also a similar force, on which the General Government would have no right to call for aid to repel invasion, suppress insurrection, or execute the laws; a state of things not only rendering each to a great extent inefficient and powerless, but also entirely destructive of that harmony and union which were intended to characterize the combined action of both governments.' (80 Mass. R., 614.)

"The militia of the States, restricted to domestic purposes alone, are to be distinguished, therefore, from the Army proper of the United States, which, whether in the form of regular troops or volunteers, may be used to invade a foreign country as well as to repel the attack of foreign enemies. The invasion of Mexico in 1846 and of Canada during the war of 1812 with Great Britain are notable instances of this kind. Although in the latter case some militia did participate in the battles of Chippewa and Niagara on Canadian soil, a portion claimed their constitutional rights and refused to cross the frontier. (Hildreth's Hist. of the U. S., vol. 3, p. 358.)

"Guilty as they may have been of flagrant insubordination, it is doubtful whether any military court could have vindicated its jurisdiction in punishing this disobedience of an unlawful command.

"From 1792 (act of May 8, 1792, 1 Stat. L., 271) to 1862 (act of July 17, 1862, 12 Stat. L., 597) none but free white male citizens could be lawfully enrolled in the militia of any of the States. By the latter act 'all able-bodied male citizens between the ages of 18 and 45' are included, and it is further enacted that 'the militia when so called into service shall be organized in the mode prescribed by law for volunteers.' As a fact, during our civil war the State regiments, whether raised by draft or voluntary enlistments, retained the name of their several States with their appropriate numbers, and they were called 'volunteers' to distinguish them from troops of the Regular Army.

"By the confiscation act of July 17, 1862 (12 Stat. L., 592), the President was authorized to enlist persons of African descent into the Army for the suppression of the rebellion. This was the initiation of colored soldiers into our Army, and led to the permanent organization of negro regiments.

"The power to call out the militia and the power to govern them authorizes the passage of laws to enforce the call by the infliction of suitable penalties and the erection of courts for the trial of offenders. This Congress has done in the various acts passed between 1792 and 1862 giving to the President the authority to call forth the militia and to provide for their government when in active service. (Rev. Stats. U. S., Title XVI.)

"In respect to their control the power of the State and General Government over the militia are concurrent in this sense, that the powers of the State governments antedating the Constitution, and not having been prohibited by that instrument, still remain with the States until a necessity arises calling for the exercise of the superior authority of the General Government over the same subject. (Houston *v.* Moore, 5 Wheat., 1.)

"Then the State authority (except in the matter of training and officering them according to the discipline prescribed by Congress) becomes subordinated to that of the President as commander in chief of all our forces. When-

[a] Charles II, by his own authority, kept on foot a body of 5,000 troops in time of peace, and James II increased the number to 30,000, who were paid out of his civil list. This it was which gave rise to the revolution of 1688 and to the insertion in the Bill of Rights of the clause that "raising and keeping a standing army within the Kingdom in time of peace, unless with the consent of Parliament, is against law. (1 William and Mary, 1689.) The complaint that George III had done so in the colonies is one of the grievances set forth in our Declaration of Independence. (Federalist, No. 26; Macaulay's Hist., chap. 23; Hallam's Const. Hist., chap. 25.)

ever, therefore, any body of the militia has entered into the service of the United States its authority over them is exclusive and paramount.

"As to the command of the militia, the State alone is authorized to provide its officers, but when it has passed into the service of the United States the President as commander in chief may exercise his command over them either through Regular Army officers or through the officers of the militia themselves. Until such troops have actually been mustered into this service they are not amenable to the Articles of War prescribed by the General Government, and can not be punished for disobedience to them. The militia called into the public service are still the militia of the States until organized in the manner prescribed by Congress. (Mills *v.* Martin, 19 Johns., 7; Houston *v.* Moore, 5 Wheat., 20; Vanderhyden *v.* Young, 11 Johns., 150.)"

The Revised Statutes of the United States (Title XVI) have reenacted the act of 1792, with all its obsolete military terms and references to weapons long since relegated to the museums of military antiquities. Much of this scheme of organization is in the light of modern science not only faulty but, under present and accepted rules of formation, wholly impracticable. Our highest military authority has pointed this out most forcibly in a recent publication, whose statements should receive the serious attention of Congress. (Our Army and Militia, by Gen. W. T. Sherman, in North American Review for August, 1890.)

This section replaces section 1648 of the Revised Statutes without other change than is believed to be necessary in order to bring the requirement up to date.

"SEC. 1648. Whenever the President calls forth the militia of the States, to be employed in the service of the United States, he may specify in his call the period for which such service will be required, not exceeding nine months, and the militia so called shall be mustered in and continue to serve during the terms so specified, unless sooner discharged by command of the President."

In the earlier enactments in respect to the Federal employment of the militia the period of compulsory service was fixed at three months in any one year, and the completion of such a period of service entitled a member of the militia to exemption from active service, save "in due rotation with every other able-bodied man of the same rank in the battalion to which he belongs." (Sec. 4, act of February 28, 1795; 1 Stats., 424.) This period was extended to six months by section 2 of the act of March 3, 1839 (5 Stats., 355), and to sixty days after the commencement of the next regular session of Congress by section 3 of the act of July 29, 1861 (12 Stats., 281), and to nine months by the act of July 17, 1862 (ibid., 597), which is the existing law.

"SEC. 6. That when the militia of more than one State is called into the actual service of the United States by the President he may, in his discretion, apportion them among such States or Territories or to the District of Columbia according to representative population."

This section replaces section 1643 of the Revised Statutes. It differs from that section only in that it is not mandatory, but vests a discretion in the President in respect to the apportionment of quotas where the militia of more than one State is called into the service of the United States. Section 1643 provided that:

"SEC. 1643. When the militia of more than one State is called into the actual service of the United States by the President he shall apportion them among such States according to representative population."

"SEC. 7. That every officer and enlisted man of the militia called into the service of the United States in the manner hereinbefore prescribed shall be held to be in such service from the date of the publication of such call; and any officer or man who shall refuse or neglect to obey such call shall be subject to trial by court-martial, and shall be punished as such court-martial may direct."

The authority to order forth the militia presupposes the power to enforce compliance with the order, and to make such authority effective it must be accompanied with the power to punish for a disobedience of such order from the moment a call is made. The only effective means to enforce such authority is by court-martial. Section 5 of the act of February 28, 1795 (1 Stats., 424), the Federal enactment on the subject, provided—

"That every officer, noncommissioned officer, or private of the militia who shall fail to obey the orders of the President of the United States in any of the cases above recited, shall forfeit a sum not exceeding one year's pay and not less than one month's pay, to be determined and adjudged by a court-martial: and such officer shall, moreover, be liable to be cashiered by sentence of a court-martial, and be incapacitated from holding a commission in the militia for a term not exceeding twelve months, at the discretion of the said court; and such noncommissioned officers and privates shall be liable to be imprisoned, by a like sentence, on failure of the payment of fines adjuged against them, for one calendar month for every $5 of such fine."

The leading case of Martin *v.* Mott (12 Wheaton, 19) grew out of an attempted enforcement of this section, and that of Houston *v.* Moore (5 Wheaton, 1) out of a corresponding attempt in the case of an enactment of the Pennsylvania legislature in its support. A report submitted to Congress by the Comptroller of the Treasury on October 30, 1820, shows that 9,945 persons were fined under the provisions of this section in sums aggregating $483,685.41 for neglect of duty in failing to render service in the militia during the war of 1812 (12 American State Papers, vol. 2, Military Affairs, pp. 314–319), to which should be added $15,377 subsequently reported as collected in Virginia. An incomplete report of the expenses of the courts-martial convened for the purpose of imposing fines for the year above mentioned shows that $97,194.14 were disbursed on that account during that period. In New York the fines collected amount to $243,609.41 and the cost of collection was $55,428.49, about 20 per cent. In Pennsylvania $15,877 was collected, at a cost of $41,531.77. Regarded, therefore, as a practicable method of enforcing obedience to the President's orders calling forth the militia, this portion of the enactment must be looked upon as a complete failure.

The experience of the United States for nearly three-quarters of a century has been that in an ordinary emergency of war neither inducements nor penalties are necessary in order to induce or compel citizens to perform the duty required of them as members of the militia forces in time of public danger. As the remedy for a failure to respond to the call of the President, as prescribed in the sections above cited, failed completely upon the only occasion in our history in which it was resorted to, your committee can not do otherwise than to recommend its repeal.

"SEC. 8. That courts-martial for the trial of officers or men of the militia when in the service of the United States shall be composed of militia officers only; but such officers need not be residents of the same State or Territory as the accused."

In this section the committee recognizes and continues in operation a rule which has prevailed without interruption since the adoption of the Articles of War by the Continental Congress, in 1776, and which was embodied in its present form in the general militia law of 1792. It has seemed to your committee a wise precaution to embody in the new section a declaration that while such courts shall be composed exclusively of militia officers they shall not of necessity be from the same State as the accused.

"SEC. 9. That the militia, when called into the actual service of the United States, shall be subject to the same Rules and Articles of War as the regular troops of the United States."

This section, which has been reenacted without change, replaces section 1644 of the Revised Statutes, which provides that—

"SEC. 1644. The militia, when called into the actual service of the United States for the suppression of the rebellion against and resistance to the laws of the United States, shall be subject to the same Rules and Articles of War as the regular troops of the United States."

"SEC. 10. That the militia, when called into the actual service of the United States, shall, during their time of service, be entitled to the same pay and allowances as are or may be provided by law for the Regular Army."

The provisions of the general militia law in respect to the pay and allowance of the militia when called into the service of the United States are in some respects not only obsolete, but inoperative. Your committee has therefore retained the wholesome requirement of section 1650 of the Revised Statutes, which places troops of the militia upon practically the same footing as those of the regular establishment in all matters relating to pay, rations, clothing, travel allowances, and other emoluments.

The experience gained from the mobilization of militia forces in 1861 and 1898 shows that the duty of the Federal Government to maintain and support militia which it calls into its service should become operative as to each company when it assembles at its company rendezvous in obedience to the call of the President, and all expenses subsequently incurred for pay, subsistence, and transportation constitute a proper charge against the Federal Government.

The proposed section replaces sections 1651, 1652, and 1654 of the Revised Statutes, which provide:

"SEC. 12. That the adjutant-general of each State, Territory, and the District of Columbia shall perform such duties as may be prescribed by the laws of such State, Territory, and District, respectively, and make returns to the Secretary of War, at such times and in such form as he shall from time to time prescribe, of the strength of the organized militia, and also make such reports as may from time to time be required by the Secretary of War. That the Secretary of War shall, with his annual report of each year, transmit to Congress an abstract of the returns and reports of the adjutants-general of the States, Territories, and the District of Columbia, with such observations thereon as he may deem necessary for the information of Congress."

As the office of adjutant-general is created by the State government, this section places that office under the control of the governor and legislature of the State, whose agent he is and to whom he is responsible for the correct performance of the functions imposed upon him by law. In addition to the duties attached to the office by authority of the State, this section contains the provision of existing law which requires returns of strength of the enlisted organized and uniformed active militia to be rendered to the War Department annually by that office.

Section 232 of the Revised Statutes requires the Secretary of War to transmit to Congress, on or before the first Monday in February of each year, an abstract of the returns of the adjutants-general of the several States. In the section as proposed, this return is to accompany the annual report of the Secretary to Congress. This change is believed to be in the direction of promptness in the transaction of public business, and the operation of the enactment will be to cause the report to be rendered about two months earlier than is the case at present.

Section 12 replaces sections 232, 1634, 1635, 1636, and 1640 of the Revised Statutes, which provide that—

"SEC. 232. The Secretary of War shall lay before Congress, on or before the first Monday in February of each year, an abstract of the returns of the adjutants-general of the several States of the militia thereof.

"SEC. 1634. There shall be appointed in each State an adjutant-general, whose duty it shall be to distribute all orders from the commander in chief of the State to the several corps; to attend all musters when the commander in chief of the State reviews the militia, or any part thereof; to obey all orders from him relative to carrying into execution and perfecting the system of military discipline established by law; to furnish blank forms of returns that may be required, and to explain the principles on which they should be made; to receive from the several officers of the different corps throughout the State returns of the militia under their command, and to make proper abstracts from such returns, and lay the same annually before the commander in chief of the State.

"SEC. 1635. The several officers of the divisions, brigades, regiments, and battalions shall report, in their returns of the corps under their command, the actual condition of their arms, accouterments, and ammunition, their delinquencies, and every other particular relating to the general advancement of good order and dicipline, and shall make the same in the usual manner.

"SEC. 1636. It shall be the duty of the adjutant-general in each State to make return of the militia of the State, with their arms, accouterments, and ammunition, agreeably to the provisions of law, to the President of the United States, annually, on or before the first Monday in January; and it shall be the duty of the Secretary of War from time to time to give such directions to the adjutants-general of the militia as may, in his opinion, be necessary to produce a uniformity in such returns.

"SEC. 1640. It shall be the duty of the brigade inspector to attend the regimental and battalion meetings of the militia composing the several brigades during the time when they are under arms, to inspect their arms, ammunition, and accouterments; to superintend their exercise and maneuvers, and to introduce throughout the brigade the system of military discipline prescribed by law, and such orders as they receive from the commander in chief of the State.

"SEC. 13. That the Secretary of War is hereby authorized to issue, on the requisitions of the governors of the several States and Territories, or of the commanding general of the militia of the District of Columbia, such number of the United States standard service magazine arms, with bayonets, bayonet scabbards, gun slings, belts, and such other necessary accouterments and equipments as are required for the Army of the United States, for arming all of the organized militia in said States and Territories and District of Columbia, without charging the cost or value thereof, or any which have been issued since December 1, 1901, or any expense connected therewith, against the allotment to said State, Territory, or District of Columbia, out of the annual appropriation provided by section 1661 of the Revised Statutes as amended, or requiring payment therefor, and to exchange, without receiving any money credit therefor, ammunition, or parts thereof, suitable to the new arms, round for round, for corresponding ammunition suitable to the old arms, theretofore issued to said State, Territory, or District by the United States: *Provided*, That said rifles and carbines and other property shall be receipted for and shall remain the property of the United States and be annually accounted for by the governors of the States and Territories as now required by law, and that each State and Territory, and District shall, on receipt of the new arms, turn in to the Ordnance Department of the United States Army, without receiving any money credit therefor, and without expense for transportation, all United States rifles and carbines now in its possession.

"To provide means to carry into effect the provisions of this section, the necessary money to cover the cost of or issuing the new arms, accouterments, equipments, and ammunition to be exchanged or issued hereunder is hereby appropriated out of any moneys in the Treasury not otherwise appropriated."

The requirement of the Constitution which confers upon Congress the power to prescribe the discipline of the militia forces, and vests in the States the right to instruct them in conformity to the system of drill and discipline so prescribed by Congress, has for its purpose to secure substantial uniformity in drill and instruction as between the Army and the militia. That there should be such uniformity in discipline it is absolutely necessary that there should be a corresponding uniformity in armament and equipment.

In other words, the systems of drill and target practice for the Army and militia can not be uniform unless the arms and equipments are the same for both forces. This principle was recognized in the act of February 24, 1897 (29 Stats., 592), which authorized the issue of the Springfield breech-loading rifle to the whole body of the militia in exchange for the diverse types of small arms which were then in use by the militia of the several States. A similar exchange is contemplated in this section, and for the same purpose, viz, of introducing uniformity of instruction throughout the constitutional militia establishment. The advantage which will result to the United States in the way of increased efficiency in the militia forces is a sufficient consideration and warrants the exchange being made on the same basis as was prescribed in the legislation of 1897.

"SEC. 14. That whenever it shall appear by the report of inspections, which it shall be the duty of the Secretary of War to cause to be made at least once in each year by officers detailed by him for that purpose, that the organized militia of a State or Territory or of the District of Columbia is sufficiently armed, uniformed, and equipped for active duty in the field, the Secretary of War is authorized, on the requisition of the governor of such State or Territory, to pay to the quartermaster-general thereof, or to such other officer of the militia of said State as the said governor may designate and appoint for the purpose, so much of its allotment out of the said annual appropriation under section 1661 of the Revised Statutes as amended as shall be necessary for the payment, subsistence, and transportation of such portion of said organized militia as shall engage in actual field or camp service for instruction, and the officers and enlisted men of such militia while so engaged shall be entitled to the same pay, subsistence, and transportation or travel allowances as officers and enlisted men of corresponding grades of the Regular Army are or may hereafter be entitled by law, and the officer so designated and appointed shall be regarded as a disbursing officer of the United States, and shall render his accounts through the War Department to the proper accounting officers of the Treasury for settlement, and he shall be required to give good and sufficient bonds to the United States, in such sums as the Secretary of War may direct, faithfully to account for the safe-keeping and payment of the public moneys so intrusted to him for disbursement."

It is contemplated in this section to extend the participation of the United States Government in the training of the milita by authorizing the transfer to the States of any sum remaining to their respective credits out of the allotments accruing to them under the operation of section 1661 of the Revised Statutes, as amended by the act of February 12, 1887 (24 Stats., 401). The sums so paid are to be used for the training of the organized militia in camp duty and field service. With a view to secure the end contemplated in the original enactment, of providing for the armament and equipment of the whole body of the militia, such payments are conditioned upon an inspection, to be made under the authority and direction of the Secretary of War, with a view to ascertain whether the militia of the State is fully equipped for field service. When that condition has been fulfilled to the satisfaction of the Secretary of War, any sums remaining to the credit of the State may be paid over to an officer designated by the governor, who in virtue of such designation becomes, for the purpose of receiving and distributing such funds, a disbursing officer of the United States, giving bond, as such, for the safe-keeping and faithful distribution of the moneys intrusted to him for the purpose above mentioned.

With a view to assimilate the conditions of such field or camp service to those prevailing in the Army, it is provided that the pay, subsistence, and transportation of the militia forces undergoing such instruction shall be the same as are allowed to the troops of the United States under the same circumstances.

"SEC. 15. That the Secretary of War is hereby authorized to provide for participation by any part of the organized militia of any State or Territory on the request of the governor thereof in the encampment, maneuvers, and field instruction of any part of the Regular Army at or near any military post or camp or lake or seacoast defenses of the United States. In such case the organized militia so participating shall receive the same pay, subsistence, and transportation as is provided by law for the officers and men of the Regular Army, to be paid out of the appropriation for the pay, subsistence, and transportation of the Army: *Provided*, That the command of such military post or camp and of the officers and troops of the United States there stationed shall remain with the regular commander of the post without regard to the rank of the commanding or other officers of the militia temporarily so encamped within its limits or in its vicinity."

It is the purpose of this section not only to invite, but to authorize, the participation of the organized militia in the encampments and maneuvers of the Regular Army and to provide for the expense of such participation out of the annual appropriation for the support of the Army. The extent of such participation is vested by the terms of the enactment in the Secretary of War, whose duty it will be to submit estimates of cost to Congress with his annual estimates for the support of the military establishment. In this way the authority of Congress to regulate the matter is assured by the control which it exercises through its annual grants of money in appropriations for the maintenance of the military establishment.

"SEC. 16. That whenever any officer of the organized militia shall, upon recommendation of the governor of any State or Territory, or of the general commanding the District of Columbia, and when authorized by the President, attend and pursue a regular course of study at any military school or college of the United States such officer shall receive from the annual appropriation for the support of the Army the same travel allowances and quarters, or commutation of quarters, to which an officer of the Regular Army would be entitled if attending such school or college under orders from proper military authority; and shall also receive commutation of subsistence at the rate of $1 per day while in actual attendance upon the course of instruction."

It is the purpose of this section to assist officers of the militia who desire to obtain educational advantages afforded by the service schools. The extent of the assistance extended is slight, when measured by a financial standard, and extends only to the allowances of quarters in kind, or to commutation therefor, to a moderate allowance for subsistence and to the travel allowances to which officers of the Army would be entitled under the same circumstances.

"SEC. 17. That the annual appropriation made by section 1661, Revised Statutes, as amended, shall be available for the purpose of providing for issue to the organized militia any stores and supplies or publications which are supplied to the Army by any staff department. Any State, Territory, or the District of Columbia may, with the approval of the Secretary of War, purchase for cash from the War Department, for the use of its militia, stores, supplies, material of war, or military publications, such as are furnished to the Army, in addition to those issued under the provisions of this act, at the price at which they are listed for issue to the Army, with the cost of transportation added, and funds received from such sales shall be credited to the appropriations to which they belong and shall not be covered into the Treasury, but shall be available until expended to replace therewith the supplies sold to the States and Territories and to the District of Columbia in the manner herein provided."

The permanent annual appropriation which is carried by section 1661 of the Revised Statutes, as amended by the act of June 6, 1900 (31 Stat., 662), now authorizes the issue of ordnance, quartermaster stores, and camp equipage for the use of the militia. It is the purpose of this section to extend these issues so as to include all stores, supplies, or publications which are now or may hereafter be issued or supplied to the Army by any branch of the War Department. The second clause modifies and replaces the authority to sell stores, supplies, etc., to the several States for the use of their militia, which was embodied in section 3 of the act of February 24, 1897 (29 Stat., 592).

"SEC. 18. That each State or Territory furnished with material of war under the provisions of this or former acts of Congress shall during the year next preceding each annual allotment of funds, in accordance with section 1661 of the Revised Statutes as amended, have required every company, troop, and battery in its organized militia not excused by the governor of such State or Territory to participate in practice marches or go into camp of instruction at least five consecutive days, and to assemble for drill and instruction at company, battalion, or regimental armories or rendezvous or for target practice not less than 24 times, and shall also have required during such year an inspection of each such company, troop, and battery to be made by an officer of such militia or an officer of the Regular Army."

With a view to secure such an amount of training on the part of the States as will be calculated to warrant the expenditure of the public money in support of the militia, this section provides for a certain number of drills and a certain amount of instruction in field service and target practice in the several organizations of the militia in order to entitle them to the benefits of the allotments of funds provided for by section 1661 of the Revised Statutes, as amended by the acts of February 12, 1887 (24 Stat., 401), and June 6, 1900 (31 Stat., 662). It also requires that the work of instruction above provided for shall be verified by appropriate inspections under the authority of the governors of the States and the Secretary of War, representing, respectively, the State and Federal authority.

"SEC. 19. That upon the application of the governor of any State or Territory furnished with material of war under the provisions of this act or former laws of Congress, the Secretary of War may detail one or more officers of the Army to attend any encampment of the organized militia, and to give such instruction and information to the officers and men assembled in such camp as may be requested by the governor. Such officer or officers shall immediately make a report of such encampment to the Secretary of War, who shall furnish a copy thereof to the governor of the State or Territory."

It is the purpose of this section to still further increase the participation of the War Department in the practical instruction of the militia forces by authorizing the Secretary of War to detail officers of the Army to attend the annual encampments of the State militia, for the purpose of assisting in the instruction of the troops and of reporting the results to the Secretary of War. That the troops undergoing instruction shall receive the full benefit of such participation it is required that full copies of such reports shall be furnished to the governors of the respective States for the use of the officers of their militia.

"SEC. 20. That upon application of the governor of any State or Territory furnished with material of war under the provisions of this act or former laws of Congress, the Secretary of War may, in his discretion, detail one or more officers of the Army to report to the governor of such State or Territory for duty in connection with the organized militia. All such assignments may be revoked at the request of the governor of such State or Territory or at the pleasure of the Secretary of War."

In the section last above cited provision was made for the cooperation of officers of the Army in the annual encampments of the militia forces. It is the purpose of this section to provide for an extension of such cooperation during the armory drill season by authorizing the detail of officers of the Army for duty with the militia. Such details are to be made by the Secretary of War, upon the request of the governors of the respective States, and provision is made in the enactment for the termination of said details upon request by the same authority.

"SEC. 21. That the troops of the militia encamped at any military post or camp of the United States may be furnished such amounts of ammunition for instruction in firing and target practice as may be prescribed by the Secretary of War, and such instruction in firing shall be carried on under the direction of an officer selected for that purpose by the proper military commander."

This section is in furtherance of the purpose which is embodied in sections 15, 19, and 20, which have already been explained. It authorizes the expenditure of a limited amount of ammunition for the instruction in target practice of any organizations of the militia while encamped, for the purposes of instruction, at a military post of the United States. It also authorizes the use of the target range and other facilities for target practice, and permits the detail of an officer of the Army to supervise the instruction.

"SEC. 22. That when any officer, noncommissioned officer, or private of the militia or of the National Volunteer Reserve is disabled by reason of wounds or disabilities received or incurred in the service of the United States he shall be entitled to all the benefits of the pension laws existing at the time of his service, and in case such officer, noncommissioned officer, or private dies in the service of the United States or in returning to his place of residence after being mustered out of such service, or at any time, in consequence of wounds or disabilities received in such service, his widow and children, if any, shall be entitled to all the benefits of such pension laws."

It is the purpose of this section to insure a pensionable status to the officers and enlisted men of the militia when called into the military service of the United States in pursuance of a proclamation of the President. This section replaces the obsolete provisions of sections 1639, 1656, and 1657 of the Revised Statutes.

"SEC. 1639. If any person, whether officer or soldier, belonging to the militia of any State, and called out into the service of the United States, be wounded or disabled while in actual service, he shall be taken care of and provided for at the public expense.

"SEC. 1656. When any officer, noncommissioned officer, artificer, or private of the militia or volunteer corps dies in the service of the United States, or in returning to his place of residence after being mustered out of service, or at any time, in consequence of wounds received in service, and leaves a widow, or if no widow, a child or children under 16 years of age, such widow, or if no widow, such child or children, shall be entitled to receive half the monthly pay to which the deceased was entitled at the time of his death, during the term of five years, and in the case of death or intermarriage of such widow before the expiration of five years, the half pay for the remainder of the time shall go to the child or children of the decedent; and the Secretary of the Interior shall adopt such forms of evidence in application under this section as the President may prescribe.

"SEC. 1657. The volunteers or militia who have been received into the service of the United States to suppress Indian depredations in Florida shall be entitled to all the benefits which are conferred on persons wounded or otherwise disabled in the service of the United States.

"SEC. 23. That for the purpose of securing a list of persons specially qualified to hold commissions in any volunteer force which may hereafter be called for and organized under the authority of Congress, other than a force composed of organized militia, the Secretary of War is authorized from time to time to convene boards of officers at suitable and convenient Army posts in different parts of the United States, who shall examine as to their qualifications for the command of troops or for the performance of staff duties all applicants who shall have served in the Regular Army of the United States, in any of the volunteer forces of the United States, or in the organized militia of any State or Territory or District of Columbia, or who, being citizens of the United States, shall have attended or pursued a regular course of instruction in any military school or college of the United States Army, or shall have graduated from any educational institution to which an officer of the Army or Navy has been detailed as superintendent or professor pursuant to law, after having creditably pursued the course of military instruction therein provided. Such examinations shall be under rules and regulations prescribed by the Secretary of War, and shall be especially directed to ascertain the practical capacity of the applicant. The record of previous service of the applicant shall be considered as a part of the examination.

"Upon the conclusion of each examination the board shall certify to the War Department its judgment as to the fitness of the applicant, stating the office, if any, which it deems him qualified to fill, and, upon approval by the President, the names of the persons certified to be qualified shall be inscribed in a register to be kept in the War Department for that purpose. The persons so certified and registered shall, subject to a physical examination at the time, constitute the eligible class for commissions pursuant to such certificates in any volunteer force hereafter called for and organized under the authority of Congress, other than a force composed of organized militia: *Provided*, That no person shall be entitled to receive a commission as a second lieutenant after he shall have passed the age of 30; as first lieutenant after he shall have passed the age of 35; as captain after he shall have passed the age of 40; as major after he shall have passed the age of 45; as lieutenant-colonel after he shall have passed the age of 50, or as colonel after he shall have passed the age of 55: *And provided further*, That such appointments shall be distributed proportionately, as near as may be, among the various States contributing such volunteer force: *And provided*, That the appointments in this section provided for shall not be deemed to include appointments to any office in any company, troop, battery, battalion, or regiment of the organized militia which volunteers as a body and the officers of which are appointed by the governor of a State or Territory."

It has been attempted in this section to provide for the preparation of a register of persons whose capacity to exercise command in the line or to perform staff duties has been proved by the test of actual military service. To entitle an individual to register he must have served in the regular or volunteer forces, or in the organized militia of a State or Territory, or must have graduated from the war college or from one of the regular service schools, or from a college or military school maintained in part by a grant of lands from the United States, at which an officer of the Army or Navy has been detailed as superintendent or as professor of military science, in pursuance of the authority conferred by sections 1225 and 1260 of the Revised Statutes, as amended by the act of November 2, 1893 (27/7).

To ascertain the capacity of such candidates for registration as have conformed to the conditions above set forth in respect to military or academic training, it is provided that boards of examination shall be convened from time to time by the Secretary of War, before which the candidates will be permitted to appear with a view to determine their fitness for registration. The examinations prescribed in the section are intended and required to be so conducted as to ascertain and test the practical capacity of the candidate for the performance of duty as a commissioned officer. To still further restrict the theoretical tendency of the examinations herein contemplated, it is expressly required that the record of service of the applicant shall be considered a part of the examination. A rigid physical examination is also provided for. Having regard to the practical efficiency and military capacity of the applicant as thus determined, the board is required to certify its opinion as to the office which he is qualified to fill in the military service, and upon approval of such certification by the President the applicant's name is to be recorded at the War Department in a register kept for that purpose.

Persons so registered become entitled, in consequence of such registration, to membership in a class from which appointments are required to be made in any volunteer force which may hereafter be raised by authority of Congress, save in an organization of the active militia which volunteers in a body or the officers of which are appointed by the governor of a State. Certain age limitations are imposed, the operation of which will be to remove from the register the names of persons recommended for appointment upon reaching the ages assigned to their respective grades of rank in the military service. An equitable distribution of appointments upon a territorial basis is also provided for.

"SEC. 24. That for the purpose of providing a reserve force of trained men which shall be ready for immediate service whenever called for and organized under authority of Congress, the Secretary of War is authorized to enroll not exceeding 100,000 men, who shall have served in the Regular or Volunteer armies of the United States or in the organized militia. Such reserve force shall be designated as the National Volunteer Reserve, and when called forth by the President shall serve wherever ordered, within or without the territory of the United States. Such enrollment shall in each case continue for a period of five years, but in the event they shall be called into the service of the United States, other than for the purpose of drill, inspection, and instruction, they shall be entitled to be discharged at the close of the war or after nine months' service. The persons so enrolled shall report for drill, inspection, and instruction at such times and places to be specified and under rules and regulations to be prescribed by the Secretary of War, and each person so reporting shall, during the time of such service, be subject, as far as practicable, to the regulations and discipline governing the military establishment, and shall be entitled to the same pay and allowances as are or may be provided by law for the Army of the United States, to be paid out of the appropriation for the pay of the Army; but in time of peace, except in case of threatened invasion, said National Volunteer Reserve shall not be required to perform military duty to exceed ten days in any one year.

"Whenever a volunteer force shall be called for by authority of Congress, and the members of any companies, troops, batteries, battalions, or regiments of the organized militia shall enlist in the Volunteer Army in bodies, such companies, troops, batteries, battalions, or regiments shall be received as the first organizations of such volunteer force. Whenever a volunteer force shall be called for by authority of Congress exceeding in number the companies, troops, batteries, battalions, and regiments of the organized militia which shall enlist in bodies pursuant to the provisions of section 6 of the act entitled 'An act to provide for temporarily increasing the military establishment of the United States in time of war, and for other purposes,' approved April 22, 1898, the persons so enrolled as a reserve force of trained men, or so many thereof as shall be required, shall be organized in the manner provided for the organization of the volunteer force by section 12 of the act entitled 'An act for increasing the efficiency of the Army of the United States, and for other purposes,' approved March 2, 1899.

[Act of 1898, chapter 187, Fifty-fifth Congress, second session.]

"SEC. 6. That the Volunteer Army and the militia of the States when called into the service of the United States shall be organized under and shall be subject to the laws, orders, and regulations governing the Regular Army: *Provided*, That each regiment of the Volunteer Army shall have one surgeon, two assistant surgeons, and one chaplain, and that all the regimental and company officers shall be appointed by the governors of the States in which their respective organizations are raised: *Provided further*, That when the members of any company, troop, battery, battalion, or regiment of the organized militia of any State shall enlist in the Volunteer Army in a body as such company, troop, battery, battalion, or regiment the regimental, company, troop, battery, and battalion officers in service with the militia organization thus enlisting may be appointed by the governors of the States and Territories, and shall, when so appointed, be officers of corresponding grades in the same organization when it shall have been received into the service of the United States as a part of the Volunteer Army: *Provided further*, That the President may authorize the Secretary of War to organize companies, troops, battalions, or regiments, possessing special qualifications, from the nation at large, not to exceed 3,000 men, under such rules and regulations, including the appointment of the officers thereof, as may be prescribed by the Secretary of War.

[Act of 1899, chapter 352, Fifty-fifth Congress, third session.]

"SEC. 12. That to meet the present exigencies of the military service the President is hereby authorized to maintain the Regular Army at a strength of not exceeding 65,000 enlisted men, to be distributed amongst the several branches of the service, including the Signal Corps, according to the needs of each, and raise a force of not more than 35,000 volunteers to be recruited as he may determine from the country at large, or from the localities where their services are needed, without restriction as to citizenship or educational qualifications, and to organize the same into not more than 27 regiments organized as are infantry regiments of war strength in the Regular Army, and three regiments to be composed of men of special qualification in horsemanship and marksmanship, to be organized as cavalry for service mounted or dismounted: *Provided*, That each regiment shall have one surgeon with the rank of major; two assistant surgeons, one of whom shall have the rank of captain and one that of first lieutenant, and three hospital stewards: *Provided further*, That such increased regular and volunteer force shall continue in service only during the necessity therefor, and not later than July 1, 1901.

"*Provided*, That the President of the United States, in time of peace, may by order fix the minimum number of enlisted men in each company, troop, battery, signal corps, engineer corps, and hospital corps: *Provided further*, That no person shall belong to both organizations at the same time."

It is a defect of the voluntary system by means of which the military establishment of the United States is habitually maintained in time of peace that no provision has been made to retain the services of its discharged soldiers in some organization of volunteer reserves. It is therefore proposed in this section to keep in touch with and, in case of emergency, to utilize the services of men who have received a military training, either in the Regular or Volunteer Army or in the organized militia. To entitle an individual to enrollment in the reserve force created by this section, he must have served at least one enlistment in the regular or volunteer establishment or a corresponding term in the organized militia of a State or Territory.

With a view to verify the enrollment and provide for an occasional brief course of training and instruction, it is proposed to embody the reserve forces provided for in this section and to assemble or mobilize them from time to time as funds for that purpose are provided by Congress. In the event of war, if the volunteer forces authorized by Congress exceed in strength the regiments, battalions, troops, or other commands of organized militia who shall enlist in bodies in pursuance of section 6, act of April 22, 1898, the reserve forces herein provided for may be accepted by the President in organizations conforming to the requirements of section 12 of the act of March 2, 1899.

"SEC. 25. That all the volunteer forces of the United States called for by authority of Congress shall, except as hereinbefore provided, be organized in the manner provided by the act entitled 'An act to provide for temporarily increasing the military establishment of the United States in time of war, and for other purposes,' approved April 22, 1898, as follows:

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That all able-bodied male citizens of the United States, and persons of foreign birth who shall have declared their intention to become citizens of the United States under and in pursuance of the laws thereof, between the ages of 18 and 45 years, are hereby declared to constitute the national forces, and, with such exceptions and under such conditions as may be prescribed by law, shall be liable to perform military duty in the service of the United States.

"SEC. 2. That the organized and active land forces of the United States shall consist of the Army of the United States and of the militia of the several States when called into the service of the United States: *Provided*, That in time of war the Army shall consist of two branches, which shall be designated, respectively, as the Regular Army and the Volunteer Army of the United States.

"SEC. 3. That the Regular Army is the permanent military establishment, which is maintained both in peace and war according to law.

"SEC. 4. That the Volunteer Army shall be maintained only during the existence of war, or while war is imminent, and shall be raised and organized, as in this act provided, only after Congress has or shall have authorized the President to raise such a force or to call into the actual service of the United States the militia of the several States: *Provided*, That all enlistments for the Volunteer Army shall be for the term of two years, unless sooner terminated, and that all officers and men composing said army shall be discharged from the service of the United States when the purposes for which they were called into service shall have been accomplished, or on the conclusion of hostilities.

"SEC. 5. That when it becomes necessary to raise a volunteer army the President shall issue his proclamation stating the number of men desired, within such limits as may be fixed by law, and the Secretary of War shall prescribe such rules and regulations, not inconsistent with the terms of this act, as may in his judgment be necessary for the purpose of examining, organizing, and receiving into service the men called for: *Provided*, That all men received into service in the Volunteer Army shall, as far as practicable, be taken from the several States and Territories and the District of Columbia and the Indian Territory in proportion to their population. And any company, troop, battalion, or regiment from the Indian Territory shall be formed and organized under such rules and regulations as shall be prescribed by the Secretary of War.

"SEC. 6. That the Volunteer Army and the militia of the States when called into the service of the United States shall be organized under, and

shall be subject to, the laws, orders, and regulations governing the Regular Army: *Provided*, That each regiment of the Volunteer Army shall have one surgeon, two assistant surgeons, and one chaplain, and that all the regimental and company officers shall be appointed by the governor of the States in which their respective organizations are raised: *Provided further*, That when the members of any company, troop, battery, battalion, or regiment of the organized militia of any State shall enlist in the Volunteer Army in a body, as such company, troop, battery, battalion, or regiment, the regimental company, troop, battery, and battalion officers in service with the militia organization thus enlisting may be appointed by the governors of the States and Territories, and shall when so appointed be officers of corresponding grades in the same organization when it shall have been received into the service of the United States as a part of the Volunteer Army: *Provided further*, That the President may authorize the Secretary of War to organize companies, troops, battalions, or regiments possessing special qualifications, from the nation at large, not to exceed 3,000 men, under such rules and regulations, including the appointment of the officers therefor, as may be prescribed by the Secretary of War.

"SEC. 7. That all organizations of the Volunteer Army shall be so recruited from time to time as to maintain them as near to their maximum strength as the President may deem necessary, and no new organization shall be accepted into service from any State unless the organizations already in service from such State are as near to their maximum strength of officers and enlisted men as the President may deem necessary.

"SEC. 8. That all returns and muster rolls of organizations of the Volunteer Army and of militia organizations while in the service of the United States shall be rendered to the Adjutant-General of the Army, and upon the disbandment of such organizations the records pertaining to them shall be transferred to and filed in the Record and Pension Office of the War Department; and regimental and all other medical officers serving with volunteer troops in the field or elsewhere shall keep a daily record of all soldiers reported sick or wounded, as shown by the morning calls or reports, and shall deposit such reports, with other reports provided for in this section, with the Record and Pension Office, as provided herein for other reports, returns, and muster rolls.

"SEC. 9. That in time of war, or when war is imminent, the troops in the service of the United States, whether belonging to the Regular or Volunteer Army or to the militia, shall be organized, as far as practicable, into divisions of three brigades, each brigade to be composed of three or more regiments; and whenever three or more divisions are assembled in the same army the President is authorized to organize them into army corps, each corps to consist of not more than three divisions.

"SEC. 10. That the staff of the commander of an army corps shall consist of 1 assistant adjutant-general, 1 chief engineer, 1 inspector-general, 1 chief quartermaster, 1 chief commissary of subsistence, 1 judge-advocate, and 1 chief surgeon, who shall have, respectively, the rank of lieutenant-colonel; 1 assistant adjutant-general, who shall have the rank of captain, and the aids-de-camp authorized by law. The staff of the commander of a division shall consist of 1 assistant adjutant-general, 1 engineer officer, 1 inspector-general, 1 chief quartermaster, 1 chief commissary of subsistence, and 1 chief surgeon, who shall have, respectively, the rank of major, and the aids-de-camp authorized by law. The staff of the commander of a brigade shall consist of 1 assistant adjutant-general, 1 assistant quartermaster, and 1 commissary of subsistence, each with the rank of captain, 1 surgeon, and the aids-de-camp authorized by law. The staff officers herein authorized for the corps, division, and brigade commanders may be appointed by the President, by and with the advice and consent of the Senate, as officers of the Volunteer Army, or may be assigned by him, in his discretion, from officers of the Regular Army or the Volunteer Army, or of the militia in the service of the United States: *Provided*, That when relieved from such staff service said appointments or assignments shall terminate.

"SEC. 11. That the President is hereby authorized to appoint in the Volunteer Army, by and with the advice and consent of the Senate, not exceeding one major-general for each organized army corps and division, and one brigadier-general for each brigade, and any officer so selected and appointed from the Regular Army shall be entitled to retain his rank therein: *Provided*, That each general officer of the Volunteer Army shall be entitled to the number of aids-de-camp authorized for an officer of like grade in the Regular Army.

"SEC. 12. That all officers and enlisted men of the Volunteer Army, and of the militia of the States when in the service of the United States, shall be in all respects on the same footing as to pay, allowances, and pensions as that of officers and enlisted men of corresponding grades in the Regular Army.

"SEC. 13. That the governor of any State or Territory may, with the consent of the President, appoint officers of the Regular Army in the grades of field officers in organizations of the Volunteer Army, and officers thus appointed shall be entitled to retain their rank in the Regular Army: *Provided*, That not more than one officer of the Regular Army shall hold a commission in any one regiment of the Volunteer Army at the same time.

"SEC. 14. That the general commanding a separate department or a detached army is authorized to appoint from time to time military boards of not less than three nor more than five volunteer officers of the Volunteer Army to examine into the capacity, qualifications, conduct, and efficiency of any commissioned officer of said army within his command: *Provided*, That each member of the board shall be superior in rank to the officer whose qualifications are to be inquired into: *And provided further*, That if the report of such a board is adverse to the continuance of any officer, and the report be approved by the President, such officer shall be discharged from service in the Volunteer Army, at the discretion of the President, with one month's pay and allowances.

"SEC. 15. That all acts and parts of acts inconsistent with the provisions hereof be, and the same are hereby, repealed.

"SEC. 26. That sections 1625 to 1660, both included, of title 16 of the Revised Statutes, and section 232 thereof, relating to the militia, are hereby repealed.

"SEC. 27. That this act shall take effect upon the date of its approval."

The foregoing report accompanies House bill 11654, "to promote the efficiency of the militia, and for other purposes," and aims to set forth the objects and purposes of the bill, explains its several sections in detail, and gives an historical résumé of Federal legislation on the subject of the militia. Arguments and historical data are presented showing the necessity for a well organized, equipped, and disciplined militia. Congress has never yet exercised, in time of peace, its constitutional authority to organize, equip, and discipline the militia. The time now seems ripe for such action. Public sentiment demands some efficient and modern legislation on the subject. The Executive is interested and friendly. The War Department is anxious to assist in improving the condition of the country's militia.

The bill, in the final form in which it is presented, has the approval of the Secretary of War, as appears from his letter printed above. It has the support of the organized militia of the country, as expressed in numerous letters received by many members of Congress, and its provisions, so far as then agreed upon, were approved by the Interstate National Guard Association at its last meeting in this city. Furthermore, it is the unanimous report of the Committee on Militia.

A Business Congress.

SPEECH
OF
HON. JOSEPH W. BABCOCK,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 26, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (S. 2295) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes—

Mr. BABCOCK said:

Mr. CHAIRMAN: Under the leave granted I desire to extend my remarks and have printed a statement now in preparation, which will appear in the Washington Times at an early day.

[The Washington Times, Frank A. Munsey, July 4, 1902, publication office, Tenth and D streets.]

RÉSUMÉ OF WHAT CONGRESS ACCOMPLISHED IN ONE HUNDRED AND FIFTY DAYS—MORE MEASURES REPORTED AND DISPOSED OF THAN DURING ANY TERM—1,484 BILLS PASSED IN ALL—THIS SESSION OF CONGRESS WORKED ELEVEN MORE DAYS THAN THE PRECEDING LONG SESSION—PRESIDENTIAL VETOES—OMNIBUS CLAIMS BILLS.

In the brief speech which he made just before the House adjourned last Tuesday, Speaker HENDERSON declared that no Congress since the adoption of the Constitution had transacted so much business in the same length of time as had the first session of the Fifty-seventh Congress.

This declaration is amply borne out by the statement which has been prepared under the direction of Maj. Alexander McDowell, the clerk of the House of Representatives, by Mr. F. H. Wakefield, the tally clerk, assisted by Mr. A. A. Richards, who have made a very careful and exhaustive analysis of the work done and compiled a most comprehensive statement.

In the first session of the Fifty-seventh Congress there were 15,363 bills introduced in the House, while in the two years of the Fifty-sixth Congress there were only 14,339 bills introduced. Yet the number of bills introduced in the Fifty-sixth Congress was greater than in any prior Congress.

COMPARISON WITH LAST CONGRESS.

In comparing the first session of the Fifty-seventh Congress with the first session of prior Congresses, it appears that the House was in session one hundred and fifty days and adjourned thirty-three days, while in the Fifty-sixth Congress the House was in session one hundred and thirty-nine days and adjourned over only eight days. The House in the eleven extra days of the Fifty-seventh Congress more than kept up with the average amount of work per day.

During the first session of the Fifty-seventh Congress there were 2,750 reports made as against 2,105 in the first session of the Fifty-sixth Congress, the greatest amount ever made in the long session of any prior Congress; and 1,484 bills became laws as against 1,159 in the first session of the Fifty-sixth Congress, which far exceeded any of its predecessors in this respect.

Of the 15,369 bills and resolutions introduced in the House, 11,300 were referred to four committees—6,544 to the Invalid Pensions Committee, 2,503 to War Claims, 2,349 to the Committee on Military Affairs, and 904 to the Committee on Claims.

Of the 2,750 reports made, five committees made 2,073 reports, apportioned as follows: Invalid Pensions, 1,349; Pensions, 228; Military Affairs, 183; Claims, 168; and War Claims, 145.

The detailed statement of House work is as follows:

Calendar.	Bills reported.	Bills passed.	Bills undisposed of.
Union	308	152	156
House	231	180	51
Private	2,008	1,599	409
Totals	2,547	1,931	616

Of the bills reported, 2,044 were House bills and resolutions, and 706 were Senate acts and resolutions. Of the bills left undisposed of, 616, there were 452 which originated in the House and 164 of Senate origin. Carried on the Calendar of the House as disposed of, the allotment is as follows: House bills 108, Senate 48, on the Union Calendar; House 45, Senate 6, on the House Calendar, and House 299, and Senate 110, on the Private Calendar.

There were 203 reports which passed without reaching the Calendar.

All told, the House disposed of 2,334 House and Senate bills and resolutions, 1,767 of the House and 567 of the Senate. Of the 1,767 House bills, adverse reports were made on 84; the enacting clause was stricken out of 6; 26 were laid on the table; 155 became public acts; 775 became private acts; 72 were simple resolutions; 5 were vetoed by the President; 382 were private bills (381 pension bills), and 24 other private bills were passed by the House, and not acted on by the Senate, and 61 were public bills passed by the House and not acted on by the Senate.

The Senate passed and sent to the House for its concurrence 1,156 bills and resolutions. The House passed 23 by taking them from the Speaker's table, without reference to committees; 1,132 were referred to committees, 706 of which were reported back to the House by the committees, leaving 427 Senate bills in the committees of the House unacted upon, as against a total of 443 House bills unacted upon by the Senate.

The 706 Senate bills reported by the House committees, and the 23 Senate bills taken from the Speaker's table were disposed of by the House, as follows: Killed by adverse reports, 7; laid upon the table, 1; became public acts, 143; became private acts, 410; vetoed by the President, 2; passed by the House but left in conference, 4; left on the calendars of the House undisposed of, 184.

Of the 1,484 laws passed at the first session of the Fifty-seventh Congress, which were approved by the President, 913 originated in the House and 553 in the Senate. Of these 1,484 laws, 299 were public and 1,185 private. Of the 299 public laws, 156 originated in the House and 143 in the Senate. Of the 1,185 private laws, 775 originated in the House and 410 in the Senate.

The omnibus claims bill, indexed for the first time, shows more than 850 items, the public buildings and grounds bill 191 items, and the river and harbor bill 599 items.

A COMPARATIVE STATEMENT.

The following is a comparative statement of the work of the Fifty-second to the Fifty-seventh Congress:

Congresses.	Reports made.	Number of days.	Bills introduced.	Public laws.	Private laws.	Total laws.	Pages of Journal.
Fifty-second [a]	1,535	251	10,337	237	200	437	.....
Fifty-third [b]	995	337	9,076	307	134	441	.....
Fifty-fourth [c]	2,105	223	10,639	223	270	493	613
Fifty-fifth [d]	1,465	175	10,547	279	444	723	705
Fifty-sixth [e]	2,006	139	12,220	279	880	1,159	719
Fifty-seventh [f]	2,750	150	15,960	299	1,185	1,484	.....

[a] Reckoned for the entire first session of the Congress.
[b] Including the extra session.
[c] For the entire first session.
[d] To June 1, only.
[e] To adjournment, June 7, 1900.
[f] To adjournment, July 1, 1902.

In the Fifty-second Congress there were 5,040 pages of the CONGRESSIONAL RECORD; in the Fifty-third, 5,744 pages; Fifty-fourth, 6,137 pages; Fifty-fifth, 5,546 pages; Fifty-sixth, 7,765 pages, and Fifty-seventh, 8,414 pages.

In the Fifty-sixth Congress 42 resolutions, 197 public bills, and 729 private bills were signed by the President and became laws; total, 968.

The Fifty-seventh Congress—A Distinctively Business Congress—Outline Review of its Important Legislation—Enactments Wise, Patriotic, and Beneficial—Appropriations for the Government Service Ample, Economical, and Carefully Considered—War Taxes Repealed—Isthmian Canal Projected—Civil Government Authorized in the Philippines—Chinese Exclusion Continued.

REMARKS

OF

HON. JOSEPH G. CANNON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1902.

The House having under consideration the conference report on the bill (H. R. 15108) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1902, and for prior years, and for other purposes—

Mr. CANNON said:

Mr. SPEAKER: We have now under consideration the final action touching the last of the general appropriation bills for this session, and with the consent of the House I will take advantage of the opportunity presented to offer a few remarks respecting the the work that has been accomplished, with special reference to appropriations.

This has been distinctively a business session of Congress. It closes with more important legislation to its credit than any session of Congress for several decades. It has passed more public acts and more private acts than any Congress that ever assembled in the history of the Republic. And if I may be permitted the remark, one of the claims upon which it merits popular distinction is the legislation which, after mature consideration, it has seen fit not to enact. Notable among the important enactments which it has passed are—

An act to repeal war-revenue taxation;

An act providing for the construction of an isthmian canal;

An act continuing in force the laws heretofore passed for the exclusion of Chinese laborers;

An act making oleomargarine and other imitation dairy products subject to the laws of any State or Territory into which they are transported and imposing a revenue tax thereon;

An act providing a civil government for the Philippines;

An act to provide revenue for the Philippines;

An act to promote the efficiency of the Revenue-Cutter Service;

An act providing for the extension of charters of national banks;

An act appropriating receipts from sales of public lands to the construction of irrigation works for the reclamation of arid lands;

An act to provide for a permanent Census Office;

An act for the relief of owners of property taken by the military forces of the United States; and

An act for the relief of bona fide settlers in forest reserves.

In addition to these separate acts, important and beneficial legislation is contained in several of the general appropriation acts; for example, in the Post-Office act are provisions for the permanent organization and effective administration of the rural free-delivery service.

The appropriations of the session, in my judgment, compare favorably with those made at any previous session of Congress, and in their every detail they will stand successfully the test of the most searching examination by fair-minded and intelligent men who believe in wise, prudent, and sufficient provision for every proper function of government of our great, growing, and progressive country.

Before entering upon a detailed discussion of the subject of appropriations made at this session, I want to call attention to the fact that, in accordance with the promises of the Republican party, and because of the sufficiency of our revenues from normal sources under a wise and prudent Administration, we have removed practically the last of the taxes imposed for the prosecution of the war with Spain and for the resultant expenses incident thereto.

It is estimated that, under the legislation enacted at this session, taxes have been repealed aggregating $72,500,000 per annum—a larger reduction of taxes than was ever before made at any session of Congress. This appreciable relief in the burden of taxes is additional to the reduction of $41,000,000 made at the last session of Congress, which closed on March 4, 1901.

I will print as a part of my remarks a table giving a chronological history of the appropriation bills passed at this session. An analysis of this table shows that the total estimated expenditures forecast by the Executive Departments aggregated $776,348,318.47; that the total appropriations made, exclusive of $50,130,000 toward an Isthmian Canal, aggregate $750,063,837. The table also gives a succinct history of all of the bills in their various stages of enactment, from estimates as submitted therefor until their final approval by the President.

The great increase in population and the phenomenal expansion of commercial and industrial interests throughout the country are of themselves sufficient to explain the necessity of this apparent increase. But a casual examination of the totals of the regular appropriation acts in comparison with those passed at the last session affords an even better explanation.

The Agricultural bill, prepared and reported by the Committee on Agriculture, presided over by Hon. JAMES W. WADSWORTH, of New York, who has had many years of distinguished service on that committee, both as a minority member and as chairman, provides for the expenditures of the Department of Agriculture—a Department which represents and fosters the greatest of all our industries. That bill shows an increase of $626,540.

The Army appropriation bill shows a reduction of $24,203,912.69. This fact in itself is a source of genuine satisfaction, and will meet the approval of the people. That bill has been prepared and formulated by the Committee on Military Affairs, under the able leadership of Hon. JOHN A. T. HULL of Iowa, a veteran soldier himself, accomplished in the science of war and familiar with all military matters. This agreeable result has been made possible by the wise administration of the War Department, the total number of men in the Army having been reduced since June 30 last from 77,287 to 66,497 men. As soon as law and order are fully restored in the Philippines the Army will be further reduced to the minimum provided by law, namely, 59,674 men.

The diplomatic and consular appropriation bill, prepared under the supervision of my honored colleague, Hon. R. R. HITT, of Illinois, whose ripe experience and comprehensive knowledge respecting our diplomatic service and the foreign relations of the Government are invaluable, exhibits an increase of $108,496.93.

The District of Columbia bill shows an increase of only $45,257.03. In this connection it is proper to call attention to the fact that with the increasing needs and the rapid development of the national capital it has been found necessary and proper to pass legislation imposing moderate taxes on personal property, which for many years has borne no burden of taxation whatever in the District of Columbia.

The fortification bill shows a reduction of $65,056. The very large expenditures made for our seacoast defenses in the period immediately preceding and during the war with Spain rendered it possible and proper that the recent and current appropriations for those objects should be held substantially at what they were last year; and in my judgment they will require no material increase for some years to come.

The Indian appropriation bill, under the skillful management of my friend from New York, Hon. JAMES S. SHERMAN, chairman of the Committee on Indian Affairs, shows a creditable reduction of $603,568.51, due mainly to the exclusion from the bill of objects not directly connected with the Indian service.

The legislative, executive, and judicial bill shows an increase of $803,412.65. This bill provides for the personal machinery of administering the Government through the Executive Departments at Washington. With the marked growth in every branch of industry the Government at Washington must keep pace. The

largest increase for personal services, it is significant to note, occurs in the Post-Office Department and in the Patent Office.

The Military Academy bill, prepared by the Committee on Military Affairs, shows an increase of $1,854,670.74. This is due chiefly not to an increase of scope or of ordinary expenses at the West Point institution, but to the necessity of reconstructing, enlarging, and building additional structures that have become imperatively necessary by the lapse of time and the increase in the number of cadets appointed under the law.

The naval bill shows an increase of $577,172.13. For many years following the civil war the Navy was greatly neglected. Its reconstruction began about twenty years ago, under the Administration of President Arthur. When the Spanish war came on, the weakness of this arm of our public defense was made painfully apparent to the people, and the Government was compelled to go into the markets of the world to buy ships.

The bill just enacted was framed under the supervision of my friend and colleague from Illinois, Hon. GEORGE EDMUND FOSS, young, vigorous, and well equipped, who in this as well as in the last Congress has earned the country's praise for his intelligent and well-directed efforts for the upbuilding of the Navy. The bill provides for two first-class battle ships, two first-class armored cruisers, and two gunboats. It also makes ample appropriations to begin their construction and to continue the construction of the ships previously authorized.

The pension appropriation bill shows on its face a reduction of $5,403,000. This is not the result of efforts at severe economy, nor is it a source of congratulation. It emphasizes the fact that the only enemy before whom the American soldier retreats is the Grim Reaper himself, who is now rapidly decimating the ranks of the Union veterans of the war of the rebellion.

The post-office appropriation bill, compiled under the argus eye of Hon. EUGENE F. LOUD, the safe and conservative chairman of the Committee on the Post-Office and Post-Roads, shows an unusual increase of $14,633,910. But it simply marks the growth and prosperity of the country as evidenced through the operations of the Post-Office Department, which, under the Administrations of President McKinley and of President Roosevelt, have been conducted with progressiveness, economy, and business-like methods.

No river and harbor bill was enacted by the last Congress—leaving unprovided with original appropriations authorized a longer period than we have had before in many years. The sum directly appropriated by the bill of this session amounts to $26,727,442, which in itself is a sheer increase over the appropriations made at the last session, and more than offsets the increase of the total appropriations made by this session, exclusive of the sum for the Isthmian Canal. In addition to the appropriations directly made by the river and harbor bill, contracts are authorized involving future appropriations by the next session and future Congresses amounting to $38,336,160.

On this point it is not inappropriate to observe that under the the present practice, which has proven wise, effective, and economical, the continuing-contract system inaugurated in the Fifty-first Congress under the guidance of Hon. Thomas J. Henderson, then and for many years previously my colleague, and a most useful Representative from the State of Illinois, has been followed and applied by Congress to river and harbor and many other classes of public works, resulting in great economy in expenditures as well as great expedition and dispatch in the consummation of public works.

The authorizations under this bill and those for public buildings, together with the very large sum which has been authorized toward the construction of the Isthmian Canal, will require appropriations in great or large degree for many years to come. They are not here treated as a part of the outright appropriations, for the very sufficient reason that when they are met hereafter they will be charged and carried, in the Congressional and Treasury statements, as appropriations. To consider them as outright appropriations now would but duplicate the figures.

I may add that the distinguished chairman of the Committee on Rivers and Harbors, Hon. THEODORE E. BURTON, of Ohio, accomplished and scholarly as we all know him to be, well merits the confidence reposed in him by the House and the country for the zeal and discriminating earnestness with which he has superintended the labors of his committee at this and past sessions in the preparation of the great measures for public improvements of national necessity and importance.

The sundry civil bill, the "omnium-gatherem" vehicle which carries provision for every conceivable phase of the public expenditures of the National Government not specifically cared for in the other bills, shows a reduction of $1,670,549.08 below the amount carried by the act of last year. Notwithstanding this appreciable reduction in the sum total, the bill carries many matters that are new for next year, notably:

For new public buildings, authorized at this session, to be constructed in the chief cities and towns of the United States, in order properly to care for the public service within their precincts, $4,995,450.

It also provides increased sums for many objects that have peculiar demands upon the nation's bounty; for example:

The National Home, and the Homes in States, for Disabled Volunteer Soldiers, are increased from $4,024,144 to $4,673,869, or $649,825.

For artificial limbs for soldiers, the appropriation is increased from $125,000 to $514,000, or $389,000; and

The appropriation for providing the simple headstones that mark the last resting places of the soldier dead of the Union has been doubled in this bill.

For deficiencies an aggregate sum of $28,039,911.42 is appropriated, being an increase over the deficiencies appropriated for last year of $12,122,464.48. These deficiencies include sums for a variety of purposes that could not be foreseen in order to be provided for at the last session, and could not be avoided when they presented themselves during this session. Among them is included an item of $500,000 "for the proper shelter and protection of officers and enlisted men of the Army of the United States lawfully on duty in the Philippine Islands, to be expended in the discretion of the President."

On the occasion of its consideration in the House on January 24 last, a yea-and-nay vote was demanded and taken. Every Democrat, save seven, recorded himself in opposition; no Republican member voted against it. It was on that occasion that the late Amos J. Cummings, a Democratic member from New York, when taunted by his party colleagues and told to sit down, exclaimed:

> When I refuse to vote to protect the lives of American soldiers, I hope I may be paralyzed.

In addition to this appropriation, which was attended by such dramatic scenes and utterances in the House, the several deficiency bills carried unusual amounts for many other objects that were eminently proper, and which could not, in the patriotic performance of our duty, have been avoided by the majority in control of this Congress, namely:

For refunding to States moneys expended in raising troops to suppress the war of the rebellion, and which were determined by the Supreme Court of the United States to be due and owing to the several States, amounting to $4,272,239.33.

For constructing the new branch of the National Home for Disabled Volunteer Soldiers in Tennessee, $350,000.

For miscellaneous objects, including $1,662,117.57 for payment of claims that had been adjudicated under findings of the Court of Claims, and otherwise demonstrated to be fair and just, the appropriations are $5,390,018.67 less than those made for similar objects at the last session. In this connection I will mention the fact that among the other miscellaneous acts of the session was one establishing a National Sanitarium of the National Home for Disabled Volunteer Soldiers, at Hot Springs, in South Dakota, and appropriating therefor $170,000.

The permanent annual appropriations are diminished, according to the estimates of the Treasury Department, $437,000. The whole sum carried as permanent annual appropriations, $123,921,220, includes $54,000,000 to meet the requirements of the sinking fund.

For many years past the surplus moneys in the Treasury have been devoted, in the exercise of the discretion lodged in the Secretary of the Treasury, to the extinguishment of the public debt to an extent far in excess of the requirements of the sinking fund, and under the law it is a mere matter of discretion with the Secretary how much shall be devoted to that purpose, depending chiefly as it does upon what surplus revenues are realized. Under these permanent appropriations is also included the sum of $27,500,000 for interest on the public debt.

It is not inappropriate here to advert to the fact that the expenditures for the past two fiscal years, 1900 and 1901, show that during that period there has been applied to the sinking fund more than $113,000,000, a sum greater than the law actually requires, and which exceeds the whole amount applied to the extinguishment of the public debt during all of the nine fiscal years from 1891 to 1899, inclusive.

During the four years of President Cleveland's last Administration, from 1893 to 1896, inclusive, only $13,400,047.98 was applied to the payment of the public debt, while during the same period that Administration issued bonds to the extent of $262,315,400 in order to raise money wherewith to pay current expenses and maintain the public credit.

The statement which I have submitted shows at the conclusion of the column of appropriations made at this session an appropriation of $50,130,000 for the isthmian canal. This sum, for manifest and, as I believe, satisfactory reasons, has not been included in the footing, nor have I taken it into consideration in any of the comparisons made with or deductions drawn from the appropriations of this or other sessions of Congress, or in connection with the questions of revenue or expenditures that I have adverted to.

The enterprise in itself is more than a national one. If successfully prosecuted it will materially affect the commercial prosperity

of the whole civilized world: but chiefly and in an immeasurable degree our own country, from the standpoint of commercial supremacy as well as of public defense, will be the greatest beneficiary. The project is one that is demanded by practically the whole body of our people, and in no sense is it a partisan measure. The appropriations and the contract authorizations embodied in this act are conditional and depend in large degree upon the exercise of the President's discretion.

If the Panama route is not accepted by the President $40,000,000 of the whole sum appropriated will cease to be available, and no part of it will be expended. In that event only $10,130,000 will be expended under authority of the act, and its expenditure will doubtless extend over several years, owing to the delays that will be inevitable in the inauguration and prosecution of the actual work of construction. For these reasons I conceive it improbable that anyone would insist upon the use of these figures for purposes of partisan comparison.

A further analysis of the table which I submit shows that the appropriations made in the regular annual bills, for ordinary expenses of the Government payable during the fiscal year 1903, aggregate $595,502,705.58, which, together with the sums carried under permanent appropriations, and exclusive of the amount required by the sinking fund, makes a total of $665,423,925.50. In the nature of things, and in the light of past experience, this entire sum will never be expended, but will probably be reduced in the neighborhood of 10 per cent. The revenues of the Government, as now estimated, on the basis of the revenue-reduction legislation enacted at this session, amount to $639,520,630.

The appropriations for 1899, including postal service and sinking fund, and the large sums required at the beginning of the war with Spain, amounted to $893,231,615.55, while the actual expenditures reached only $700,124,837.50, or $193,106,778.05 in sum total, and more than 21½ per cent, less than the appropriations.

Again, the appropriations for 1900, including postal service, sinking-fund requirements, and appropriations incident to the war with Spain, amounted to $674,981,022.29. The actual expenditures thereunder reached only $646,612,927.06, or $28,368,095.23 in sum total, and 4 1/10 per cent, less than the appropriation.

Similarly, the appropriations for 1901, including postal service, sinking-fund requirements, and amounts incident to the war with Spain, amounted to $710,150,862.88, while the total expenditures thereunder reached only $678,073,237.27, or $32.077,625.61 in sum total, and 4½ per cent, less than the appropriations.

The figures I give with reference to appropriations and expenditures, and the disparity between them, are taken from the statements of appropriations made by Congress, and from reports of the Secretary of the Treasury, combining from the latter the amounts stated as total expenditures, amounts applied to the sinking fund, and amounts paid from postal revenues.

It will be seen by these figures that, applying the average percentage of disparity for the past three years between appropriations and expenditures actually incurred (and the actual per cent for 1903 will, I believe, be as great), the expenditures to be made under the appropriations of this session will not exceed $600,000,000, or a sum approximating $40,000,000 less than the revenues which we expect to derive under the revenue laws as revised by this Congress.

Chronological history of appropriation bills, first session of the Fifty-seventh Congress; estimates and appropriations for the fiscal year 1902-3, and appropriations for the fiscal year 1901-2.

[Prepared by the clerks to the Committees on Appropriations of the Senate and House of Representatives.]

By the Isthmian canal act										50,130,000.00	

Amount of estimated revenues for fiscal year 1903	$507,500,000.00
Amount of estimated postal revenues for fiscal year 1903	132,020,630.00
Total estimated revenues for fiscal year 1903	639,520,630.00

a One-half of the amounts for the District of Columbia payable by the United States, except amounts for the water department (estimated for 1903 at $326,016), which are payable from the revenues of the water department.

b Includes all expenses of the postal service payable from postal revenues and out of the Treasury.

c This amount is exclusive of $5,489,377.50 to meet contracts authorized by law for river and harbor improvements included in the sundry civil estimates for 1903.

d In addition to this amount the sum of $5,768,757.50 is appropriated in the sundry civil act to carry out contracts authorized by law for river and harbor improvements for 1903, making in all $32,495,199.50 for rivers and harbors for 1903.

e No river and harbor bill passed for 1902, but the sum of $7,046,623 is appropriated in the sundry civil act to carry out contracts authorized by law for river and harbor improvements for 1902.

f This amount includes $5,489,377.50 to meet contracts authorized by law for river and harbor improvements for 1903.

g This amount includes $5,768,757.50 to carry out contracts authorized by law for river and harbor improvements for 1903.

h This amount includes $7,046,623 to carry out contracts authorized by law for river and harbor improvements for 1902.

i This amount is approximated.

k This is the amount submitted by the Secretary of the Treasury in the annual estimates for the fiscal year 1902, the exact amount appropriated not being ascertainable until two years after the close of the fiscal year.

l In addition to this amount, contracts are authorized to be entered into, subject to future appropriations by Congress, as follows: By the District of Columbia act, $2,118,405; by the naval act, $18,306,000; by the sundry civil act, $616,000; by the Military Academy act, $3,500,000; by the river and harbor act, $98,336,160; by the urgent deficiency act, $550,000; by the public buildings act, $15,946,650, and by the isthmian canal act, $180,000,000; in all, $259,373,215.

m In addition to this amount, contracts are authorized to be entered into, subject to future appropriations by Congress, as follows: By the District of Columbia act, $498,500; by the naval act, $1,384,640; by the sundry civil act, $82,500; by the act of March 3, 1901 (public buildings act), $2,259,000; in all, $4,224,640.

A Billion-Dollar Session of Congress—Its Appropriations, under Republican Auspices, Double those of the Last Session of a Democratic Congress.

REMARKS

OF

HON. LEONIDAS F. LIVINGSTON,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1902.

The House having under consideration the conference report on the bill (H. R. 15108) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1902, and for prior years, and for other purposes—

Mr. LIVINGSTON said:

Mr. SPEAKER: The direct appropriations made at this session of Congress, including the Isthmian Canal appropriation, reach the astounding aggregate of $800,193,837. To this sum should be added the further amount of $259,373,215 to include contracts authorized to be entered into in addition to the specific appropriations which are made. These contract authorizations are in the nature of promissory notes of the Government, issued by this session of Congress, to be met and liquidated in the future, and constitute as much a part of the appropriations chargeable to this session as are the specific appropriations made, and which are to be expended, not at once, but throughout the coming fiscal year.

The two sums aggregate $1,059,577,052. The direct appropriations in themselves are so near a billion dollars that it is not difficult to imagine the time near at hand when, if the Republican party is to be continued in control of the Government, we are to have in direct cash appropriations, to say nothing of contract authorizations that mortgage the revenues of the country indefinitely for the future, "billion-dollar sessions of Congress" instead of "billion-dollar Congresses," of which that party first gave the country an example.

The appropriations, including authorized contracts, of this session exceed those, including contracts, of the last session by $270,798,102.01.

The enormity of the sum total of appropriations and contracts made this session can best be appreciated by contrasting it with the total appropriations made and contracts authorized at the last session of the Fifty-third Congress, for the fiscal year 1896. That Congress was Democratic in both branches, and the Government was administered by Mr. Cleveland. It therefore affords fair ground for the purposes of comparison. The difference between the total of each amounts to the startling sum of $540,881,767.34, or more than as much again as it required to conduct the affairs of Government under a Democratic Congress and Executive.

Analyzed in detail, the direct appropriations, without regard to contract obligations to be met by future Congresses, made at this session for the fiscal year 1903, show increases over those, including contracts, for 1896, as follows:

The Agricultural bill shows an increase of $1,905,210.

The Army bill shows an increase of $68,277,528.32, a sum four times greater than were the appropriations for the support of the military establishment for the fiscal year 1896.

The diplomatic and consular act shows an increase of $383,466.93.

The District of Columbia act shows an increase of $2,802,083.72.

The fortification bill shows an increase of $5,394,397.50.

The Indian bill shows an increase of $381,151.34.

The legislative, executive, and judicial bill shows an increase of $3,506,663.42.

The Military Academy bill shows an increase of $2,163,062.76.

The naval bill shows an increase of $49,262,717.82, and in the aggregate it is more than double the amount that was required to maintain the naval establishment in 1896.

The pension appropriation bill, alone of the whole category, exhibits a reduction, which amounts to $1,539,340. I commend this crumb of economy to the thoughtful consideration of the Union soldiers of the country.

The post-office bill shows the enormous increase of $48,870,600.89.

No river and harbor bill was passed for 1896, while the bill for this year reaches the great sum of $26,726,442 in direct appropriations, and authorizes contracts in addition thereto to the amount of $38,336,160, making in all $65,062,602 chargeable to this session of Congress.

The sundry civil bill shows an increase of $13,557,198.73.

For deficiencies there is an increase of $18,054,536.60.

For miscellaneous appropriations, other than those carried in the general appropriation bills, an increase of $2,302,332.63 appears.

Under permanent appropriations, which include the sinking fund and interest on the public debt, there is an increase of $10,847,263.68.

It can not be demonstrated by any process of logic or arithmetic that this enormous growth in public expenditures within the brief period of less than seven years is attributable to the natural growth of the country, the increase of population, or to the expansion of commercial interests.

There is now in the Treasury a surplus of more than $200,000,000, accumulated as the result of an onerous protective-tariff policy and undue taxes levied to prosecute the war with Spain.

Instead of applying this surplus to that great enterprise, the construction of the isthmian canal, this Congress has seen fit to authorize an issue of bonds in order to raise money for that purpose, implying by this action that this $200,000,000, wrung from the people, instead of being applied to this most worthy public object, is to be left in the Treasury, a prey for jobbing enterprises at the next session of Congress.

The total appropriations, including contracts, and amounting, as I have shown, to $1,059,577,052, exceed the revenues, estimated for the next fiscal year at $639,520,630, by $420,056,422.

I submit, and will have printed as a part of my remarks, a statement which shows the appropriations made for the fiscal year 1896, at the last session of the Fifty-third Congress, controlled in both branches, as I said before, by a Democratic majority, and with a Democratic Administration of the Government; also the appropriations made by the Fifty-sixth Congress and by the present session of the Fifty-seventh Congress, covering the fiscal years 1901, 1902, and 1903, with the Republican party in control of Congress and the Executive.

The careful scrutiny of these figures will afford much food for thought, and will lead all intelligent men to contemplate with manifest disapproval the reckless and extravagant methods of the Republican party as compared with the economical and prudent administration of the Government by the Democratic party.

Statement of appropriations made at the last session of the Fifty-third Congress for the fiscal year 1896, and by the Fifty-sixth Congress and the first session of the Fifty-seventh Congress for the fiscal years 1901, 1902, and 1903.

	Fifty-third Congress, last session, for fiscal year 1896.	Fifty-sixth Congress.		Fifty-seventh Congress, first session, for fiscal year 1903.
		First session, for fiscal year 1901.	Second session, for fiscal year 1902.	
Agriculture	$3,303,750.00	$4,023,500.00	$4,582,420.00	$5,208,960.00
Army	23,252,608.09	114,220,095.55	115,734,049.10	91,530,136.41
Diplomatic and consular	1,574,458.76	1,771,168.76	1,849,428.76	1,957,925.69
District of Columbia	5,745,443.25	7,577,369.31	8,502,269.94	8,547,526.97
Fortifications	1,904,557.50	7,383,628.00	7,364,011.00	7,298,955.00
Indian	8,762,751.24	8,197,989.24	9,747,471.09	9,143,902.58
Legislative, etc.	21,891,718.08	24,175,652.53	24,594,968.85	25,398,381.50
Military Academy	464,261.66	674,306.67	772,653.68	2,627,324.42
Navy	29,416,245.31	65,140,916.67	78,101,791.00	78,678,963.13
Pension	141,381,570.00	145,245,230.00	145,245,230.00	139,842,230.00
Post-Office	89,545,997.86	113,658,238.75	123,782,688.75	138,416,598.75
River and harbor		560,000.00		26,726,442.00
Sundry civil	46,568,160.40	65,319,915.45	61,795,908.21	60,125,359.13
Deficiencies	9,825,374.82	15,688,330.61	15,917,446.94	28,039,911.42
Miscellaneous	297,667.37	3,802,301.34	7,990,018.67	2,600,000.00
Total, regular annual appropriations	383,931,564.34	577,438,642.88	605,980,355.99	626,142,617.00
Permanent annual appropriations	113,073,956.32	132,712,220.00	124,358,220.00	123,921,220.00
Isthmian Canal				50,130,000.00
Grand total, regular and permanent annual appropriations	497,008,520.66	710,150,862.88	730,338,575.99	800,193,837.00
Contracts authorized	21,686,764.00	4,224,640.00	58,440,374.00	259,373,215.00
Total, including contracts	518,695,284.66	714,375,502.88	788,778,949.99	1,059,577,052.00

Army Appropriation Bill.

SPEECH

OF

HON. JOHN W. GAINES,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 25, 1902.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 12804) making appropriations for the support of the Army for the fiscal year ending June 30, 1903—

Mr. GAINES of Tennessee said:

Mr. CHAIRMAN: I have not had an opportunity to read either the report on this bill or the bill itself. The bill, however, carries an appropriation for the maintenance of the Army in the United States and the colonies. I desire to ask the chairman of the committee how much this bill carries in the aggregate?

Mr. HULL. The total appropriation of the bill is $90,000,000, in round numbers.

Mr. GAINES of Tennessee. How much was the appropriation in the last bill?

Mr. HULL. One hundred and thirteen millions in the bill, and then there was a deficiency of four or five millions, making a total of one hundred and eighteen millions, in round numbers.

Mr. GAINES of Tennessee. How much of this appropriation will go for the maintenance of the army in the Philippine Islands?

Mr. HULL. That is not figured out in the bill; that is according to how many troops are kept there.

Mr. GAINES of Tennessee. How many troops will we keep there?

Mr. HULL. The Secretary of War estimates about 35,000.

Mr. GAINES of Tennessee. What is the average number we retain in the Philippines now?

Mr. HULL. Thirty thousand from the United States and 5,000 Filipino troops or scouts.

Mr. GAINES of Tennessee. Mr. Chairman, the Report of the Secretary of War for the year 1900, at pages 141 and 142, states that it costs $1,280.85 to equip and maintain each American soldier for twelve months, excluding the cost of armament and fortification. At this rate the 30,000 American soldiers whom we keep permanently in the Philippine Islands will cost the taxpayers of the United States annually $38,425,500. The native scout is paid, I believe, half price, which would add $3,200,000 more, making a total annual cost of 35,000 soldiers in the Philippine Islands of $41,625,500.

I will insert here the table from which I have quoted, taken from the war report of 1900, pages 141 and 142, for it is very instructive:

Fiscal year.	Average number enlisted men.	Average per enlisted man under the following figures.			Approximate average from these figures.
		War Department ledgers.	Annual reports.	Treasury statements.	
1896	25,159	$886.52	$1,071.26	$957.15	$971.66
1897	25,331	880.97	1,036.04	887.11	934.71
1898	50,783	1,170.46	1,218.68	1,088.62	1,159.26
1899	162,224	1,595.80	1,140.71	1,194.54	1,310.35
1900	96,674	1,017.73	.....	1,011.61	1,014.66
Average	72,034	1,280.85	1,139.05	1,092.30	1,173.85

The following table shows the averages for two years of peace (1896 and 1897) and two years of war (1899 and 1900):

	Average per enlisted man under the following figures.			Approximate average from these figures.
	War Department ledgers.	Annual reports.	Treasury statements.	
Peace	$882.86	$1,053.57	$922.03	$953.12
War	1,379.95	1,140.71	1,126.23	1,226.28
Increase	497.09	87.14	204.20	273.16
Per cent	56.3	8.3	22.1	28.7

The American soldier is enlisted now to remain in the Philippines not over two years, because of the climate there. This "endless-chain policy" is adopted from this necessity. Thousands of our soldiers are returned to the United States before the term of enlistment expires, to regain their health if possible, while large numbers die from disease in the Philippines and others are killed in action or by accident. Thus vacancies are created in the ranks which must be immediately supplied by fresh American troops. Hence, it seems to me we must prepare and keep a standing army ready and waiting in the United States for the sole purpose of supplying these vacancies and to ultimately take the place of and succeed the 30,000 troops already in action in the Philippine Islands.

It seems to me that of necessity the keeping of this second 30,000 troops standing waiting to succeed their comrades from time to time in the Philippine Islands necessarily follows. Surely there must be, if not 30,000, a large number of soldiers kept waiting to be sent from time to time to the Philippine Islands, and finally to be sent there not only in time to succeed to the places of their comrades, but they must be sent there and be at their post of duty before the two years' term of enlistment has expired. Thus it seems inevitable that we must keep two standing armies at the same time, one in the Philippines and one in the United States. The Republican party is responsible for all this, and seems determined to hold the Philippines permanently as a colony and the inhabitants thereof as subjects, and it is plain that we can not do this except at the point of the sword.

In addition to the expense for soldiers to thus operate in the Philippine Islands, we must incur an additional expense of equipping and maintaining and keeping constantly a Philippine navy in the Philippine waters. This the Administration insists is necessary in order to police these waters and defend the American establishment there and protect our subjects.

I am thoroughly convinced that if the Republican policy obtains of holding these islands as a colony and the inhabitants there as subjects, we must do so at the point of the sword. This, the Democrats contend, can be avoided, and honorably, if Congress will now declare by resolution or statute its purpose to give the Filipinos their independence, reserving coaling stations and the like for this Government, which the Filipinos will gladly concede.

I am supported in this opinion by leading writers and Army officials and high privates who are familiar with these people, their feeling toward us, their ambitions and conditions generally. I talked with many Army and several Navy officials, many privates in our Army, and a number of American citizens on my recent trip to the Philippines, and several leading Army officials since my return.

Before the war with Spain these people were fighting for their independence. Surely they would not fight for or accept less. They demanded independence of Spain, and they were led to believe, and believing, they cooperated with the American forces against the common enemy, Spain, that they were to be given their independence, after our successful prosecution of the war with Spain.

It is my firm belief that they want independence and will never be satisfied without it; that whatever of peace there is in the Philippines that "peace" is but "skin deep and not from the heart," to use the language of many American citizens and military officials, including high privates, with whom I freely conversed in the Philippines, on my return home, and since.

I desire now to read from General Otis and then from several interviews had with them touching upon this question and kindred subjects.

As early as August, 1899, General Otis, in his report, at page 272, said:

> The mass of the people were intoxicated with the cry for independence and self-government, which the reflecting classes now realize is impossible until true political education is more generally diffused. The political conditions which will follow armed resistance demand the most serious attention of our eminent statesmen, and Congressional action can not be too much accelerated.

I read now from a stenographic report of an interview I had with a distinguished Army officer who had served in Cuba and for more than two years in the Philippine Islands.

I asked him:

Q. Must we have a standing army in the Philippine Islands?

A. If we hold them as colonies—that is, without giving them all the rights of American citizenship—it will necessitate keeping a large standing army there continually.

Q. Do they object to being held as colonies without making them citizens?

A. I understand that is what they are fighting for—to be citizens.

Q. Will you explain what you heard them say about this?

A. I believe their object in the insurrection was either to secure independence or to secure all the rights and privileges of a free people; that is, with the sovereignty vested in the United States, for that matter; but what I mean by a free people, as our American citizens are free, and I believe that those who have voluntarily surrendered have either done so for their own personal interests or they have been persuaded that it is our intention to eventually give them those rights and privileges that I have spoken of; that is, either give them independence or incorporate them as a part of our people.

Q. Your opinion is that if we don't give them all the rights we enjoy we must hold them at the point of the sword?

A. Yes.

Q. We have educated these people in the way of fighting and in the art of war, have we not?

A. They are very quick to observe and I believe will profit by our methods if the opportunity presents itself. Of course, if we get all their arms away from them, and they can not get any more, they may then quit fighting us.

In other words, they may see the hopelessness of their cause and quit until a better opportunity is presented.

Q. Your idea is, then, that until they are given the rights and privileges that you have alluded to, that they are going to keep up actual war if they have arms, and if not they will wait for an opportunity to start it again?

A. They will keep up as long as they think they have any chance.

Q. Suppose, then, they lay down their arms, is it your idea that they will seek a good opportunity to get these rights and privileges you allude to?

A. Yes.

Q. Are you familiar with the proclamation issued by Aguinaldo on July 1, 1898?

A. I have read it, but have forgotten the details of it.

Q. Let me refresh your memory. I read from Commodore John D. Ford, of the United States Navy, in his book entitled, "An American Cruiser in the East," at page 501:

1. The independence of the Philippines shall be proclaimed.

2. A republic shall be established, with a government designated by General Aguinaldo and approved by the admiral and general commanding the United States forces.

3. The government will recognize the temporary intervention of commissioners designated for the present by the United States.

4. The American protectorate shall be recognized on the same conditions as arranged for Cuba.

5. The Philippine ports shall be opened free for the universal commerce of the world.

6. Precautionary measures shall be adopted against Chinese immigration, so as to regulate the competition with the work of the natives.

7. The corrupt judicial system at present existing shall be reformed, intrusting at the commencement the administration of justice to competent European legal officials.

8. The complete liberty of association, as likewise that of the press, shall be declared.

9. There shall be a general religious toleration, but measures shall be adopted for the abolition and expulsion of the religious communities who with an iron hand have hitherto demoralized the actual civil administration.

10. Measures conducive to the working, development, and prospects of the natural resources of the country shall be adopted.

11. The development of the public wealth shall be facilitated, together with the opening up of roads and railways.

12. The existing obstacles to the forming of commercial enterprises and investment of foreign capital shall be suppressed.

13. The new government will keep the public order, and will be obliged to prevent every act of reprisal against the Spaniards.

14. The Spanish official element shall be removed to some other safe and healthy island until the opportunity is presented for them to return to Spain.

A. I have in my papers a copy of his proclamation, but it has been some time since I have read it and I could not say whether this is it or not.

Q. You see that the very first sentence is that independence will be proclaimed.

A. Yes.

Q. What do you think we should do with the Philippine Islands?

A. As an American citizen, I think it is our duty to give them all the rights and privileges of a free people, either as a part of our Republic, or we should give them an independent government and should protect that government against encroachments from foreign powers until such time as they are able to protect themselves.

Q. If we would do this now, or if we would promise this by a statute, not by simple words or proclamations, do you not believe that these people would at once become reconciled and contented and lay down their arms and wait until we would redeem our promise?

A. I do; and I believe that within a very short time any American would be able to travel without escort through any portion of the islands without danger, except from the savage tribes and from the Ladrones and Tulusanes, who recognize no law.

Q. Do you not believe that if the United States had said to these people at the beginning—that is, before the clash between our forces and the insurgents—that we are going to give you independence as quick as you are able to maintain it that they would have been content and we would have had no clash with them?

A. Yes; by giving them some definite statement, as you could by a statute or law, I do.

Q. Have they ever understood over there really what we were going to do with them, and hasn't that been one of our troubles?

A. I have never understood myself. I don't see how they could.

Q. Well, hasn't that been one of our troubles?

A. Yes. They have never known what was going to be the ultimate disposition of them, and what they feared was that they would become slaves or vassals, and they wanted freedom, and this is what they want now.

Q. If they had an army and a navy and a suitable government set up for them through our kind offices, they to have a voice in framing this government, how long would it be before they would be capable of maintaining their independence, and with the strength and dignity that is characteristic of the other brown races of the world?

A. They have immense resources, and in a few years would be able to equip an army and build a navy that would put them on a defensive footing equal to Japan.

Q. Haven't they many leading learned men who are capable of ruling and controlling that government in a way entirely acceptable to them and to us?

A. I believe that to be the case. I have no doubt about it. They have a great many learned men there.

Q. And haven't these men been identified immediately in framing and making the laws and forming even the young government we have over there in that country?

A. Well, to just what extent they have had a voice in that I do not know, but I know there are a great many of them who are holding office under our government; they occupy places in the supreme court and they are governors of provinces, but to what extent they have had a voice in framing the laws I do not know.

Q. Did they not have a government that they had framed and we executed under what is known as the Aguinaldo government?

A. They had a government which was framed by themselves, and I believe acceptable under the conditions that existed and to the extent that it had been perfected.

Q. It was operating all right so far as you were able to learn?

A. So far as I was able to know, it was. Of course it was in its mere infancy.

Q. As an infant government it was operating all right and was satisfactory?

A. It seemed to have the unanimous approval of the people at that time.

Q. And that was just when they had gotten out of the struggle of 1896 and 1897 and were going into a struggle with us, and that government was operating acceptably to the masses of the people?

A. Yes.

Q. Have you ever examined what form of government they had?

A. Well, not critically; I have not. I have read their papers, their political organ, the Republica, which was full of patriotic articles. The people seem to be striving toward progression.

Q. Don't you think the start they made was a very remarkable start, and what they accomplished was equally remarkable?

A. I think it was sufficient to demonstrate their ability to establish a suitable and permanent government.

Q. Even without our assistance?

A. Without our assistance other than in preventing the invasion of the Philippines by other powers.

Q. The Americans did not aid in the establishment of the government we are talking of?

A. No; without any assistance whatever so far as the establishment of the government was concerned, it being understood that we would defend them against invasion by the powers, as they are weak.

Q. Are you familiar with the Negros government?

A. No.

Q. Do you think it was the intention of Aguinaldo to have war against the Americans at this time?

A. I think it was the intention of the leaders of the Filipinos to secure independence, and believing that their purposes were in danger, caused the conflict at that time.

Q. As I understand your answer—and if I do not understand it correctly, explain it—it is that at this time, and as it had been all the time previous, these people wanted to secure their independence, and conditions had gotten to where it looked at this time as though they were not going to do it, and it was their intention to have independence peaceably, and if not, to fight for it?

A. Yes; that is my impression.

Q. Do you know anything about the abuses of our people by the Filipinos or the abuse of the Filipinos by our people?

A. In a conflict between two forces there are bound to be always breaches of discipline. I do not believe any abuses have been countenanced by the Filipino government, and certainly not on the part of our men by our military authorities.

Q. In other words, the lawlessness has been without the authority of either the Filipino or the American forces, and has been by that gang of people who follow in the wake of an army or precede it and for their own personal gain or spite have recklessly punished people promiscuously. What has been the rule with reference to the treatment of our soldiers by the Filipinos, excluding this lawless gang?

A. I believe that their treatment has been very considerate. Haven't you heard of our prisoners being fed at the Filipino officer's table and treated as kindly and considerately as they had means and power to do, and our men did the same thing—the case of Captain Roberts, not being accustomed to Filipino diet or cooking, and Colonel Tecson sent down into one of the towns and secured a cook that could cook American fashion for Captain Roberts?

Q. I have heard of this. Where is Captain Roberts now?

A. I don't know where he is, but I have frequently heard that men who were with them stated on their release that they had been well treated.

Q. And this is the rule that has obtained with the regular Filipino army?

A. They are very hospitable and are disposed to treat everybody dependent upon their hospitality with every consideration.

I regret that I have not time to read the entire interview.

I have quite a number of such interviews from leading American citizens and Army and Navy men, as well as from some of the "privates."

Mr. SIBLEY. Will the gentleman permit an interruption?

Mr. GAINES of Tennessee. Certainly; always from my friend from Pennsylvania.

Mr. SIBLEY. What is the name of the officer with whom you had this interview?

Mr. GAINES of Tennessee. I prefer not to give his name, and by his request.

Mr. Chairman, I read now from another American Army officer. I will give the name to my friend from Pennsylvania [Mr. SIBLEY], because I have his permission. It is N. H. Hollingsworth, of Jacksboro, Tenn., late regimental quartermaster-sergeant Fourth Tennessee Volunteers, late second lieutenant of the Twenty-ninth Infantry, United States Volunteers. I read from the stenographic report:

I was in the secret service of the police department of Manila for nearly a year past (and of course came in contact with thousands of people). The Filipinos want independence. They are waiting now to see what Congress will do for them. That is what they tell me, and I have talked with a great many. I have lived with a Filipino family in Manila since I first came there—that is, at their residence, Lorenzo Rosario (I think now he is in high office in the Philippine Islands. He was formerly chief quartermaster to Aguinaldo, and surrendered in 1898 to General Otis and took the oath of allegiance. He has said to me often he would never have done so if he had seen any chance of the Filipinos gaining their independence by conquering the United States.

And so on.

Q. If the Filipinos were given their independence, or if Congress would now promise them their independence, would they lay down their arms and become peaceful?

A. That is all they want. I have heard them talk of it often and often.

Q. Do you think the failure of Congress to do this is the cause of the continued warfare there against the Americans?

A. Yes, they have talked to me about that, too. You can get more information in Manila than you can in the provinces.

This is a very intelligent interview. I do not know anything about the gentleman's politics. I presume he is a Republican. He comes from East Tennessee.

Q. If Congress had declared at the beginning that we did not propose or want to hold these islands permanently, but that we would ultimately give them their independence, would there have been, do you think, a clash between the insurgent forces and our authority in the Philippine Islands?

A. No; there would not.

I want to state further that this gentleman is a high Mason, and is a man of intelligence, who returned from the Philippine Islands voluntarily. He is a man of sobriety, a man that would impress you not only because of what he knows, but because of his charming personality.

He continues:

A. They were promised that by Dewey, and he went back on the promise. That is my information, and these people surely believe it and I believe it myself from all I have heard or read on the subject.

Neither Aguinaldo nor any of the Filipinos have ever asked for a cent for their services which they rendered us when we were fighting the Spaniards, and this is one of the many things going to show that independence was promised them by Dewey, and he led them to believe that and they acted under that belief, and we certainly got the benefit of their services when we needed them. If we intend to keep these islands without making any concessions along the line of independence and local self-government, there is one thing certain—we have not only got to keep the army we have in the Philippine Islands, but to increase it, and also increase the navy to patrol the waters.

Q. Are the Philippine Islands capable of supporting this army and navy?

A. No, and will not be for ten years. They have no cattle, no hogs, no agricultural implements.

And so on.

Then he speaks about a question of climate, saying it is no white man's country.

Q. Are the Filipinos, as a race, easily controlled? If so, by what means are they easiest reached?

A. The Filipino is the easiest person to control that I ever came in contact with, by giving him honest justice and upright treatment; treating him as you would your brother or good neighbor, paying him what you owe him and showing him any courtesy you would have him show you, and he will do anything he can for you. That has been my experience with them, and I have seen a great many in and out of Manila. I have been in the secret service for nearly a year in Manila. I enlisted in the Spanish war as a private and was mustered out as a quartermaster; was offered positions under the civil government in the Philippine Islands, but I declined them all.

I will next read from a stenographic report of an interview I had with a most reputable and efficient Army officer, who has served throughout the Spanish and Philippine war and is now serving in the Regular Army. This Army officer, in addition to supporting the position I have taken, amongst other important things briefly stated that the Philippine Islands "is not a white man's country," that the "white man can not work in the sun there," and "the women can not stand the climate at all," but can remain a short while probably with impunity, and then "they must go to a cool climate;" that "this climate weakens the people mentally and physically" and that "white children can not develop there," and that "there are many people in these islands to-day who are conservative, educated, and civilized enough to exercise with judgment the functions of self-government." He approves putting ex-insurgents into high positions, as we are doing in the Philippines, and says:

Most heartily I approve that policy, and there are many others who could be put in similar positions, and that if Congress had promised these people their independence that they would have been satisfied, and that they wanted self-government and would be satisfied with that.

I will read:

Q. Have the Filipinos or any of their leaders ever talked to you about why they are now fighting or the reason for the clash between the insurgent forces and our Army?

A. The original break, you mean?

Q. Yes.

A. Yes, sir. I have talked with many leading Filipinos. In their conversations with me they have generally taken it for granted that I would deny any definite promises or encouragement on the part of any of the United States officers to the Filipino leaders that the islands should, under American rule, receive their political independence; but they also assumed, and this assumption was general, that their leaders had either directly or indirectly received such assurance or encouragement, and certain it is that all the leaders with whom I have ever talked believed that such independence would come soon after the expulsion of the Spaniards.

Q. Do you mean to say that the Filipino believes that the American authorities, that is, Dewey in person or Dewey by and through our consuls acting under the directions of Dewey, promised Aguinaldo, as the leader and representative of the Filipino people, that the American Government would give the people of those islands their independence if Aguinaldo and the Filipino people would join with our Army in crushing Spanish sovereignty in the Philippine Islands?

A. No; I do not mean that. I mean that, however the impression arose, the impression still existed, that they would receive their independence after the expulsion of the Spaniards. I do not know how this impression was made upon the general Filipino mind; I know that it existed and that when they did not receive such independence they felt very much embittered against the Americans. I think that they still believe that they were deceived by the Americans. I do not know whether the impression was made by Americans or whether it was made by the leaders of the Filipinos. The people themselves can not tell where they got it; the people themselves can not tell who started the proposition or made this statement that they would receive their independence after the expulsion of the Spaniards; it was a general belief; it was undoubtedly spread by their leaders, on what authority I am totally ignorant.

Q. If a promise was made you do not know who made it; but the fact is that the people believe that it was promised?

A. The people believe it was promised.

Q. And promised by the Government of the United States; but as to who made the promise you do not know?

A. I do not know. The Filipinos with whom I have talked could give no more than the general belief on the subject.

Q. Do just a few, or a majority, or all the people believe that independence was promised them?

A. Practically all the leading people that I ever talked with believed that independence was somehow and by some persons promised the Filipinos.

Q. Did you ever talk with any of them about American institutions and the American Constitution or the Declaration of Independence, or have they talked with you; and if so, what did they say?

A. I have talked with two or three intelligent Filipinos on that subject. I have not talked much with them, because it was beyond my province. The two or three that I did talk with seemed to have a pretty fair knowledge of American history and the establishment of American liberty and independence through George Washington.

Q. Did they ever quote George Washington on you?

A. They have, and referred to his history.

Q. Ever quote the Declaration of Independence on you or talk about it?

A. I do not remember that, but they have discussed the Declaration of Independence with me and have asserted that they were fighting for no more than we were fighting for, and that I should not condemn them for things which my own fathers did here in the American Revolution.

Q. Do you remember any particular thing that they said about George Washington?

A. No; I do not. My first discussion with any Filipino on that subject decided me not to pursue the subject very far with any others afterwards.

Q. You say you did not talk much with the Filipinos on the subject of American history and institutions and liberty. Why did you abstain if they undertook to talk with you?

A. Because the similarity of conditions between their resistance to the United States Government and the American Revolution against the English was such that I could not argue the question with them and I quit.

Q. Did you ever see a copy of the American Constitution or the Declaration of Independence in the Philippine Islands?

A. Yes. I had that read in front of my soldiers on the Fourth of July and also to the people, or on Washington's birthday, I have forgotten which.

Q. Was it read in English or Tagalog or Spanish or in the local dialect?

A. It was read in such a way as to enable the people to understand it. It was probably read in Spanish and translated in Tagalog.

Q. How did the people take it?

A. They generally accepted such things with acclamation, but I never could bring myself to believe that they really meant their acclamations, because, first, they have been practically enslaved for three or four hundred years and they have learned to dissimulate their feelings as their only means of self-defense and, second, because of their subsequent conduct in allowing their young men to organize themselves and operate as guerrillas right in our own garrison towns.

Q. Well, do you mean to say that they applauded the words of the Declaration of Independence or the Constitution, or that they applauded the raising of the American flag where you were, or what did they applaud?

A. They applauded, apparently, both the action of the United States Government and the flag. At one of the principal towns in Luzon the presidente presented a silk battle flag to one of the battalions of my regiment, yet that town was full of insurgents, and I have no doubt that some of the insurgents contributed money to make the flag. It is essentially a vice of people who have long been suppressed to lie and deceive. The Filipinos do this because they do not desire to be known as insurgents or as not accepting the Government of the United States, yet at heart they do not, and when they have an opportunity they secretly aid the insurgents and encourage their young men to resist.

Q. Then their acclamation was only sound and not from the heart?

A. I considered it so.

Q. Is the peace condition, or the so-called peace condition, in the Philippine Islands skin deep or from the heart?

A. At present it is but skin deep, but these people are undoubtedly now in an observant mood. After they have been much beaten they are willing to see what the Government of the United States will do. They can not longer fight as an organization; that would mean extermination; the great bulk of them are now looking to see what the Government of the United States will give them. If the Government of the United States will give the Filipinos a simple, democratic, honest administration of government free of forms and circumlocutions; if it will give them an efficient constabulary and a judiciary who can not be bought off, and if they can observe the workings of this government, and this constabulary, and this judiciary for eighteen months, in my opinion peace will be permanently established, because these people are not revolutionary.

Q. Would the Filipinos further resist us if they were able to do so?

A. Beyond a doubt.

Q. Do they love the Americans?

A. No.

Q. Do they want their independence?

A. Yes.

Q. Have they ever talked to you about that?

A. Oh, yes.

Q. That is what they have been fighting for?

A. That is what they fought for.

Q. They would fight now if they thought they could whip us?

A. Beyond a doubt.

Q. Have these people understood what the American Government proposed to do for them in the Philippine Islands?

A. No, sir.

Q. Have you heard them say so or say anything about that?

A. I have not heard them express themselves beyond the first cause of the outbreak, but I know from much talk with them that they do not comprehend what the Government now proposes to them, or are just beginning to do so.

Several members of Congress had conversations with Aguinaldo who went with me to the Philippine Islands. The first time I called I did not have a stenographer with me, but the second time I did, and my interview with Aguinaldo was reported stenographically. Aguinaldo is studying and can speak some English, but talks Spanish and Tagalog well. I asked (through an interpreter) this question:

What did you expect to have done with the Philippine people when you united with the American forces to drive the Spaniards from these islands?

And Aguinaldo replied:

I expected the independence promised; not only mine, but the Philippine people.

Q. After this clash (of February 4, 1899) between your army and the American forces, suppose Congress had promised to give independence to your people as soon as you are capable of maintaining it, would it have stopped the war?

A. If they had given us a good, stable, liberal government this would not have happened.

Q. If Congress would now promise that, would it not stop all war in the islands?

A. I think so. And in conclusion Aguinaldo said, "I only hope for happiness for my country, and I would not have opened these issues had you not asked me the question. I have no more to say but the hope for the liberty of my country."

We should not lose sight of the fact that it is now undisputed that on July 1, 1898, Aguinaldo "proclaimed the Philippine republic," and the proclamation he then issued declared:

First. The independence of the Philippines shall be proclaimed.

Second. A republican government shall be established with a government

designated by General Aguinaldo and approved by the admiral and general commanding the United States forces.

Third. The government will recognize the temporary intervention of the commissioners designated for the present by the United States. The American protectorate shall be recognized on the same condition as recommended for Cuba.

And so on.

Here, then, is the establishment of the Philippine republic and a proclamation declaring its independence, which Dewey permitted when he could have prevented it.

Previous to this date Aguinaldo had issued many proclamations and operated, to use the language of Dewey, "under the protection of our guns."

Yet you will find some people who say that the Filipinos never wanted and do not now want their independence. This is a mistake. They wanted it in 1896 and 1897, when 30,000 of them were killed fighting the Spanish soldiers on Philippine soil. They wanted independence when Dewey brought Aguinaldo to Cavite, May 19, 1898; they wanted independence when they agreed to cooperate and did cooperate with the American forces and did fight Spain on Philippine soil, and they wanted independence when they fought the American Army in the Philippines, and they are fighting for independence now, and they still want their independence.

Consul Wildman cabled the department at Washington that these people expected their independence, and he impressed on the department that they could not be treated as we had treated the American Indians. Later on General Anderson and Admiral Dewey cabled the President that the Filipinos wanted independence, and here we see in this proclamation of July 1 the establishment of a Philippine republic and a declaration proclaiming its independence, and this, as well as everything else that Aguinaldo and his associates did, was done at Cavite within a few yards of Dewey's guns, and, of course, right before Dewey's eyes, and Dewey stood by and permitted all this, with full authority to act offensively and defensively. Dewey stood by armed with the power to make and enforce his orders, and if he did not direct and assist Aguinaldo in everything he did, and Dewey confesses to have assisted him in many things, Dewey at least permitted Aguinaldo to do everything which he (Aguinaldo) did, and everything which Aguinaldo did tended directly or indirectly toward at least the ultimate independence of the Filipinos, and the Filipinos acted under this belief, fighting on land and sea, at times by the side of our own men, cooperating with our own Navy, and with the knowledge and consent of Admiral Dewey and the officers under him.

I would not do Admiral Dewey the slightest injustice; I am a faithful admirer of his; but what I am stating is not so much what Dewey "said," but what he "did" and knowingly permitted others to do—his acts, not his words—when he could have prevented them doing anything if he had so desired. The American people should know the facts. The whole truth is all that I want, and the American people are entitled to at least that much.

The day after Aguinaldo was captured the Washington press reports Admiral Dewey as saying that the whole truth of his relations with Aguinaldo had never been written. I hope that he will promptly reveal it, in justice to himself and in deference to the American Republic, to which he owes entire allegiance. What I say now and what I repeat is that if Dewey did not in person or if he did not permit officers under his control for him to make a promise of independence to these people or form an alliance for that purpose, Dewey or his officers, or both, led these people to believe that such a promise or alliance had been made, and the Filipinos acted accordingly. In brief, Dewey, by what he did and by what he failed to do and by what he permitted the Filipinos to do, led the Filipinos to believe that such a promise or alliance was made.

Mr. SIBLEY. Does not Dewey contradict that statement of fact?

Mr. GAINES of Tennessee. Dewey denies that he made any promise or alliance; but I think he does so arguendo, and among other things he says that everything he did or had done was done "within the spirit of his instructions" from Washington, and while thus acting Dewey led those people to believe he had made a promise of or formed an alliance for their independence.

I did not propose to discuss this phase of the Philippine question. It has arisen, you must see, incidentally. My desire has been to show that these people want and have always wanted their independence and that if Congress will now promise independence to them that peace in these islands will soon follow.

But I will stop here to read from a book entitled "The Filipino Martyrs; A Story of the Crime of February 4, 1899, by an Eye Witness, Richard Brinsley Sheridan, Barrister at Law, Inner Temple, London." I am reading now from the title-page of Mr. Sheridan's book. I have quoted his own language, and you see he himself says that he was an eyewitness. Mr. Sheridan is an Englishman. He wants the United States to hold the Philippine Islands permanently. He went to the Philippines prejudiced in our favor. He was there at the beginning of the operations of Dewey, and he says we have greatly wronged the Filipinos. I will now read the part that is pertinent to the Dewey-Aguinaldo cooperation as follows:

It has been stated, and is daily alleged in the American press, that no promises were made, that no pledges were given by Dewey and his representatives to General Aguinaldo. How, then, was it that Aguinaldo was at Manila; taken to the Philippines by the Americans in one of their own ships; at their own urgent request; armed by them; Spanish prisoners taken at the battle of Manila Bay delivered into their hands by Dewey; quartered at Cavite; permitted a flag which was saluted by their admiral—Dewey; authorized and encouraged to make war upon the Spaniards; to take prisoners; supported at Subig and the town handed over to them by the Americans? How came these and other things to be allowed if Aguinaldo and his forces were not the allies of the American Government.

It is inconceivable that Aguinaldo, who had been fighting the Spaniards for Philippine independence, would have returned to the islands and there have raised his standard in the American cause if the promises made were only to reap a worse servitude than that inflicted by Spain.

If the American representatives had informed Aguinaldo that it was America's intention to subjugate or exterminate the Filipino race after they had assisted America in her conquest of Spain in the Pacific, is it possible or is it probable that Aguinaldo would have conducted his victorious compaign, sacrificing the lives of many of his best citizens and friends in order to aid a policy which threatened the destruction of his proposed republic and the hopes of his independence.

Arrangements were come to, as I have shown, whereby the Filipinos were to become free, and I can not believe that Admiral Dewey, who is a man of honor and integrity, will stand by longer and witness the oppression and destruction of the Filipino race.

I will not comment on this; I have not time. At some future day I will gladly discuss this question with any member of the House and take this quotation from Sheridan as our text. I will add in conclusion on this point, that there can be no reasonable doubt now but that Dewey permitted and directed certain American officers to receive Aguinaldo at Hongkong and advise with him before he was brought to Cavite by order of Admiral Dewey.

Mr. SIBLEY. Did you ascertain who these people were?

Mr. GAINES of Tennessee. Consul-General Wildman was one and Lieutenant Brumby, of the *Olympia* (Dewey's flagship), was another so Edwin Wildman, the assistant consul-general at Hongkong, states in his recent book entitled "Aguinaldo."

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. SULZER. I yield ten minutes more to the gentleman.

Mr. GAINES of Tennessee. Many Army officials and privates often stated to me that the "so-called peace conditions in the Philippines is only skin deep, and not from the heart" of the inhabitants there. One of the leading Army officials was asked by one of my colleagues this: "Have the Filipinos become reconciled to American rule?" and the prompt reply was, "No; they still have hell in their hearts." I see some evidence from the New York Times of yesterday that this is a correct statement of the real feelings of the Filipinos toward the Americans. I will read the headlines:

Fighting in Mindanao—Two hundred Moros attack a Signal Corps detachment—Americans lose one man and their transportation.

The Times does not state the cause of this conflict, but I presume the Signal Corps was interfering with some local custom of the natives and the Moros objected, sword in hand. The Moros object to the Government of the United States interfering with their customs. They cling to these.

While in Mindanao and Jolo I talked with leading Moros and foreigners who were living there—all Mohammedans. The Moros are all Mohammedans. The Filipinos proper are all Catholics.

I talked with Dato Mandi, second in authority to the Sultan of Sulu, and several other leaders, and they said to me:

All the Moros want is to be let alone in their old customs and ways. If you touch them, if you undertake to break down these customs and laws, do away with slavery and harems, you will see the bloodiest conflict between the Moros and Americans you ever heard of.

The Moros do not care what the Government of the United States does as to outside or international matters, but whatever you do, don't interfere with the local customs of these people. As to ourselves, we feel friendly toward and are the friends of the Government of the United States, but we are stating to you exactly what the conditions are and how these people feel.

And I take it for granted that our Signal Corps must have undertaken to interfere with their customs, either officially or as individuals, and brought on this conflict.

So far, I do not understand that the Government of the United States has made or dares to attempt to make a change in any of the laws or customs of these people, and possibly for the very reasons I have given, for, as a fact, they still have slavery and harems there. I saw slaves myself—the first I ever saw, and the last, I hope.

The Sultan still has his harem, "which is a part of the religion of the Moros," as I was informed. We have had enough trouble trying to exterminate polygamy right here at our doors, but we will have a herculean task on our hands to try to exterminate it in the Philippine Islands, 10,000 miles away, among Mohammedans.

The Sultan of Sulu and his distinguished cabinet are now paid a large sum of money annually by the United States to run the

government in local matters, and in their way, practically, in the Philippine Islands. He still believes he is supreme in authority. An example going to show this has recently occurred. This Sultan has sold one of the islands in the Philippine Islands within the jurisdiction of the United States for $25,000 and put the money in his pocket, and he now, as it were, shakes his fist in the face of the authorities of the United States in the Philippines, in this the exercise of one of his supposed "sovereign rights." He communicated this transaction to Governor Taft a short while before I left Manila, defying Governor Taft and denying his right to interfere. Governor Taft said to me he intended to "move on the Sultan in the course of the next six months," but he has not done so, nor has his successor, Vice-Governor Wright, although he is a man of ability and great courage, who served four years as a gallant soldier in the Confederate Army.

We are confronted, then, as to this particular portion of the island with three propositions: First, to give or not to give the people in the Philippine Islands ultimately their independence, in which event we will leave behind us these islands, their inhabitants, and their customs; second, hold to them permanently and continue these un-American and disgraceful customs; or, third, we must hold to them and exterminate their customs, wading through a bloody conflict to do it, at the expense of many lives and much treasure.

Some of the customs of the Moros, you can see, are a disgrace to American society and to our flag which floats there to-day.

If the inhabitants of the Philippine Islands were given their independence, they would then be ruled by brown men, to whom these customs are not so obnoxious; indeed, they are what can be termed "brown man's customs."

If given their independence, they can continue or discontinue them, just as they please. Of course, if we give them their independence we leave them and their customs on the other side of the world, where I hope they will stay and where they want to stay, with the Americans on this side.

Mr. PARKER. Does the gentleman think that that circumstance—the attack of the Moros on our Signal Corps—that these people are entitled to a free and independent government?

Mr. GAINES of Tennessee. Let me state to the gentleman that when you speak of the Filipinos as Moros you insult the Filipinos. These people living in Mindanao are Mohammedans. They are perfectly willing——

Mr. PARKER. Will the gentleman permit me to ask whether he makes the same distinction?

Mr. GAINES of Tennessee. Why, sir, I am compelled to make it. Every historian——

Mr. PARKER. Then I understand the gentleman to concede that universal free government ought not to be introduced into the Philippines?

Mr. GAINES of Tennessee. I do not contend that we should now give the inhabitants of the Philippines their independence; but I do say that we should now promise to do so, and keep that promise. If we do that, I believe we will have no further bloodshed in these islands—by the people, at least, as a people. Of course, there may be, as always follows in every country after a war, more or less wrongdoing by individuals. And I further say that if in the beginning Congress had said to these people in the Philippines that ultimately we intend to give you your independence, there would not have been any conflict between the inhabitants there and the American authorities.

These interruptions have diverted and delayed me in discussing another subject of a kindred nature.

It will be remembered that the Republican party in the campaign of 1900 said to the Democrats: "You should cease talking about the Constitution; you should cease talking about the Declaration of Independence; you should cease talking about the government by the consent of the governed; you should cease talking about the spirit of 1776; you should cease saying the Constitution follows the flag; you should not indorse the Declaration of Independence and the Constitution in your party platform; you should cease making speeches in Congress and on the hustings on these subjects, because," they said, "you incite the Filipinos to fight our troops in the Philippine Islands that much harder."

The Democrats were advised by the Republicans that we should abandon the discussion of the Declaration of Independence and the Constitution, because even talking about them perpetuated war in the Philippine Islands, they said.

But lo and behold, Mr. Chairman, to my great astonishment and amazement, when I arrived in the Philippine Islands last summer what did I discover? An old and distinguished Army officer of the United States, with his face red with indignation and fire flashing from his eyes, said to me: "GAINES, now what do you suppose? This damned government up here at Manila is distributing the Declaration of Independence and Constitution all over these islands, printed in English and Spanish—a damned incendiary document, sir."

Surprised that the Republicans should have sent such a document to the Philippine Islands, I said, "Are you joking?" "No, sir," the veteran sharply replied; "I have some now up yonder at my office." I said, "Will you not go with me now and get a copy?" "No," he replied; "I must go off on the boat now immediately," which he did, "but I will mail you a copy when I return if you want it." He did so, and here is the copy. You can see it, gentlemen, for yourselves. It was mailed under his frank, and I have the cover here with his name and high rank on it. I received it at Manila, and immediately wrote on it with my pen these letters, "D. M., Inc. D. C.—damned incendiary document," so that I could not possibly fail to recollect the exact language of the grizzly veteran.

On returning to the boat I informed several of my colleagues of this conversation, and they said, "Why, GAINES, you are mistaken about that. Your informant meant that the Filipino government had printed and distributed the document," and I could not convince them that the veteran meant the United States Government operating from Manila had distributed this document instead of the Filipino government. But I was right.

On arriving at Manila I received from the old veteran a copy of this "damned incendiary document," which I hold in my hands, and at the library in Manila I procured several others and was officially informed by the librarian in person and by written statements that "on August 18, 1899, the War Department at Washington published and had sent 15,000 copies of the Constitution, which were received at Manila by General Otis October 26, 1899."

The librarian further stated they were distributed in the Philippine Islands. Mr. Ferguson, secretary of the Taft Commission, said to me that "this was the first official information that these people had of our institutions." Many articles were written on this document as a basis—one in particular by Buencamino, now on the civil-service board. It was also, I think, printed in Tagalog. Thousands were sent all over the island.

The title-page of this copy reads as follows:

Estados Unidos de America con los articulos en adición y enmyenda a la misma.

Division de aduanas y negocios insulares, Departamento de Guerra, agosto de 1899.

This was printed at the "Government Printing Office at Washington, August, 1899," and was received in "Manila August 26, 1899."

There were 50,000 copies of the document containing the Declaration and Constitution combined with a brief history of the United States, which this veteran called "A damned incendiary document," that were ordered by General MacArthur August 15, 1900, sent to the Philippine Islands, and received at Manila May 15, 1901. General MacArthur got in a hurry, cabled for them, and repeated his cable urging that this document be sent to Manila as quickly as possible. The librarian gave me a written statement showing all these facts.

In this "damned incendiary document" there is a brief history of the United States, and amongst other things is shown that we have acquired territory for the purpose of making "future States for the American Union," and had done so. Not a word is said that we had acquired the Philippines or Porto Rico to hold them as colonies and the inhabitants thereof as subjects. That is kept in the dark.

So it turned out that my colleagues were wrong in their construction of the old veteran's language, and instead of the "damned Government up here at Manila" being the "Filipino government" that was distributing this document, he meant the American Government was the "damned Government" doing the work.

Mr. SIBLEY. Mr. Chairman, I trust we understood that my friend is not using this language? That this is not language of his own initiating, but that it is a quotation.

Mr. GAINES of Tennessee. Of course, everybody who knows me knows that.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SULZER. I yield ten minutes more to the gentleman from Tennessee.

Mr. GAINES of Tennessee. The title-page of this "damned incendiary document" reads as follows:

History of the United States of America. Constitution of the United States of America, with amendments. Declaration of Independence. Map of the United States of America. Published under the direction of Arthur MacArthur, major-general, U. S. A., military governor of the Philippine Islands.

Historia de los Estados Unidos de América. Constitución de los Estados Unidos de América, con enmiendas. Declaración de Independencia. Mapa de los Estados Unidos de América. Publicado bajo la dirección de Arthur MacArthur, mayor-general del ejército de los E. U., gobernador-general de las Islas Filipinas.

Strange, indeed, that the War Department at Washington should have sent these documents in 1899 (and ordered more in 1900) to these islands if speeches based upon the Constitution and the Declaration of the United States incited the Filipinos to more

furiously fight our American soldiers. It seems to me that natives reading the Declaration and the Constitution in their native dialect would be more easily and indelibly impressed with the inalienable rights of mankind than by a Democratic speech based upon the Constitution and Declaration, or the Democratic platform indorsing the principles of the Declaration and the Constitution.

I confess I felt indignant, and do yet, that the Administration and its party and party press should have denounced the Democratic party for standing by the Constitution and Declaration of Independence under these circumstances, while war was going on in the Philippine Islands, and at the same time the Administration, the great War Department and Army officials, should be secretly, so far as I know, for I never heard of these documents until I arrived in the Philippine Islands, be distributing these "damned incendiary documents," the very thing that better teaches the human mind than any other document short of the Bible the natural rights of man, whether he is a white or a brown human being.

So we see, Mr. Chairman, beyond any doubt, while the Democrats were being traduced for standing by the Constitution, the bulwark of American liberty; for standing by the Declaration of Independence, our political bible; for exploiting all these sacred instruments teach, that the Democrats might more surely and better preserve the purity, integrity, and life of our own Republic; while we were being denounced as traitors and as inciting the people in the Philippine Islands to execute with renewed vigor their war against American arms, the Republican Administration, through its great war machinery, was at the same time scattering broadcast over the Philippine Islands, under military orders, thousands of copies of the American Constitution and Declaration of Independence, instruments, if you please, which have inspired more human hearts to fight for life, liberty, and the pursuit of happiness than any other political instrument ever issued by the pen of man.

Under such circumstances I say that the deportment of the Administration and its party associates if not cowardly, was at least sneaking, unjust, and unfair, not only to the Democratic members of Congress, brother lawmakers of the Republicans, but to the 6,000,000 voters of this Republic who in the face of such arraignment and vituperation by their votes stood, not only by the standard bearer of the Democratic party in 1900, but by our immortal Constitution, the Declaration of Independence, and the traditions of our Republic.

To show you that the love of liberty, the love of independence, the love of country, and that the Filipino loves all these, pardon me for alluding to some experiences that I had while in the Philippine Islands that are particularly pertinent to the question I am now discussing.

I was in the city of Manila looking through an American book store to get some home papers and reading matter, and I saw two boyish-looking Filipinos in their clean white suits standing side by side engaged in reading a paper—The Commoner—and it happened that I was reading the same paper, having read previously many others.

Surprised, of course, at the Filipino reading this paper, and really more surprised to see it in the Philippines at all, I immediately turned and asked them, "What are you doing, reading that kind of a paper?" to which one of them replied in English, "We like to read it. It is a good paper; it teaches a good doctrine. We take it at the club up here." I asked him what club, and he said, "The Filipino Club." He pointed to an editorial comment in the Commoner of August 23, 1901, entitled "A Forgotten Truth," based on a quotation from a speech of Congressman McKinley at Shawneetown, Ill. The Filipino said, "Here, read this; what President McKinley said once." I did read it, as follows:

> Human rights and constitutional privileges must not be forgotten in our race for wealth, for commercial supremacy. The government of the people must be by the people, and not by a few of the people. It must be by the consent of the governed and of all the governed. Power, it must not be forgotten, which is secured by wrong or usurpation, is soon dethroned. We have no right in law or morals to usurp that which belongs to another, whether it be property or power.

I then asked the young man if he had read the American Constitution or Declaration. "Oh, yes," he said, "we read that in magazines and in American school histories which we have up at the club, and in newspapers."

The proprietor of the news stand said: "We sell a great many magazines from America and school histories containing the Declaration and Constitution to the Filipinos, and the Filipino Club up here subscribes for them regularly. We sold them a copy of Barnes's History of the United States, which contains the Constitution and Declaration," handing me a copy, which is a text-book in the American schools in the Philippines, I was informed. The Filipino took the book from my hands and turned to the Declaration and Constitution and said: "This is what the Filipinos like," pointing out and marking with a pencil this: "That to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed." He wrote his name and age, 22, in the history in English, as did his one-eyed, pock-marked Filipino companion, who could write, but could not speak English.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GAINES of Tennessee. Will the gentleman from New York yield me a little more time?

Mr. SULZER. My time has expired.

Mr. HULL. I will yield the gentleman more time. How much time do you want? I do not like to see a gentleman cut right off in the middle of a speech of this kind.

Mr. GAINES of Tennessee. Only a few minutes more, and I can finish.

Mr. HULL. Well, I will yield the gentleman ten minutes.

Mr. GAINES of Tennessee. I thank my Republican friend very much.

These boys walked away with the bookseller, but in a moment the latter returned and said to me: "They want to know your name; but I did not give it to them. They asked me if your name was Mr. WEEKS." The gentleman from Michigan [Mr. WEEKS] had a few days before, through the newspapers, stated that the Filipinos were savages with a little veneer of civilization, and the Filipinos did not like it much, and hence they were particularly curious to see the gentleman from Michigan [Mr. WEEKS]. I said to the bookseller, "Tell them my name if you choose," which he did not do. And I said, "Young men, my name is GAINES, a member of Congress from the United States, and I want to say to you here that I do not believe you Filipinos are a lot of savages, even if my friend WEEKS does say you are, with a little veneer of civilization. On the contrary, I think thousands of you Filipinos are capable of making your own laws, and I am in favor of giving you a chance to do it."

With this they seemed to be much pleased and turned and left the store, and the bookseller gave me the history from which these boys had read parts of the Constitution and Declaration of Independence, and with which you must see this horrible, wicked Filipino was familiar; not only so with this book, but familiar, and understandingly so, with the utterances of President McKinley, who at Shawneetown and in this House, if you please, denounced those who controlled people without the consent of that people, denounced criminal aggression and the destruction of human rights and constitutional privileges, which was being done, I believe, at this very time in the Philippines by American arms.

On another occasion at Santa Cruz I called at the residence of one of the leading Filipinos, a man of wealth, a farmer, who could speak some English, and I was informed by the soldier boy at whose request I called (and by one of my neighbors, an army official, before whom this farmer had taken the oath of allegiance) that he was one of the best men in the island. After a long conversation, in which he showed remarkable familiarity with the entire history of all the troubles his people had confronted, the history of the Americans, the American Constitution and laws, under which, by the way, he said, 'we could not have colonies,' I wound up the conversation by asking him, "How do you and the Filipinos feel over conditions here?" He hesitated a moment, his face grew pale, and with his voice quivering and low he said:

"We feel mighty bad. We are not Spanish citizens any more; we are not Filipino citizens; we are not American citizens. What are we?—no country, no flag, no nothing," turning his face at the same time toward the floor. I did not want to make or reopen any wounds during my stay in the Philippine Islands, which I would possibly have done if I had replied to his pathetic question, so I immediately said good night, and the soldier and myself left. The Filipino, picking up his lamp that illuminated his beautifully furnished parlor, walked with us down to the bottom of the long flight of steps, where he said, "Good night, gentlemen."

The soldier and I parted at the gate, and as I wandered along through the dark, in the quiet of the deserted streets, deeply touched by what the Filipino had said to me, I asked myself this question, "Is there any man, savage or civilized, in any country, who does not love his native land?" and thought of these words:

> Breathes there a man with soul so dead,
> Who never to himself hath said,
> This is my own, my native land?—

and I answered my question, at least to myself, satisfactorily—there is none; there should be none.

Now, Mr. Chairman, it is perfect folly for us to try to crush out of those people the natural spark of liberty which is in all their hearts. And certainly after they have read in the books that we have sent there, in the thousands of copies of the Constitution and of the Declaration of Independence, in the number of histories that we have sent there, and many that were there before we were there—the number of newspapers, and they have newspapers all over the island printed in their own dialect, in which all these matters are discussed—I want to say, Mr. Chairman, it

is utter folly on the part of the American Government to undertake to crush out that God-given love of liberty that lives and should live in the heart of every American and every man that lives under the American flag.

Mr. Chairman, I have thought it right to avail myself of this unexpected opportunity to address the committee on these important questions—to show them one of the things that has made it so hard for us to control the Filipino, and that is because he loves liberty and independence and wants Congress to give him this boon.

If Congress will act in the proper spirit, peace will come. If Congress had so acted in the past, peace would have come long before this. We ought to give them a government over there, and then as quickly as possible give them their independence, and say so now and then live up to this promise. [Applause.]

Hypocrisy of the Republican Party in its Attitude Toward the Trusts.

SPEECH

OF

HON. DUDLEY G. WOOTEN,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 21, 1902.

Having obtained unanimous consent of the House to submit certain remarks on the bill (H. R. 14947) to amend "An act to protect trade and commerce against unlawful restraints and monopolies," approved July 2, 1890—

Mr. WOOTEN said:

Mr. SPEAKER: This bill proposes to amend what is known as the Sherman anti-trust law so as to strengthen its provisions, enlarge its scope, make more certain its application, and adapt it more nearly to the corrupt devices and subtle methods of the modern corporate monopoly. Its main features consist in a better definition of trusts, monopolies, and combinations in restraint of trade and competition, more onerous penalties against such criminal conspiracies, and the prohibition, under severe punishment, of the transportation of all articles and commodities manufactured or controlled by trusts from one State or Territory to another, or to and from foreign countries.

It is intended to cure certain alleged defects in the existing statute and to destroy the power of the trusts by destroying their capacity to engage in interstate commerce. Nobody supposes that under the present organization of this House this measure will ever emerge from the Judiciary Committee, to which it was referred, or that the dominant majority which now controls Congress will ever seriously entertain any proposition to amplify or to strengthen and enforce the laws against those huge monoplies which it has fostered by its own policies and practices and to whose substantial aid it owes its elevation to power. Therefore all discussion of the subject here and at this time must be of a theoretical character and can be only valuable for its educational influence upon the country at large. Unfortunately, that is true of nearly every one of the great problems that demand solution at the hands of Congress, and for the solution of which the people of the United States are waiting with an anxiety that will sooner or later assert itself in angry and emphatic condemnation of the party responsible for the delays and difficulties placed in the way of necessary and beneficent legislation.

It has now been twelve years since the so-called Sherman law against trusts was enacted. Its benefits, if any were ever contemplated by it, have not been realized. In fact, if we were to judge of its operation and influence by the practical results of these twelve years, the act should have been entitled "An act to encourage monopoly, to promote the organization of trusts, and to strengthen the power of corporate conspiracies in restraint of trade and competition." Whether due to the law or to its administration, those have been the abundant and alarming consequences of the country's experience during the period of its existence on the statute books.

In 1890, when this act was passed, the total capitalization represented by what are known as "trusts" in the United States did not reach $2,000,000,000; to-day they represent in bonds and stock over $10,000,000,000, exclusive of some 4,000 minor concerns engaged in various forms of combination to fix and control prices, exclusive of what are known as "natural monopolies," such as railroads, street railways, express, telegraph, gas, electric light, power, telephone, and other companies managing public utilities, and exclusive of the thousands of smaller firms, companies, and associations whose business methods have all the vicious features and seek all the unlawful ends that are avowedly and openly sought by the mammoth syndicates whose gigantic tyranny over commerce and industry has made their names familiar to every citizen of the Republic.

If the wealth wrapped up in all of these subsidiary enterprises which really constitute a part of the capitalized monopoly of the country was computed, it would add ten billions more of dollars to the ten billions actually recognized as being in the hands of the vast incorporations that are overshadowing every line of life and labor by their tremendous despotism. For instance, there are considerably more than a billion dollars invested in the street railways of the country, or represented therein by bonds and stocks.

The telegraph and telephone companies represent a half a billion more. The express companies and gas companies embrace as much capital as the street railways, and so on through all the departments of industry and every avenue of human employment. And, then, the great steam railroads of the United States represent an aggregate of $12,000,000,000 in stocks and bonds. Thus we have, either in the form of the actual trust combination or conspiracy, or in the form of practical monopoly and restraint of competition, a total capital, real and fictitious, and entering necessarily into the financial and economic life of the country, of $30,000,000,000, which is double the amount of all the money—gold, silver, and currency—in the whole world.

These figures seem incredible, and they are, in fact, beyond the capacity of man to comprehend as real, but they are based on the careful computations and calculations of the best statisticians of the times. They may serve to give some idea—though not a tangible conception—of the enormous accumulation of wealth and the amazing power of concentrated capital under the manipulations of shrewd, selfish, and unscrupulous men. The world has never known anything to compare with it. The fabulous wealth of oriental princes and ancient monarchs was pitiful in contrast with this immense and monumental aggregation of riches. Pliny and Suetonius, Gibbon and Merivale, in all their splendid and seductive pictures of Roman and Grecian luxury and magnificence, never dreamed of such limitless opportunities for the despotic profligacy and pomp of gold as are embodied in thirty billions of concentrated capital, organized into a perfect scheme of monopoly and privilege, protected by governmental patronage and immunity, and controlled by a few favorites of governmental bounty.

Is it to be wondered that the same consequences that have always and everywhere followed upon such conditions should now attend and threaten this régime of lawless wealth in our own Republic? Can any man say that plutocracy is a phantasm of political prejudice and a mere scarecrow of partisan rivalry, in view of the actual facts presented by these statistics? In every age and every clime such abnormal and irrational accumulations of riches and the power that riches bring, in the hands of a few men or of irresponsible corporations, have produced the same results—beggary, discontent, nonemployment of the masses, resentment against constituted authority, political corruption, maladministration of government, the growth of militarism as a conservative or a restraining force, imperial expansion as a vent for ambitious greed or a pretext for avaricious conquest, tyranny over conquered peoples and abuse of domestic rights and equality, lawlessness, rebellion, anarchy, and ruin.

These are the logical, the legitimate, the inevitable fruits of such a system, wherever inaugurated, however conducted, and whenever pursued to its perfection. This is the age-long and universal verdict of history; more than that, it is the just judgment of a righteous Providence upon an unjust, an unnatural, and an oppressive perversion of the normal functions of government and the rational relations of men in a free and enlightened society. I heard a gentleman here the other day seeking to justify the imperial policy of the Republican party in its dealings with the Philippine Islands, and to warrant the infamous system of colonial servitude sought to be imposed upon those alien races in their struggle for freedom, declare that this Government is doing these things in obedience to Divine guidance, that "We are being led on by the hand of an infinite God."

There seems to be no limit to the hypocrisy and the pietistic cant of the Republican party under its present infatuated love for imperial and commercial glory. It invades the sacred precincts of the grave and masquerades in the borrowed cerements of dead and buried Presidents, in order to conceal its iniquities and condone its perfidies. It converts every debate into an elegiac upon Lincoln and McKinley, at the same time violating the principles of the one and abandoning the policies of the other. Macaulay said that there was nothing more ridiculous than the British public in one of its periodical spasms of morality, and I can conceive of nothing more nauseating than the Republican party in one of its fantastical fits of hypocritical grief over some dead leader whose memory it seeks to prostitute for partisan ends, but whose genuine virtues it neither inherits nor imitates. But the height of

its canting pharisaism was reached by the gentleman from Illinois [Mr. REEVES] when he blasphemously sought to invoke the authority of God Almighty for the justification of Republican despotism and barbarity in the Philippines. I will readily admit that nothing short of Infinitude can comprehend the depth and desperation of Republican wickedness and nothing less than Divinity can estimate its crimes or forgive its career, but in no other sense can I imagine an infinite God as in any way cognizant of the Republican party.

This unprecedented and dangerous amassing of money and power in the hands of the corporations and syndicates as trust conspiracies has brought and can bring no result but disaster and destruction to our institutions, our happiness, and our integrity as a nation. We are being constantly reminded of the prosperity that attends such enormous commercial and industrial development, and the trust is said to be the evolution of the highest form of organized enterprise and trade ingenuity. That is the academic view, the view of the magnate in his private office, of the banker in his directors' meeting, of the college professor in his class room, of the political essayist in his cloister, of the railroad president and the shipowner in their luxurious travels and their *cunning* plans for greater power. But it is not the view of the political philosopher who has studied the canons of healthy national life, nor of the philanthrophist who loves his race, nor of the statesman who esteems the free and equal rights of all the people as the prime purpose of all organized governments. Nor is it the view of the toiling millions of men and women who seek livelihood and gather hope from honest labor and modest surroundings—that great majority of mankind, "the common people," whom Abraham Lincoln said the Lord must have loved so much because he made so many of them.

Freedom of trade, full and fair competition in business, equal opportunities to live and labor and grow prosperous, absolute impartiality of the Government in its relations to every citizen and to every interest in the community—in short, that political, social, and economic status so well summarized in the maxim of "equal rights to all and special privileges to none"—these are the just objects of good government honestly administered. They have been the immemorial doctrines of English and American law, canonized in the precedents of parliamentary and judicial decisions, sanctified by civil and political revolutions instigated and conducted to maintain them, and embedded in the whole fabric of our institutions, our history, and our jurisprudence. So long as these principles retain force and these traditions govern the American mind, the combination or conspiracy that seeks to destroy competition, to restrain trade, to raise or lower prices of products or labor without regard to the normal laws of supply and demand, will be denounced by public opinion, declared unlawful by the courts, and punished as criminal by the power of the Government. Whenever it is otherwise, and whenever any responsible political party attempts to deny or to nullify these doctrines, then we may accept it as certain that the time has come to change existing conditions and to repudiate the agencies that have brought them about.

I do not suppose that any member of this House will undertake to defend the trusts; certainly no political party in this country has had the hardihood to announce its advocacy of their organization, methods, and consequences. On the contrary, all sects and creeds of partisan influence are asserting hostility to them and claiming credit for having inaugurated the warfare against them. The Republican party, particularly, has been very noisy of late in proclaiming its opposition to these unlawful associations, and to listen to some of the things that are being said by the conventions, newspapers, and campaign orators of the party in power, one would imagine that it has never had any other mission but to break up the trusts, and that "the hand of an infinite God" was leading it surely to victory against these vast and despotic aggregations of moneyed might.

For the past two months conventions of Republican politicians in various sections of the country have boasted of the devotion of their party to the rights of the people against the exactions and burdens of the trusts, and have impudently asserted their purpose to prosecute and punish these unlawful conspiracies against trade. Cabinet officers have abandoned their posts of duty at the capital and traveled long distances to harrangue listening multitudes upon the virtues and vigor of the present Administration in its hostility to the corporate monopolies whose greed and tyranny are despoiling and degrading every resource and hope of honest industry and lawful aspiration. We are told that the Sherman antitrust act was the product of Republican providence and patriotism, framed by the wisdom and enforced by the courage of Republican statesmen, and that the people owe a debt of gratitude to the party that was the pioneer and is the representative of antitrust legislation and procedures.

A more shocking and shameful exhibition of falsehood, hypocrisy, and cowardice never confronted the world than the attitude of the Republican party toward the trusts for the past fifteen years, and its mendacity, deceit, and complaisance toward these criminal conspiracies are to-day one of the most astonishing and disgraceful symptoms of political corruption and decadence. There is not on record a single instance in which that party or its officials have instituted and conducted to successful results any case against the trusts. For twelve years this Sherman law has been in force, and yet not a monopoly has been suppressed, not a conspiracy has been broken up, not an offender has been punished.

The courts have time and again declared that the law is sufficient to accomplish the purposes of its enactment if honestly and vigorously administered. They have decided in several leading cases that the enforcement of this statute is wholly dependent upon the action of the Attorney-General of the United States, because private individuals can not originate and conduct prosecutions under it. The courts have even gone further and held that the statute is not necessary to the proper prosecution and punishment of these unlawful combinations, as the Federal courts, in the exercise of their general equity jurisdiction and power, can suppress these conspiracies against trade and competition upon the highest grounds of public policy and commercial morality, independent of express statutory authority.

If the law was weak or defective, it could long since have been amended and strengthened, but not a single effort has been made toward that end by the half dozen Republican Congresses assembled during the period of its existence. The history of that party has been a consistent record of thinly concealed friendship for the trusts and their representatives, of purposeless indifference to the repeated protests and petitions of the people who are being robbed and oppressed, and of persistent and perverse duplicity and cowardice in dealing with the whole subject.

I have here a carefully prepared statement of the various cases that have arisen under the Sherman antitrust act, which I desire to incorporate in these remarks. It is complete and accurate and presents a significant catalogue of inefficiency, stupidity, and official complicity with the trusts that can be explained on no other hypothesis than that the power of these great associations of wealth has paralyzed the Government and prostituted the Department of Justice. The following are the cases that have been instituted or decided since 1890, under the Sherman law:

Suits under the antitrust act of 1890 and suits in which the act has been cited or considered by the courts, chronologically arranged.

(1) United States *v.* Jellico Coal Company (43 F. R., 898; 45 F. R., 422). Suit under section 4 of act. Injunction issued. (Tennessee.)
(2) American Buscuit Company *v.* Klotz (44 F. R., 721). Petition for receiver. (Louisiana.)
(3) United States *v.* Greenhut (50 F. R., 469). Indictment under sections 1 and 2. Whisky trust. (Massachusetts.)
(4) In re Corning (51 F. R., 205). Indictment. Hearing on petition for removal. (Ohio.)
(5) In re Terrell (51 F. R., 213). Indictment. Petition for writ of habeas corpus. (New York.)
(6) Bishop *v.* American Preserves Company (51 F. R., 272), suit under section 7 of the act. (Illinois.)
(7) In re Greene (52 F. R., 104), indictment. Note Judge Jackson's opinion (Ohio.)
(8) United States *v.* Nelson (52 F. R., 646), indictment. (Minnesota.)
(9) United States *v.* Trans-Missouri Freight Association (53 F. R., 440; 58 F. R., 58; 166 U. S., 290), March, 1897. Note Judge Shiras's dissenting opinion in court of appeals decision and quoted with approval by Justice Peckham. (Kansas.)
(10) Blindell *v.* Hagan (54 F. R., 40), suit under section 4 can be brought only by United States. (Louisiana.)
(11) United States *v.* Workingmen's Council (54 F. R., 994; 57 F. R., 85); suit under section 4. (Louisiana.)
(12) Waterhouse *v.* Comer (55 F. R., 149), rule 12 of the Brotherhood of Locomotive Engineers declared unlawful. (Georgia.)
(13) United States *v.* Patterson (55 F. R., 605; 59 F. R., 280), note the epitome of brief, by Elihu Root. Indictment. (Massachusetts.)
(14) Dueber Company *v.* Howard Company (55 F. R., 851; 63 F. R., 637), suit under section 7. Note opinion of Judge Wallace. (New York.)
(15) United States *v.* Knight Company (60 F. R., 306; App. C., 934; 156 U. S., 1). In this suit the Government neglected to secure evidence of a restraint of interstate commerce, and consequently failed. Note in particular Justice Harlan's dissenting opinion. (Pennsylvania.)
(16) Farmers' L. & T. Co. *v.* N. P. R. R. Co. (60 F. R., 803), note Judge Jenkins's comments on the act. (Wisconsin.)
(17) Thomas *v.* Cincinnati Railway Company (62 F. R., 803), note Judge Taft's comments. (Ohio.)
(18) In re Grand Jury (62 F. R., 840), charge to grand jury by Judge Morrow. (California.)
(19) United States *vs.* Alger (62 F. R., 824), suit under section 4. (Indiana.)
(20) United States *vs.* Elliott (62 F. R., 801; 64 F. R., 27), suit under section 4. (Missouri.)
(21) United States *vs.* Debs (64 F. R., 210; 64 F. R., 724; 158 U. S., 564), in re Debs, suit under section 4 by direction of Attorney-General Olney. Note Judge Woods's opinion upon the scope of the antitrust act. The Supreme Court decision was based upon "broader ground" than the antitrust act. (Illinois.)
(22) Pidcock *vs.* Harrington et al. (64 F. R., 821), private suit under section 4 not authorized. (New York.)
(23) United States *vs.* Cassidy (67 F. R., 698), indictment. (California.)
(24) Lowenstein *vs.* Evans (69 F. R., 908), suit under section 7. (South Carolina.)
(25) Prescott, etc., *vs.* Atchison Railroad Company (73 F. R., 438), note Judge Lacombe's remarks on scope of act. (New York.)
(26) The Charles E. Wiswell case (74 F. R., 802; 86 F. R., 671). (New York.)
(27) United States *vs.* Joint Traffic Association (76 F. R., 895; 171 U. S., 505). The institution of this suit by Attorney-General Harmon was due to the persistent efforts of Hon. W. E. Chandler. See Senate Document No. 39, Fifty-fourth Congress. (New York.)
(28) Greer, Mills & Co. *vs.* Stoller et al. (77 F. R., 1, 1897).
(29) United States *vs.* Addyston Pipe and Steel Company (78 F. R., 712;

circuit court of appeals, 85 F. R., 271; United States Supreme Court decision December 4, 1899). Suit under section 4. Note the remarkable decision by Judge Taft of the circuit court of appeals stating the common-law doctrine.

(30) United States *vs.* Anderson et al., June 7, 1897. Circuit court of Missouri, and certified up from the circuit court of appeals. Anderson et al. *vs.* United States (171 U. S., 604, 1898). Suit under section 4.

(31) United States *v.* Hopkins (82 F. R., 529); Hopkins *v.* United States Supreme Court decision (171 U. S., 578). Suit under section 4.

(32) Minnesota Tribune Company *v.* Associated Press (83 F. R., 350, 1897). (See bottom of page 357.) (Minnesota.)

(33) United States *v.* Coal Dealers' Association (85 F. R., 252). Suit under section 4. This suit was instituted by Attorney-General McKenna, and, it is reported, only after grest pressure. (California.)

(34) Gulf Goast and Santa Fe Railway Company *v.* Miami Steamship Company (86 F. R., 407). Suit under section 4 by private person not authorized. (Texas.)

(35) Indiana Express Company *v.* United States Express Company et al. (88 F. R., 659). Suit under section 4 by private person not authorized. (Indiana.)

(36) Sun Publishing Company *v.* Associated Press. Suit under section 7 commenced December 8, 1897. Bill in equity filed at the same time. (New York.)

(37) United States *v.* Officers of Knights of Labor, etc. (1898). Indictment. Demurrer overruled on authority of certain common-law decisions. (District of Columbia.)

(38) United States *v.* Coal Companies. Fifteen coal companies indicted at Cincinnati, Ohio, February 11, 1899. (Ohio.)

(39) Lowry et al. *v.* Tile, Grate, and Mantel Association of California. (F. R., February 20, 1900.) Suit under section 7. Demurrer overruled. (California.)

(40) Inter Ocean Publishing Company *v.* Associated Press. Before the circuit court of the State of Illinois. Judge Waterman in his opinion declared certain by-laws of the Associated Press to be in restraint of trade and violating the antitrust act. See the decision of the supreme court of Illinois, published in the Inter Ocean February 20, 1900, in which it was held that certain by-laws of the Associated Press were in restraint of trade. (Illinois).

It appears that Attorney-General Miller instituted four suits under section 4 of the act; Attorneys-General Olney and Harmon commenced six suits, three of them being against workingmen on the occasion of the Chicago strike, and one as the result of the persistent efforts of Senator Chandler (see Senate Document No. 39, Fifty-fourth Congress). As far as can be learned, Attorney-General McKenna directed two suits to be brought—United States *v.* Anderson et al. and the case of United States *v.* Coal Dealers' Association—and Attorney-General Griggs has not directed the institution of a single suit.

Six or seven suits have been commenced under section 7 of the act, and there have been indictments returned by at least ten separate grand juries. Laboring men have been indicted in at least five cases; coal companies in three cases, and a cash-register combine was prosecuted in the district of Massachusetts.

It is a noteworthy fact that United States District Attorney MacFarlane testified before the Senate Committee on Interstate Commerce, December, 1896, regarding the difficulty he encountered in finding judges who were not disqualified for trying the case of The United States *v.* The Joint Traffic Association. Of the eight Federal judges, circuit and district, in the jurisdiction where the suit was brought, only one, Judge Wheeler, was found qualified.

In the fall of 1901 certain parties were indicted in Mississippi for combining and conspiring to monopolize interstate trade in cotton-seed oil.

An attempt was made in the spring of 1902, in Louisiana, to criminally prosecute the beef trust, as shown by the following telegram to the Washington Times:

BEEF TRUST WINS—GRAND JURY DISMISSES GOVERNMENT SUIT IN NEW ORLEANS.

NEW ORLEANS, *June 11, 1902.*

The United States Government's suit against the beef trust here was practically abandoned to-day and the grand jury dismissed. The failure was brought about by the refusal of the agents of the trust to answer for fear of incriminating themselves.

Judge Parlange decided that they might be sent down for contempt. Refusing to answer the questions proposed, but armed with the habeas corpus and the decision of the United States court in Mississippi in the similar cotton-seed oil case, they persisted in their refusal, when the case was abandoned.

The Department at Washington held that it was better policy to allow the proceedings now under way at Chicago to culminate before showing its hands at New Orleans.

Under date of June 20, 1902, it was announced that the Federal grand jury at Atlanta, Ga., had returned a joint indictment against certain railroad corporations and individuals for violating the Federal antitrust law. The railroads indicted are the Southern Railway, Seaboard Air Line, Atlanta and West Point, Western and Atlantic, and Georgia Railroad and Banking Company. The individuals are Second Vice-President W. W. Finley and General Freight Agent E. A. Neal, of the Southern Railway; President and General Manager Charles A. Wickersham and Traffic Manager R. E. Lutz, of the Atlanta and West Point; Traffic Manager H. F. Smith and Division Freight Agent J. A. Sams, of the Western and Atlantic; R. 1. Cheatham, acting general freight agent of the Seaboard Air Line; S. E. Magill and E. O. Pritchard, of the Georgia Railway, and S. F. Parrott, chairman of the Southeastern Freight Association.

On March 10, 1902, a suit under section 4 of the act was commenced in Minnesota entitled "United States *v.* The Northern Securities Company, the Great Northern Railway Company, the Northern Pacific Railway Company, et al."

On May 10, 1902, was filed in Chicago, Ill., the suit entitled "The United States *v.* Swift & Co. and others."

The investigation of the foregoing cases discloses a remarkable state of affairs. In none of the cases was any practical remedy afforded against the criminal defendants—the trust monopolies attempted to be suppressed and punished—although the opinions of the judges in nearly every case pointed out clearly the proper procedure, called attention to the failure of the Government through its prosecuting officers to present the law and facts as could have been done, and plainly intimated in several instances the apparent indifference of the Department of Justice to its duties and rights in the premises. No one can read the history of these cases, especially the more important decisions, without coming to the conclusion that the Government did not institute the suits in good faith, did not prosecute them with vigor or intelligence, and in fact never intended to do more than appease public sentiment by a mere collusive litigation and a sham display of official zeal. That has been the record in the past, and we have no reason to believe that it will be better in the future, but quite the contrary, as I will show later on by the facts as they have transpired in the last nine months.

It is also a notable and nauseating feature of this judicial history that not one of the Attorneys-General has seemed in the slightest degree to feel his responsibility or to appreciate his duty to the people and to the laws he was sworn to enforce. And why should we expect it, when we consider the personal and professional relations of the Attorneys-General who have been charged with the enforcement of this law? The leopard will not change his spots, nor can a corporation lawyer come fresh from his lifelong devotion to a class of criminal clients and be expected to use his official power in the prosecution of those to whom he owes his professional success and distinction and to whose employment he intends to return as soon as his brief official life has ended. It is not necessary to believe that the heads of our Department of Justice were purposely selected because of their friendliness to the syndicates and trusts, although every circumstance and the uniform custom would seem to conclusively warrant that belief.

The stubborn and suggestive fact remains to be accounted for that for the past twelve or fifteen years, with but one or two exceptions, the Attorneys-General of the United States have been appointed from the ranks of the corporation counsel of the country; that they have been men whose whole experience, training, mental bias, professional prejudices, and judicial temperament have been acquired and molded in the school of the trusts, syndicates, and corporate monopolies, and that in nearly every instance they have gone immediately back to their corporation clients as soon as they doffed the gown of office. No man can put off and on at will the garment of his intellectual and moral habitudes, and if these men were not selected for the purpose of serving and protecting the trusts, they were chosen in plain and flagrant violation of the common rules of decency and fairness and the customary canons of prudence and consistency.

Attorney-General Griggs was known to be the counsel for one of the worst trusts in the country at the time he was appointed. He came from the State that has acquired an infamous identity with every form of corrupt and lawless monopoly; and it is also known that his selection was due to the influence of Vice-President Hobart, who acted, even after his elevation to the Vice-Presidency, as one of the three arbitrators of the Joint Traffic Association, which was declared to be an illegal and criminal conspiracy against trade by the Supreme Court of the United States and dissolved for that reason. In a hearing before the Interstate Commerce Commission it was made the subject of a severe denunciation by one of that Commission that the Vice-President of the United States should have maintained that compromising position during his incumbency of the next to the highest office in the Government. He it was who secured Griggs's appointment, and the selection justified the partiality of the trusts for their own lawyers. During his entire official term Attorney-General Griggs never instituted or authorized a single prosecution against the trusts, although it was a period of the most shameless activity and exploitation by the great corporations organized in his own State and under his very eyes. And he had hardly stepped out of the Department of Justice to give place to the present Attorney-General, another corporation lawyer, before he appeared in court as the counsel for the trusts.

The sovereign State of Minnesota, alarmed and oppressed by one of the monster railroad combinations of the age, made a motion in the Supreme Court of the United States for leave to file a bill in equity to enjoin and dissolve that syndicate, and the State of Washington did likewise. The late Attorney-General at once appeared as attorney for the defendant criminals and resisted these motions filed, not by discontented individuals, but by sovereign Commonwealths in the Union, seeking to protect their people and trade against disastrous monopolies. A little later in this year, responding to the universal clamor of the country and to the necessities of an approaching Congressional campaign, the present Attorney-General instituted a suit against the Northern Securities Company, and at once the late Attorney-General Griggs appeared at the bar of the court and filed the answer and defense of the same infamous syndicate that had defied the law during his own administration of the office, but which he had generously spared in order to profitably serve.

These are damaging facts that can not be wiped out, and they furnish a chapter of official servility to corporate power and a drama of Republican hypocrisy that give the lie to all the pretended zeal of the recent campaign crusade against one or two of the trusts. The record of the present Attorney-General is not less reprehensible, both for his antecedent relations and for his official partiality to his former clients and friends. He went directly from the employ of the armor-plate trust and the Carnegie Steel Company into the Department of Justice. He has persistently refused to recognize the notorious criminality of these combinations and their allied interests, and has treated with scorn and contemptuous indifference the repeated petitions of those who have sought to enlist his action against well-known violators of the statutes and of the plain principles of public policy and commercial justice.

His conduct has been what might have been expected from his former associations, and no doubt his future career will parallel that of his predecessor in a ready return to the service of those whom he now patronizes and protects. The history of his indifference and neglect to perform the sworn duties of his office will more clearly appear from the documents that I shall submit with these remarks and which abundantly establish the duplicity and deceit of the present Administration's attitude toward the real iniquity of the trusts.

It may be insisted that the conduct of the Attorney-General's office under Democratic rule from 1893 to 1897 was not different to that of the Republican party under Harrison, McKinley, and Roosevelt. That is unfortunately true to a certain degree and with certain qualifications. I do not recognize Democratic responsibility for the second Cleveland Administration, beyond the fact that the party must be held accountable for its own mistake in elevating to place and power a man who surrendered all its principles, prostituted all its policies, and signalized his term of office by destroying its organization, disgracing its pledges, debauching its doctrines, and enthroning in its councils the creed of plutocratic privilege in place of the immemorial faith of Democratic equality and popular rights.

And I may be permitted to say that a reorganization of the Democratic party under the auspices or the influence of the men who dishonored its history and disrupted its integrity during that period will only insure the continued inefficiency of its efforts and the gradual destruction of its hold upon the confidence and support of the great masses of the American people. It is a fact that should be considered by all who advocate or tolerate the proposition of restoring to positions of prominence and power in Democratic councils the men who controlled its official life in the second Cleveland Administration, that whatever of disaster and disintegration has come about in the later career of the Democratic party is directly due to Clevelandism and the Cleveland policies.

We have heard a great deal about "Bryanism" and its baleful influence upon old-time Democracy. Men are continually decrying the effects that are supposed to have resulted from the controlling power of the great Nebraskan's genius and eloquence during the last two campaigns, and we are asked to believe that his prominence in Democratic affairs has been synonymous and coextensive with Democratic defeat. Those who heed such statements and lend credence to such arguments must be strangely oblivious to the actual facts of political history in this country for the past ten years. Let me remind them of a few significant transactions in Democratic party experience in recent times.

It is not probable and perhaps not desirable that Mr. Bryan should again lead the Democratic party in the next national campaign, but it is certainly not possible and would be grossly inconsistent if not criminal for the party to submit itself to the leadership and control of Mr. Cleveland, or any of those who stand for the Clevelandism of 1893 to 1897. I assert it as a fact not susceptible of dispute that the first symptoms of Democratic disintegration and weakness arose as the direct result of Mr. Cleveland's apostasy in 1893 and 1894. The party was disrupted, defeated, and humiliated by him and his coadjutors two years before Mr. Bryan was heard of or thought of as a Presidential candidate or a potential factor in its counsels.

In 1892, despite the fact that there were five opposing tickets in the field, representing every phase of political and social opinion, the Democracy swept into power by immense majorities, elected a President and both Houses of Congress, and for the first time in thirty years was in complete control of the Federal Government. No party ever came into place under more favorable auspices or with greater enthusiasm. But in two years the conduct of the President and his chief advisers had alienated the Democratic support of Congress, disgusted the oldest and wisest leaders of the party, fomented irreconcilable strife inside the party organization, and fanned into flame an opposing public sentiment that split the democracy in twain two years later, and drove it from power under the most disastrous circumstances and at a time fatal to the fortunes of the Republic.

It is doubtful if any set of men ever accomplished more of political ruin and national injury than did the Cleveland régime in the short space of two years. To that period of party disaffection and disloyalty we owe all the misfortunes and maladministration of Republican domination since 1896. To it we owe the supremacy in subsequent years of imperialism, plutocracy, militarism, the sinister creed of colonialism, and the budding heresies of monarchical and aristocratic prerogatives in official life.

In 1894 New York went Republican by an overwhelming majority against the man who now aspires to an unnatural alliance with Grover Cleveland in the attempt to rehabilitate the party they helped to wreck. New Jersey, Maryland, and West Virginia joined the column of Democratic dissent and Republican triumph; in the Northwest those who had coalesced with the Cleveland policies—Vilas, Dickinson, and that coterie of Administration supporters—were repudiated, and the Fifty-fourth Congress was elected with a Republican majority of 144 in the House, in contrast with a Democratic majority of 92 in the Fifty-third Congress, and an exact reversal of majorities in the Senate. In my own State, the impregnable stronghold of Democracy for more than fifty years, a Democratic governor was only elected by the enforced aid of negro votes, and in his own county, the chief commercial center and the banner Democratic county of the State, he was defeated by the Populist candidate.

That was the result of two years of Clevelandism, two years before the despised Nebraskan assumed the leadership of the party. With this universal demoralization and dismay in Democratic ranks, with a divided party and an intestine faction giving open aid and encouragement to the opposition, with every trust, corporation, bank, metropolitan newspaper, academic propaganda, and literary bureau in the Union arrayed against him, William J. Bryan polled the largest vote for the Presidency any man had ever polled to be defeated—and no honest man will ever believe that he was honestly defeated—in the memorable campaign of 1896. When I hear men decry and ridicule "Bryanism," and even some Democrats join in the belittling scandal, I blush for their ignorance of the actual facts of political history and their incapacity to give just honor to one of the most heroic and historic figures in the annals of that age-long struggle for equality of citizenship and the rights of man to which the Democratic party of this Union is pledged by a hundred years of incessant labor and loyal devotion.

So that on the whole I am disposed to regard the second Cleveland Administration as an interregnum in Democratic history or as a connecting link in Republican evolution. But this much may and ought to be said in excuse or explanation of the failure of the Department of Justice to prosecute the trusts at that time. It was an experimental stage in the development of these combinations and of the legislation intended to suppress them. They had not assumed such proportions nor challenged such attention as they have done in later years.

At that period the several States were seeking to solve the problem by statutes directed against these conspiracies, and the country was just beginning to understand something of the vast and increasing evils of this systematic interference with the commerce, industry, and prosperity of the whole Union. It was probably thought that the States might deal with the question satisfactorily and successfully, and hence the Federal authorities were perhaps warranted in waiting the results of State action. But it can not be denied that the Attorney-Generals of that time were recruited from the same class of corporation counsel that have had a monopoly on the position for so long that it would be a novelty to find in that office a man who was the attorney of the people of the United States and not an apologist and advocate of the trusts.

But the growth and power of corporate monopoly took on such decided and dangerous aspects after the election of the Republican candidates in 1896 that the entire country was aroused to the necessity of investigating its methods and restraining its operations. Unprecedented activity and arrogant assertion on the part of the trusts marked the years 1898 and 1899, as their open insolence and defiant tyranny have signalized the Republican victory of 1900. The managers of those associated industrial and commercial robberies seem to well understand that they may expect only sympathy and toleration from the party whose favor they have purchased by campaign contributions and from which they have taken hostages of immunity by every device of political corruption.

So widespread and earnest became the interest and alarm excited by the limitless despotism of the trust conspiracies that a nonpartisan organization, so called, the Chicago Civic Federation, called a national conference on trusts at Chicago in September, 1899, which was largely attended by delegates from the several States, by college professors, political essayists, labor and commercial orders, public men, and a few farmers. It was a unique assembly, and its proceedings were interesting if not practically productive of good. The most noticeable feature of the discussions was the almost uniform hostility of the academic and college class of thinkers to any attempt to suppress or control the trusts.

These learned gentlemen evinced that same unfriendly spirit

toward the rights of the people and the reforms that seek popular relief that has always characterized the scholastic element in all ages and everywhere. History demonstrates nothing more conclusively than that the academic spirit is a constant factor of opposition and reluctance in the great movements for political, social, and economic good. It imagines that it has a monopoly of wisdom, a trust on knowledge, and a close corporation of patriotism and virtue. The last man on earth to extend sympathy or aid to any feasible movement in the interest of the masses and the amelioration of commercial and industrial conditions is the average college professor, especially if he be that mysterious philanthropist—a political economist or a student of sociology.

The historic attitude—more emphatic to-day and in this country than ever before or anywhere else—of the scholastic segment of our population is one of dogmatic and doctrinal indifference to the wrongs of the masses of the people and a servile sycophancy toward the ruling forces of wealth and privilege. I do not believe that a more dangerous and insidious form of the plutocratic and monopolistic influence exists in this country than is to be found in our leading colleges and universities, particularly those under private control. By degrees they have been subsidized and brought into service by the great trust magnates who have with such apparent liberality and generosity endowed them as seminaries of corporation ideas and centers of the moneyed conception of culture and civilization.

It is now the fashion for every great multimillionaire to found a college or patronize a university, both as a contribution to the conscience fund and as a means of controlling what are called the "leaders of thought" and the exponents of scholastic statesmanship. The result is that every one of the old and influential seats of learning is to-day the pliant tool and serviceable propaganda of the plutocratic and imperialistic theory of government and politics. To this may be added the tremendous power of the metropolitan press and the select circle of literary periodicals, of which there is not one that does not cater to the interests and propagate the influence of the trusts, the corporations, and the mercenary instincts of Republican policy.

These combined forces made themselves felt at the Chicago conference of 1899, with the result that the only practical achievement of that meeting was the creation, on the outside, of what is to-day in this country the only active and organized force in opposition to the growth and despotism of commercial and industrial trusts. The American Antitrust League was conceived and put in operation at that meeting. It has been and is now chiefly maintained and conducted by the representatives of the great labor unions and working classes of the Republic—the men who do the work and bear the burdens of our economic and industrial system, who understand from practical experience and daily observation the real effects of corporate combinations in restraint of trade, labor, and honest competition, and who are themselves the conspicuous victims of this lawless and insolent scheme of monopoly and greed.

It was my pleasure and privilege to have participated in the organization of the American Antitrust League and to have been honored by election to its first executive committee. I regret not to have been able to contribute more to its success and efforts in behalf of law, justice, and equality, and I am therefore only too glad of the opportunity here and now to exhibit something of the great work this association of humble citizens and toiling wage-earners are doing and trying to do toward enforcing the laws of the land against those giant commercial and industrial conspiracies that find their first and most helpless prey in the laboring men of the country.

I also feel it my duty and my privilege to show by the written record that these people have been treated with contempt, indifference, and actual hostility by the President and the Department of Justice when they have presented to these Republican officials incontestable proofs of the present and past operation of the most flagrant trust criminals under the Sherman Act and under the plain principles of equity jurisdiction over immoral contracts and conspiracies in contravention of public policy. The record is one of consistent and deliberate contempt for the law on the part of the Republican Administration, and demonstrates the hypocrisy and perfidy of that party in its professed desire to suppress and punish the trusts.

To begin with the case as it was instituted by the American Antitrust League, I quote from the Antitrust Bulletin, published by the League in this city, in the issue for August, 1901, as follows:

At a meeting of Local League No. 1 of the American Antitrust League, held at Washington, D. C., August 3, 1901, the following resolution was unanimously adopted:

"*Resolved*, That this league appoint a committee to act in cooperation with similar committees which may be appointed by other organizations for the purpose of bringing about the civil and criminal prosecution of the United States Steel Corporation and other trusts by the Attorney-General of the United States and the attorneys-general of the various States, for violation of the antitrust laws of the United States and of the several States."

The following gentlemen were appointed a committee to take charge of the matter on behalf of the league: H. B. Martin, C. T. Bride, C. F. Sudwarth, H. J. Schulteis, Capt. J. A. Collins.

On Thursday evening, August 8, 1901, the matter was brought to the attention of District Assembly 66, Knights of Labor, Washington, D. C., by the delegates of Local Assembly 2672, and the same resolution was unanimously adopted by District Assembly 66, Knights of Labor, and the following gentlemen appointed to represent District Assembly 66 on the joint committee: Thomas P. O'Dea, William L. Dewart, John T. Doyle, J. F. O'Meara, Thomas Sheehan.

The joint committee met on Saturday evening, August 10, 1901, at 1229 Pennsylvania avenue, and elected H. B. Martin chairman and William L. Dewart secretary of the joint committee. The chairman and secretary were instructed to send out the following letter, which we herewith reprint.

Pursuant to this action the committee thus appointed addressed to the Attorney-General this letter, which was followed by his reply, both of which were published in the papers at the time:

[From Washington Times, August 20, 1901.]

LETTER OF THE JOINT COMMITTEE—ATTORNEY-GENERAL KNOX ASKED FOR INFORMATION REGARDING THE TRUSTS.

At a joint meeting of the committees representing the American Antitrust League and of District Assembly No. 66, Knights of Labor, held last night, the chairman and secretary were instructed to address the following communication to Philander C. Knox, Attorney-General of the United States:

JOINT COMMITTEE AMERICAN ANTITRUST LEAGUE
AND DISTRICT ASSEMBLY NO. 66, KNIGHTS OF LABOR,
FOR THE CIVIL AND CRIMINAL PROSECUTION OF
THE UNITED STATES STEEL TRUST AND OTHERS,
Washington, D. C., August 19, 1901.

Hon. P. C. KNOX, *Attorney-General United States.*

SIR: We have the honor to request that you afford us all the information that you are possessed of or can obtain concerning an agreement or agreements made between the constituent companies and individuals who organized the United States Steel Corporation, commonly known as the Steel Trust.

The trust or syndicate agreement which we especially desire is the one which President C. M. Schwab, of the United States Steel Corporation, refused to furnish to the United States Industrial Commission when on the witness stand before that body.

Our request is founded upon information and belief that at the time that this contract or contracts was or were made you were in some way officially connected with the Carnegie Steel Company, which institution is one of the principal companies in the United States Steel Corporation. As this information is doubtless in your possession or conveniently at hand, you will greatly oblige this committee by giving us the substance thereof in your own language, or, if possible, a copy thereof.

This request is to cover any other contracts of a similar kind with which you are acquainted or which you can obtain for us. Our object is to prevent the failure of justice in certain legal proceedings which we contemplate in the near future.

Hoping that you will find it convenient to comply with this request, we remain,

Very respectfully, yours, H. B. MARTIN, *Chairman.*
WILLIAM L. DEWART, *Secretary.*

[From Washington Times of August 21.]

ATTORNEY-GENERAL KNOX'S REPLY TO THE COMMITTEE'S LETTER.

Attorney-General Knox late yesterday afternoon addressed a lengthy letter to the joint committee of the American Antitrust League and District Assembly, No. 66, Knights of Labor, in reply to the communication from those two organizations last Monday. In that letter Mr. Knox was asked for information concerning the agreement made between the various companies which organized the United States Steel Corporation, known as the steel trust.

The Attorney-General's letter is as follows:

OFFICE OF THE ATTORNEY-GENERAL,
Washington, D. C., August 20, 1901.

Mr. H. B. MARTIN,
Chairman Joint Committee American Antitrust League, etc., City.

SIR: I have the honor to acknowledge the receipt of your letter of August 19, 1901, in which you request me to obtain for you certain information with reference to certain alleged "agreement or agreements made between the constituent companies and individuals who organized the United States Steel Corporation." You ask me to afford you all the information that I may "possess or can obtain," and you specifically refer to an alleged "trust or syndicate agreement," which you state the president of the United States Steel Corporation, Mr. C. M. Schwab, "refused to furnish to the United States Industrial Commission when on the witness stand before that body;" and you further state that your request for information is to be understood as covering "any other contracts of a similar kind with which you are acquainted or which you can obtain for us."

You also state that your request for information is "founded upon information and belief that at the time this contract, or these contracts, was or were made," that I was "in some way officially connected with the Carnegie Steel Company," and you therefore assume that the information which you request must be in my "possession or conveniently at hand." I am, therefore, requested to give you the substance, or, if possible, a copy thereof.

Primarily, permit me to say that your request is founded upon an erroneous assumption. I do not know who the individuals are who organized the United States Steel Corporation. If they are the persons usually named in the newspapers as the promoters of that organization, with the single exception of Mr. C. M. Schwab, I do not know, never saw, and was never in any way connected with any one of them. I never heard of any agreement between them and the constituent members of the Steel Corporation.

Neither at the time of the formation of the United States Steel Corporation nor at any time was I officially connected with the Carnegie Steel Company. I was formerly one of its legal advisers in the conduct of its manufacturing business, but was never consulted with reference to the formation of the United States Steel Company, nor in relation to the sale to that company of the shares of stock held by the stockholders of the Carnegie Company.

I have never seen the papers or agreements to which you refer, nor have I been informed of their contents. I have no knowledge whatever of their existence, terms, or scope. I am thus specific, as I desire to cover both the spirit and the letter of your inquiry.

I may say, moreover, that I have no access to the agreement or papers to which you refer. I know nothing of the one to which you especially refer, and do not even know that such an agreement is in existence. The information which you request, therefore, is not in my possession or "conveniently at hand," as you assume, and it is therefore impossible for me to comply with any of the requests set forth in your letter. All this information you could at any time have acquired through the usual method of direct personal inquiry,

thereby avoiding the doubtful propriety of addressing me through the medium of an open letter which you concurrently delivered to the press.

Whether, if such papers were accessible to me, it would be my duty to obtain them and furnish them for use in legal proceedings to which you are a party, and the nature of which you do not explain, is a question which I do not care at this time to discuss.

If I may regard the letter as addressed to me officially, I will say:

If this Department is under obligations to furnish information to prospective litigants in undisclosed proceedings, its responsibilities and labors are necessarily greater than they have ever been imagined from the time of its formation. Indeed, as there are generally two parties to every controversy, it would be difficult to discharge such alleged duty to both parties in view of conflicting interests. This Department was not called into being to furnish information to private litigants. Its duty and its object is to enforce the Federal statutes as interpreted by the courts wherever there is probable cause for believing that they have been violated.

Very respectfully,

P. C. KNOX, *Attorney-General.*

The palpable evasion, the contemptible cowardice and chicanery of the Attorney-General's reply, as just quoted, were so plain and so damaging to his official sincerity and candor that not a leading newspaper in the country but commented upon it most critically and disparagingly. Anyone who runs may read between and in the lines of this communication his absolute unwillingness to enforce the law and his corrupt complaisance toward the known violators of the law, because, presumably, they were his recent clients and his prospective friends. It is a document of such disingenuous and dishonest tone and temper as to render it certain, in the minds of all impartial judges, that no antitrust suit will ever be instituted by the present Attorney-General except under the compulsion of necessity, and when instituted will never be prosecuted in good faith nor with reasonable official honor and intelligence.

But the Antitrust League was not dismayed, though somewhat disheartened, by their first encounter with the new corporation counsel of the Government. Griggs had been bad enough, but they thought possibly Knox might be better, because he could hardly be worse. So they immediately endeavored to comply with his Jesuistic suggestions as to presenting "probable cause" for the prosecutions they had asked. On September 6, 1901, the following communications were transmitted to the Department of Justice by the committee of the League:

PETITION TO ATTORNEY-GENERAL KNOX.

WASHINGTON, D. C., *September 6, 1901.*

Hon. PHILANDER C. KNOX,
Attorney-General of the United States, Washington, D. C.

SIR: In response to your communication of August 20, 1901, in which you say the duty of your Department and its "object is to enforce the Federal statutes as interpreted by the courts wherever there is probable cause for believing that they have been violated," we herewith hand you the inclosed petition, in which the "probable cause" demanded is set forth for your action.

Very respectfully, yours,

H. B. MARTIN, *Chairman.*
WILLIAM L. DEWART, *Secretary,*
Joint Committee American Antitrust League and District Assembly 66, Knights of Labor.

Hon. PHILANDER C. KNOX,
Attorney-General of the United States:

1. Your petitioners would respectfully show that the American Antitrust League is an organization nonpartisan in its character, numerous in its membership in various parts of the United States, having for its object, among other things, to secure the enforcement of the existing State and Federal statutes against trusts and monopolies, and furnish such evidence of the violation of such statutes to the officers whose duties are to enforce these laws, and to cooperate with such prosecuting officers of the various States and the United States for the enforcement of these laws; and that District Assembly 66, Knights of Labor, is also a nonpartisan body, engaged in various trades and crafts within the District of Columbia, whose object is to protect the rights and interests of the wage-working wealth producers from unlawful aggressions and encroachments on the part of great combinations of capital, whether in the form of a trust or otherwise. The said District Assembly 66 is also associated with various other branches of organized labor throughout the United States.

2. Your petitioners would show that the United States Steel Corporation seems to your petitioners to exist, subsist, and persist in violation of law, and that its principals, agents, promoters, and managers are a combination who conspire to restrain—and they do restrain—and monopolize and attempt to monopolize trade and commerce between the States and Territories and the District of Columbia and in the Territories and in the District of Columbia and with foreign nations.

3. Your petitioners further say that at various times prior to February 23, 1901, certain alien capitalists, aided by American coconspirators, among whom are and were Andrew Carnegie; J. P. Morgan & Co., American agents of the house of Rothschild; Charles C. Cluff, William J. Curtis, Charles MacVeagh, John D. Rockefeller, Charles M. Schwab, Henry C. Frick, and others, did, under the alleged protection of the State of New Jersey, in violation of the Constitution and laws of the United States, enter into the following unlawful

"ARRANGEMENT."

In violation of the "antitrust law," as it is commonly called, which was enacted July 2, 1890, the interstate-commerce law of 1887, and the act to reduce taxation and provide revenue for the Government, and other purposes, which became a law in 1894, the coconspirators made an "arrangement," contract, combination, and conspiracy in restraint of trade and commerce among the States and with foreign nations, attempted to monopolize and combined and conspired together and with other persons to monopolize a very great part of the trade and commerce among the several States and with foreign nations, and made a contract, agreement, and combination in the form of a trust and otherwise and a conspiracy in restraint of trade and commerce among the States and in a Territory and Territories of the United States and in the District of Columbia, and in restraint of trade and commerce between one Territory and another, one State and another, and with the District of Columbia and foreign nations; that the syndicated conspiracy includes certain American capitalists who unite and combine with the European capitalists to share with them the spoliation of the people of the United States, based upon the "acquisition of the holdings of the said Andrew Carnegie" and the stock and bonds of the Carnegie Company, and the stocks and bonds of the following companies, to wit:

Of the Federal Steel Company, of the American Steel and Wire Company of New Jersey, of the National Tube Company, of the American Tin Plate Company, of the National Steel Company, of the American Steel Hoop Company, and of the American Sheet Steel Company, which, on his oath before the United States Industrial Commission, the said Charles M. Schwab deposed to be a "consolidation" of artificial and other persons in the shape of the United States Steel Corporation by agreement between it and the abovenamed seven constituent companies, to none and to neither of which does the incorporating certificate grant such a right to consolidate. The said "consolidation," therefore, being illegal, and the said United States Steel Corporation being, therefore, nonexistent by law and subject to the dissolution by a court having jurisdiction; and that the conspirators agreed that whenever by the consummation of the proposed "arrangement" the amount of dividends shall cease to be substantially increased the greater stability of investment will be assured by "necessarily increasing the prices of manufactured products," all of which facts appear in the prospectus of the syndicate managers, J. P. Morgan & Co., dated March 2, 1901, as Exhibit 1, on page 455 of a public document entitled "Testimony, Trusts and Industrial Combinations," herewith filed as part of Exhibit A, for reference, and also in Exhibit 2 of said document, which is a copy of the amended certificate of incorporation of the United States Steel Corporation, as the other part of Exhibit A, in which the said State of New Jersey, excepting herself from the operation of said law by forbidding the corporation to operate or maintain railroads and canals within her own borders, assumes to give eminent domain to the corporation everywhere else in the country except in New Jersey, and further subjects a greater part of the metal and mineral products in the United States and Territories, and manganese (and imported metaloid), and every transport thereof by land and water to the corporation and its extension and "business," contrary to the Constitution and laws of the United States and of each of them, and contrary to "public policy," private rights, and the stability of the Republic of America.

4. As is further shown by the testimony of President Charles M. Schwab, of the United States Steel Corporation, delivered before the United States Industrial Commission May 11, 1901, reported on page 465 of their "Testimony, Trusts and Industrial Combinations," where he states, in reply to the following question by Commissioner Farquhar:

Q. What have you to say to the public expression that the United States Steel Corporation controls 80 per cent of the whole manufactured product of this country?

A. (Interrupting.) Seventy per cent.

And on page 455, same sworn testimony, in answer to a question by Commissioner Phillips:

Q. Can you give the per cent of the Carnegie Works?

A. Well, I could figure it out. I know the Carnegie people exported 70 per cent of all the steel exported, but I could not give you the tons, etc.

And on page 470, in answer to a question by Commissioner Litchman:

Q. I understood you to say that the United States Steel Corporation controls about 80 per cent of the ore of the United States?

A. Well, I would modify that some if I said the United States; I think I made a mistake; I would say it controls about 80 per cent of the ores in the Northwest, which are those most largely used; in fact, nearly altogether used for steel products in the United States, etc.

And continuing on page 471, in answer to a question by Commissioner Harris, as follows:

Q. In transportation of your raw materials, do you own your own roads and steamboats?

A. We own all of our steamboats—not quite all—and we own all our railroads; the constituent companies own their railroads from the mines to the lakes, and we own one railroad from the lakes to the manufactories.

Q. You practically control the transportation of your raw materials, then?

A. On the lakes; yes.

5. Your petitioners respectfully submit that in view of the fact that the Carnegie Company is only one of the constituent companies of the United States Steel Corporation, that President Schwab's testimony, which is hereinbefore quoted, is almost conclusive evidence that the aforesaid steel trust is monopolizing, or attempting to monopolize, a part of the trade or commerce among the several States and with foreign nations.

6. And your petitioners further respectfully show that there are certain other combinations and conspiracies, in the form of trusts and otherwise, who are monopolizing, attempting to monopolize, combining and conspiring to monopolize part of the trade and commerce, and combining, contracting, and conspiring in restraint of trade and commerce among the several States and Territories and the District of Columbia, and with foreign nations; and that among those who have and are thus conspiring, as aforesaid, in the form of trusts and otherwise, are the armor-plate trust or combination, which has been for some years past composed of the Carnegie Steel Company and the Bethlehem Steel Company.

7. And your petitioners further show that the said armor-plate trust and its constituent members and its managers have combined and conspired not only to monopolize the trade, commerce in armor plate among the several States and Territories and the District of Columbia and with foreign nations, but it and its constituent members and managers thereof, among whom are the aforesaid Andrew Carnegie, Charles M. Schwab, Henry C. Frick, and others, have conspired and combined to so monopolize the commerce in armor plate among the several States and with foreign nations that they have been able to and did extort from the people and Government of the United States such an exorbitant price from the National Government and the people of the United States that they sold armor plate which cost less than $200 per ton to the said Government of the United States for the sum of $520 per ton.

8. And your petitioners further show that the said Carnegie Company and the said Bethlehem Company, who combined and conspired to form the said armor-plate trust, conspiracy, or combine, are now combined in violation of law of the United States into the hands of one combination, and they are the same combination which now controls the United States Steel Corporation, and that they are still monopolizing the trade and commerce in armor plate and still charging the Government the aforesaid exhorbitant prices as a result of their being able to monopolize the trade and commerce in armor plate.

9. And we herewith submit the following from the official report of Hon. Hilary A. Herbert, Secretary of the Navy, for the year 1897:

"My impression is that there is and has been for some time at the least a friendly understanding among armor contractors both in Europe and America as to the prices to be charged for armor. This impression, I find, prevails abroad, certainly among some of the persons who have inquired into the subject.

* * * "These natural promptings to such a combination are mentioned only as persuasive to show, when taken in connection with what follows, and that a world-wide combination or understanding does exist.

* * * "An inspection of the prices paid, as shown by the diagram before referred to, will indicate what is not denied, that the Carnegie and Bethlehem companies agreed with each other as to prices. They have divided the contracts of this Government between themselves, each bidding lower than the other for one-half of the armor required at any time by the Government.

* * * "In 1895 Russia was in the market for harveyed nickel armor.

The Bethlehem and Carnegie companies in the United States were then both well established and neither had sufficient orders from this Government to employ its plant continuously. There was sharp competition for the order from Russia, and the Bethlehem Company secured the contract for manufacturing armor for one ship at the very low price of $249 per ton, this armor to be both nickeled and harveyed and to be delivered in Russia, the company agreeing at the same time to manufacture the armor for two other ships, if required, at the same price. The Russian Government afterwards did require for the other two ships, and taken altogether the armor for the three amounted to about 1,400 tons.

* * * "I am informed upon authority which I believe to be good that about or perhaps before the time of the last contract of the Bethlehem Company with Russia there was a meeting in Paris of the representatives of the principal, if not all, of the armor manufacturers of Europe and America.

* * * "These facts seem to lead to the conclusion that there is at least a friendly understanding or agreement among the principal armor manufacturers of the world that prices shall be maintained at or about a certain level.

* * * "In June, 1896, a board of officers, consisting of Lieuts. Karl Rohrer, Kossuth Niles, and A. A. Ackerman, was assembled with instructions to make a careful estimate of the actual cost in labor and material for the manufacture of armor now being provided for our battle ships. The board submitted a report on July 3, 1896.

* * * "The Department is inclined to give the greater weight to the estimated cost formed by the board, and it is believed to be just to both the manufacturers and to the Government to take average of the estimates to be $185.38 for single-forged and $197.78 for reforged armor."

10. And your petitioners further respectfully show that in addition the aforesaid violators of the United States Statutes against trusts and monopolies, part of the aforesaid individuals, including John D. Rockefeller and others and the Standard Oil Company, among the managers, directors, and officers of which are John D. Rockefeller, H. M. Flagler, H. H. Rogers, John D. Archbold, William Rockefeller, and others, who have combined, contracted, and conspired together under the name of the Standard Oil Company, the Home Oil Company, the National Transit Company, and otherwise, to monopolize and restrain the trade and commerce among the States and Territories and the District of Columbia and foreign nations in crude and refined petroleum and its by-products.

11. And your petitioners further show that the anthracite coal combine and its members, among whom are the aforesaid J. P. Morgan, William Rockefeller, and others, have combined and conspired together to restrain and to monopolize the trade and commerce among the several States and Territories and the District of Columbia and with foreign nations in anthracite coal.

12. And your petitioners further respectfully show that the aforesaid J. P. Morgan & Co., the American agents of Rothschild, John D. Rockefeller and William Rockefeller, also William K. Vanderbilt, James J. Hill, E. H. Harriman, George J. Gould, Russell Sage, A. J. Cassatt, and numerous railroad corporations, their owners, managers, and directors, including the Delaware, Lackawanna and Western, the New York Central Railroad, the New York, New Haven and Hartford Railroad, the Pennsylvania Company, or Pennsylvania Railroad Company, the Chicago and Northwestern Railroad Company, the Chesapeake and Ohio Railroad Company, the Missouri Pacific Railroad Company, the Union Pacific Railroad Company, the Southern Pacific Railroad Company, the Atchison, Topeka and Santa Fe Railroad Company, the Northern Pacific Railroad Company, the Great Northern Railroad Company, the Southern Railroad Company, the Louisville and Nashville Railroad Company, the Wabash Railway Company and the Erie Railway Company, the Boston and Albany Railroad Company, and numerous others, and their principal stockholders, directors, and managers and officers, and certain bankers, including the firm of J. P. Morgan & Co., the National City Bank of New York, Kuhn, Loeb & Co., the First National Bank of New York, and the First National Bank of Chicago, and others, have conspired and combined to restrain and monopolize the railroad trade and commerce among the several States and Territories and the District of Columbia of the United States and with foreign nations.

13. As evidence of the existence of the said combination of railroads, and as further evidence of the existence of a conspiracy entered into by the aforesaid railroad managers, stockholders, and manipulators, for the purpose of monopolizing and restraining the railroad trade and commerce among the several States and Territories and the District of Columbia, of the United States, and with foreign nations, your petitioners submit herewith, and make a part hereof, two sentences from the opinion handed down by Judge Hazel, sitting in equity in the case of the Lackawanna Railroad against 61 ticket scalpers, in which case the aforesaid railroad company prayed the United States court at Buffalo to restrain and inhibit the defendant ticket scalpers from dealing in Pan-American excursion tickets. Judge Hazel threw the case out of court, his decision that the aforesaid railroad company was not entitled to the protection of the laws being based upon the reasons in the following two sentences from his opinion:

"It appears that the complainant is a party to a combination which is engaged in pooling railroad rates and in fixing fares in order to avoid competition between the several lines constituting the association known and distinguished as the Trunk Line Association.

"Can the aid of a Federal tribunal be invoked to protect the complainant in the issuance of a ticket which is the culmination as well as the evidence of an agreement between railroad corporations specifically forbidden by an act of Congress which has been sustained by the Supreme Court of the United States?"

Judge Hazel, thus decided that, sitting in equity, he could do nothing for a complainant who "does not come into court with clean hands."

Your petitioners further represent that the decision of Judge Hazel, of the United States court at Buffalo, as above quoted, certifies that a document was produced in his court which was the culmination as well as the evidence of an agreement between the railroad corporations, specifically forbidden by an act of Congress which has been sustained by the Supreme Court of the United States.

And we submit that this evidence produced in Judge Hazel's court is ample and sufficient evidence and "probable cause" on which the Attorney-General may institute proceedings under the statute.

14. Your petitioners would further show unto your honor that numerous other trusts exist than those herein mentioned; that they can furnish evidence of the existence of such other trusts if necessary; that their existence is so open and notorious to the minds of the people of the United States that it seems unnecessary and would lengthen this petition to furnish more specific evidence at this time; that this other evidence will be furnished, if requested, by the Attorney-General; that the existence of the trusts is admitted by the public editorials and articles in every leading newspaper in the United States; that during the last session of Congress their existence was admitted by the declaration of every member of Congress who addressed himself to the subject; and that an act was passed by the House of Representatives which purported to further restrict their operations in the United States, as is evidenced by a copy filed herewith and for identification, marked "Exhibit B."

The existence of these dangerous combinations is further proven by facts known to all men that in the platforms of the Republican, Democratic, and Populist parties adopted at their last national convention they all recognized the existence of these illegal combinations and vigorously denounced them.

It therefore being thus stated by men of all parties, by the executive and legislative departments of the Government, and having been recognized by the judicial department of the Government in various opinions rendered by the Supreme Court, and also having been recognized by a large number of States in their constitutions by incorporating clauses therein denouncing these monopolies, trusts, and combinations and providing laws for inflicting upon them civil and penal punishment.

15. Your petitioners would further show unto your honor that, even though it should be denied that these combinations exist, or that they are now violating the law enacted by Congress, entitled "An act to protect trade and commerce against unlawful restraints and monopolies," that it is the duty of the Attorney-General to prevent and restrain a contemplated violation of the said law whenever and wherever there is probable cause for instituting such proceedings as are provided for by said section 4 of the aforesaid act, which reads as follows:

"The several circuit courts of the United States are hereby invested with jurisdiction to prevent and restrain violations of this act; and it shall be the duty of the several district attorneys of the United States, in their respective districts, under the direction of the Attorney-General, to institute proceedings in equity to prevent and restrain such violations. Such proceedings may be by way of petition setting forth the case and praying that such violation shall be enjoined or otherwise prohibited. When the parties complained of shall have been duly notified of such petition, the court shall proceed, as soon as may be, to the hearing and determination of the case; and pending such petition and before final decree, the court may at any time make such temporary restraining order or prohibition as shall be deemed just in the premises."

16. Your petitioners further respectfully represent unto your honor that they will cheerfully furnish evidence now in their possession, and gladly assist you by furnishing you, through their organizations, whatever information and aid you may desire from them.

Your petitioners therefore pray that you either institute yourself, in the proper courts, prosecutions against these violators of the law, or that you may authorize in the various districts of the United States your subordinates, the respective district attorneys in these districts, to at once commence prosecution for the past violations of this law in their respective districts, and at the same time instruct them at once to file before the various courts of the United States petitions such as are provided for by the terms of said law in equity, to restrain and prevent impending and future violations of this law.

That these and all other and general proceedings may be taken against the aforesaid trusts, combinations, as to you may seem meet, your petitioners in duty bound will ever pray, etc.

H. B. MARTIN, *Chairman*,
WILLIAM L. DEWART, *Secretary*,
Joint Committee American Antitrust League and District Assembly 66, Knights of Labor.

F. S. Monnett, of Ohio; A. A. Lipscomp, of District of Columbia; R. S. Tharin, of District of Columbia; L. R. Via, of West Virginia, counsel for petitioners.

OFFICE OF L. C. STRIDER, JUSTICE OF THE PEACE,
Washington, D. C.

Henry B. Martin, who being first duly sworn, says that he has read the foregoing petition or heard the same read, and that the grounds of belief therein stated as probable cause for the proceedings of the Attorney-General against the persons of all kinds therein mentioned and accused are clearly, in his opinion, good and sufficient to furnish ample grounds for the prosecution of the accused, as in duty bound under the Attorney-General's direction, by such assistant or district attorney as may be lawful and right.

HENRY B. MARTIN.

Subscribed and sworn to before me this 6th day of September, 1901.
[SEAL.] L. C. STRIDER, *Justice of the Peace.*

On September 11, 1901, the joint committee received the following reply from Attorney-General Knox:

OFFICE OF THE ATTORNEY-GENERAL,
Washington, D. C., September 11, 1901.

H. B. MARTIN AND OTHERS,
1229 Pennsylvania avenue, Washington, D. C.

SIRS: I have your letter of September 6, inclosing a copy of what is properly known as the "Sherman antitrust act," a copy of the testimony of Mr. Charles M. Schwab before the Industrial Commission, and a petition addressed to me requesting legal proceedings to be taken against the trusts and combinations referred to therein. I will examine these papers with care at as early a date as is possible, and communicate to you my conclusions.

Very respectfully, yours,

P. C. KNOX, *Attorney-General.*

To this last petition showing "probable cause" for the institution of prosecutions against the several criminal conspiracies named no response was ever received by the Antitrust League or its committee. Becoming satisfied that the Attorney-General would not respond to their petition and protest before mentioned, the committee then resorted to the President of the United States, to whom it is so often and boastingly asserted is committed the enforcement of the laws of the Union. The following correspondence with the President explains itself:

THE AMERICAN ANTITRUST LEAGUE, NATIONAL OFFICE,
1229 PENNSYLVANIA AVENUE, SECOND FLOOR,
Washington, D. C., November 25, 190-.

Hon. THEODORE ROOSEVELT,
President, White House, Washington, D. C.

SIR: I am instructed by the joint committee of the American Antitrust League and District Assembly 66, Knights of Labor, to address to you a letter of inquiry, asking you to name a date within the next five days when you could give our committee an opportunity to present to you in person certain facts in reference to violations of Federal law by certain great trusts, and also with reference to a certain petition of complaint against these trusts which we filed with the Attorney-General of the United States some two months ago.

It is of great importance that we should have the opportunity to present this matter to you on or before November 29.

Earnestly hoping that in the pressure of your many other duties you will be able to find time to grant us this request, I am,

Very respectfully, yours,

H. B. MARTIN,
Chairman Joint Committee the American Antitrust League and District Assembly 66, Knights of Labor.

WHITE HOUSE,
Washington, November 26, 1901.

MY DEAR SIR: In reply to your letter of the 25th instant, I would state that the President has expressed a desire to have matters of the kind to which you refer submitted to him in writing. This is because of the great pressure upon his time which renders it impossible for him to receive all of those who wish to call upon him.

Assuring you that I shall be glad to see that anything you may decide to forward is given prompt attention, believe me,

Very truly, yours,

GEO. B. CORTELYOU,
Secretary to the President.

Mr. H. B. MARTIN,
National Secretary, etc., 1229 Pennsylvania avenue, Washington, D. C.

THE AMERICAN ANTITRUST LEAGUE, NATIONAL OFFICE,
1229 PENNSYLVANIA AVENUE, SECOND FLOOR,
Washington, D. C., November 30, 1901.

Hon. THEODORE ROOSEVELT,
President, White House, Washington, D. C.

SIR: Your letter of 26th instant, per George B. Cortelyou, secretary to the President, at hand. Pursuant to the suggestion contained therein, we herewith submit to you the documents relating to the petition of the joint committee of the American Antitrust League and District Assembly 66, Knights of Labor, to Attorney-General Knox, in which we laid before that officer the "probable cause" asked for by him as a basis of instituting proceedings against five of the great trusts who are operating in violation of the Federal statute of July, 1890.

We desire to call your attention also to the fact that we not only submitted "probable cause" for prosecution, but also positive proof of the violations of the Federal statute against trusts by at least two combines, viz, the armor-plate trust and the railroad combine, which latter succeeded the Joint Traffic Association and continued the illegal practices of that trust after it was ordered dissolved by the Supreme Court of the United States in 1898.

Recent events in connection with the organization of a railroad trust known as "The Northern Securities Company" by the same offenders who were enumerated in our petition to Attorney-General Knox, dated September 6, 1901, have aroused the indignation of the people of five of the great Northwestern States to such an extent that the governors of States are calling special sessions of legislatures to take action to prevent the consummation of this conspiracy against the public welfare.

The course of Attorney-General Knox in neglecting or refusing to take action against the parties of whose guilt proofs were submitted to him in our petition and his failure to keep the promise made in his letter of September 11 to take action and render a decision as to "his conclusions at the earliest possible date," make it our duty to call your attention to his culpable inactivity in these matters.

The neglect on the part of Attorney-General Knox to enforce the law of 1890 against trusts and combinations has resulted in such grave injury to the interests of the people of the United States that we deem it our duty to bring to your notice these facts, in order to secure that prompt and necessary action which the emergency demands.

Very respectfully,

H. B. MARTIN, *Chairman,*
WILLIAM L. DEWART, *Secretary,*
Joint Committee American Antitrust League and District Assembly 66, Knights of Labor.

WHITE HOUSE,
Washington, December 2, 1901.

MY DEAR SIR: I beg to acknowledge the receipt of your letter of November 30, with inclosures, and to state that by direction of the President it has been brought to the attention of the Attorney-General.

Very truly, yours,

GEO. B. CORTELYOU,
Secretary to the President.

Mr. H. B. MARTIN,
Chairman, etc.,
1229 Pennsylvania avenue, second floor, Washington, D. C.

Thus the President was furnished with all the information and sufficient information upon which to have authorized or instructed proper procedure by the Department of Justice, but neither he nor the Attorney-General deigned to take notice of the plain and positive facts submitted to them.

Congress met in December, 1901, and the name of Philander C. Knox was sent to the Senate of the United States as the appointee of President Roosevelt for the position of Attorney-General. Knowing his antecedents and associations, fully persuaded that his attitude toward the trusts was that of a friend at court, a former employee and prospective counsel for these criminal companies, and with the recent action of this man Knox toward their respectful and ample petition for relief at the hands of his Department smarting in their minds, the representatives of the American Antitrust League felt that it would be an outrage upon the public and a disgrace to the Government for his appointment to be confirmed.

They accordingly went to work to acquaint the Senators with the facts as here stated and to demand an investigation of the surroundings and relations of Mr. Knox, which, in their opinion, disqualified him to represent the people of the United States in the great battle between the trusts and the law. Many personal conferences were held with Senators, and, as an example of the character of protests that were lodged against that confirmation, the following letter to the senior Senator from Massachusetts is presented, showing the good faith of these committeemen of the Antitrust League:

THE AMERICAN ANTITRUST LEAGUE, NATIONAL OFFICE,
1229 PENNSYLVANIA AVENUE, SECOND FLOOR.
Washington, D. C., December 10, 1901.

Hon. GEORGE F. HOAR,
Chairman Senate Committee on the Judiciary.

SIR: Referring to the conversation we had with you yesterday, in which you stated that P. C. Knox, acting Attorney-General of the United States, had informed you that he "had notified our committee that he would take up our cases right away after the meeting of Congress," we beg to inform you that our committee has never received any such notice whatever in any form from Mr. Knox.

We further call your attention to the fact that the charges against Mr. Knox, which we have filed with the Senate, not only refer to his dereliction of duty in the cases which we filed with him, but also bear upon his antecedents and his admitted intimate relations and his collusion with the criminal practice of the armor-plate trust, which institution, we are informed by members of the Senate, robbed the Government of millions of dollars annually during the time that Mr. Knox was their associate and adviser.

We submit that the record of such a man should be thoroughly investigated before he is confirmed in the office of Attorney-General, where one of his principal duties will be to prosecute those great criminals whom he admits were his former friends and employees.

Very respectfully, yours,

H. B. MARTIN, *Chairman,*
WILLIAM L. DEWART, *Secretary,*
Joint Committee American Antitrust League and District Assembly 66, Knights of Labor.

Pending the confirmation the committee addressed the following communication to the Senate:

WASHINGTON, D. C., *January 29, 1902.*

To the honorable the Senate of the United States, Washington, D. C.

GENTLEMEN: At a meeting of the joint committee of the American Antitrust League and District Assembly No. 66, Knights of Labor, held on Monday, January 27, 1902, the following resolutions were unanimously adopted and directed to be presented to the Senate of the United States:

Whereas on four separate occasions, viz, August 20, 1901, September 11, 1901, November 25, 1901, and January 23, 1902, covering a period of over five months, the joint committee of the American Antitrust League and District Assembly 66 of the Knights of Labor did urge upon the attention of Attorney-General P. C. Knox complaints and evidence of violations of the laws of the United States against trusts and monopolies and conspiracies in restraint of trade; and

Whereas, despite the assurance given us in his letter of September 11, 1901, by said Attorney-General P. C. Knox that he would "examine these papers with care at as early a date as is possible and communicate to you my conclusions," nevertheless five months have passed and we have not yet received his promised conclusions as to these complaints of violations of law on the part of the unlawful trusts enumerated in our petition, viz: The United States Steel Corporation, the Standard Oil Company, the armor-plate trust, the railroad combine, the anthracite-coal trust, and the Northern Securites Company; and

Whereas, during the five months which have elapsed since we first made our complaint to Attorney-General P. C. Knox of these violations of the Federal statutes against trusts, numerous other and flagrant violations of the law of the United States have been committed by the same offenders charged in our petition and complaint to the Department of Justice; and

Whereas these gross violations of law are well known not only to us, but to the public, and especially to the said Attorney-General P. C. Knox and other officials of the Department of Justice; and

Whereas great and irreparable injury to the welfare and interests of the people of the United States and grave scandal and disgrace to a department of the Government results from this apparent collusion between the officials of the Department of Justice and the great trust criminals; and

Whereas it is a well-known and scandalous fact that the predecessor of P. C. Knox in the Attorney-General's office, John W. Griggs, went from the service of the coal trust to the head of the Department of Justice, and that during his term of four years in that office he permitted the laws of the United States to be trampled under foot by the criminal trusts, and when he left the Attorney-General's office it was to publicly reenter the service of the railroad combine and other trusts, and on this very day, January 27, 1902, said ex-Attorney-General Griggs appeared before the Supreme Court of the United States as the servant of the Northern Securities Company, a branch of the railroad trust now being tried on charges preferred by a sovereign State; and

Whereas the equally scandalous condition now exists that P. C. Knox, the present Attorney-General, went into the Department of Justice directly from the service of the criminal armor-plate trust and the Carnegie Steel Company, the main factor in the steel trust, and that he, like his predecessor Griggs, has persistently neglected and refused to perform the sworn duties of his office as regards the prosecution of trusts, combines, and monopolies operating in open violation of the law; and

Whereas the Attorney-General is the sole officer of the United States who is clothed with authority to prosecute these trust-law breakers: Therefore,

Resolved, That the attention of the Senate and House of Representatives and of the President of the United States is hereby called to this condition of affairs now prevailing and to the palpable appearance of illicit relations existing between the Attorney-General of the United States and the most dangerous class of lawbreakers now at large in this Republic; and

Resolved, That we, the joint committee of the American Antitrust League and District Assembly 66 of the Knights of Labor, hereby call upon the Senate, the House of Representatives, and the President of the United States to at once institute a searching and thorough investigation of the Department of Justice and the official conduct of that Department by Attorney-General P. C. Knox.

Respectfully submitted.

H. B. MARTIN, *Chairman,*
WILLIAM L. DEWART, *Secretary,*
Joint Committee of the American Antitrust League and District Assembly 66, Knights of Labor.

Contemporaneously with these interviews with individual Senators, despairing of any relief or attention without radical methods, this joint committee filed specific charges and objections against the confirmation of Mr. Knox, embodying therein the facts here stated. That protest has already been printed as part of the Senate proceedings, and it is not necessary to repeat it here.

Attorney-General Knox was confirmed as the chief law officer of the Government, notwithstanding that all his prior relations and his recent conduct had conclusively demonstrated that he would never prosecute any one of the great trusts with fidelity, zeal, or official vigor.

Meanwhile, becoming convinced that this Attorney-General would not investigate or prosecute any of the five combines that had been first mentioned to him and whose criminality was established beyond a reasonable doubt, because of his professional

and personal friendship for them, the Antitrust League prepared and presented to him a complete exhibition of the lawless character of another extensive and injurious trust, formed thirty-six years ago, and which is operated for the express purpose of paralyzing the Patent Office of the United States and robbing inventors of the benefit of their devices and improvements in railroad appliances and construction.

The Eastern Railroad Association was formed about 1866, and its constitution and by-laws show that its purpose is to control all inventions and patents that may be taken out under the laws of the United States, and to guarantee to the various railroads belonging to the association immunity in the use of any invention or appliance recommended by the association. In other words, this trust proposes and has for thirty-six years proposed to control all useful improvements and inventions affecting railroad operation, and to maintain all suits necessary to assert its monopoly. It is a combine to defeat the constitutional rights of the patentees of valuable inventions, and to establish for the benefit of its members a bureau of barratry and maintenance to defend its unlawful objects.

For instance, if a man obtains a patent upon some useful and necessary railroad appliance, no railroad belonging to this Eastern Railroad Association will adopt it unless it is recommended by the association. If the inventor and patentee happens to be a poor man, unable to defend his rights by law, this monopoly will take and use his patented invention among the members of the association, and if suits should arise for infringement or unlawful use of another man's invention, this association agrees to defend the suit, pay the costs, and protect the infringer.

That is the exact case of the man Tubman, whose name appears in the documents that I shall submit directly. What more iniquitous and unlawful combination could be conceived than one intended to control the value and use of patentable inventions, to practically quarantine the United States Patent Office, and to defend the violations of the patent laws by members of the combination?

That is precisely the purpose of this Eastern Railroad Association, and for the past thirty-six years, with increasing power and a vast sweep of railroad connections, it has impoverished honest inventors, protected piracy of patented inventions, maintained and defended suits for the purpose of insuring its members in the unlawful use of other men's property, and demoralized the whole field of useful invention and ingenuity in railroad development.

Failing to secure any favorable action by the Attorney-General in suppressing the monstrous trusts with which he was personally and professionally connected, the antitrust people filed a mass of convincing documents against this Eastern Railroad Association with President Roosevelt on December 21, 1901, which the President referred to the Attorney-General.

Those documents I here submit in full, because they are valuable in themselves as an exhaustive presentation of the law, and because they show conclusively that the present Administration does not intend to suppress or punish any unlawful trust or conspiracy against trade so long as the Attorney-General has clients among them, and so long as the Republican party lives and thrives by their substantial support in all its campaigns and elections.

The following are the documents presented by the joint committee of the American Antitrust League to the President and Attorney-General of the United States, and which to this date have not received even a respectful hearing:

EXHIBIT A.

THE EASTERN RAILROAD ASSOCIATION.

This association is a combination, voluntarily formed under a secret written agreement, of nearly all railroad corporations in the fifteen Atlantic coast States to secure by unity of action arbitrary control over all patented inventions applicable for use on railroads. It is without doubt the oldest illegal trust in the United States. It was formed in 1866 and has successfully pursued its iniquity for some thirty-five years.

The association's annual reports from 1867 to 1883 are on file in the United States Patent Office library, but since 1883, which is approximately the date of the present agitation against unlawful combinations, no reports have been allowed to reach the public.

Its membership in 1868 embraced 57 railroad corporations in Maryland, Pennsylvania, New York, and in the New England States. In 1883 the membership had increased to include 255 railroad corporations. The present membership is not actually known, inasmuch as the affairs of the association since 1883 have been kept secret. However, it is believed that the membership now includes at least 600 or 700 railroad corporations.

The headquarters of the combine was originally at Springfield, Mass.; afterwards, in 1878, at the Boston and Lowell station in Boston; then, in 1880, at the Grand Central Station in New York; and finally a permanent base of operations was established at Washington, D. C., the association, in 1886, purchasing for $25,000 the premises No. 614 F street NW., to be held "in trust for the sole use and benefit of the members of a certain association known as the Eastern Railroad Association."

On reference to the "Memorandum of deed in trust" (see Exhibit H), it will be seen that the conveyance was made to three members of the executive committee of the association and in a form which "has ever been held most sacred in equity." The building which is now the headquarters of the association contains large fireproof vaults with combination locks and within which are guarded the secret archives.

The railroad corporation members prior to December 4, 1878, operated under a written agreement, called a constitution, adopted February, 1867, a copy of which is not available. On the above date an amended constitution was adopted. (See Exhibit I.) This latter constitution was revised some time prior to 1887. (See Exhibit F.)

It will be seen on reference to the constitution that all the affairs of the association are turned over to and managed by nine governors called an executive committee. The names of the committee and the officers of the association have been published from time to time in the Travelers' Official Guide. In the Guide for June, 1902, the following list of the officials is given:

"*Eastern Railroad Association.*—General offices—614 F street NW., Washington, D. C. Hon. W. D. Bishop, president, Bridgeport, Conn.; Theodore N. Ely, vice-president, Philadelphia, Pa.; Albert A. Folsom, treasurer, Boston, Mass.; Robert J. Fisher, general counsel, Washington, D. C.; John J. Harrower, secretary, Washington, D. C."

Executive committee: William D. Bishop, New York, New Haven and Hartford Railroad Company; Theodore N. Ely, Pennsylvania Railroad Company; Henry F. Kenney, Philadelphia, Wilmington and Baltimore Railroad Company; John R. Kenly, Atlantic Coast Line Railroad Company; Samuel E. Williamson, New York Central and Hudson River Railroad Company; Frank S. Gannon, Southern Railway Company; F. D. Casanave, Baltimore and Ohio Railroad Company; John J. Turner, Pennsylvania Company; William G. Besler, Central Railroad Company of New Jersey.

The meaning and force of certain articles in the amended constitution were explained to the 53 corporation members in the twelfth annual report of the president, Exhibit D, and reveals the true nature and character of the association.

Litigation is asserted to be the association's most important business. It is stated that section 4 of the constitution is "tyrannical," and deprives "members of the liberty of individual and independent action in the settlement of claims;" that members are forbidden to settle claims independently of the permission of the executive committee, for "the money thus paid enables the party making the unjust claim to prosecute other members, which in most cases he would otherwise be unable to do;" that the members of "the association must act as a unit," and that "it is believed that this unity of action has been the true cause of our success heretofore."

In fact, this report furnishes conclusive evidence that the association was at the time, as it is now, a criminal conspiracy at common law. In State *v.* Burnham (15 N. H., 396, 1840) Judge Gilcrist said:

"Combinations against law or against individuals are always dangerous to the public peace and to public security. But the law by no means intends to exclude society from the benefits of united effort for legitimate purposes and such as promote the well-being of individuals or the public. It uses the word "conspiracy" in its bad sense. An act may be innocent without being indictable where the isolated acts of an individual are not so injurious to society as to require the intervention of the law. But when innocent acts are committed by members in furtherance of a common object, and with the advantage and strength which determination and union impart to them, they assume the grave importance of a conspiracy, and the peace and order of society require their repression."

"The general principle on which the crime of conspiracy is founded is this, that the confederacy of several persons to effect any injurious object creates such a new and additional power to cause injury as requires criminal restraint, although none would be necessary were the same thing proposed or even attempted to be done by any person singly." (7 Rep. Crim. Law Com., 1843, p. 90.)

"The concentrated energy of several combined wills operating simultaneously and by concert upon any one individual is dangerous even to the cautious and circumspect. It is therefore the business of the law to protect individuals from such conspiracies. All combinations in society to effect an evil purpose are dangerous, and when their object and purpose are to cheat an individual, by whatever means, they are obnoxious to the criminal law." (Twitchell *v.* Comm., 9 Pa. St., R. 211.)

"I take it, then, a combination is criminal wherever the act to be done has a necessary tendency to prejudice the public or to oppress individuals by unjustly subjecting them to the power of confederates and giving effect to the purposes of the latter, whether of extortion or mischief." (Judge Gibson, Comm. *v.* Carlisle, Brightly's Rep., Pa. 36, 1821.)

"An association may be formed, the declared objects of which are innocent and laudable, and yet they may have secret articles or an agreement communicated only to the members by which they are banded together for purposes injurious to the peace of society; such would undoubtedly be a criminal conspiracy on proof of the fact, however meritorious and praiseworthy the declared objects might be." (Comm. *v.* Hunt, 4 Metcalf, 1845.)

Some time between 1878 and 1887 a further change in the constitution, as above stated, was made (Exhibit F), and in accordance with which the association has since carried on its business and exploited inventors and owners of patents.

The real purpose of the combination can be ascertained from an inspection of Articles V, VI, and VII of the constitution.

From section 1, Article V, it appears that an inventor or owner of a patent can not deal directly with any member of the association. He must deal with the executive committee, persons who never wish to purchase. The executive committee determines the validity of the patent and the expediency of contesting the claim, and the railroad corporation directly interested is deprived of individual freedom of action.

Under section 2, the executive committee arbitrarily fix the basis of settlement, if fixed at all. The individual member interested has no voice in the matter.

Under section 3, the individual member sued can not settle a claim or defend the suit. The executive committee manage the suit, and corporation members in no way interested are compelled to contribute aid.

Under section 4 each member is deprived of the right of individual opinion and freedom of action.

Under section 5 the individual member is forced to accept the judgment of the executive committee when "for the best interests of the association," whatever may be the interests of the individual member. If a claim is settled the inventor receives pay from those not using the invention. The sole condition of settlement is that such settlement is cheaper for the association than "carrying on the litigation."

Article VI fixes the penalty for violating the agreement.

Article VII authorizes the unlawful "maintenance" of suits where a majority of the members are not directly or indirectly interested and where no member of the association is a legal defendant of record.

These articles provide for the suppression of competition between the corporate members in the purchase of licenses and interests in letters patent, and restrict freedom in the settlement of claims for the infringement of patents; and also for the fixing of the price by the executive committee when any interest in a patent may be purchased or any claim is to be settled, provided "such settlement or purchase can be effected at less expense to the association than the cost of carrying on the litigation."

Under its constitution and by-laws the association exists in violation of the antitrust act. The facts and law showing this to be true are fully set forth in a "statement" filed in 1900 with the Attorney-General of the United States and which accompanied a request that he direct a suit in equity to be instituted under section 4 of the act to restrain and enjoin the association. A copy of the "statement" and certain exhibits, as well as the reply of Attorney-General Griggs defending the association are herewith submitted. (Exhibits B and I.)

The principal business of the association under and outside of its unlawful

constitution and by-laws appears to embrace, first, reports upon patents, and, second, litigation.

Reports upon patents are prepared by the general counsel and a slip attached stating that they are of "no effect or binding on the association until approved by the executive committee." All applications for information by a corporate member must be made through an authorized person named by the board of directors of the corporation. The reports on the validity of patents are preserved in secret, and the inventors or owners of the patents and the general public as well never learn their substance unless accidentally. Inasmuch as there is no competition and that the reports are generally made to railroad officials unfamiliar with the art and the patent laws, and hence incompetent to criticise, it is maintained with truth that the said reports are as a rule superficial and arbitrary. Several reports have been seen which disclosed great ignorance of the particular arts and which prevented the introduction of very desirable safety devices upon railroads.

However incomplete, arbitrary, capricious, and unjust these reports may be, the association members are in practice bound to adopt and follow them. Any official who should ignore the report would be dismissed from service. By these secret reports it is within the power of the association to destroy the property right in a patent created by the Government, or to give value to a worthless or invalid patent if some one on the inside is adequately remunerated.

It is obviously against public policy for a combination of corporations, each exercising a public office, affected with a public use, and performing the function of the government, to agree and covenant that they will be bound by secret decisions and reports relative to the validity or invalidity of patents for such appliances as are discovered and invented from time to time, and are adapted for cheapening, hastening, and rendering safer the transportation of freight and passengers on railroads.

Litigation is another and the most important business in which the association is engaged. (See Exhibit D.) According to one of the association's reports, it had in its treasury in 1882 the sum of $50,028.98. Of this amount immediately available for litigation and corrupt uses, $33,655 was invested in convertible bonds and stock and $10,000 loaned on call. A much larger sum is now doubtless immediately available for "running down a poor inventor with an invalid patent," who has the audacity to bring suit against a corporation member. The members of the association are domiciled in four judicial circuits. An owner of a patent commences suit in equity against a railroad corporation member in a certain district. The general counsel of the association appears for the defendant and unlawfully maintains the suit, the other corporate members of the association refusing to lawfully intervene, so they may not be bound by any judgment rendered within that district.

When the complainant takes his proofs he must pay his witnesses and railroad fares. The general counsel travels to the place of examination on a railroad pass, cross-examines the witnesses at great length to increase the per diem charges of the witness for his services and to increase the cost of printing the testimony by the complainant. When the general counsel takes testimony for the defense he rides on a pass and secures witnesses free, who also travel on passes, from among railroad employees, who are always willing to testify as instructed. The testimony may be taken in any part of the country which will entail the greatest possible expense for the complainant in railroad fares.

The general counsel secures perjurous testimony, manufactured evidence, and avails himself of all means, honest or dishonest, to defeat the suit. When the case comes on to be heard it may be before a Federal judge who has a railroad pass in his pocket. Then comes a series of appeals. Should the complainant be successful he can but seldom prove profits or damages as the association has by its ingeniously contrived constitution prevented the establishment of a license fee. Upon application for an injunction in another judicial circuit against a railroad corporation which had participated in the defense, the general counsel will again appear and assert new defenses and allege a different claim or demand and the case must be tried anew.

Without entering into details it is a truthful statement of fact to say that the ordinary citizen is absolutely precluded from prosecuting in any Federal court a suit against a railroad corporation for infringing a patent with any hope of success.

The association is above citation in any court of justice, and in fact possesses a power superior to that exercised by any circuit court of the United States. In the annual report for 1882 the president says:

"The association has so increased in strength and usefulness that it may be likened in one respect to a judicial authority or tribunal, to which all interested can apply for advice respecting patented inventions in any way relating to railroads, and with the assurance that the advice given, if followed, will be supported and sustained with all the combined force and power of our membership."

In closing the thirteenth annual report, 1879, the general counsel uttered this boast:

"It appears to be the fact that during the whole period of thirteen years, during which the association has been in existence, no suit defended by it has resulted in a judgment against a member on appeal to the highest court; and that while some claims have been settled after suit was brought, no member defended by the association has yet, by process of law under execution, attachment, or otherwise, been compelled to pay anything on account of infringement of letters patent."

For thirty-five years this association has stripped owners of patents and inventors of their property as effectively and completely as the uncircumcised Philistines of old stripped Saul on Mount Gilboa. As stated by the Scientific American March 12, 1892: "Legislation is certainly needed to put a stop to combinations like the Eastern Association for the express purpose of nullifying the privileges granted to inventors by Congress."

[Extracts from the association's annual reports.]

In the first report it is stated that persons who claim damages for the infringement of their patents are "cormorants."

In the third report it is said that the usefulness of the association is becoming apparent. Members enjoy freedom from applications of "patent agents." Our relations to the Western Railroad Association, of Chicago, are such as to secure to each party the full benefit of investigations conducted at the expense of the other.

Fourth report: That under the quiet influence of our own and the Western Railroad Association the business of dealing in railroad patents is fast becoming legitimate and respectable. Owners of patents making claims against railroads are aptly denominated "patent sharks."

Sixth report: That after six years, of all the suits brought against members of the association only one has been pressed to trial, and in that case the defendant was successful, "and a fraudulent claim was permanently overthrown." Referring to certain attempts to secure extensions of patents from Congress, it is stated that "the poor inventor was employed to stand around as a figurehead and recite his misfortunes to members of Congress for the purpose of eliciting sympathy." "It is deemed a part of prudence for the association to be properly represented at Washington during the session of Congress to watch the speculators in these defunct patents and report their earliest appearance."

Seventh report: That the association saves to the companies many hundreds of thousands of dollars annually. That during the seven years' experience of the association only three cases have actually been heard by the courts.

Eighth report: "The executive committee presents its eighth annual report with a feeling of lively satisfaction at the success which continues to attend the organization."

Ninth report: "The kindly relations hitherto existing between the executive committee of this and the Western Railroad Association are still maintained."

Eleventh report: "It has been thought advisable to accept of a low compromise rate offered by the owners of one or two patents whose claims have upon investigation been found to be valid." Data is given of 20 suits defended by the association.

Thirteenth report: It is stated that attention is called to a bill before Congress providing for a commission, appointed by the President of the United States, to examine patented improvements applicable to railroads, with power to decide which of such improvements shall be used and the amount to be paid to the owner. "But the provisions of the bill were so manifestly unconstitutional I did not think it necessary to appear as a remonstrant."

Fifteenth report: "The association can no longer be said to be an experiment. With fifteen years' experience and the resulting accumulation of valuable records and tangible assets in the form of invested securities shown by the reports of the counsel and secretary and the treasurer, it must be admitted to be an established institution, and that it has proved a success far exceeding the expectations of its founders."

"It has fully subserved the object which was intended to be accomplished, and has so increased in strength and usefulness that now it may be likened in one aspect to a judicial authority or tribunal, to which all interested can apply for advice respecting patented inventions in any way relating to railroads, and with the assurance that the advice given, if followed, will be supported and sustained with all the combined force and power of our membership.

"All are apt to be blind when their own interests are concerned, but it is worthy of remark, and a subject of congratulation, that whatever may be the individual interests of our members here we meet as a brotherhood, on a common level, for a common purpose, and without respect to persons or individuals, whatever may be their circumstances or pretensions.

"It may be proper to remind you that the association makes use of no legal power or authority against its members; we are bound by no other ties than those of honor and mutual benefit. There has been some discussion as to the desirability of our acquiring the powers of a corporation. Your committee has not so far discovered any necessity for making such a radical change in the organization of the association."

H. B. MARTIN.
National Secretary.
F. E. STEBBINS,
Of Counsel American Antitrust League.

EXHIBIT B.

In re The Eastern Railroad Association.

STATEMENT ACCOMPANYING A REQUEST, FILED WITH THE ATTORNEY-GENERAL, THAT SUIT IN EQUITY BE INSTITUTED AGAINST THE EASTERN RAILROAD ASSOCIATION.

"In an effort to avoid the condemnation of the law, shelter has been sought under what has ever been held most sacred in equity, a trust, a thing over which equity, to prevent fraud, has asserted and exercised an exclusive jurisdiction. The same combinations to prevent competition, condemned already by the law, are attempted to be worked out at the footstool of the chancellor, concealed in the form there most favored. It is like the outlaw grasping the horns of the altar for security, but, unlike him, it conceals its guilt and demands protection, protesting its innocence while pursuing its iniquity. The act is the culmination of corporate insolence and deceit." (Ray, Contractual Limitations, under the head of "Corporate combinations to prevent fair competition.")

STATEMENT.

The agreement of the Eastern Railroad Association set forth in its constitution and by-laws, and its doings in accordance therewith, constitute violations of the "Act to protect trade and commerce against unlawful restraints and monopolies." (26 Stat. L., chapter 647.)

I.

The constitution of the Eastern Railroad Association is a contract in restraint of trade or commerce among the several States.

THE AGREEMENT.

Prior to the 4th day of December, 1878, 53 railroad corporations, chartered under the laws of and doing business in 15 separate States—to wit, Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, North Carolina, and South Carolina—had entered into an agreement by which they constituted themselves an association to be known as the Eastern Railroad Association. On December 4, 1878, "after due discussion and deliberation," and at a special meeting of the association, an amended constitution was adopted. (Exhibit D.)

Under date of March 24, 1879, the president of the association made the twelfth annual report to the railroad corporation members, and therein called "particular attention" to, and explained the meaning of, certain provisions of the amended constitution.

During the year 1883 the railroad corporation members to the agreement numbered 255, and operated over 19,198 miles of track in 15 States. (Exhibit E; Report in Patent Office Library.)

In 1894 and at the present time, as far as can be learned, the membership of the association embraces some 700 railroad corporations, having 34,000 miles of track and $2,820,000,000 capital.

About 1887 the members of the association adopted a revised constitution, which each railroad company signed and by which it agreed to be bound. (Exhibit F.)

Article I of the constitution recites the purpose of the association, to wit: "While having for its general purpose the promotion of railway interests, its leading object shall be the protection of its members against unjust claims made for patented inventions."

By Article II the members agree that any railroad company approved by the executive committee and subscribing to the articles and contributing to the expense of the association may become a member. Each company is to be represented by a duly authorized person.

By Article III the members agree that the affairs of the association shall be turned over to and managed by nine governors, called the executive committee, who shall be elected each year by the representatives of the railroad corporations at the annual meeting of the association, held in the city of New York. (By-laws, Article I.) That the executive committee shall elect a president, vice-president, and treasurer, selected from among themselves, and shall also elect a general counsel and secretary, and that the officers shall be the officers of the association. That the committee shall have power to elect

other officers and employees, to appoint legal counsel, fix salaries and compensation for themselves and other employees, to prescribe the duties of all officers, agents, and employees, and to make by-laws for its own government.

By Article IV the members agree that annual meetings of the association shall be held; that special meetings shall be called at the request of two members of the executive committee and upon written request of the representatives of not less than five companies; that each company shall be entitled to one vote.

By Article V the members agree that the executive committee shall determine the validity or invalidity of any patent submitted for examination by any railroad corporation member; that the executive committee shall determine the expediency of contesting any claim for compensation made upon any railroad corporation member for the use of a patented invention which it has appropriated; that should the executive committee conclude (1) that a patent is valid or (2) that it is inexpedient to contest a claim for compensation made against one of the railroad members of the association, it shall be the duty of said executive committee, at the request of an associate member to (1) negotiate for the use of the patent or (2) for a settlement of the claim of compensation; that if the railroad member declines to accept the terms fixed by the executive committee for the use of the patent the association will not be responsible for the defense of any suit against such member.

That if the railroad member declines to accept the basis of settlement fixed by the executive committee when claim for compensation is made for the use of an invention, the association will not thereafter be responsible for the expense of litigation growing out of the case. That when the owner of a patent brings suit at law or in equity against a railroad member for infringing his patent adjudged invalid by the executive committee, said member shall report the suit to the secretary, and the executive committee shall manage the same thereafter at the expense of the association. That when the owner of a patent brings suit at law or in equity against a railroad member for the use of a patent which the executive committee has reported upon as valid and for the use of which the executive committee has also fixed the price, accepted by the railroad member but not by the owner of the patent, the said railroad member shall report the suit to the secretary and the executive committee shall thereafter manage the defense at the expense of the association.

That no member shall settle a suit or claim against it after being advised that a similar suit or claim is in charge of the association for defense against another member, except with the consent of the general counsel and president of the association. That when the executive committee decide it inadvisable to assume or continue the expense of litigation arising out of a report which it has adopted, it may so notify the member against which suit has been brought. But the executive committee may compromise or settle the claim for compensation made by the owner of the patent or purchase a license for the member at the expense of the association: *Provided*, The settlement or purchase can be effected at less expense to the association than the cost of carrying on the litigation.

By Article VI the members agree: That expulsion shall be the penalty when any member willfully violates "these articles."

By Article VII the members agree: That the executive committee shall confer with the officers of similar associations in the United States relative to the settlement of patent claims and the trial of patent cases; meaning by "similar associations" especially the Western Railroad Association, which embraces some 81 railroad corporations distributed among the Western States. (See Exhibit V.) Travelers' Official Guide. And that they will contribute from the trust fund to maintain the defense of suits.

By Article VIII the members agree: That they shall be assessed annually according to mileage and gross receipts "for any expenses incurred or hereafter to be incurred" in behalf of the association; and that payment of the assessments shall be enforced under penalty.

By Article IX the members agree: That any company may withdraw from the association by giving notice in writing.

The provisions recited in the by-laws and standing resolutions of the association are intended to aid in carrying out and making effective the agreement set forth in the constitution.

It should be noted that Article V of the constitution of 1887 is substantially identical with Article VI of the constitution of 1878, and that the explanation of said Article VI by the president of the association in the twelfth annual report (Exhibit II) applies to Article V of the constitution of 1887. The explanation is as follows and reveals the true purpose and object of the agreement:

Your committee, however, think it proper here to refer to some of the provisions of the constitution as amended.

Particular attention is called to Article VI, which is designed to regulate the action of all concerned when a claim is made for the use of a patented invention and said claim is submitted to the association for action.

Section 1 of this article makes it the duty of the executive committee to negotiate with an inventor or patentee whose claim it is considered inexpedient to contest; but attention is drawn to the fact that the committee must first be requested to do so by a member. In this respect the section differs from section 3 of Article VII of the old constitution. Section 2 is substantially the same as section 4 of Article VII of the old constitution; but it will be observed that if a member fails to acknowledge receipt of notice sent by the committee for fifteen days after its date, the terms of settlement proposed shall be considered as accepted by such member.

Attention is also called to section 3 of this article, as by its terms the members, in order to avail themselves of the services of the association for defense or in settlement of claims, must notify the secretary of any suit or claim brought against them. And if any member has previously declined, or shall subsequently decline, the basis of settlement recommended by the executive committee, the association will not be responsible for any expenses for litigation such member may incur.

Section 4 prohibits any member settling any suit or claim brought against it, after being advised by the secretary that a similar suit or claim is in charge of the association for defense in behalf of any of its members, without the consent of the secretary, indorsed by the president.

This provision of the Constitution may appear tyrannical, and it does to a certain extent deprive members of the liberty of individual and independent action in the settlement of claims; but the subject has been well considered, and the rule is believed to be essential to the successful carrying out of the main object of the association, to wit, the protection of its members against unjust claims made for patented inventions.

One member may find it expedient to settle a claim under special inducements; but the money thus paid enables the party making the unjust claim to prosecute other members, which in most cases he would otherwise be unable to do. Again, the weaker members of the association might be unduly influenced in the settlement of such claims when they learned that a more powerful member had found it expedient to settle.

Such methods of influencing the settlement of claims are well known to those engaged in the manipulation of fraudulent patent claims, and, if allowed to prevail, the influence and salutary effect of the association would be destroyed. To obtain the best results, the members of the association must act as a unit, and it is believed that this unity of action has been the true cause of our success heretofore.

As further revealing the association's estimate of the character of its agreement, as embodied in its constitution, the following extracts from the president's annual report,[a] March 9, 1882, are reproduced, to wit:

The association "has so increased in strength and usefulness that now it may be likened in one respect to a judicial authority or tribunal,[b] to which all interested can apply for advice respecting patented inventions in any way relating to railroads, and with the assurance that the advice given, if followed, will be supported and sustained with all the combined force and power of our membership."

There has been some discussion as to the desirability of our acquiring the powers of a corporation. Your committee has not so far discovered any necessity for making such a radical change in the organization of the association.

THE ANTITRUST LAW.

An act to protect trade and commerce against unlawful restraints and monopolies.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal. Every person who shall make any such contract or engage in any such combination or conspiracy, shall be deemed guilty of a misdemeanor and, on conviction thereof, shall be punished by fine not exceeding $5,000, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court.

SEC. 2. Every person who shall monopolize, or attempt to monopolize, or combine or conspire with any other person or persons, to monopolize any part of the trade or commerce among the several States, or with foreign nations, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding $5,000, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court.

SEC. 3. Every contract, combination in form of trust or otherwise, or conspiracy, in restraint of trade or commerce in any Territory of the United States or the District of Columbia, or in restraint of trade or commerce between any such Territory and another, or between any such Territory or Territories and any State or States or the District of Columbia, or with foreign nations, or between the District of Columbia and any State or States or foreign nations, is hereby declared illegal. Every person who shall make any such contract or engage in any such combination or conspiracy shall be deemed guilty of a misdemeanor, and, or conviction thereof, shall be punished by fine not exceeding $5,000, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court.

SEC. 4. The several circuit courts of the United States are hereby invested with jurisdiction to prevent and restrain violations of this act; and it shall be the duty of the several district attorneys of the United States, in their respective districts, under the direction of the Attorney-General, to institute proceedings in equity to prevent and restrain such violations. Such proceedings may be by way of petition setting forth the case and praying that such violation shall be enjoined or otherwise prohibited. When the parties complained of shall have been duly notified of such petition the court shall proceed, as soon as may be, to the hearing and determination of the case; and pending such petition and before final decree, the court may at any time make such temporary restraining order or prohibition as shall be deemed just in the premises.

SEC. 5. Whenever it shall appear to the court before which any proceeding under section four of this act may be pending, that the ends of justice require that other parties should be brought before the court, the court may cause them to be summoned, whether they reside in the district in which the court is held or not; and subpœnas to that end may be served in any district by the marshal thereof.

SEC. 6. Any property owned under any contract or by any combination, or pursuant to any conspiracy (and being the subject thereof) mentioned in section one of this act, and being in the course of transportation from one State to another, or to a foreign country, shall be forfeited to the United States, and may be seized and condemned by like proceedings as those provided by law for the forfeiture, seizure, and condemnation of property imported into the United States contrary to law.

SEC. 7. Any person who shall be injured in his business or property by any other person or corporation by reason of anything forbidden or declared to be unlawful by this act, may sue therefor in any circuit court of the United States in the district in which the defendant resides or is found, without respect to the amount in controversy, and shall recover three fold the damages by him sustained, and the costs of suit, including a reasonable attorney's fee.

SEC. 8. That the word "person," or "persons," wherever used in this act shall be deemed to include corporations and associations existing under or authorized by the laws of either the United States, the laws of any of the Territories, the laws of any State, or the laws of any foreign country.

Approved, July 2, 1890.

ARGUMENT.

Section 1 of the antitrust act states:

"Every contract * * * in restraint of trade or commerce among the several States * * * is hereby declared to be illegal."

The law assumes that trade and commerce among the several States shall be free, and that this freedom shall extend to all persons, natural as well as artificial, and also embrace all subjects-matter, whether corporeal or incorporeal, which can be bought, sold, or exchanged.

Chief Justice Fuller, in United States *v.* Knight (156 U. S., 11), said:

"The Constitution does not provide that interstate commerce shall be free, but, by the grant of this exclusive power to regulate it, it was left free except as Congress might impose restraints."

No limitation has ever been fixed by the Supreme Court to the phrase "commerce among the States." Its narrowest definition at least embraces "the conduct of individuals" "in buying and selling or barter."

On argument in Gibbon *v.* Ogden (9 Wheaton) it was claimed that navigation was not included within the meaning of the term; and the court remarked, at page 190:

"The mind can scarcely conceive of a system for regulating commerce (between the States) which shall * * * be confined to prescribing rules for the conduct of individuals in the actual employment of buying and selling or of barter."

Other deliverances on the subject are as follows:

"Commerce is undoubtedly traffic. But it is also something more; it is intercourse." (Gibbon *v.* Ogden, 9 Wheat., 181.)

"Sale is the object of importation, and it is an essential element of commerce." (Brown *v.* Maryland, 12 Wheat., 419.)

"Commerce is intercourse; one of its most ordinary ingredients is traffic." (Brown *v.* Maryland, 12 Wheat., 446.)

"Commerce is a term of the largest import. It comprehends intercourse for the purpose of trade in any and all of its forms, including the transportation, purchase, sale, and exchange of commodities between the citizens

[a] On file in the United States Patent Office library.

[b] It is not within the power of individuals or corporations to create judicial tribunals for the final and conclusive settlement of controversies. (102 Ind., 262, 1885.)

of our country and the citizens of other countries, and between the citizens of different States." (Welton *v.* State of Missouri, 1 Otto, 275.)

"Commerce with foreign countries and among the States, strictly considered, consists in intercourse and traffic, including in these terms navigation and the transportation and transit of persons and property, as well as the purchase, sale, and exchange of commodities." (County of Mobile *v.* Kimball, 102 U. S., 702.)

"The negotiation of sales of goods which are in another State, for the purpose of introducing them into the State in which the negotiation is made, is interstate commerce." (Robbins *v.* Shelby Taxing District, 120 U. S., 497.) (1886.)

"While the completely internal commerce of a State is reserved to the State itself, because never surrendered to the General Government, commerce, the regulation of which is committed by the Constitution to Congress, comprehends traffic, navigation, and every species of commercial intercourse or trade between the United States, among the several States and the Indian tribes." (Interstate Commerce Commission *v.* Brimson, 154 U. S., 447.) (1894.)

"Definitions as to what constitutes interstate commerce are not easily given, so that they shall clearly define the full meaning of the term. We know from the cases decided in this court that it is a term of very large significance. It comprehends, as it is said, intercourse for the purpose of trade in any and all its forms, including transportation, sale, purchase, and the exchange of commodities between the citizens of different States." (Justice Peckham in Hopkins *v.* United States, October 24, 1898, 171 U. S., 597.)

(See United States *v.* Addyston Pipe and Steel Company, 54 U. S., App. 723 et seq. Supreme Court decision December 4, 1899, 175 U. S., 211.)

From the above definitions it may be said that the transfer by a person domiciled in one State to a person domiciled in another State of any interest in a patent by assignment, grant, or license, or negotiations preliminary or preparatory to such transfer, constitute trade or commerce among the several States.

The Congress by positive enactment has declared that there shall be freedom of trade or commerce in patents for inventions and interests therein throughout the United States. Section 4898, Revised Statutes of the United States, reads:

"Every patent or any interest therein shall be assignable in law by an instrument in writing; and the patentee or his assigns or legal representatives may, in like manner, grant and convey an exclusive right under his patent to the whole or any specified part of the United States."

There are three classes of persons in whom the patentee can vest an interest of some kind in the patent. They are an assignee, a grantee of an exclusive sectional right, and a licensee. (Potter *v.* Holland, 4 Blatchford, 406.)

The courts have repeatedly affirmed the existence of a free and open market for patent property throughout the United States. Justice Davis, of the Supreme Court of the United States, in ex parte Robinson, 2 Biss., 309 (1870), a case arising under an act of the State of Indiana "regulating the sale of patent rights," said:

"The property in inventions exists by virtue of the laws of Congress, and no State has a right to interfere with its enjoyment or to annex conditions to the grant. If the patentee complies with the laws of Congress on the subject, he has a right to go into the open market anywhere within the United States and sell his property."

It has repeatedly been held that the acts of State legislatures which attempt to direct the manner in which patent rights shall be sold in the States are void. (See Helm *v.* Bank, 43 Indiana, 167; Robinson on Patents, section 46, note 4, and section 1242.)

In Holiday *v.* Hunt (70 Illinois, 113) the court recognized that the purchase and sale of a patent right constituted "traffic," and remarked of the State law:

"It is a marked discrimination against the traffic in patent rights, which can not fail to seriously prejudice and impair the rights of patentees and their assignees."

A State can not impose a license tax upon the sale of a patent. (State *v.* Butler, 3 Lea., 222.) (1879.)

An act respecting foreign corporations and their agents does not apply to an agent selling patented inventions. (Grove & Baker Sewing Machine Company *v.* Butler, 53 Ind., 454 (1876); Shock *v.* Singer Company, 61 Ind., 520.) (1878.)

The necessary effect of the agreement entered into by the railroad corporations, members of the Eastern Railroad Association, is the restraint of trade or commerce in patent property among the several States.

In United States *v.* The Trans-Missouri Freight Association (166 U. S., p. 241) Justice Peckham, referring to the agreement there under consideration, said:

"The question is one of law in regard to the meaning and effect of the agreement itself. The necessary effect of the agreement is to restrain trade or commerce, no matter what the intent was on the part of those who signed it."

The true meaning of the agreement is to be gathered, according to the well-known rule, from the four corners of the agreement itself. (Judge Chitty in Mills *v.* Dunham, 1 Ch., 580; 1891.)

I do not think an averment is necessary as to what has been done under it (the agreement) or as to any mischief which it has actually produced. We are to consider what may be done under it and what mischief may thus arise. (Lord Campbell in Hilton *v.* Eckersley, 6 E. & B., 65.)

Whether the nature of the combination is injurious is to be determined by a construction of the provisions of the agreement constituting the combination, and not by its effects in actual operation. (Salt Company *v.* Guthrie, 35 Ohio State, 678; Atcheson *v.* Mallon, 43 N. Y., 149 (1870); Richardson *v.* Buhl, 43 N. W., 1102; 77 Mich., 632; Anderson *v.* Jett, 41 Alb. L. J., 104; 89 Ky., 375.)

From the plain terms of the constitution of the Eastern Railroad Association it appears to be the fact that the several hundred railroad corporations, members thereof, have entered into a mutual contract and agreement one with another whereby they have voluntarily abolished competition among themselves in the negotiations for the purchase of any interest in patents for inventions; that for securing "unity of action" they have handed over to a committee of nine persons, called the executive committee, all control over all their business relating to the purchase of patent rights and licenses; that each and every of them has surrendered its liberty of individual and independent action in dealing with inventors and owners of patents; and especially in negotiating settlements of claims made for the use of patented inventions; that they have delegated and surrendered to the said executive committee the power of fixing the price or prices to be paid for the use of any patented invention, and the price in payment for any unlawful appropriation of a patented invention, and the price to be paid for a license to use any patented invention, and the price to be paid for any patent or assignment thereof (assuming that in any case they intend to pay anything at all), and have bound themselves by penalties to abide by the articles of agreement and the decisions of the executive committee.

The several hundred railroad corporations, members of the association, and parties to the agreement, are organized under the laws of fifteen or more States. The owner of a patent domiciled in any of the States is, under the agreement, debarred from negotiating with any one of the railroad corporation members for the sale of an interest in a patent, or for the settlement of any claim for compensation against any railroad member that has infringed a patent.

As between an individual patentee or owner of a patent and the corporation members of 14 States the negotiations involve trade or commerce among the States.

In Hammerstein *v.* Parsons (38 Mo. App., 333) (1889) the court remarked:

"The constitution and by-laws of an association constitute a contract between the members."

It can not be gainsaid that the constitution and by-laws of the Eastern Railroad Association constitute a contract in restraint of trade or commerce among the several States, and thus violate section I of the anti-trust act.

Had the agreement as set forth in the association constitution given the executive committee power only to report on the validity or invalidity of a patent, and then left such railroad company to its own individual and independent judgment as to whether it would purchase a license, or settle for an infringement, or defend any suit brought against it, the agreement would perhaps not be illegal. But had the agreement been so limited it would have been useless. If each company should be allowed to act independently in dealing with owners of patents the whole agreement might as well be rescinded. The president in explaining the provisions of the constitution (Exhibit D) reveals the real nature and essential purpose of the agreement when he says:

"To obtain the best results the members of the association must act as a unit, and it is believed that this unity of action has been the true cause of our success heretofore."

Justice Peckham in United States *v.* The Joint Traffic Association (171 U. S., 505), referring to an analogous agreement, said:

"If one company is allowed, while remaining a member of the association, to fix its own rates and be guided by them, it is plain that as to that company the agreement might as well be rescinded. This result was never contemplated."

The defense in the joint traffic case endeavored to differentiate the agreement there involved from that in the trans-Missouri case by asserting that in the former the rates were made by the several companies and in the latter by the association. Both agreements were held to be violations of the antitrust act.

The conditions imposed upon railroad members by Section V of the constitution, aside from the provision of the remaining sections, render the agreement unlawful. In the Inter-Ocean Publishing Company *v.* The Associated Press (184 Ill., 438), 1900, the supreme court of Illinois decided that—

"The restrictions attempted to be imposed by the Associated Press through its contracts and by-laws upon the rights of members to purchase news from other agencies which such corporation may declare to be antagonistic are null and void as tending to create monopoly and restrict competition." (See Exhibit IX.)

II.

The combination and confederacy of the railroad corporations composing the association to oppose individual patentees and owners of patents in the negotiations of interests in their property, and the agreement of said corporations to use certain unlawful means set forth in their constitution in so opposing, as well as their unlawful acts in pursuance thereof, constitute the association a conspiracy in restraint of trade or commerce among the several States.

By the first section of the antitrust law not only are contracts in restraint of trade which impose binding obligations upon parties to the agreement not to compete illegal, but also conspiracies in restraint of trade, which cover a well-known class of cases where the confederacy proposes or attempts to prevent others from freely carrying on their trade.

The Congress intended to embrace within the statutory prohibition all conspiracies which would be illegal at common law. Illustrations of such cases are: Commonwealth *v.* Carlyle (Br. Rep., 36), where a combination of employers conspired to depress the wages of journeymen, and in respect to which Judge Gibson remarked:

"An association is criminal when its object is to depress the price of labor (commodity) below what it would bring if it were left without artificial excitement, by either masters or journeymen, to take its chances in the market" (p. 42).

Mogul Steam Company *v.* McGregor, Grow & Co. (appeal cases, 25). (See Judge Taft's remarks on this decision (54 U. S. App., 211). People *v.* Everest (51 Hunn., 19). Wright, Criminal Comspiracy, pp. 144–181; American and English Encyclopedia of Law, Vol. IV, p. 608; First Edition Stephen's History of Criminal Law; Ray, Contractual Limitations.)

First. The combination under the constitution and by-laws constitutes the conspiracy though nothing be done in pursuance thereof. In Woodworth *v.* Sherman and same *v.* Cheever and 18 others, 3 Story 172 (1844), Justice Story, who at that time had served thirty-five years on the bench, remarked during the course of the case:

"That he observed that the bills contained a charge of an actual combination to resist the patent. That it was a question of much importance what would be the legal effect of such a combination. That he did not intend to express any opinion on this part of the case, but that in a former case he had occasion to declare that it seemed to approach very near, if it did not actually reach, a criminal conspiracy. That in many cases it was lawful for individuals to do what could not lawfully be done by a combination. That an individual patentee might successfully resist an individual, but it was much more difficult to resist the combined force of a great number of persons united to oppose a patent."

An inspection of the agreement will disclose that the associated railroad companies, organized under the laws of 15 States, have conspired together for the purpose of restraining individual owners of patents, domiciled in the several States, from freely negotiating sales of interests in their patents and from collecting compensation from any member of the association who has appropriated a patented invention.

Second. The agreement by the association to use unlawful means in opposing owners of patents in their attempts to negotiate interests in their property constitutes the association a criminal conspiracy.

A conspiracy has been defined as:

"A combination of two or more persons by concerted action to accomplish a criminal or unlawful purpose, or some purpose not in itself criminal or unlawful, by criminal or unlawful means." (Pettibone *v.* United States, 13 Supreme Court Reporter, 542, (1893.)

The unlawful means which the association agrees to use are: (1) The unlawful maintenance of suits brought against any one of its members (Art. V, Secs. 3 and 5, Art. VII). (2) The boycott. The members of the association agree by Article V not to individually negotiate with the owner of a patent for an interest therein and not to settle a suit or claim when a similar suit or claim against another member is being maintained by the association, for, as the president of the association said in the twelfth annual report: "The money thus paid enables the party making the unjust claim to prosecute other members, which in most cases he would be otherwise unable to do." He further remarked that "this unity of action has been the true cause of our success heretofore."

Third. The acts of the association, its res gestæ, through a series of years in opposing individual patentees and owners of patents, prove the association

to be a permanent conspiracy in restraint of trade or commerce among the several States.

The methods and means, unlawful under the common law and by statute, employed by the association, embrace:[a]

(1) The unlawful maintenance of suits and without legal intervention. (See article "Intervention," A. and E. Enc. of Pleading and Practice, Vol. XI, p. 494.)

(2) Impeding, obstructing, and defeating the due course of justice. (Sec. 5407, R. S., U. S.)

(3) Manufactured evidence.

(4) Perjury. (Sec. 5392, R. S., U. S.)

(5) Subornation of perjury. (Secs. 5396, 5440, R. S., U. S.)

(6) Oppression. (Sec. 5508, R. S., U. S.)

The association violates, and has violated, the first section of the antitrust act within the meaning of the conspiracy clause thereof.

III.

The members of the association have combined and conspired to monopolize part of the trade or commerce among the several States appertaining to the purchase and sale of interests in patents, and have consequently violated section 2 of the act.

By the agreement, as set forth in the constitution, the members turn over to the executive committee of nine governors the sole control of all purchasing of licenses from owners of patents, the settlements of claims made against individual members of the association for the appropriation of patented inventions, and the maintenance of all suits. In the Twelfth Annual Report (Exhibit D) the president states that "this unity of action has been the true cause of our success heretofore."

By suppressing competition among the members and delegating to the executive committee the power to fix prices, the sole buying by the corporation members in 15 States and the selling by the individual owners of patents domiciled in the several States, Territories, and District of Columbia is effectively controlled, and a monopoly of part of the commerce or trade among the several States or Territories is established.

Had not the main purpose of the association been the creation and acquiring of a monopoly, the constitution would have provided that after the executive committee had reported upon the validity or invalidity of a patent, each member should be left free to exercise its own individual and independent judgment as to the advisability of purchasing an interest in or license under the patent or settling a claim made for the use of an invention. Deprive the association of the power of compelling or agreeing upon "unity of action," and it would fall to pieces immediately.

It may be further asserted that under the provisions of Article VII of the constitution the attempt is made to further extend the monopoly to all the trade or commerce in patent rights in all the States which may be carried on, or attempted to be carried on, between railroad corporations and owners of patents for inventions.

But it is immaterial whether an attempt is made to monopolize the whole or any part of trade or commerce among the States. In United States *v.* Knight Company (156 U. S., 16) Chief Justice Fuller said:

"Again, all the authorities agree that in order to vitiate a contract or combination it is not essential that the results should be a complete monopoly. It is sufficient if it really tends to that end and to deprive the public of the advantages which flow from free competition."

Combining or conspiring to monopolize trade or commerce among the several States may be defined as a conspiracy of two or more persons by concerted action to acquire the sole, or an excessive, power to control trade or commerce among the several States which others have the legal right to engage in independently.

Tested by this definition, the association has violated section 2 of the antitrust act.

As the headquarters of the association are in the District of Columbia, it might be shown that it violates section 3 of the act. It is at least within the jurisdiction of the supreme court of the District of Columbia, and that court is authorized by section 4 to apply the third section to corporations (see section 8) doing business within the District of Columbia and bound by contract or conspiring to restrain trade locally in the District of Columbia, or between the District of Columbia and any State or Territory.

THE SCOPE OF THE ANTITRUST ACT.

Six decisions only have thus far been rendered by the Supreme Court in cases under the act, to wit: United States *v.* E. C. Knight Company, 156 U. S., 1; United States *v.* Trans-Missouri Freight Association, 166 U. S., 290; United States *v.* The Joint Traffic Association, 171 U. S., 505 (decided October 24, 1898); Hopkins et al. *v.* United States, 171 U. S., 578; Anderson et al. *v.* United States, 171 U. S., 604; Addyston Pipe and Steel Co. et al. *v.* United States, 175 U. S., 211.

It was decided in United States *v.* E. C. Knight Company that the act did not apply to "monopolies in manufacture even of a necessary of life," but to "monopolies in restraint of interstate or international trade or commerce."

The Chief Justice remarked in that case:

"What the law struck at was combinations, contracts, and conspiracies to monopolize trade and commerce among the several States or with foreign nations; but the contracts and acts of defendants related exclusively to the acquisition of the Philadelphia refineries and the business of sugar refining in Pennsylvania, and bore no direct relation to commerce between the several States or with foreign nations."

In this suit the Government neglected to secure evidence of a restraint of interstate commerce, and consequently failed.

In the United States *v.* Trans-Missouri Freight Association it was held:

That the antitrust act applied to railroad companies.

That the true meaning and intent of the statute was that it should apply, and did apply, to "every contract, combination in the form of trust or otherwise, or conspiracy in restraint of trade or commerce among the several States," irrespective of whether the contract, combination, etc., was in reasonable or unreasonable restraint of trade or commerce.

"While the statute prohibits all combinations in the form of trusts or otherwise, the limitation is not confined to that form alone. All combinations which are in restraint of trade or commerce are prohibited, whether in the form of trusts or in any other form whatever. We think, after a careful examination, that the statute covers, and was intended to cover, common carriers by railroad." (326.)

"We are of opinion that the language used in the title refers to and includes, and was intended to include, those restraints and monopolies which are made unlawful in the body of the statute." (327.)

"Contracts in restraint of trade have been known and spoken of for hundreds of years, both in England and in this country, and the term includes all kinds of those restraints, which, in fact, restrain or may restrain trade." (328.)

"When, therefore, the body of an act pronounces as illegal every combination or contract in restraint of trade or commerce among the several States, etc., the plain and ordinary meaning of such language is not limited to that kind of contract alone, which is in unreasonable restraint of trade, but all contracts are included in such language, and no exception or limitation can be added without placing in the act that which has been omitted by Congress." (328.)

"Why should not a railroad company be included in general legislation aimed at the prevention of that kind of agreement, made in restraint of trade, which may exist in all companies, which is substantially of the same nature wherever found, and which tends very much toward the same results, whether put in practice by a trading and manufacturing or by a railroad company." (322)

"It is entirely appropriate, generally, to subject corporations or persons engaged in trading or manufacturing to different rules from those applicable to railroads in their transportation business, but when the evil to be remedied is similar in both kinds of corporations, such as contracts which are unquestionably in restraint of trade, we see no reason why similar rules should not be promulgated in regard to both, and both be covered in the same statute by general language sufficiently broad to include them both." (324)

In The United States *v.* The Joint Traffic Association, it was held:

That the differences between the provisions contained in the Trans-Missouri and Joint Traffic agreements were not of a material and fundamental nature: and that the decision in the former case was a precedent for the latter. That the act was constitutional. That the decision of the Trans-Missouri case was not erroneous.

In Hopkins et al. *v.* The United States, it was held:

That certain rules and regulations of a live-stock exchange "are not agreements affecting interstate commerce, within the meaning of the antitrust law, having no direct or necessary relation to such commerce."

It appears from this decision that the members after they entered into such association "still continued their individual business in full competition with each other and that the association itself, as an association, does no business whatever."

Justice Peckham here remarked:

"The contract condemned by the statute is one whose direct and immediate effect is a restraint upon that kind of trade or commerce which is interstate.

"There must be some direct and immediate effect upon interstate commerce in order to come within the act."

In Anderson et al *v.* United States it was held—

"That an association of dealers who buy and sell cattle in competition with each other in a particular market, where it is open to all similar dealers, and where no attempt is made to control prices or the number of cattle bought, nor in any manner to prevent full competition between its members, is not in violation of the antitrust act, although the members are engaged in interstate commerce."

In Addyston Pipe and Steel Company *v.* United States it was held—

"That a combination and conspiracy among six companies in regard to the manufacture and sale of cast-iron pipe, by which they agreed that there should be no competition between themselves in some 36 States and Territories and by which prices were to be fixed for each contract by the association, was in violation of antitrust act."

From these decisions it is apparent—

That any agreement (whether contract, combination, in the form of trust or otherwise, or conspiracy) in direct restraint of trade or commerce among the several States is illegal.

That the act is not restricted to any particular subject-matter of the buying or selling or trade or commerce among the several States.

That, further, the act is not limited in its application to any particular persons, natural or artificial, who may enter into any agreement to restrain trade or commerce among the several States.

The decision of the court of appeals for the fifth circuit in United States *v.* Addyston Pipe and Steel Company (54 U. S. App., 723) is especially noteworthy in positively disclosing that the scope of the antitrust act is not restricted to contracts, combinations, or conspiracies to restrain the transportation or delivery of the corpus (iron pipe) from one State to another, but extends to contracts, combinations, etc., in restraint of negotiations and sales which precede delivery of the corpus across State lines (or not). Sections 4 and 5 of the act confer jurisdiction over and power of reaching persons, companies, and corporations who have entered into agreements or combinations to hinder, interrupt, restrain, or in any way prevent full, free, and unrestricted negotiations or sales preliminary to the delivery of the corpus.

Section 6 reaches the corpus when it is in process of transportation, provided the corpus is of such a character or nature that it can be seized.

It is worth while here to observe that by the construction of the antitrust act in the trans-Missouri and joint traffic cases it is not necessary to prove that an agreement actually restrains trade in practice or in operation to render it violative of the act. The defense of the joint traffic case attempted to show the opposite, and instanced in support of its view a State statute of New York (1830), and cited three cases tried under the act, to wit, People *v.* Fisher, 14 Wend., 9; Hooker *v.* Vandewater, 4 Denio, 347; Stanton *v.* Allen, 5 Denio, 434.

Under section 4, moreover, courts of equity have jurisdiction and power to issue injunctions for the purpose of and which may result in restraining the commission of crime. United States *v.* Trans-Missouri Freight Association; United States *v.* Joint Traffic Association; Ellenbecker *v.* Plymouth County, 134 U. S., 31; United States *v.* Alger, 62 F. R., 824; United States *v.* Elliott, 64 F. R., 27; United States *v.* Debs, 64 F. R., 724. In fact, this act seems to revive, in a measure, the ancient criminal jurisdiction of the court of chancery. See Spence's Equity Jurisdiction of Court of Chancery, Vol. I, page 684.

PATENTS FOR INVENTIONS ARE PROPERTY AND FORM THE SUBJECT-MATTER OF TRADE OR COMMERCE AMONG THE STATES.

(I) Patents are property.

"An invention secured by patent is property, and as such entitled to protection as other property." (Cammemyer *v.* Newton, 94 U. S., 225.)

"Patents when rightfully issued are property, and are surrounded by the same rights and sanctions which attend all other property." (Densmore *v.* Scofield, 102 U. S., 375.)

"By the laws of the United States the rights of a party under a patent are his private property." (Brown *v.* Duchesne, 19 Howard, 197.)

"The Government has no more power to appropriate a man's property invested in a patent than it has to take his property invested in real estate." (Solomon *v.* United States, 137 U. S., 346.)

"The power, therefore, to issue a patent for an invention and the authority to issue an instrument for a grant of land emanate from the same source, and * * * are of the same nature, character, and validity." (United States *v.* A. B. T. Co., 128 U. S., 358-359.)

Robinson on Patents, section 752 et seq.

The distinction between a patent for an invention and the physical thing, as machine, article of manufacture, etc., which embodies the invention set forth in the patent should not be overlooked.

In Webber *v.* Virginia (103 U. S., 349) the court clearly distinguished between "the right to an invention or discovery—the incorporeal right—which the State can not interfere with," and the "tangible property," which is subject to the tax laws of the State.

"The purchase of an implement or machine for the purpose of using it in the ordinary pursuits of life stands on different ground from the purchase of

[a] Statement of facts under oath now on file in the office of the Attorney-General support there charges.

the right of making and using the article." (Bloomer *v.* McQuewan, 14 Howard, 539.)

"There is manifest distinction between the right of property in the patent, which carries with it the power on the part of the patentee to assign it, and the right to sell the property resulting from the invention or patent." (11 Bush., 311 Ky. See also Welch *v.* Phelps, 14 Nebr., 134, where many cases are cited. Robinson on Patents, section 45, note 4, and section 1242.)

(II) Patents are not, properly speaking, monopolies.

Inventions were not recognized as property at common law. The Crown undertook to secure the exclusive right by patent, the same instrument as was used to create a monopoly. Thus the English courts fell into the habit of calling a patent a monopoly—one allowed and not forbidden by the Statute of 21 James I. The unreflecting confounded and still confound the word and the thing.

"Now patents (for inventions) are not monopolies, as the counsel have well said, because a monopoly is that which segregates that which was common before and gives it to one person or to a class for use and profit." (Singer *v.* Walmsley, 1 Fish., 363; Seymour *v.* Osborne, 11 Wall., 516.)

(III) Patents form the subject-matter of trade or commerce among the several States.

Section 4898, Revised Statutes of the United States, reads:

"Every patent or any interest therein shall be assignable in law by an instrument in writing, and the patentee or his assigns or legal representatives may in like manner grant and convey an exclusive right under his patent to the whole or any specified part of the United States."

A judgment debtor may be compelled to execute and deliver an assignment of an interest in a patent to a receiver. (Ager *v.* Murray, 105 U. S., 126.)

If the patentee complies with the laws of Congress on the subject, he has the right to go into the open market anywhere within the United States and sell his property. (Justice Davis, of the Supreme Court of the United States, in ex parte Robinson, 2 Biss., 309.)

Property can not be defined without enumerating seizure, use, and alienation. (Wynehamer *v.* People, 13 N. Y., 396, where the entire subject is exhaustively discussed.)

See also section 5045, Revised Statutes of the United States.

CONTRACTS, COMBINATIONS, OR CONSPIRACIES TO LOWER PRICES IN NO WISE DIFFER IN CHARACTER FROM SIMILAR CONTRACTS, ETC., TO RAISE PRICES WHEN THE PURPOSE IS THE SAME.

Lieber, in his Political Ethics, volume 2, book 4, chapter 37, has briefly and intelligently discussed this subject.

See also Commonwealth *v.* Carlyle (Br. Rep., 36), where it is stated that "a combination of employers to depress the wages of journeymen below what they would be if there were no recurrence to artificial means by either side is criminal."

People *v.* Fisher (14 Wendell, 1): "Combinations and conferences to enhance or reduce the price of labor or of any articles of trade or commerce are injurious."

Moore *v.* Bennet (29 N. E., 888): "To stifle or prevent competition, and thereby enhance or diminish prices to a point above or below what they would have been if left to the influence of unrestricted competition," is unlawful.

In United States *v.* Knight Company (156 U. S.) Chief Justice Fuller, at page 16, remarked:

"Contracts, combinations, or conspiracies to control domestic enterprise in manufacture, agriculture, mining, production in all its forms, or to raise or lower prices or wages, might undoubtedly tend to restrain external as well as domestic trade." * * *

Wharton's Criminal Law, tenth edition (1896), section 1365:

"To prejudice the public or government generally, as, for instance, by unduly elevating or depressing the prices of wages or toll or of any merchantable commodity."

Section 1370:

"To suppress competition at public auction."

(Comm. *v.* Haines, 15 Phila. Rep., 363; Huntzinger *v.* Connecticut, 10 Weekly Notes, Pa., 98; Texas Standard Oil Company *v.* Ardoue, 83 Tex., 650; Journeymen Tailors Case, 8 Mod., 10; Comm. *v.* Hunt, 4 Metcalf, 111; The Queen *v.* Rowlands, 17 Q. Bench, 671; Hilton *v.* Eckersley, 6 Ellis & B., 47.)

In the statutes of Great Britain and Ireland, Volume I, page 64 (31 Edw. III), is found a law relating to merchants who by covin do abate the price of wools.

In Leiber Assissarum (27 Edw. III, 138) is specified, among other conspiracies to be investigated, that of—

"Merchants who by alliance and covin among themselves in any year put a certain price on wools which are to be sold in the country, so that none of them will buy, or otherwise pass in the purchase of wools beyond the certain price which they themselves have ordained, to the great impoverishment of the people."

(See Statutes at Large, 7 and 8 Victoria (vol. 84), chap. 24, Section IV.)

Senator HOAR, who aided in formulating the antitrust act, gives the following definition of a trust:

"I understand that a trust, technically and legally, means the case of having one or more persons commit to others or to a combination of others their business or the control of their business or the management of some portion of their business, such as the selling portion or the fixing the price or the hiring of labor, with the understanding that these powers are to be exercised by the corporation or combination to whom it is committed in a manner to operate for the benefit of the persons committing to them that power ordinarily by the depression or putting up of prices." CONGRESSIONAL RECORD, June 28, 1897.

A contract, combination, or conspiracy in restraint of trade among the States, which lowers prices of whatever is to be purchased, undoubtedly violates the antitrust act; and further, any contract, combination, or conspiracy to lower prices in the District of Columbia, and thus restrain local trade, violates section 3 of the act.

THE RELATION OF QUASI-PUBLIC CORPORATIONS TO THE ANTITRUST LAW.

This subject is fully discussed in United States *v.* Trans-Missouri Freight Association (166 U. S.), where numerous authorities are cited and the conclusion reached that:

"The business which the railroads do is of such a public nature that it may well be doubted, to say the least, whether any contract which imposes any restraint upon its business would not be prejudicial to the public interest."

That "while, in the absence of a statute prohibiting them, contracts of private individuals or corporations touching upon restraint in trade must be unreasonable in their nature to be held void, different considerations obtain in the case of public corporations like those of railroads," etc.

See Inter-Ocean Publishing Company *v.* The Associated Press (184 Ill. Rep., 438) (1900) (Exhibit IX), and also note that the by-laws of the Associated Press—declared to be illegal—are identical in force with several articles of the Eastern Railroad Association constitution.

A railroad corporation performs the function of the State (Olcott *v.* The Supervisors, 16 Wall., 678), and all its property is a trust fund for the sovereign power which created it. The incidental interests and profits of individuals are accidents, both in theory and in practice (Talcott *v.* Township of Pine Grove, 1 Flippin, 144) (1872).

In People *v.* Chicago Gas Trust Company it was said:

"Whatever tends to prevent competition between those engaged in a public employment or business impressed with a public character is opposed to public policy, and therefore unlawful."

The Constitution (Art. I, sec. 8, clause 8) empowers Congress to promote the progress of the useful arts by securing, for limited times, to inventors the exclusive right to their discoveries, and the Congress has repeatedly enacted laws to that end.

Patents for inventions are granted under the authority of the Constitution for the promotion of a Federal purpose. (Board of assessors of Brooklyn *v.* Edison Ill. Co., 156 N. Y., 417, 1898.)

The Congress also passed an act approved March 2, 1893, "to promote the safety of employees and travelers on railroads by compelling common carriers engaged in interstate commerce to equip their cars with automatic couplers and continuous brakes, and their locomotives with driving-wheel brakes, and for other purposes."

In a message recommending this legislation, President Harrison said:

"It is a reproach to our civilization that any class of American workmen should, in the pursuit of a useful and necessary vocation, be subjected to peril of life and limb as great as that of a soldier in time of war."

Yet there exist two combinations of railroad corporations, one of them embracing practically all the companies in the 15 Atlantic Coast States and the other 81 corporations, each bound together under a written agreement, entered into voluntarily by each corporation, to "act as a unit" not only in subverting and negativing the laws enacted to promote the progress of the useful arts, but also in delaying and obstructing the enforcement of the act approved March 2, 1893.

The restriction of the introduction of patented inventions by anyone is against public policy and the public interests, and especially reprehensible when practiced by a public corporation, or a combination of 700 public corporations.

Agreements between common carriers, whether by land or by water, whereby a company covenants not to use such inventions and appliances as are discovered or invented from time to time, and are adapted to cheapening, hastening, and rendering safer the transportation of freight and passengers, are against the most obvious public policy. (Wiggins Ferry Company *v.* Chicago and Alton Railroad, 5 Mo. App., 347.)

In Hopkins *v.* Oxley Stave Company (28 C. C. App., 83 F. R., 912) the court remarked, in the course of its decision:

"Another object of the conspiracy, which was no less harmful, was to deprive the public at large of the advantages to be derived from the use of an invention."

The common law will not permit individuals or corporations to legally place themselves in a position by contract where they are required to do or not to do a particular thing, when the thing to be done or omitted is in any degree injurious to the public. (W. Va. Trans. Co. *v.* Ohio R. P. L. Co., 22 W. Va., 617; W. U. Teleg. Co. *v.* Am. U. P. Co., 65 Ga., 160; Watson *v.* Harlem and N. Y. Nav. Co., 52 How., Pr. 348. See Ray Contractual Limitations, p. 206; Partial restriction of trade not permissible by corporations; and p. 261, Corporate Combinations to Prevent Fair Competition. Beach, Trust and Monopolies.)

By reason of the influence of the Eastern and Western Railroad Associations innumerable old methods and devices are now in use on railroads which, had competition not been suppressed, would long ago have been cast aside and replaced by improved methods and life and labor saving devices.

FREE COMPETITION IS THE GENERAL PUBLIC POLICY OF THE BODY POLITIC OR NATION.

"Competition, free and unrestricted, is the general rule which governs all the ordinary business pursuits and transactions of life." (United States *v.* Trans-Missouri Freight Association, quoting Judge Shiras, 166 U. S., 337.)

"The public policy of the Government is to be found in its statutes, and where they have not directly spoken, then in the decisions of the courts and the constant practice of the Government officials; but where the law-making power speaks upon a subject, over which it has constitutional power to legislate, public policy in such case is what the statute enacts." (United States *v.* Trans-Missouri Freight Association, 166 U. S., 340.)

The entire body of the laws of the United States may be subdivided into—

(1) The Constitution, treaties, and statutes of the United States.
(2) The constitutions and statutes of the several States.
(3) The common law as interpreted by the Federal courts.
(4) The common law as interpreted by the State courts.

The first constitutes supreme national law, and the third and fourth subsidiary national law. A United States court, when the law governing a case is common law, follows its own judgment in the interpretation to be placed upon the law, and not the interpretation of a State court, and the State courts thereafter follow such interpretation. In this way the common law has, in fact, acquired the character of a national system and is kept substantially uniform.

To determine the public policy of the nation relative to free competition, it is only necessary to consult (1) the Constitution, treaties, and Federal statutes, and decisions of United States courts in cases arising under the same; and (2) the decisions of the Federal courts and State courts in cases at common law.

I. The Constitution empowers the Congress only to interfere at all with free competition (other than purely local within a State) in what may properly be called industrial or commercial pursuits. Thus far the coining of money (Article I, section 8, clause 5) and the postal business (clause 7) have been completely monopolized, but in connection with the latter, section 3950, Revised Statutes, requires free competition in making contracts for carrying the mails. The power, under clause 3, to regulate (not monopolize) commerce has been exercised mainly in the direction of preserving freedom of interstate trade and commerce. Note the interstate-commerce law, and in particular section 5, which forbids "pooling" by common carriers, and the anti-trust act.

Whatever industrial or commercial enterprises may in the future be conducted on a limited scale or be monopolized by the General Government under the authority of Article I, section 8, clauses 1 and 18, it is a fact that so far the power has for the most part been held in abeyance. The decisions of the United States courts in cases involving the construction of the Constitution or arising under the statutes have ever been in the line of preserving and promoting commercial freedom and free competition.

NOTE.—The Interstate Commerce Commission *v.* Railway Company (167 U. S., 479), where it was held that the Commission has no power to prescribe traffic rates for common carriers "to evolve as it were out of its own consciousness the satisfactory solution of the difficult problem of just and reasonable rates for all the various roads in the country." United States *v.* Trans-Missouri Freight Association; United States *v.* Joint Traffic Association.

In Chicago and Northwestern Railway Company *v.* Osborne (52 Fed. Rep.) Justice Brewer said:

"Congress has not attempted to require that tariffs on all roads be uniform, nor has it attempted to place a limit in figures beyond which no

company may go in its charges. The laws of business and competition have as yet been deemed sufficient restraint in that direction."

Nearly all States have legislated against the consolidation of competing lines of railroads. In a case arising under a State law (Pearsall *v.* Great Northern Railway Company, 161 U. S., 646) Justice Brown remarked:

"Whether the consolidation of competing lines will necessarily result in an increase of rates or whether such consolidation has generally resulted in a detriment to the public is beside the question. Whether it has that effect or not, it certainly puts it in the power of the consolidated corporation to give it that effect; in short, puts the public at the mercy of the corporation. There is and has been for the past three hundred years, both in England and in this country, a popular prejudice against monopolies in general, which has found expression in innumerable acts of legislation. We can not say that such prejudice is not well founded. It is a matter on which the legislature is entitled to pass judgment. There are, moreover, thought to be other dangers to the moral sense of the community incident to such aggregations of wealth, which, though indirect, are even more insidious in their influence, and such as has awakened feelings of hostility which have not failed to find expression in legislative acts."

In Van Patten *v.* Chicago, Milwaukee and St. Paul Railway (81 F. R., 545) the judge said that "the controlling element in regulating prices, values, and rates in general commercial and manufacturing business of the country" is "self-interest controlled by free competition."

"The fact that Congress has not legislated upon the subject of interstate commerce is equivalent to the declaration that it shall remain free and untrammeled." (Welton *v.* Missouri, 91 U. S., 275; In re Debs, 158 U. S., 564.)

"Again, all the authorities agree that in order to vitiate a contract or combination it is not essential that its results should be a complete monopoly; it is sufficient if it really tends to that end and to deprive the public of the advantages which flow from free competition." (United States *v.* Knight Company, 156 U. S., 16.)

II. The decisions of the Federal and State courts in suits involving the interpretation of the common law have almost without exception condemned all agreements the main objects of which were the restraint or destruction of free competition. Those who before the courts and in the public press have denounced "free competition self-destructive" have been able to support their contentions by about six decisions, to wit: [a] (1) Perkins *v.* Lyman, 9 Mass., 522 (1813); (2) Kellog *v.* Larkin, 3 Pinney, 123 (1851); (3) Schrainka *v.* Scharringhausen, 8 Mo. App., 522 (1880); (4) Leslie *v.* Lorrilard, 110 N. Y., 519 (1888); (5) Manchester and Lawrence Railroad *v.* Concord Railroad, 20 Atlantic R., 393 (1890); (6) National Company *v.* Hospital Company, 45 Minn., 275.

These decisions, however, have but little weight when carefully studied. They are only minor and temporary reverse currents which have lost their way in the general onward flow of the main stream.

Free competition is to fix prices in all cases except where the nature of the business renders it inoperative and creates a "virtual monopoly," and there the "police power" may be exercised (subject, however, to the provisions of the fifth and fourteenth amendments to the Constitution) in establishing "reasonable rates" or charges. (Granger cases, 94 U. S.; Munn *v.* Illinois, 94 U. S., 113; Railway Company *v.* Minnesota, 134 U. S., 418; Smyth *v.* Ames, 169 U. S., 466; Budd *v.* New York, 143 U. S., 517; Spring Valley Water Works *v.* Schlotter, 110 U. S., 247.)

As confirmatory of the proposition expressed, there may be here introduced the testimony of two eminent jurists:

"The advantages of unrestricted competition are apparent to the public in industrial life all about us, and while in some kinds of business this is sharp, yet selfishness is sufficiently active and sufficiently intelligent to prevent its becoming ruinous." (Judge T. M. Cooley in Railway Review, January 8, 1887.)

"As long as the principle of competition by private contract is recognized by our social philosophy as regulative of industrial relations, the law has done all it can when, as with us, it breaks down the cast of hereditary privileges, sweeps away the law of primogeniture, and establishes that equality of opportunity which secures to every individual all that he can, according to his capacity, achieve and acquire for himself and his without infringing upon the equal right of his neighbor. The law can do no more than, as an impartial judge, keep a free and fair field, clear from all obstruction, and let the winner win." (Justice Matthews in New York Independent, July 10, 1879.)

As a summary of the benefits of free competition see the remarkable article in Lalor's Cyclopedia of Political Science, Vol. I, page 642, written by the eminent economist, Coquelin:

"We would not," it is remarked, "have the reader imagine that in what we have just said our object was to defend industrial or commercial competition against the puerile attacks which have so frequently been made on it. It has always seemed to us as ill-becoming economists to stoop to defend such a principle; it is too entirely inherent in the primary conditions of social life; it is at the same time too great, too elevated, too holy, and in its general application too far above the attempt of the pigmies who threaten it, to need any defense. We do not defend the sun, although it sometimes burns the earth, which it should only illuminate and warm; neither is there any need to defend competition, which is to the industrial world what the sun is to the physical world. Competition was not born in 1789; it was born in the very cradle of human society, which it has led step by step, from its state of primitive barbarity, to the point of civilization which it has now reached."

It may be truthfully stated that where competition is free no person, natural or artificial, can gain an advantage over others except by rendering more effective and efficient service to the community in quality, quantity, or time, or in some of these combined, unless resort be had to force or fraud.

The Eastern Railroad Association has, by its "combined force and power" and by fraud, for more than twenty-five years oppressed and robbed inventors and owners of patents. Since July 2, 1890, it has existed and pursued its iniquity, in violation of the anti-trust act. It is unquestionably the duty of the Attorney-General, as directed by section 4 of the act, to instruct the proper district attorney forthwith to file a petition in equity praying that further violations of the law be enjoined and prohibited.

THE ATTORNEY-GENERAL, INDEPENDENT OF HIS POWER AND DUTY AS SPECIFIED UNDER SECTION 4 OF THE ANTI-TRUST ACT AND REPRESENTING THE GOVERNMENT OF THE UNITED STATES, HAS AUTHORITY TO AND SHOULD INSTITUTE SUIT IN EQUITY FOR THE PURPOSE OF RESTRAINING THE EASTERN RAILROAD ASSOCIATION.

The United States can assert its prerogative of parens patriæ and enter suit in its own courts in behalf of the public when there is an interference with the exercise of any exclusive power or function granted by the Constitution and over which the Congress by positive enactments has assumed control. (In re Debs, 158 U. S., 599; United States *v.* American Bell Telephone Company, 159 U. S., 670.)

The legislative branch of the Government vested with power and authority granted by Article I, section 8, paragraph 8, of the Constitution has enacted certain patent laws.

Patent rights are granted under the Federal Constitution and necessarily for the promotion of a Federal purpose. (Grant *v.* Raymond, 6 Peters, 218, 241; Ames *v.* Howard, 1 Sumner, 482; Blanchard *v.* Sprague, 3 Sumner, 535.)

In People ex rel Edison Illuminating Company *v.* The Assessors (156 N. Y. R., 417), the court remarked:

"The next step is that patent rights being created under the Federal Constitution and laws for a Federal purpose, the States are without the right to interfere with them."

A State has no power to obstruct or impose conditions upon or to interfere with the sale of State, county, or town rights or individual licenses under a United States patent. (Ex parte Robinson, 2 Biss., 209; Holliday *v.* Hunt, 70 Ill., 109; Helm *v.* First National Bank, 43 Ind., 167; Patterson *v.* Kentucky, 97 U. S., 501; Webber *v.* Virginia, 103 U. S., 304, etc.)

Regarding an interference with interstate commerce the Supreme Court, in re Debs (158 U. S., 564), expressed itself as follows:

"If a State with its recognized power of sovereignty is impotent to obstruct interstate commerce, can it be that any mere voluntary association of individuals within the limit of that State has a power which the State itself does not possess?"

By parity of reasoning a voluntary association of railroad corporations in 15 States has no lawful authority to erect a "judicial tribunal" for the determination of all questions "respecting patented inventions in any way relating to railroads." (See p. 10.)

The executive branch of the Government must guard the Constitution and enforce the laws. The President "shall take care that the laws be faithfully executed." (Constitution, Article II, section 3.)

By act of Congress certain Executive Departments have been created to aid the President in the performance of his duties and to act by his authority.

The circuit courts, a part of the judicial branch of the Government, have jurisdiction of actions to which the United States is a party (18 U. S. Stat., 470, act March 3, 1875), and can exercise their equity jurisdiction at the suit of the Attorney-General, to prohibit acts which interfere with any subject-matter over which Congress, by power granted, has assumed control, and to restrain or annul obstructions interposed by private persons or corporations in the way of the full and free exercise of privileges lawfully granted by said legislative branch of the Government. (In re Debs, 158 U. S., 599; United States *v.* A. B. T. Co., 128 U. S., 359.)

Justice Brewer, in re Debs, summed up the conclusions of the court in a case involving an interference with interstate commerce by a voluntary association. Substituting for the clauses thereof relating to commerce among the States those relating to the promotion of useful arts by patents for inventions, the decision reads:

"Summing up our conclusions, we hold that the Government of the United States is one having jurisdiction over every foot of soil within its territory, and acting directly upon each citizen; that while it is a government of enumerated powers, it has within the limits of those powers all the attributes of sovereignty; that to it is committed power 'to promote the progress of science and useful arts by securing for limited time to * * * inventors the exclusive right to their * * * discoveries;' 'that the powers thus conferred upon the National Government are not dormant, but have been assumed and put into practical exercise by the legislation of Congress; that in the exercise of those powers it is competent to remove all obstructions,' 'natural or artificial,' to the progress of science and useful arts and to the free exercise by every citizen of the privileges guaranteed under the patent laws; that while it may be competent for the Government (through the executive branch and in the use of the entire executive power of the nation) to forcibly remove all such obstructions, it is equally within its competency to appeal to the civil courts for an inquiry and determination as to the existence and character of any alleged obstructions, and if such are found to exist, or threaten to occur, to invoke the powers of those courts to remove or restrain such obstructions; that the jurisdiction of such courts to interfere in such matters by injunction is one recognized from ancient times and by indubitable authority; that such jurisdiction is not ousted by the fact that the obstructions are accompanied by or consist of acts in themselves violations of the criminal law; that the proceeding by injunction is of a civil character."

And the court further stated that its decision in this case rested upon "broader ground" than the anti-trust act.

See the following authorities:

The United States may bring an injunction bill, in the proper circuit court, to protect improvements which she is making under the authority of Congress in navigable waters from injury which will be caused by works of internal improvement within State limits and by State authority. (United States *v.* City of Duluth et al., 1 Dillon, 469 (1870).)

According to the principles of equity, as recognized in the courts of the United States, a State can obtain relief by a bill in equity filed by the attorney-general of the State. (Coosaw Mining Company *v.* South Carolina, 144 U. S., 564 (1892), citing United States *v.* Gear, 3 Howard, 120, and City of Georgetown *v.* Alexandria Canal Company, 12 Peters, 91.)

When a corporate excess of power tends to the public injury or to defeat public policy, it may be restrained in equity at the suit of the Attorney-General. (Stockton *v.* Central Railroad Company, 50 N. J. Eq. Rep., 52 (1892).)

"Remedies against corporations—bill by Attorney-General to prevent corporations from entering into agreements and combinations to prevent competition or monopolize trade, or for continuing in, or carrying out, such agreements and combinations." (Note to People *v.* Milk Exchange, page 485 of American Railroad and Corporation Reports, Volume XI.)

"When the managing body are doing or about to do an ultra vires act of such a nature as to produce public mischief, the Attorney-General, as the representative of the public and of the Government, may maintain an equitable suit for preventive relief." (Pomeroy, Equity Jurisprudence, sec. 1093. See also the last paragraph of the decision, United States *v.* Trans-Missouri Freight Association, 166 U. S., 290.)

The unlawful agreement relating to patents for inventions entered into by the railroad corporations of the 15 Atlantic Coast States under the style of the Eastern Railroad Association, and the many unlawful acts of the association in enforcing its unlawful agreement are fully set forth in the foregoing statement and accompanying exhibits.

The Attorney-General should, independent of his duty as designated in the antitrust act, direct the filing of a civil information in equity in the proper United States circuit court praying for an injunction to issue restraining the Eastern Railroad Association and for a dissolution of the unlawful trust combination and conspiracy.

F. E. STEBBINS.

EXHIBIT C.

Constitution and by-laws of the Eastern Railroad Association, adopted December 4, 1878.

CONSTITUTION.

ARTICLE I.

This association shall be called "The Eastern Railroad Association." While having for its general purpose the promotion of the railway interests, its leading object shall be the protection of its members against unjust claims made for patented inventions.

[a] Ex parte Koehler, 21 Am. and English Rid. Cas., 57. But pooling is now forbidden by the interstate-commerce act.

ARTICLE II.

This association shall be composed of railroad companies of New England, and any others, at the discretion of the executive committee, subscribing to the articles and contributing to the expenses of the association, each company to be represented by a duly authorized person.

ARTICLE III.

SECTION 1. The affairs of the association shall be managed by an executive committee of nine members, who shall be elected every year at the annual meeting of the association. They shall submit at each annual meeting of the association a report of the operations of the past year and of its financial condition, and any member of said committee, ceasing to be the representative of the company for which he is appointed, shall cease to be a member of said committee.

SEC. 2. Said committee shall organize by the election of a chairman, secretary, and treasurer—the chairman and treasurer to be selected from its own members—who shall also be president, secretary, and treasurer of the association. A majority shall constitute a quorum for the transaction of business. They shall also appoint such standing committees as they may deem requisite.

SEC. 3. Said committee shall provide a suitable place for the general office of the association, where all models, books, papers, and documents may be deposited for safe keeping.

SEC. 4. Said committee shall have power to elect such other officers and employees and appoint such legal counsel as may be necessary for the interests of the association, and fix their compensation; shall fill vacancies in its membership and make by-laws for its own government.

SEC. 5. Meetings of the executive committee may be called at any time by the chairman, or shall be when requested by any two members of the committee.

ARTICLE IV.

SECTION 1. The annual meeting of the association for the election of the executive committee and for the transaction of other business shall be held on the second Wednesday in May, at such hour and place as may be designated by the executive committee, and the fiscal year of the association shall terminate on the 31st of December.

SEC. 2. Special meetings of the association shall be called by the president, upon the request of two members of the executive committee, or at the written request of the representatives of not less than five companies.

SEC. 3. The representatives of ten companies shall constitute a quorum at all meetings of this association. Each company shall be entitled to one vote.

ARTICLE V.

SECTION 1. It shall be the duty of the president to preside at all meetings of the association. In the absence of the president a president pro tempore may be appointed. The presiding officer shall name or appoint all special committees, unless otherwise ordered by the association, and the president shall be ex officio a member of all committees.

SEC. 2. The secretary shall keep the minutes of the association, have charge of the models, archives, and property not belonging to the finances of the association; he shall give his time exclusively to its service,and receive therefor such salary as the executive committee may fix.

He shall notify each company of any meeting of the association, by written or printed notice, at least ten days before such meeting. He shall answer all inquiries from members of the association relative to patent matters, and furnish them with written information regarding patents or patent claims that may be in possessien of the executive committee. He shall also perform such duties in examining the validity of patents, and preparing cases for defense before the courts, and such other duties as the executive committee may direct. And, in order that this association may become more extended in its usefulness, it shall be the duty of the secretary to collect information relative to American railway operating, and distribute the same as may be directed by the executive committee.

SEC. 3. The treasurer shall collect all assessments as made by the executive committee, and disburse all the moneys of the association, under the direction of the executive committee, to whom he shall report as often as required, and at the annual meetings of the association shall submit a statement showing its financial condition, with a detailed exhibit of the receipts and expenditures of the past year.

ARTICLE VI.

SECTION 1. Whenever, in the opinion of the executive committee, a patent submitted for examination by any member is valid, or whenever it is deemed inexpedient to contest any claim made upon a member of the association for the use of a patented invention, it shall be the duty of said committee, at the request of any of the associate members, to negotiate either for the use of said patent, or for a settlement of the claim preferred, and when effected, to report the same to each associate member for acceptance.

SEC. 2. If any member declines accepting the basis of settlement so offered (and a failure to acknowledge receipt of said notice for fifteen days after its date shall be deemed an assent to the terms thereof), the association shall not be responsible for the defense of any suit, or for the expenses of any litigation against that company, and growing out of that case, incurred subsequent to date of said notice.

SEC. 3. Whenever a suit is brought against any member of the association for infringing upon a patent reported upon as invalid, or whenever a claim is made against any member for the use of a patent reported upon as valid, and for which a basis of settlement has been agreed upon as aforesaid, it shall be the duty of that member to make report of such suit or claim to the secretary, and thereafter the said committee shall manage the same at the expense of the association: *Provided*, The member so reporting has not previously declined, or shall not subsequently decline, such basis of settlement as has been, or may be recommended by the executive committee.

SEC. 4. Members of the association shall not settle any suit or claim against them after being advised by the secretary that a similar suit or claim is in charge of the association for defense in behalf of any of its members, without the consent of the secretary, indorsed by the president.

ARTICLE VII.

Any member willfully violating these articles may be striken from the roll of membership by a vote of two-thirds of the members present, at any annual or special meeting, provided due notice of such proposed action shall be given in the call of said meeting.

ARTICLE VIII.

The chairman of the executive committee shall confer with the officers of similar railroad associations in the United States in relation to the settlement of patent claims and the trial of patent cases, and said committee may, if they deem it advisable, contribute from the funds of the association to aid in the defense of any patent case the issue of which involves the interests of the members of the association.

ARTICLE IX.

The executive committee shall have the power, and it shall be their duty, from time to time, as often as they judge the interests of the association require, to make assessments upon members of the association, one-half, as nearly as practicable, in proportion to their gross receipts for the fiscal year preceding the making of the assessment, and one-half in proportion to the length of their roads, for any expenses already incurred or hereafter to be incurred, which, in the opinion of the committee, should be borne by this association; and each of the companies, members of said association, does hereby severally agree with the treasurer of said association when said assessment is made to pay him the sum so assessed upon it, and that said treasurer may maintain an action in his own name against each of said companies severally for the assessment as aforesaid made upon it.

ARTICLE X.

Any company may withdraw from this association by giving notice in writing to the secretary, provided such company shall nevertheless be liable for its proportion of the expenses of the association for the fiscal year ending December 31 next ensuing.

ARTICLE XI.

This constitution may be altered or amended by a vote of two-thirds of the members present at any regular or special meeting, provided due notice of said proposed alteration or amendment shall have been given in notice for said meeting.

BY-LAWS.

ARTICLE I.

The annual meeting of the association and the election of an executive committee shall be held in the city of New York, and the stated meetings of the executive committee shall be held on the second Wednesdays of the months of March, May, September, and December, in each year, at such place and hour as the committee may from time to time designate; special meetings of the executive committee shall be called in the same manner as provided in constitution for the meetings of the association.

ARTICLE II.

The general office of the association shall be located, until further action by this committee, at Boston, Mass.

ARTICLE III.

The executive committee shall, at their first meeting after election, organize by electing from their own number a chairman and a treasurer. a secretary and general agent, not members of the committee, and also a finance committee, to be composed of three members of the executive committee. All elective officers shall serve for the ensuing year, or until their successors be elected.

ARTICLE IV.

Five members of the committee shall constitute a quorum for the transaction of business, which shall be in the following order:

1. Minutes of the last meeting read.
2. Report of treasurer.
3. List of applications made since last meeting.
4. Report of secretary.
5. Miscellaneous business.
6. Unfinished business.
7. New business.

ARTICLE V.

SECTION 1. The finance committee shall have charge of the finances of the association, and shall authorize all investments, and annually audit the accounts of the treasurer.

SEC. 2. The chairman shall preside at all meetings of the executive committee, preserve order and regular debate, according to parliamentary rules, and appoint all committees, unless otherwise ordered by the committee. In the absence of the chairman, a chairman pro tempore may be appointed. The chairman shall be ex officio a member of all committees.

SEC. 3. The secretary shall have charge of the models, books, papers, and documents of the executive committee, and of the association, excepting those in charge of the treasurer; and no original paper or report shall be taken from the office without the consent of the executive committee; he shall be present at all meetings of the executive committee, take minutes of the proceedings and record the same in a suitable book for that purpose. He shall notify the members of all regular and special meetings at least ten days prior to each meeting, and shall answer all inquiries from members of the association, relative to patent matters, by furnishing such important information as may be in possession of the committee; make such examinations and investigations and collect such information and testimony as may be necessary for the proper action of the executive committee, or for conducting a suit in the interests of the association; he shall report at each stated meeting a list of applications submitted since the last meeting, and make such reports thereon as have been prepared, and may send to members applying therefor any report that has been prepared for the action of the executive committee, but not submitted, with the understanding that said report is of no effect unless approved by the said committee. He shall, whenever the necessity for outside counsel may arise, submit to the executive committee the names of parties to be engaged, and the rates at which such services may be obtained; but no engagement therefor shall be binding unless approved by the president. He shall prepare and submit to the executive committee, at its stated meeting in March of each year, a report of the operations of the association for the past year, showing the applications made, from whom and date of report thereon, and also the status of any suits that may be in progress.

He shall, by and with the consent of the committee, appoint a clerk to perform such duties connected with the association as he may direct.

SEC. 4. The treasurer shall keep a regular set of books, containing the accounts of the association and of all the funds that may pass through his hands, and keep a separate account as treasurer at such bank or banks as the executive committee may approve. He shall make a report, at each stated meeting of the executive committee, of his receipts and disbursements, in such form as the said committee may direct, and at the stated meeting in March shall submit a general statement of the financial condition of the association and a detailed statement of receipts and expenditures of the past fiscal year, duly audited by the financial committee. All payments shall be made by orders on the treasurer, audited by the secretary and approved by the president.

SEC. 5. The general agent shall, under the supervision and direction of the secretary, investigate and report on all patent questions, as submitted by members of the association, and in contested cases shall prepare for defense. He shall note application for new patents and the extension of old ones. He shall furnish such information through the secretary as will enable the executive committee to reply to the inquiries of correspondents touching patent matters and to act intelligently in adjusting patent claims.

ARTICLE VI.

No alteration or amendment shall be made in these by-laws until presented at a stated meeting and adopted at a subsequent meeting by a majority of the whole committee.

EXHIBIT D.

Twelfth annual report of the executive committee of the Eastern Railroad Association to the members, 1878-79.

Membership.—Ashuelot; Baltimore and Ohio; Boston and Albany; Boston, Concord and Montreal; Boston, Clinton, Fitchburg and New Bedford; Boston, Lowell and Nashua; Boston and Maine; Boston and Providence; Catasauqua and Fogelsville; Central (of New Jersey); Central, Vermont; Cheshire; Concord, Manchester and Lawrence; Connecticut River; Connecticut Western; Danbury and Norwalk; Delaware and Hudson Canal Company; Eastern; Fitchburg; Housatonic; Lehigh Valley; Long Island; Maine Central; Naugatuck; New York Central and Hudson River; New York, New Haven and Hartford; New Haven and Northampton; New London Northern; New York and New England; North Pennsylvania; Northern Central; Northern (New Hampshire); Northeastern (of South Carolina); Norwich and Worcester; Ogdensburg and Lake Champlain; Old Colony; Passumpsic; Pennsylvania; Philadelphia and Baltimore Central; Philadelphia and Reading; Philadelphia, Wilmington and Baltimore; Providence and Worcester; Providence, Warren and Bristol; Raleigh and Gaston; Richmond, Fredericksburg and Potomac; Richmond and Petersburg; Seaboard and Roanoke, Stonington and Providence; Troy and Boston; Vermont Valley; Wilmington, Columbia and Augusta; Wilmington and Weldon; Worcester and Nashua.

Executive committee.—Strickland Kneass, assistant to president Pennsylvania Railroad Company; J. B. Winslow, agent Boston and Lowell Railroad Company; Frank Thomson, general manager Pennsylvania Railroad Company; J. N. DuBarry, representing Northern Central Railroad Company; E. D. Worcester, secretary New York Central and Hudson River Railroad Company; William D. Bishop, director New York, New Haven and Hudson River Railroad Company; James Moore, general superintendent Central (of New Jersey) Railroad Company; A. A. Folsom, general superintendent Boston and Providence Railroad Company; D. L. Harris, president Connecticut River Railroad Company.

Officers.—President, Strickland Kneass, Philadelphia, Pa.; Treasurer, A. A. Folsom, Boston, Mass.; Secretary, A. McCallum, Boston, Mass.; Secretary's Office, Room No. 15, Boston and Lowell Passenger Station, Boston, Mass.

REPORT.

OFFICE OF THE EASTERN RAILROAD ASSOCIATION,
Boston, Mass., March 24, 1879.

To the Members of the Eastern Railroad Association:

GENTLEMEN: In submitting this the twelfth annual report, your committee congratulates the members on the continued prosperity of the association. On referring to the reports of the Secretary and Treasurer herewith, it will be seen, from the details of the business transactions therein set forth, that the association has proved of increased usefulness to its members, while financially its condition is very satisfactory.

Your committee also congratulates the members on the successful results of the litigation assumed by the association on their behalf, as noted in that part of the Secretary's report devoted to this the most important branch of the business of the association. In view of the results obtained in this respect your committee is fully impressed with the conviction that very large sums of money have been saved to the members, and to railroads generally, by the determined and persistent opposition made to what was believed to be "unjust claims for patented inventions." In this regard it must be a matter of great satisfaction to the members to know that no case which has been opposed by the association has yet been decided against them on final adjudication to the Supreme Court of the United States.

Since the last annual meeting several important changes have occured which call for particular notice.

With much regret your committee accepted the resignation of Messrs. Isaac Hinckley as president, D. L. Harris as secretary, and John B. Winslow as treasurer. The resignation of these gentlemen, who so long and so ably filled their responsible positions, is felt to be a great loss; but we have the satisfaction of knowing that, while unable longer to continue the active duties of their former positions, they still take a deep interest in the welfare of the association, and continue to aid in its administration by their valuable counsel.

We have also to note the resignation of S. M. Whipple, esq., who has heretofore acted as expert and general agent of the association, to investigate and report on patent claims, and to prepare for defense in contested cases.

Under the new constitution such services require to be performed under supervision of the secretary, and form part of his duties. It is therefore believed that, with the addition to the clerical force of the secretary's office already made, the office of expert and general agent as heretofore existing may be dispensed with. Several important changes have been effected by the amended constitution, which, after due discussion and deliberation, was adopted at the special meeting of the association on the 4th day of December, 1878.

Copies of the amended constitution, and also of the by-laws, were forwarded to the members, and their representatives have doubtless made themselves familiar with the same.

Your committee, however, think it proper here to refer to some of the provisions of the constitution as amended.

Particular attention is called to Article VI, which is designed to regulate the action of all concerned when a claim is made for the use of a patented invention and said claim is submitted to the association for action.

Section 1 of this article makes it the duty of the executive committee to negotiate with an inventor or patentee whose claim it is considered inexpedient to contest; but attention is drawn to the fact that the committee must first be requested to do so by a member. In this respect the section differs from section 3 of Article VII of the old constitution.

Section 2 is substantially the same as section 4 of Article VII of the old constitution; but it will be observed that if a member fails to acknowledge receipt of notice sent by the committee for fifteen days after its date, the terms of settlement proposed shall be considered as accepted by such member.

Attention is also called to section 3 of this article, as by its terms the members, in order to avail themselves of the services of the association for defense, or in settlement of claims, must notify the secretary of any suit or claim brought against them. And if any member has previously declined, or shall subsequently decline, the basis of settlement recommended by the executive committee, the association will not be responsible for any expenses for litigation such member may incur.

Section 4 prohibits any member settling any suit or claim brought against it, after being advised by the secretary that a similar suit or claim is in charge of the association for defense in behalf of any of its members, without the consent of the secretary, indorsed by the president.

This provision of the constitution may appear tyrannical, and it does to a certain extent deprive members of the liberty of individual and independent action in the settlement of claims; but the subject has been well considered, and the rule is believed to be essential to the successful carrying out of the main object of the association, to wit, the protection of its members against unjust claims made for patented inventions.

One member may find it expedient to settle a claim under special inducements; but the money thus paid enables the party making the unjust claim to prosecute other members, which in most cases he would otherwise be unable to do. Again, the weaker members of the association might be unduly influenced in the settlement of such claims when they learned that a more powerful member had found it expedient to settle.

Such methods of influencing the settlement of claims are well known to those engaged in the manipulation of fraudulent patent claims, and, if allowed to prevail, the influence and salutary effect of the association would be destroyed. To obtain the best results, the members of the association must act as a unit, and it is believed that this unity of action has been the true cause of our success heretofore.

Your committee also think it proper to direct attention to the fact that by the amended constitution the duties and responsibilities of the secretary's office have been increased (see section 2, Article V). One of the objects sought to be attained by extending the duties of the secretary so as to include the management of litigated cases was economy. Heretofore the executive committee, as a matter of necessity, had to employ counsel whenever suits were brought against any of the members and pay whatever bills were presented without full knowledge of the actual services rendered. As a remedy for this unsatisfactory state of affairs it was thought advisable to employ as secretary an attorney having experience in the practice of the patent law and who could, if necessary, practice in any of the United States courts having jurisdiction in patent cases. For particulars respecting the present method of carrying on the business of the association, we refer to the accompanying report of the secretary.

On referring to said report it will also be found that the secretary is prepared to furnish information respecting several subjects not specially inquired of, but of general interest to the members, such as the early histories of the "electric telegraph," "power brakes," "sleeping cars," etc.; but as the regular duties of his office have proved onerous, it is not to be expected that he can give much attention to the collection of such general information. It is therefore suggested that when anything of interest in this connection comes to the knowledge of any members, the same be communicated to the secretary, so that, under the direction of your committee, he may be enabled to distribute such information to the other members.

We also call attention to the suggestions of the secretary as to the formation of a scientific library by voluntary donations of spare books by the members, to which end your committee have appropriated a limited amount to secure a complete set of the drawings of patents relating to railroads, and such reports on patent cases as will materially aid in carrying out the objects of the association, as well as to the importance of collecting models with a view to the formation of a museum of inventions. Your attention is particularly called to the means suggested to prevent the grant of fraudulent patents.

Recent developments show that our members can not be too careful, when taking a license, to see that the language of the agreement or license affords them proper protection in the use of the patented invention for which the license is given; and in this connection the following suggestions may be acceptable:

1. Be sure that the party who gives the license has a legal title to the patent. This can be ascertained by making application to the Commissioner of Patents for a certified abstract of the assignments of the particular patent for which the license is to be given.

2. Be sure that the license covers the right to use the invention, any improvements thereon which the inventor may have made and patented, or for which patents may hereafter be obtained by the inventor or his assignees.

3. Be sure that the license covers the right to use the patented device, not only on your own roads, but on any roads and branches which may be leased, or otherwise connected therewith, during the life of the patent or patents.

4. Be sure that the license covers the right to use the patented device during the entire period for which letters patent are or may be granted or extended, including any reissue of the same.

Attention is respectfully called to the resolutions adopted at the meeting of your committee, December 4, 1878, a printed copy of which was sent to the members at that time. Said resolutions are to the effect that the association can not, under the constitution, undertake to defend the members against claims for infringement of letters patent until said claims have been examined and reported on by the executive committee; so that when suits are brought previous to such examination and report, the expenses incurred in defending the suit must be borne by the individual members sued, unless said suit, upon examination, be accepted by the executive committee, in which case all expenses will be assumed by the association.

This does not prohibit the secretary from giving all the information on the subject at issue which may be in his possession, or from rendering aid in the proper defense of such suit prior to the action of your committee. Such services are at all times available to the members, but anything that may be done or any expense that may be incurred is subject to the approval of the executive committee.

On referring to the report of the treasurer it will be found that the account up to December 31, 1878, stands as follows:

Balance from preceding year	$17,958.44
Collections under assessments	17,819.85
Collection of interest	430.00
Total	33,238.29
Less expenditures	15,678.21
Balance	20,560.08

Respectfully submitted.
By order of the executive committee.

STRICKLAND KNEASS, *President.*

Worcester and Nashua, also 1 railroad corporation	95
	19,198

Two hundred and fifty-five corporations.

EXHIBIT F.

Constitution and by-laws of the Eastern Railroad Association.

CONSTITUTION.

ARTICLE I.

This association shall be called "The Eastern Railroad Association." While having for its general purpose the promotion of the railway interests, its leading object shall be the protection of its members against unjust claims made for patented inventions.

ARTICLE II.

This association shall be composed of railroad companies of New England and any others, at the discretion of the executive committee, subscribing to the articles and contributing to the expenses of the association. Each company to be represented by a duly authorized person; but no railroad company whose earnings are mainly derived from the transportation of passengers upon an elevated railroad within the limits of a city shall be admitted as a member of the association, except upon such terms and conditions as may be prescribed by the executive committee.

ARTICLE III.

SECTION 1. The affairs of the association shall be managed by an executive committee of nine members, who shall be elected every year at the annual meeting of the association. They shall submit at each annual meeting of the association a report of the operations of the past year and of its financial condition, and any member of said committee, ceasing to be the representative of the company for which he is appointed, shall cease to be a member of said committee; and in all cases where a member of the executive committee is absent from two consecutive stated meetings of said committee, unless such absence is caused by sickness or absence from the country, it shall be equivalent to a resignation of said member, and it shall be the duty of the executive committee to fill the vacancy thus created at the next stated meeting following.

SEC. 2. Said committee shall organize by the election of a president, vice-president, general counsel, secretary and treasurer (the president, vice-president, and treasurer to be selected from its own members) who shall also be president, vice-president, general counsel, secretary and treasurer of the association. A majority shall constitute a quorum for the transaction of business. They shall also appoint such standing committees as they may deem requisite.

SEC. 3. Said committee shall provide a suitable place for the general office of the association, where all models, books, papers, and documents may be deposited for safe-keeping.

SEC. 4. Said committee shall have power to elect such other officers and employees, and appoint such legal counsel, as may be necessary for the interests of the association, and fix salaries and compensation, and prescribe the duties of all officers, agents, and employees; shall fill vacancies in its membership, and make by-laws for its own government.

SEC. 5. Meetings of the executive committee may be called at any time by the president, or shall be when requested by any two members of the committee.

ARTICLE IV.

SECTION 1. The annual meeting of the association for the election of the executive committee and for the transaction of other business shall be held on the second Wednesday in May, at such hour and place as may be designated by the executive committee, and the fiscal year of the association shall terminate on the 31st of December.

SEC. 2. Special meetings of the association shall be called by the president upon the request of two members of the executive committee, or at the written request of the representatives of not less than five companies. Notice of any meeting of the association shall be given by a written or printed notice directed to each member, and deposited in the post-office at least ten days prior to the day of such meeting.

SEC. 3. The representatives of ten companies shall constitute a quorum at all meetings of this association. Each company shall be entitled to one vote.

ARTICLE V.

SECTION 1. Whenever, in the opinion of the executive committee, a patent submitted for examination by any member is valid, or whenever it is deemed inexpedient to contest any claim made upon a member of the association for the use of a patented invention, it shall be the duty of said committee, at the request of any of the associate members, to negotiate either for the use of said patent, or for a settlement of the claim preferred, and, when effected, to report the same to each associate member for acceptance.

SEC. 2. If any member declines accepting the basis of settlement so offered (and a failure to acknowledge receipt of said notice for fifteen days after its date shall be deemed an assent to the terms thereof), the association shall not be responsible for the defense of any suit or for the expenses of any litigation against that company, and growing out of that case, incurred subsequent to date of said notice.

SEC. 3. Whenever a suit is brought against any member of the association for infringing upon a patent reported upon as invalid, or whenever a claim is made against any member for the use of a patent reported upon as valid, and for which a basis of settlement has been agreed upon as aforesaid, it shall be the duty of that member to make a report of such suit or claim to the secretary, and thereafter the said committee shall manage the same at the expense of the association, provided the member so reporting has not previously declined, or shall not subsequently decline, such basis of settlement as has been or may be recommended by the executive committee.

SEC. 4. Members of the association shall not settle any suit or claim against them after being advised by the general counsel that a similar suit or claim is in charge of the association for defense in behalf of any of its members without the consent of the general counsel, indorsed by the president.

SEC. 5. Whenever the executive committee shall adopt a report relating to a patent, and shall not deem it for the best interests of the association to assume or continue the expenses of litigation growing out of such report, it may at its discretion so notify the member to whom such report is made, and the association shall not hereafter be at any legal or other expense on account thereof; but said committee may compromise and settle the claim, or purchase a license for such member at the expense of the association: *Provided*, That in the opinion of said committee such settlement or purchase can be effected at less expense to the association than the cost of carrying on the litigation in behalf of such member.

ARTICLE VI.

Any member willfully violating these articles may be stricken from the roll of membership by a vote of two-thirds of the members present at any annual or special meeting, provided due notice of such proposed action shall be given in the call of said meeting.

ARTICLE VII.

The president of the executive committee shall confer with the officers of similar railroad associations in the United States in relation to the settlement of patent claims and the trial of patent cases, and said committee may, if they deem it advisable, contribute from the funds of the association to aid in the defense of any patent case the issue of which involves the interests of the members of the association.

ARTICLE VIII.

The executive committee shall have the power, and it shall be their duty from time to time, as often as they judge the interests of the association require, to make assessments upon members of the association, one-half, as nearly as practicable, in proportion to their gross receipts for the fiscal year preceding the making of the assessment, and one-half in proportion to the length of their roads, for any expenses already incurred or hereafter to be incurred, which, in the opinion of the committee, should be borne by this association. If any company shall neglect to make the proper returns called for by the treasurer after assessment is made, or neglect to pay the treasurer the sum assesssd upon it before the 31st day of December thereafter occurring, it shall be deemed to be in default and shall not be entitled to the privileges of membership, and if it shall fail to pay the sum assessed upon it within three months after notice of default from the treasurer, it shall thereupon cease to be a member of the association.

ARTICLE IX.

Any company may withdraw from this association by giving notice in writing to the secretary, provided such company shall, nevertheless, be liable for its proportion of the expenses of the association for the fiscal year ending December 31 next ensuing.

ARTICLE X.

This constitution may be altered or amended by a vote of two-thirds of the members present at any regular or special meeting, provided due notice of said proposed alteration or amendment shall have been given in notice for said meeting.

BY-LAWS.

ARTICLE I.

The annual meeting of the association and the election of an executive committee shall be held in the city of New York, and the stated meetings of the executive committee shall be held on the second Thursday of the months of March, September, and December and on the second Wednesday of the month of May in each year, at such place and hour as the committee may from time to time designate. Special meetings of the executive committee shall be called in the same manner as provided in the constitution for the meetings of the association.

ARTICLE II.

The general office of the association shall be located, until further action by this committee, at Washington, D. C.

ARTICLE III.

The executive committee shall, at its first meeting after election, organize by election from its own number a president, vice-president and treasurer; a secretary and general counsel, not members of the committee, and also a finance committee, to be composed of three members of the executive committee. All elective officers shall serve for the ensuing year, or until their successors be elected.

ARTICLE IV.

Five members of the committee shall constitute a quorum for the transaction of business, which shall be in the following order:

1. Minutes of the last meeting read.
2. Report of treasurer.
3. List of applications for membership made since last meeting.
4. Report of general counsel.
5. Other business.
6. Reports on patents, etc.

ARTICLE V.

SECTION 1. It shall be the duty of the president or vice-president to preside at all meetings of the association. In the absence of the president or vice-president, a president pro tem. may be appointed. The presiding officer shall name or appoint all special committees, unless otherwise ordered by the association, and the president shall be ex-officio a member of all committees.

SEC. 2. The vice-president, when called upon, shall assist the president in the performance of his duties, and during the absence or at the request of the president, shall officiate in his place.

SEC. 3. The general counsel shall give his time exclusively to the service of the association, and receive therefor such salary as the executive committee may fix. He shall make all required examinations and reports as to scope and validity of letters patent and questions of infringement of same, and prepare cases for defense before the courts. He shall answer all inquiries from members of the association relative to patent matters, and furnish them with written information regarding patents or patent claims that may be in the possession of the executive committee. He shall keep the minutes of the meetings of the association and of the executive committee; shall have charge of the office, models, archives, and property not pertaining to the investments or finances of the association, and perform such other duties as the executive committee may direct.

SEC. 4. The secretary shall give his time exclusively to the service of the association, and receive therefor such salary as the executive committee may fix. He shall keep the books of the association, excepting those in charge of the treasurer; shall notify the members and the executive committee of all meetings of their respective bodies. He shall have charge of the rooms of the office building in the city of Washington, D. C., not occupied by the association, rent same, collect the rents, and account to the treasurer therefor. He shall assist the general counsel, and perform such duties as may be designated by him, and, in the absence of the general counsel he shall take charge of the office, models, archives, and property not belonging to the finances of the association, and perform such other duties as the executive committee may direct.

SEC. 5. The treasurer shall collect all assessments as made by the executive committee, and disburse all the moneys of the association, under the direction of the executive committee. He shall keep a regular set of books containing the accounts of the association, and of all the funds that may pass through his hands, and keep a separate account as treasurer at such bank or banks as the executive committee may approve. He shall make report at each stated meeting of the executive committee of his receipts and disbursements in such form as the said committee may direct, and at the stated meeting in March shall submit a general statement of the financial condition of the association, and a detailed statement of receipts and expenditures of the past fiscal year, duly audited by the finance committee. All payments shall be made by orders of the treasurer, audited by the secretary, and approved by the president.

ARTICLE VI.

No alteration or amendment shall be made in these by-laws until presented at a stated meeting and adopted at a subsequent meeting by a majority of the whole committee.

STANDING RESOLUTIONS.

Resolved, That the secretary be instructed that in making reports to members, as directed by section 3, article 5, of the by-laws, previous to being submitted to the executive committee, he append thereto a printed notice to the effect that said reports are of no effect or binding upon the association until approved by the executive committee.

Adopted March 12, 1879.

Resolved, That the Secretary be instructed to notify all railroad companies, members of this association, that hereafter all applications from such company asking for information from the association in regard to any patent device must be made through the president, vice-president, general manager, or superintendent of such company, or such officer or agent of said company as may be thereto specially authorized by resolution of the board of directors of said company.

Adopted March 10, 1880.

Resolved, That the executive committee be authorized to fix upon and establish an entrance fee that shall be chargeable to all companies desiring to connect themselves with the Eastern Railroad Association after this date, said entrance fee being intended to cover the proportional interest in funds of the association now invested.

Adopted at annual meeting, May 11, 1881.

Resolved, That it is not thought advisable for the association to introduce or, as an association, advocate legislation in Congress; but its members should promote any bill that may be offered to amend the patent laws so as to require the patentee or owner of a patent to give notice of any claim for infringement, and to commence suit thereon within a reasonable time after such notice is given.

Adopted December 14, 1881.

Resolved, That this association will, through its general counsel, furnish to any of its members any information it may be able to give in relation to the legal construction, effect, and bearing of any license or assignment made by the inventor or owner of any patent to one of the members; but, inasmuch as such licenses and assignments have been drawn or accepted by the officers or counsel of such members without action by or consultation with this association, the association can not properly take charge of or assume the expense of any litigation growing out of or connected with such licenses or assignments.

Adopted December 15, 1881.

Resolved, That the secretary notify all persons applying to the association for the privilege of making oral argument before the executive committee relating to patents that such privilege can not be granted, but that the executive committee will receive and consider any argument in writing that may be presented to it.

Adopted December 13, 1883.

Resolved, That in all future patent suits against members of this association the secretary be, and is hereby, instructed to require from the plaintiffs bonds or security for the costs, when such security can be legally demanded.

Adopted March 13, 1884.

In the matter of reports called for by members respecting inventions for which applications for patents are pending in the Patent Office,

On motion, it was—

Voted, That the general counsel be directed to notify the members making such inquiries that the association can not, consistently with its constitution and by-laws, give any advice or express any opinion in regard to any invention for which application for letters patent has been made and is pending in the Patent Office.

Adopted May 12, 1886.

Resolved, That the office of general counsel and secretary, created by resolution adopted May 12, 1880, be discontinued, and that the offices of a general counsel and a secretary be created in accordance with amendments to by-laws.

EXHIBIT G.

The following extracts from the technical journals represent the consensus of public opinion regarding the character of said Eastern Railroad Association, to wit:

[From the Railroad Car Journal, December, 1892.]

RIGHTS OF PATENTEES AND INVENTORS.

We have several times previously given space in this journal to the publication of the circumstances and proceedings in the suit of W. K. Tubman against the Wason Manufacturing Company for infringement of his patent. We have given unusual prominence to the case for the reason that it has brought up a much wider issue than the mere damage sustained by the owner of the patent—an issue of vital interest to inventors or owners of patented railroad appliances.

It would appear from the testimony that Tubman in his suit encounters a more formidable opponent than the actual defendants. He claims that the Eastern Railroad Association is maintaining the defense with the object of defeating his claim, and that with such an organization in existence, pursuing the methods it does, a poor inventor can not possibly hope to maintain his rights to a patented device which the association chooses to advise its members to use without the payment of royalty. The testimony, which we print in another column, of Mr. Andrew McCallum, the counsel of the association, can not be regarded as in any way rebutting the serious charges made against the association by Tubman. We quite fail to see why the proceedings of the Eastern Railroad Association should not be made public. The owner of a patent should certainly be entitled to learn the substance of the association's report to its members upon his invention; for railroads are becoming notorious by reason of the frequency with which they appropriate the ideas of inventors without compensation. The testimony in Tubman's case will be read with interest by inventors or owners of patents on railroad devices.

[From the World's Progress, March, 1892.]

APPROPRIATING PATENTS.

In another article in this issue we have discussed briefly the exercise of a practically assumed right by the Government to appropriate to its own use, without compensation, any patented article or invention it may please to want. That form of appropriation will have attention, and then will be duly regulated by law, just as soon as the abuse becomes so common as to produce public outcry. The sole reason why this law has not been made is that the number of those harmed is comparatively small. So far as the need in equity and justice for such a law is concerned, it seems to be commonly admitted that it is now urgent.

But there is another form of this appropriation which is more common, and consequently more aggravating. It is where a rich and powerful corporation deliberately takes and uses a patented device or invention and then says, coolly and impudently, to the patentee: "Help yourself, if you can." Then the issue so made is almost invariably governed by the length of the purse, and in the end the single-handed inventor finds himself outwinded by the long delays he can not prevent and the large expenses he is forced to pay to carry on his suit. We have now in mind a particular form of this organization that is accustomed to use any patented invention in the line of its business that it pleases to appropriate. We refer to the railroad associations, of which there is one at the East and one at the West. Ostensibly these associations are for self-protection against causeless litigation and the annoyance of importunate and unreasonable inventors. So far as this protective idea goes, the motive of these associations is very proper; but when these associations go further and assume the right to appropriate any invention it wishes to use, and thus force the inventor into the courts to endeavor to get redress, these associations are all wrong.

The consequence is that the single-handed inventor rarely wins in any such suit. It must be said, in justice to these associations, that they allege that they always pay for the use of any and all really new and valuable improvements. But this assertion is hotly denied by the body of inventors who have, as they assert, been ruthlessly defrauded of their rights.

It seems to us that some law can be framed that will secure justice to both parties; that, on the one hand, will enable the inventor to contest his rights with some show of a fair trial, and, on the other, protect the parties who do not wish to be causelessly annoyed by every inventor who is willing, properly or improperly, to invoke the aid of the law. Under the new patent law in Germany, a wanton infringement is made a criminal act. We do not say this is the way to deal in this country with the matter, but it is one way, and the existence of that law proves that the abuse of which we now write has already begun to attract deliberate attention. The attention of the House Committee on Patents has been called to the matter and an earnest attempt made to secure some legislation by Congress to prevent the alleged abuses.

[From the Scientific American, March 12, 1892.]

Legislation is certainly needed to put a stop to combinations formed like the Eastern Association for the express purpose of nullifying the privileges granted to inventors by Congress.

[From Locomotive Engineering for November, 1892. Angus Sinclair, editor, 912 Temple court, New York.]

PROPERTY RIGHTS IN PATENTS.

A decision was rendered last month by the United States Court of Appeals in a suit brought by the Edison Electric Light Company against the United States Electric Light Company, that is of interest to many people who are not in any way concerned in proprietary rights in electrical appliances. Edison was the original inventor of the incandescent lamp, where light is produced by the electric current passing through a resisting medium inclosed in a vacuum. Several parties imitated this invention, and have been selling incandescent lamps which seemed to avoid the Edison patents. The court has now decided that every known form of incandescent lamp, and every possible form of this lamp, infringes the Edison patents.

This means practically that when an inventor secures a foundation patent for any device, the imitations which obtain the same results by different mechanical arrangements are infringements. The decision is a little more emphatic than several others previously made of the same tenor. The well-known decision on the Richardson safety-valve patents was substantially the same as that now rendered concerning electric lights.

This decision ought to be of direct interest to many railroad companies, for there is no class using mechanical appliances more given to patronizing articles that are notoriously pirated imitations of patents. The great variety of functions demanded of railway machinery presents an unparalleled field for inventive genius, and it is industriously cultivated. But no sooner does an inventor produce an appliance or improvement which promises to be in demand than there is a host of imitators doing their best to produce something which will do the same functions and avoid infringing the original patent. The principal work done by the mechanical engineers employed by some railroad companies is the designing of forms of patented articles which shall perform the functions of the original without incurring the liability to pay royalty. This is a small, mean business, and is nothing more than dishonesty; for it is stealing a man's ideas and dressing them so that their identity may be disguised.

The plain decisions of the courts ought to discourage this sort of industry. The only reason why railroad companies are not paying royalties on numerous patents that they are using illegitimately is the delay and expense that must be incurred in lawsuits for infringements of patents. Law's delays are so notoriously tedious in patent suits, that those who have been injured patiently suffer wrong rather than engage in the long and expensive fight. We have recently heard of a movement among men of means to purchase the originals of patents that have been largely imitated by railroad companies. Should this be done, some of the companies are likely to have to pay

damages that will put the money paid to settle the Tanner brake suits far into the shade.[a]

That in the years 1877 and 1878 the said Eastern Railroad Association, in combination with a similar association in the West, endeavored to secure legislation in Congress which would enable the members of the association to appropriate patented inventions without being compelled to pay for them. The following selections from "Arguments before the Committees on Patents, Forty-fifth Congress, second session, Miscellaneous Document No. 50," represent the views of many reputable patent attorneys and others regarding the railroad combination to appropriate patent property, to wit:

W. C. Dodge, esq., Washington, D. C.:

"On the part of the railroads it is a demand that they shall be allowed to appropriate any invention they please, and then to have the law so changed as practically to prevent their being compelled to pay for them" (p. 69).

"Or, which of these public-spirited railroad companies, now asking you to change the patent laws for their special benefit, would invest their capital in building their roads if, when built, the dividends were to go into other pockets than their own?" (p. 70).

"That resolution was introduced by a member whose firm had been made to pay quite an amount in damages for the use of a patented invention which they had appropriated without leave or license of the owner; and it is a striking coincidence that this movement to change our laws was inaugurated by the railroad combination, who, as they tell you, have in like manner been mulcted in heavy damages for a similar appropriation of patented inventions, and which the owners would gladly have sold or licensed them to use for far less than the sum awarded by the courts. As proof of this it is stated that the owner of the swage block patent, for the use of which these companies complain they have been made to pay an exorbitant price—over $100,000—offered to let the same company have the use of his patent for its whole term for $1,000, which they agreed to pay, but when the papers were to be executed the company insisted on the party taking pay in the bonds of the company, worth only 90 cents on the dollar, and because the owner of the patent refused to be thus swindled out of one-tenth of the price agreed upon they refused to complete the arrangement, and told him they would use it in spite of him, and he might help himself if he could. I submit that it does not become parties who have acted thus to now come here crying like a whipped schoolboy and ask Congress to change the law simply to relieve them from the consequences of their own willful violation of the law" (p. 72).

J. J. Storrow, esq., counsel for the Bell Telephone Company:

"There will be cases undoubtedly where defendants will willfully infringe patents. Nay, there will be cases where rich defendants will band themselves together and say to the patentee unless he will sell his invention to them at a price agreeable to them, that they will drag him for ten years through the courts at an expense which is a flea bite to them, but ruinous to him" (p. 135).

W. W. Hubbell:

"These railroad companies infringed a patent beyond all question, and they knew the inventor was poor and could not bring suits all over the United States against these different railroad companies, and they have taken a rule upon him for security for costs, and he, in his inability to furnish it, has been barred and thrown out of court. This was done over here in Baltimore. The Baltimore and Ohio Railroad Company did that to my knowledge, where they infringed a patent" (p. 163). (See standing resolution No. 7 in constitution.)

G. H. Christy, esq., counsel for Westinghouse Air Brake Company:

"I think, further, that it is a dangerous remedy to put into the hands of a wrongdoer, particularly if he is a wealthy party or corporation, and I use the word corporation not in any ill sense, for it is one of the most honest and legitimate ways of carrying on business; but it is especially dangerous to give the power to seventy or eighty wealthy corporations to pounce down on an inventor and snatch from him all his just rights, as was the case with Goodyear, and reduce him to absolute beggary; and as was the case with Pullman when he was jacking up houses in Chicago; or as with Westinghouse, who was not able to pay me his first fee for his first caveat.

"Now, if it is good to put in the hands of an associated power representing such a consolidated amount of wealth, and with the unscrupulous character for which railroads are noted (I speak of it only as an entity, and not in regard to its officers)—I say it is a very dangerous thing to put such a grant of power into the hands of such an organization in order that they may sit down on and squelch an inventor without any money to fight them. Now, then, if I have got seventy or eighty railroad companies at the back of me with their capital and their employees, it is a very singular circumstance if I can not cook up some testimony among them.[b] I do not say that Brother Raymond would, but I do not know who his successor might be. It is putting a dangerous remedy in the hands of a most dangerous class—the wealthy part of our country, who want to use an invention without paying for it" (pp. 254, 255).

Hon. Elisha Foote, ex-Commissioner of Patents:

"You might as well do directly what this section does indirectly, and pass an act that every railroad which is not making profits or dividends shall have the privilege of taking any patents they please with impunity; and, if you make the thing entirely consistent and rational, you should also say that they may enter upon anyone's land and cut their ties, and go into rolling mills and take their rails, or any other property they choose to take, and they shall have them without responsibility to anybody.

"Take the case of this Westinghouse brake, which, I understand, the patentee manufactures himself and puts onto cars at a very reasonable price. Now, suppose any of these Chicago railroads, making no money, should think it desirable for them to take and use this brake without paying anything for it. This section would undoubtedly authorize them to do so without any compensation, and they could grab any amount of property with impunity" (p. 413).

"What chance would the poor inventor have against these powerful corporations? None but a very wealthy person could enter into such a controversy. The roads would not need the other provisions of the bill. This would enable them to take and use any patent they please with impunity, and no one would dare to sue them" (p. 415).

"Suppose any of these wealthy corporations should call upon a poor inventor to commence a suit against them, and to encounter a big railroad combination with all their able and learned counsel in heir employ? It would be impracticable; he would have to give up his patent" (p. 418).

Albert H. Walker, esq., author Walker on Patents:

"Now suppose the Baltimore and Ohio Railroad Company see the wonderful invention, and think that is a good thing, and a good deal cheaper than coal, and say: 'We will proceed to infringe Mr. Vance's patent, and we will fight him ten or fifteen years, if he sues us, with the probable result of his exhausting his means before he gets a decree.' Such a course of defiant infringement is, in many cases, the deliberate purpose of railroad men. It was the avowed practice of H. E. Sargent, the superintendent for many years of the Michigan Central Railroad, and one of the members of the Western Railroad Association. He has avowed it as his universal principle never to pay anything voluntarily to a patentee. He says: 'Whenever our attention is called to a patent of value, we use it, and in a few cases we are made to pay, by plucky inventors; but, in the aggregate, we pay much less than if we took licenses at first.' I admit the railroad companies do not generally avow such a plan of action, but I know they entertain such ideas" (p. 396).

7. That the substance of the following article, which correctly sets forth the character, objects, and methods of the Eastern Railroad Association, was published in the Railway Age in 1891, to wit:

The Eastern Railroad Association should be broken up, because:

1. It is a secret society, with a secret constitution and by-laws, organized, not like most voluntary associations, for charity or mutual assistance in times of sickness, poverty, or distress, nor for moral or intellectual culture, nor for the promotion of science or the arts, nor for the advancement of man's estate, but, judged by its actions for many years, for the spoliation of the property of inventors. It has no charter. It does not report annually to any commonwealth. Its right to exercise its franchises is a usurpation. It is not based upon any contract with the people of any State. It is an irresponsible body. It is organized selfishness.

2. It is a permanent conspiracy, inasmuch as its constitution requires unity of action by all its members in opposing individual patentees, and this whether each member (railroad) is directly interested or not in the particular controversy. It is well-established law that a combination to attain an end, even lawful in itself, constitutes a conspiracy when such combination subjects the individual to its combined and concentrated power.

3. The members of the association intermeddle in what is none of their business. The precepts of international law do not allow a disinterested nation to intermeddle in a contest between two other nations. Our National Government can not intermeddle with the local affairs of a State. The man who interferes with his neighbors' quarrels receives no sympathy if he gets his head broken. Boys in their sports cry: "Hands off!" "Fair play!" The courts have well-defined rules as to when and how interested parties may intervene in suits. But this association will not ask leave to intervene.

4. The association violates Section VIII, article 8, of the Constitution of the United States: "To promote the progress of science and useful arts by securing for limited times to * * * inventors the exclusive right to their * * * discoveries."

Mr. W. S. Huntington, in the National Car Builder some time ago, speaking of the Eastern and Western Railroad Associations, remarked: "The inventors are now practically in their power." "Many inventors who had labored to improve railway appliances abandoned the field and exercised their ingenuity in other directions, where there were fewer obstacles."

5. It is a trust; the most powerful and wealthy trust in the United States—the Standard Oil is an infant beside of it—more powerful than any that has had being since the enactment of Statute 21, James I, abolishing monopolies. This statute has been called the Magna Charta for British industries, and may equally be called the same for American, inasmuch as it established legitimate competition. "This statute," Hume said, "contained a noble principle and secured to every subject unlimited freedom of action, provided he did no injury to others nor violated statute law." This association closes the market against inventors and owners of patents, and prevents free competition.

6. It interferes with the administration of justice in the courts. Its methods are somewhat as follows: If a railroad wishes to use a patented invention, the matter is referred to the general counsel of the association. He investigates and sees what is most expedient to do. He ascertains whether the owner of the patent is a poor man, without means to bring a suit, or a wealthy and influential citizen; whether it is cheaper to pay a small license fee or to appropriate the invention and fight the owner through the court of last resort. If appropriated and the owner brings suit against the railroad infringer, the entire strength and means of the association are brought to bear to crush him, so as to terrify other patentees from bringing suit for the spoliation of their property, and every member of the association joins in the defense against him, whether using the invention or not. It closes the market against the patentee by the first report on his patent. Its constitution forbids any member paying anything to the owner, because such payment would serve to establish a measure of damages should the owner ultimately win his suit. In one of the association's reports the president exhorts the members to "act as a unit," and says: "This unity of action has been the true cause of our success heretofore." Its general counsel in 1879 boasted that the association had never been compelled to pay anything for infringement of letters patent. The seal of the United States on a patent has no significance in its eyes. The little building 614 F street, is bigger than the United States Patent Office.

All suits against any member of the association are defended by its general counsel, who travels on passes while taking evidence and at all other times in defending the suit, and he avails himself of every means within his power per fas per nefas to defeat the suit. Delays, obstructions, manufactured evidence, appeals, and all sorts of trickery are resorted to as occasion demands.

If the complainant is finally successful he can seldom prove "profits" or "damages," and as his patent has generally expired before a final judgment is secured, an injunction will not issue. The complainant has been to great expense and trouble and, after having won his suit, can not collect a cent. It is "more expedient" and cheaper to pay costs than to take licenses in the first instance.[a]

The following boast was made by the association's general counsel, A. McCallum, in closing the thirteenth annual report to the members of the association, to wit: "It appears to be the fact that during the whole period of thirteen years, during which the association has been in existence, no suit defended by it has resulted in a judgment against a member on appeal to the highest court; and that while some claims have been settled after suit was brought, no member (railroad) defended by the association has yet, by process of law, under execution, attachment, or otherwise, been compelled to pay anything on account of infringement of Letters Patent."

EXHIBIT H.

[Memorandum. Alexander T. Britton et ux. Mary, William C. McIntire et ux. Frances B., to William D. Bishop, of Bridgeport, Conn.; Theodore N. Ely, of Altoona, Pa.; Albert A. Folsom, of Boston, Mass. Deed in trust, dated June 18, 1886. Recorded June 26, 1886.]

Consideration, $25,000.

Parts of lots 17 and 18, in square 456.

Beginning on the north line of said lot 18, distant 49 feet west of the northeast corner thereot on F street, and run thence south 159 feet 1½ inches to a

[a] In the Tanner brake suit the railroad associations manufactured evidence which was of such an outrageous character that even the counsel of the Western Association discarded it. A. H. Walker, esq., of Hartford, Conn., author of "Walker on Patents," can give particulars. The Supreme Ruler only knows how much of the testimony in this case was "cooked up."

[b] In 1889 the Association "*reissued*" a patent, with an added drawing, from its office on F street, in Washington. The reissue was then introduced in evidence for the purpose of securing a narrow construction of a patent claim.

[a] The theory of the association regarding patent property is somewhat analogous to that held by the defendant in Campbell Printing Press and Manufacturing Company *v.* Manhattan Railway Company, 60 O. G., 894, decided March 9, 1892.

public alley, thence west 24 feet 4½ inches, thence north 159 feet 1½ inches to north line of lot 17, and thence east 24 feet 4½ inches to the beginning.

To hold unto the only use and benefit of parties of second part, their heirs, and to the survivors and survivor of them and the heirs and assigns of the survivor.

In and upon the following trusts:

First. In trust for the sole use and benefit of the members of a certain association known as the Eastern Railroad Association,

Second. The said parties of the second part, or any of them, shall at any and all times and from time to time convey the same land and premises, or any part thereof, to such person or persons to such uses and purposes and in such quantity or quality of estate or estates, whether in fee simple absolute or by way of trust or mortgage as the executive committee of said association shall name, limit, or appoint, such limitations or appointments to be deemed sufficiently evidenced by the signature of the secretary for the time being of said association affixed to the instrument of conveyance, and on any conveyance or conveyances being made as aforesaid the grantee or grantees in any such conveyance or conveyances shall take the title, discharged from all responsibility on the part of the grantee or grantees to see to or account for the due application of the purchase money, or any part thereof.

General warranty to parties of second part.

Recorded in Liber 1189, folio 253.

EXHIBIT I.

Letters from Whitney, Olney, and Griggs.

DEPARTMENT OF JUSTICE,
Washington, D. C., August 23, 1893.

WILLIAM K. TUBMAN, Esq., *Baltimore, Md.*

SIR: Your petition of August 18 in relation to the Eastern Railroad Association has received careful attention.

The facts stated in your petition, so far as material to the relief asked, are that you are bringing suit in the Federal courts in Connecticut and Pennsylvania, respectively, against two railroad companies for infringement of letters patent for an improvement in railway car windows; that these suits are being defended in the name of the defendant corporations by the Eastern Railroad Association; that one of the objects of this association is to combine all the railroad companies of this part of the country for the purpose of dealing with patentees, it being provided by the constitution of the association that negotiations with patentees should be carried on by the executive committee of the association; that no royalties should be paid, except with the consent of the executive committee, and that all suits for infringements should be defended by the association.

Your claim is that this combination is a violation of the antitrust law of July 2, 1890, and you ask me to direct the United States attorneys for the districts in which the suits are pending immediately "to institute proceedings in equity to restrain the Eastern Railroad Association from continuing in force against yourself the provisions of its constitution above referred to."

The antitrust law provides that every "contract, or combination in the form of a trust or otherwise, or conspiracy in retraint of trade or commerce among the several States or with foreign nations" is illegal, and that every "person who shall monopolize or attempt to monopolize, or combine or conspire with any other person or persons to monopolize, any part of the trade or commerce among the several States or with foreign nations" is guilty of a misdemeanor. I do not think that the combination you refer to comes within the purview of the act.

A patentee is the owner of a monopoly of the right for seventeen years to the sole manufacture, use, and sale of the article which he has invented. In this instance the article invented is one that can only be used by railway companies. You are the only producer and they are the only consumers. You allege that all the possible consumers of the article in a certain territory combine against the sole producer for the purpose of preventing its price being raised above the figure which they are willing to pay. It may be that this combination abuses its power, and, as you aver, either reduces the royalty to a grossly inadequate figure or violates the patentee's rights altogether, relying upon its ability to tire him out in litigation. These evils, however, are not those which the antitrust law was enacted to remedy, and their redress must be found elsewhere. I do not think that a combination of present consumers of a given commodity effects a restraint or a monopoly of trade or commerce within the meaning of the act.

Moreover, I do not perceive that you can not obtain, by proceedings in your own name, whatever remedy, if any, could be afforded by the suit you ask to be brought. It has been the opinion of this Department that the right of a person injured to sue for violation of the act of 1890 is not to be regarded as denied because, by the express terms of the statute, the United States may initiate an equivalent proceeding. General considerations of public policy require that private parties with ample remedies for the redress of their alleged wrongs in their own hands are not to be encouraged to expect Governmental interposition in their behalf. For these reasons the prayer of your petition must be denied.

Respectfully,

EDWARD B. WHITNEY,
Acting Attorney-General.

DEPARTMENT OF JUSTICE,
Washington, D. C., December 11, 1893.

WILLIAM K. TUBMAN, Esq.,
Baltimore, Md.

SIR: Your communication of November 27, asking a reconsideration of your petition for the bringing of suit against the Eastern Railroad Association, under the anti-trust law act of 1890, has received careful examination. I am unable to perceive, however, that the matter was not properly disposed of by the Acting Attorney-General in his letter of August 23 last.

The remarks of Congressmen quoted by you as to the depression of prices by middlemen in order that they may obtain an undue share of the profit between producer and consumer do not apply to combinations of the consumers themselves to obtain a reduction of prices. You do not refer to any authorities holding such combinations to be illegal in case of purely private sales: nor have I been able to find any.

Nor do I think that my refusal to direct suit in the name of the Government precludes you from relief. I am aware that the late Judge Billings decided last winter in a case in Louisiana that a private person could not sue for relief under section 4 of the act. His opinion, however, contains no reasons for the decision, and it does not appeal to my judgment, and I do not think that his decision alone should be controlling in a matter of so great magnitude. The Department of Justice has but a limited appropriation for maintenance of suits, and it has never been considered that the Attorney-General should commence suit except with the belief that he had a fair prospect of winning it. I do not think that Congress intended to conclude by the Attorney-General's opinion parties believing themselves to be injured.

In your communication you charge that officers of the Eastern Railroad Association are guilty of various acts which are crimes independent of the antitrust law. If you are possessed of evidence which will establish such crimes, it should be submitted to the district attorney for the proper district.

In acting upon your communications it has been assumed that you are the owner of a lawful patent which has been infringed by the railroad companies, although a Federal court has decided that you have no rights in the premises, a decision which might be held to dispose of your application.

Respectfully,

RICHARD OLNEY,
Attorney-General.

DEPARTMENT OF JUSTICE,
Washington, D. C., May 23, 1900.

F. E. STEBBINS, *Washington, D. C.*

SIR: In the matter of the application of William K. Tubman, requesting me to institute proceedings under the act of July 2, 1890, commonly known as the antitrust law, against the Eastern Railroad Association, having waited a reasonable time for Hon. J. M. Wilson to appear, I must infer from his failure to appear that he does not care to add anything to the argument you have submitted, and I therefore proceed to dispose of the matter.

The complaint is that a large number of railroad companies have formed this association for the purpose of advising its members with respect to the purchase or use of railway patent rights and of assisting them in the defense of claims for the infringement of such patents. It is urged that patent rights are the subject of interstate commerce and that the association constitutes a combination in restraint of trade or commerce among the several States.

The same application has been twice made to the Department and twice denied, first by Acting Attorney-General Whitney, in a carefully considered communication under date of August 23, 1893, and afterwards by Attorney-General Olney, in his letter of December 11, 1893.

In addition to the considerations mentioned by them, the following are in point:

A patent right is essentially a monopoly. The patentee is granted the exclusive right, for a term of years, to make, use, or vend the patented article. This right is absolutely within his control. He may omit to use it himself and refuse to permit anybody else to use it. He may permit one person to use it and without assigning any reason refuse to permit another to do so. He may sell the right in parcels, giving one person license to use the patent in one place and another license to use it elsewhere.

Such being the nature of a patent right, may not the association complained of be considered as a reasonable and fair arrangement for the mutual benefit and protection of railroads in transactions relating to patents? Before a railroad company can safely purchase a patent right or use an invention, it must be assured that the patent is valid and its use will not operate as an infringement. So, too, if a claim for infringement is made, the company has a right before paying it to make a full investigation, and may do this individually or through others. In what way does it unlawfully interfere with the rights of the patentee for the railroads to create a board of experts which shall be furnished with all the information they have respecting patents, and to which shall be referred for investigation and report all questions relating to patents? A man who offers a patent for sale does not enter the open field of competition. If his patent is valid there can be no competition.

The patent is a monopoly which no person can lawfully infringe, and which he can refuse to sell at all or sell for what he pleases. There is no competition to fix a reasonable price for patent rights. The patentee may demand a thousand or a million dollars. It is worth what he can get for it. If it is infringed, he has his remedy in the courts. If he makes a claim for damages because of infringement he can not object to the person or corporation threatened seeking advice and information from any source before paying or resisting it.

Another thing to be considered is, that to provide the safest service and to secure the best results railroads must be built and equipped in a uniform manner throughout the United States. Passengers and employees are alike interested in this, and Congress has recognized the need by requiring automatic couplers and other safeguards on interstate railroads. For these reasons a patented appliance for use on railroads may be of general concern, in which event one railroad can not safely adopt it without consulting the others. This of itself makes the creation of an association with a board of experts, to which patents may be referred for investigation and report, of exceptional propriety and benefit.

The application must therefore be denied.

Respectfully,

JOHN W. GRIGGS, *Attorney-General.*

This letter was written by Solicitor-General Richards and signed by Griggs, who prepared the answer to the bill in equity in the case of United States *v.* The Northern Securities Company et al.

EXHIBIT K.

OPINION OF WILLIAM E. CHANDLER, MARCH 24, 1902.

A combination of all or a large number of railroads to contest patents on all articles required for railroad use, in which each railroad agrees not to settle with any patentee without the consent of a committee of the combination, nor while any claim is pending against any other member of the combination, and by which the combination agrees to defend all suits against each railroad and to pay the expenses of such defense and pay any judgments which may be recovered, is an illegal conspiracy in restraint of trade under the act of Congress of July 2, 1890 (26 Stats., 209).

The object is to enable the combination to control and fix the prices to be paid as royalties upon all inventions, and does not allow each railroad to make its own settlements with the patentees. It is a conspiracy to get lower prices for what the combination buys, as contradistinguished from a conspiracy to get higher prices for what a combination produces and sells; and both are obnoxious to the law against monopolies.

Patents are property created by express national law. A patented article has attached to it a special value growing out of the patent. Congress having decided that it is for the public good that inventive genius shall be stimulated by patent monopolies, all patents and all patented articles are proper subjects of trade and commerce, and as such are protected by all the laws which protect other merchandise. If it is desirable that they shall exist, it is desirable that there shall be unhindered trade therein, and such trade can not be lawfully lessened by combinations and conspiracies to diminish the value thereof through lawsuits, to fix the prices which shall be paid therefor, and to otherwise prevent free traffic therein.

The railroads can no more combine to fix low prices which they shall pay than an association of patentees can combine to fix high prices which they shall charge.

The fact that the patentees are for a limited period legal monopolists gives no right to the railroads to establish an illegal combination to limit the monopolies. Congress can abolish patents; the railroads can not.

All the above propositions seem clear and not doubtful. The facts in the case of the Eastern Railroad Association are all of record in their own books and reports, and are too plain to need recital. The association is formed expressly for the purpose above supposed, and for no other purpose. To be sure, it is stated that its object is only to resist illegal patents, but that recital does not change the avowed purpose to allow no patents to be settled

for by any one member of the association except with the assent of a committee of all the railroads, and to defend any claims against any member and to pay the expenses and the judgment, if any is recovered. The Joint Traffic Association contended that its object was not to fix and maintain unreasonable rates, but only rates which should be reasonable. The subterfuge did not avail with the Supreme Court, and the subterfuge that the open combination of all the railroads to control the settlement for all patents is only intended to apply to illegal patents will be equally worthless.

It is difficult to believe that an illegal combination so plain and evident should have existed during all these thirty years last passed. It can not be doubted that the President and the Attorney-General, when they know the facts, will act with as much promptness and vigor as they have in the case of the Northern Securities Company, where the facts and the law are not so clear and plain as in the present case, because in the first the purpose is not stated in words, while in the latter it is openly and expressly avowed.

The foregoing opinion is given in full view of the letter of Acting-Attorney-General E. B. Whitney, of August 23, 1893, and the letter of Attorney-General Olney of December 11, 1893. Those gentlemen were members of Mr. Cleveland's Administration, and, like Attorney-General Judson Harmon, were doubtless influenced in their opinion by their close relations to their President, of whom Mr. William J. Bryan, on March 21, 1902, spoke as follows:

"For four years he stood between the people and reform; for four years he made the White House the rendezvous of cunning and crafty representatives of predatory wealth; for four years the corporations and syndicates controlled his Administration."

Insensibly to themselves, perhaps, Mr. Whitney and Mr. Olney were controlled by surroundings like these, and Messrs. McKenna and Griggs mistakenly refused to reverse the decisions of their predecessors, doubtless overcome by the lingering malaria of the late Administration. But there is no such atmosphere now in the White House or in the Department of Justice. President Roosevelt and Attorney-General Knox are the friends of the people and reform, and not representatives of predatory wealth, and it is impossible that they should not suppress a combination so evidently illegal as that of the Eastern Railroad Association.

WM. E. CHANDLER.

EXHIBIT L.

OPINION OF UNITED STATES SENATOR TURNER.

UNITED STATES SENATE CHAMBER,
Washington, D. C., May 17, 1902.

H. B. MARTIN, Esq.,
Secretary Antitrust League, Washington, D. C.

DEAR SIR: From the papers submitted to me it apears that the Eastern Railroad Association is a trust formed by several hundred railway companies operating east of the Mississippi River, whereby each company contributes to a fund controlled by trustees, engages to be bound by the action of the trustees, and to do nothing whatever in the matters committed to the said trustees; and under and by virtue of the trust agreement the fund thus created is to be used by the trustees—

First. To investigate concerning the validity and utility of all patents granted for improvements and devices to be used in connection with the operation of the railways.

Second. To defend all suits brought by patentees against railways, members of the trust, for using any such improvements and devices.

Third. To compromise such suits when, in the opinion of the trustees, the patent is valid, provided the sum paid by the way of compromise be not more than it would cost to litigate the suits.

Fourth. When patent rights are found to be both valid and useful, to negotiate and purchase the same for the benefit of the members of the trust, and upon such terms as the trustees may determine.

The companies agree that they will not negotiate or deal with patentees either in the matter of purchase or by way of compromise for illegal use, but that all such negotiations and dealings shall be by the trustees. The effect of the agreement is far reaching, as a moment's reflection will readily show, upon the value of the property of patentees and upon their ability to vend the same throughout the several States covered by the agreement. The patentees, as to all such States, are reduced to the necessity of dealing with a single purchaser. This purchaser is armed with a large fund to fight in the courts all patents which it can not purchase on its own terms. It is an impudent bully which takes any property that it pleases upon such terms as it pleases, and is armed with a club to beat its victims to death if they decline to submit.

Since the trust is interstate in its scope and operations, has for its object the restraint of trade in patent rights, is created by contract, has taken and maintained the trust form, and is, moreover, a criminal conspiracy at common law, thus presenting all the features denounced by section 1 of the act of July 2, 1890, it necessarily follows that it is illegal if, first, a patent right is property which may be said to enter into and form a part of trade and commerce; and, second, if a combination to lower the value of property entering into interstate commerce is as much "in restraint of trade," within the meaning of the act of 1890, as a combination to raise the value of such property would be.

It does not require either profound consideration or an extended examination of authorities to see that the question of correctness of both the foregoing subjunctive propositions must be answered in the affirmative.

First. A patent right is property. It is created by statute, and the freedom of vending it in all the States is declared by statute. The fact that it is incorporeal in character and intangible does not change its character as property. Justice Davis of the Supreme Court of the United States, in ex parte Robinson 2, Biss. 309, uses the following language concerning the character of patents and the free right to vend them within the United States:

"The property in inventions exists by virtue of the laws of Congress, and no State has a right to interfere with its enjoyment or to annex conditions to the grant. If the patentee complies with the laws of Congress on the subject he has the right to go into the open market anywhere within the United States and sell his property."

Inventions secured by patents have been specifically declared to be property by the Supreme Court of the United States in the following cases: Brown *v.* Duchesne, 19 Howard, 197; Cammeyer *v.* Newton, 94 U. S., 225; Densmore *v.* Schofield, 102 U. S., 375; Soloman *v.* United States, 137 U. S., 346.

Being property and the right to freely vend them in the several States being secured by statute, why are not patented inventions as much within the spirit and purpose of the act of 1890 as any other species of property? It is impossible to conceive of any reason why they are not. There is no such reason. Indeed, as to many tangible articles of property covered by patents, the patented idea involved in and connected with them constitutes a great part of their value, and in some instances the greater part. The protection which the law carries for such articles against combinations in restraint of trade therein is a protection for both the value of the articles considered simply as manufactured articles, and the value of the patent right which inheres in and belcngs to them. We see, then, that the law does include within its purview the patent right when connected with tangible, physical property, and it is impossible to conceive why it should not be taken to include the patent right when disconnected with the tangible, physical property.

Second. Is it not a combination to lower the value of property entering into interstate commerce "in restraint of trade" within the meaning of the act of 1890? The evil most in the public mind at the time of the passage of that act was the existence of trust combinations formed to increase the price of manufactured articles, but that combinations might be formed for the opposite purpose could not have escaped the intelligence of Congress, and that combinations and conspiracies had existed in the past for that purpose, and constituted indictable crimes at common law, was well known to the members of both Houses. The terms of the act are general. They are "every contract, etc., in restraint of trade or commerce among the several States," etc. Since it is as much in restraint of trade to depress the value of articles of property as it is to enhance them, and indeed more so, and since the history of the law showed that conspiracies for the first purpose were as likely to occur as conspiracies for the second, and that they were equally as injurious as the second kind, it is impossible, in view of the broad and comprehensive language employed, to conclude that Congress did not have both kinds of contracts and conspiracies in view.

It is true that only contracts and conspiracies of the second kind have been before the courts since the passage of the act of 1890, but that is no argument against the view here taken. The law has been in force a comparatively short time and it requires much time for cases involving every phase of any law to arise and be adjudicated. It may be observed, however, of these cases, which have been adjudicated, that the reasoning on which the judgments proceeded was as applicable to the one case as to the other, and that in none of the opinions is there the most remote suggestion that the law was not intended to cover both classes of cases. Can anyone doubt that if all the grain dealers in the United States should enter into a combination to commit the purchase of all corn bought in the United States to the hands of one firm or corporation, thereby compelling the farmers whose necessities compel them to sell, to sell at any price this firm or corporation might fix, that such combination would be declared to be in restraint of trade and commerce within the meaning of the act of 1890? If such a combination would be in restraint of trade and commerce, then this combination is in restraint of trade and commerce. The only difference in the two cases is one of degree in the number of individuals affected and the public injury inflicted.

These considerations do not appear to have occurred to Acting Attorney-General Whitney, Attorney-General Olney, or Attorney-General Griggs when they declined to intervene against this trust combination at the request of Mr. Tubman. Mr. Whitney contents himself with declaring that he did not think a "combination of present consumers of a given commodity effects a restraint or a monopoly of trade or commerce within the meaning of the act." Why such a combination does not have such an effect he does not undertake to show, unless his general statement that a patentee is the owner of a monopoly and that the railroads are the sole consumers and the patentee the sole producer, can be taken as a reason in favor of his contention. The considerations stated by him appear to be entirely foreign to his conclusion. The latter is a complete *non sequitur*.

Attorney-General Olney does not discuss the questions involved at all, and it is evident that he gave them only perfunctory consideration, if he gave them any consideration. Attorney-General Griggs evidently did not see the features of this combination which enabled it to kill competition and to control at will the prices to be paid inventors for their patented inventions. He speaks of it as if its sole purpose was to keep in touch with new inventions affecting railway business and to examine and report concerning their validity, utility, and value. He does make one statement which bears on the subjects I have been discussing, but it is nothing but a bare statement, and, morever, it is palpably incorrect. He says "if his patent is valid there can be no competition." There can be competition between railways for the purchase of valuable railway patents. Suppose there was only one line of railroad from the Atlantic to the Pacific coast having the right to use the Westinghouse air brake, would not that line of railway have a great advantage over its competitors in the matter of passenger traffic, and if such a patent right were put up for sale for the exclusive use of two or more competing lines of railways, would there not be keen competition for its purchase? If the free right to vend patented inventions were not broken down and destroyed by this combination, there would be such inventions for which rival lines of railways would compete.

I have not thought it necessary to quote from the contract by which the Eastern Railroad Association was formed. That contract and the constitution and by-laws of the association made to carry it out, shows its objects and purposes to be what I have stated. If I have committed an error it is in understatements rather than overstatements. Neither have I deemed it necessary to quote from, or refer to, the several cases construing and applying the act of 1890. They are too well known to the profession to require more than the mention I have made of them.

In conclusion I think that the question of the character of this association may well be again submitted to the Attorney-General for examination, and for the action of the Department after such examination, with the confident hope and expectation that that examination will induce a different opinion, and cause different action to be taken from that reached and taken when the matter was before under consideration in the Department of Justice.

Very respectfully,

GEO. TURNER.

EXHIBIT M.

Circuit court of the United States, district of Massachusetts. In equity. No. 2471. William K. Tubman *v.* Wason Manufacturing Company. Affidavit of John J. Harrower. Filed February 10, 1894.

I, John J. Harrower, of Washington, in the District of Columbia, make oath and say that I am secretary of the Eastern Railroad Association, whose office is at 614 F street NW., in said Washington; that Robert J. Fisher, counsel of said association, has directed me to appear on his behalf for the purpose of having forwarded to him for use in a cause in equity now pending in the circuit court of the United States for the eastern district of Pennsylvania, brought by the same complainant, Tubman, against the Pennsylvania Railroad Company (the said Eastern Railroad Association having carried on the defense in both of said causes on behalf of the defendants therein), certain exhibits, being models introduced as evidence by said defendant per said association, entitled in the printed record of this cause as follows: Defendants' Exhibit, "Defendants' car;" defendants' Exhibit, "Roberts's car;" which said models are now in the custody of the clerk of this court.

JNO. J. HARROWER.

Sworn to before me this 10th day of February, A. D. 1894.

ALEX. H. TROWBRIDGE,
Clerk United States Circuit Court, Massachusetts District.

I respectfully request that the said exhibits be forwarded by the clerk of this court to Robert J. Fisher, esq., counsel for the said Eastern Railroad Association, on the condition that they be carefully preserved in their present condition so that they can be returned to the custody of the clerk of this court whenever an order of court may be made requiring such return.

Very respectfully,

JNO. J. HARROWER.

ORDER.

[February 10, 1894.]

Colt, J. Ordered that said exhibits be delivered as prayed for, subject to the further condition that they be kept or used in the said court of Pennsylvania, subject to the order for return to this court.

By the court: ALEX. H. TROWBRIDGE, *Clerk.*

FEBRUARY 10, 1894.

Models forwarded to Robert J. Fisher, esq., per Adams Express.

Hearing no further from the President or the Department of Justice, the following correspondence occurred, which closes the chapter of this consistent refusal upon the part of the Administration to act upon the plain facts presented:

THE AMERICAN ANTITRUST LEAGUE, NATIONAL OFFICE,
1229 PENNSYLVANIA AVENUE, SECOND FLOOR,
Washington, D. C., April 3, 1902.

Hon. GEORGE B. CORTELYOU,
Secretary to the President.

SIR: You will doubtless remember that on March 26 we placed in your hands an opinion by the Hon. William E. Chandler relative to the violation of the Federal antitrust law by the Eastern Railroad Association, and requested that the same be delivered to the President.

On December 21, 1901, we submitted to the President in person and filed certain printed documents and papers, among them being a copy of the associations' unlawful agreement and a "statement" relating to the legal aspects of the same, and the President promised that he would give the matter careful consideration and call the attention of the honorable Attorney-General to it. Since the above date we have not received any communication from either the President or the Attorney-General relating thereunto.

We would be pleased to have the opportunity of discussing this matter with the President in person if you can make arrangements for us to do so.

Respectfully, yours,

H. B. MARTIN, *Chairman,*
F. E. STEBBINS, *of Counsel,*
Joint Committee Antitrust League and D. A. 66, Knights of Labor.

EXHIBIT N.

WASHINGTON, D. C., *May 27, 1902.*

Hon. THEODORE ROOSEVELT,
President of the United States.

SIR: On December 21, 1901, the undersigned placed in your hands certain evidence in the form of papers and documents showing that the Eastern Railroad Association, a voluntary combination of nearly all railroad corporations in the fifteen Atlantic coast States, exists and pursues its iniquity in violation of the Federal antitrust law. You received the papers and stated that you would give the matter careful consideration and call the attention of the Attorney-General to it.

On January 23, 1902, we addressed a communication to the honorable Attorney-General, asking what action, if any, had been taken in the matter. Thus far the Attorney-General has failed to make any reply whatsoever.

On March 26, 1902, we placed in the hands of your secretary, Mr. G. B. Cortelyou, to deliver to you in person, a legal opinion by the Hon. William E. Chandler to the effect that the Eastern Railroad Association was an "illegal conspiracy," Mr. Chandler having carefully examined a substantial duplicate of the evidence filed with you on December 21, 1901.

On April 3, 1902, we addressed a letter to Mr. Cortelyou relative to the disposition made of Mr. Chandler's opinion and expressed the desire for a personal interview with the President, and in reply received the following letter from your secretary:

WHITE HOUSE,
Washington, April 5, 1902.

MY DEAR SIR: I have your letter of the 3d instant, and in reply would say that your previous communication was by the President's direction brought to the attention of the Attorney-General on March 27. I would suggest that you communicate with Mr. Knox on the subject.

Very truly, yours,

GEO. B. CORTELYOU,
Secretary to the President.

Mr. H. B. MARTIN,
American Antitrust League,
1229 Pennsylvania avenue, Washington, D. C.

On May 21, 1902, we called at the Department of Justice and was told by the secretary to the Attorney-General that he was at the White House and that we could call up the Attorney-General's office by telephone at 2 o'clock p. m., and arrange for an interview. Upon leaving we gave the secretary a copy of a legal opinion, prepared with great care by the Hon. George Turner, showing that the Eastern Railroad Association was an illegal trust, and requested the secretary to hand the same to the Hon. Attorney-General. At 2 o'clock Mr. Martin communicated with the secretary by telephone as agreed and was informed that "the Attorney-General will not be able to take up the case." Mr. Martin replied: "Will not take up the case at all?" and the secretary responded: "He says he will not be able to take it up at all."

Mr. Martin: "We called to see him at the suggestion of the President." The Secretary: "He says he will not be able to take it up at all." On the morning of May 22, Mr. Martin received through the mail, and in a Department of Justice envelope, the copy of the opinion by Hon. George Turner, delivered to the Secretary on the previous day, and which was the sole paper inclosed in the envelope. The postmark indicated that the opinion had been returned very soon after its delivery to the Attorney-General's secretary.

Believing in the law, "the very least as feeling her care, and the greatest as not exempted from her power," and that it should not be suspended and the courts closed, we again request consideration of our petition and that the Attorney-General be directed to institute suit in equity against the Eastern Railroad Association.

Among the papers filed with you on December 21, 1901, is a true copy of the constitution and by-laws of the association, which alone is ample ground for a suit. The decisions in United States *v.* The Trans-Missouri Freight Association, and United States *v.* The Joint Traffic Association, were rendered solely upon the agreements themselves. We will at any time furnish the Attorney-General with the original copy of the Eastern Railroad Association's agreement and proofs of its authenticity, and submit additional evidence of the Association's unlawful and criminal acts and doings. The opinions of Hon. William E. Chandler and Hon. GEORGE TURNER should not be disregarded, as they embody the views of most eminent publicists, gentlemen learned in the law, both of them "too wise to be deceived, and too good to do wrong." The Hon. GEORGE F. HOAR has also verbally expressed the opinion that the Eastern Railroad Association violates the anti-trust act, and it is believed he will reiterate his belief if solicited so to do. The late Hon. Jeremiah Wilson, some two years ago reviewed all the evidences submitted by us on December 21, 1901, and repeatedly in person visited the Department of Justice for the purpose of soliciting the Attorney-General to bring suit.

We submit this communication with the confident belief that, if you once fully understand the nature and character of the Eastern Railroad Association you will direct proper action to be taken by the Department of Justice.

In an article written by yourself and published in the Cosmopolitan, November, 1895, "Taking the New York police out of politics," are statements which apply to the enforcement of the antitrust law:

"Our enforcement of the Sunday excise law caused most disturbance. Up to the time we took office no official had ever made a serious and consistent effort to enforce the law. Almost all men of much experience insisted that the law could not be enforced. After carefully considering the matter, however, we came to the conclusion that it could be enforced, and that in any event we had no alternative save to try and enforce it if we wished to retain our self-respect or obey our oaths of office.

"We stood on the principle that the law should be honestly and fairly enforced while it remained on the statute books.

"It is a lamentable thing when the people and the public officials grow to think that laws should only be enforced as far as the officers of the law think that public opinion demands their enforcement. It is such a belief that inevitably leads to lynching, white capping, and all kindred forms of outrage."

In view of all the foregoing facts in this case we are compelled to appeal to you, Mr. President, to take the steps necessary in this emergency to compel your immediate subordinate, the Attorney-General, to proceed at once to enforce the Federal antitrust law against the Eastern Railroad Association. This case has been for months before the Attorney-General, and we believe that further delay can only be subversive of justice.

Respectfully submitted.

H. B. MARTIN,
Chairman,
F. E. STEBBINS,
of Counsel,
Joint Committee American Antitrust League and District Assembly 66 Knights of Labor.

These documents and this presentation of an actual transaction with the heads of Republican authority under the present régime are given at length to demonstrate the utter perfidy of that party in its dealings with the trusts, and its flagrant hypocrisy in pretending to seek their suppression and punishment. Nothing can be expected of an Administration that conditions its action upon a prudent regard for those "business interests" that are dependent upon corporate corruption and trust ascendancy.

The President in his message last December clearly announced that his opposition to trusts and monopolies was tempered by his regard for their stability and influence in the political world.

Everybody knows that the tariff is the promoter of trusts, and that to-day the protected industries are selling their goods cheaper abroad than at home.

The exact and exhaustive facts of the situation are very difficult to obtain, owing to the sinister methods of the great trust manufacturers and dealers. They shroud their business in mystery, keep their prices secret except from those who are to profit by the iniquity of their discriminations, and in every way they evade an honest publicity in the conduct of their affairs. Enough, however, is known to give some idea of the systematic manner in which these tariff-protected combinations are robbing the people of this country and amassing the wealth that gives them such enormous power in business and politics. It is the tariff that enables them to maintain their immense monopolies, because it shuts off competition and delivers the markets at home and abroad into their control.

It is a fact not disputed, but the details of which are being kept back from the public, that some of these great manufacturing trusts, secure in the immunity that the protection of a Republican high tariff gives, have been shipping goods to Hawaii, as to a foreign country, at such low rates, as compared with the domestic prices, that the goods are reshipped to San Francisco and sold in the American market at lower rates than the home products are selling for in this country. This is but one of many instances of the infamous results of our tariff system and of the monopolies it has built up.

I have procured from Mr. Byron Holt, whose repute and reliability as a statistician upon these subjects are too thoroughly established to be doubted, the following partial table showing the comparative prices at which the same articles manufactured in the United States by the same manufacturers are sold at home and abroad. These figures are taken from the latest price lists issued by the great wholesale manufacturing concerns that enjoy the highest protection of the tariff and have perfected the highest despotism of the trusts:

Articles.	Domestic price.	Foreign price.
Typewriters	$100.00	$55.00
Wire nails, per keg	2.25	1.30
Wire rope (coil), per 100 pounds	16.00	5.00
Lead, per 100 pounds	4.00	2.00
Shovels, per dozen	7.50	5.80
Axle grease, per pound	.08	.04
Washboards, per dozen	3.00	1.70
Meat choppers	2.70	1.50
Sewing machines	40.00	17.00
Tin plate, per box	4.19	3.19
Barb wire, per 100 pounds	3.00	2.20
Alarm clocks	.60	.30
Lawn mowers	4.25	2.75
Fruit jars (Mason's), per dozen	.80	.55
Sugar, per pound	.04½	.026

The articles thus mentioned are among those of most common and necessary use, and these figures disclose the startling fact

that the same manufacturer makes these goods, pays the freight on them to foreign countries, and sells them there at prices ranging from 50 per cent to 300 per cent lower than he sells the same articles to our own people. Does anybody doubt that the protective duties imposed under the Dingley bill and previous measures of Republican legislation have produced this monstrous condition of things, or that the great trusts of the country find their origin, support, and strength in the tariff burden that is laid upon our own industry and our own people for the benefit of the foreigner and the enrichment of the monopolist? Does anyone now dare to quote, even under the sacred sanction of a martyred President's memory, that absurd declaration that "The foreigner pays the tax"?

And it seems that even these outrageous discriminations against the American consumer are not enough. It is known for a certainty that a number of the huge manufacturing trusts have a secret price list for their foreign customers, making special discounts lower than the rates just quoted. Reputable gentlemen are now offering large rewards for copies of these secret documents, and no doubt they will succeed before long in getting at the truth of the matter.

The disastrous effects of these conditions are being daily seen in the disturbed and disordered state of the industrial and social world around us. Until the tariff and the trusts began their grinding tyranny upon the masses of the people, and especially upon the poorer and laboring classes, labor strikes and lockouts were unknown, the boycott was a thing of theoretical terror, and the terrible crises through which we are being compelled to pass periodically, because of the strife between labor and capital, were undreamed of. But the onerous restrictions, unjust burdens, and constantly increasing hardships, brought about by the great power and merciless greed of the trust combinations, are bringing the country to face a growing spirit of discontent and social friction that bodes no good to our peace and prosperity.

The necessaries of life have been so enormously and unreasonably increased in price by the operations of monopoly that the cost of living has reached a point beyond the reach of the average wage-earner. It costs more to live comfortably and rear his family than the laboring man can earn at the current wages paid by the great commercial and industrial concerns that control the labor market. These vast manufacturing, mining, and trading corporations are robbing the people by their unconscionable and unnatural methods, they are daily raising the prices of the things that the poor man must eat and wear and use, and at the same time they are unwilling to pay him enough to enable him to meet the exigencies brought about by their own conduct. Such a condition must inevitably prove ruinous to both parties in the great struggle.

In a very recent address, John Mitchell, the president of the United Mine Workers of America, presented the strongest possible case in favor of better wages being granted to miners by the railroad coal barons. He showed by the actual figures that the average wages of miners are only $1.42 per day, and that they are only employed about two hundred days or less in each year; so that they earn annually less than $300. President Mitchell then says:

Such pay may supply a living on a par with some classes of European laborers, but who will say that it is sufficient to support American citizens or educate and properly maintain their families? True it is that a 10 per cent increase in wages was granted by the coal operators as a strike concession two years ago, but it is also true that a large portion of that 10 per cent was paid back to the companies to buy the suppression of an old powder grievance. Moreover, according to reliable commercial agencies, the cost of living has increased, particularly in the purchase of food stuffs, from 30 to 40 per cent, so that the purchasing power of a miner's wages is less now than before the strike of 1900.

These remarks and the argument contained in them apply to all wage-earners, because the same conditions and necessities confront them all in this country. The cost of living in the United States was greater on May 1, 1902, than ever recorded in the history of the Republic. A comparative estimate of present and past conditions may be arrived at by inspecting the following figures taken from Dun's Review, which show the average prices of 350 articles of consumption at the dates named, with due allowance for the relative importance of each:

	Jan. 1, 1890.	July 1, 1897.	Jan. 1, 1900.	May 1, 1902.
Breadstuffs	$13,765	$10,587	$13,254	$19,954
Meats	7,620	7,529	7,258	10,474
Dairy and garden	12,675	8,714	13,702	14,737
Other food	9,935	7,887	9,256	8,742
Clothing	14,845	13,808	17,484	15,527
Metals	16,240	11,642	18,085	15,702
Miscellaneous	15,111	12,288	16,312	16,654
Total	90,191	72,455	95,295	102,289

The totals show that the cost of living was 6 per cent greater in 1900 than in 1890, 31 per cent greater in 1900 than in 1897, and 41 per cent greater in May, 1902, than in 1897.

And yet we are told that the tariff is an unmitigated blessing; that there are no trusts or that they are only the natural results of economic evolution; and that we must "let well enough alone."

There is at least one mammoth monopoly that has not been disturbed by the Republican party and yet has been officially declared to be a lawless and odious combination of corporate power too dangerous to be brought into close contact with the Government.

A few months ago Andrew Carnegie offered to give $10,000,000 in the stocks of the United States Steel Corporation to found a great national university; but the President and his advisers decided that the money was tainted with trust affiliations and could not be accepted as a donation to the Government. If the concern was too disreputable to be redeemed even by such a munificent contribution to the conscience fund, certainly it deserves the attention of the President and the Attorney-General under the Sherman antitrust law. But it is folly and madness to expect any such action to be taken by any Republican administration as will endanger the partnership of mutual profit now and for years past existing between that party and the corporation monopolies.

The campaign orators of the Republican party are boasting continually of the high prices of commodities as an evidence of prosperity. A greater economic delusion was never indulged in, so far as the laboring man is concerned. High prices mean low wages, unless indeed the wages are correspondingly increased. Men do not eat or wear their wages; they eat and wear and use the things their wages buy, and if the prices of the necessaries of life rise without a relative rise in the labor wage, it means want, poverty, and revolt among the working classes.

Since 1897 the trusts, protected by the tariff, have advanced prices more than 40 per cent, while they have reduced wages more than 30 per cent. Strikes and lockouts and boycotts will not remove this deplorable condition. It can only be remedied by abolishing the political, industrial, and commercial policy under which it has grown up. That can be done, but not by the Republican party.

No trust will be destroyed or disturbed while the tariff stands, and the extent of Republican hypocrisy upon this subject can only be estimated by contemplating the proposition of a protective tariff in conjunction with a war against trusts.

The two things are so inconsistent that even the "business interests" of the country can hardly be credulous enough to accept the anomaly. The Republican party owes its present supremacy to the corrupt and privileged monopolies of the country, which it has alternately fostered by its patronage and plundered by its politics. It will never willingly abandon the policy that has promoted its power and pandered to its profligacy.

Its officials, high and low, are too much indebted to the trusts and too sensible of their obligations to ever enforce the laws that would cancel the mutual partnership of crime and corruption. The pending prosecutions against the beef trust and the Northern Securities Company are mere campaign subterfuges, intended to deceive the people, so often beguiled by similar shams in the past, but which will be easily discontinued as soon as the crisis has passed.

There is but one remedy for trust conspiracy and corporate monopoly. The tariff, which is but another name for Government monopoly, must be abolished. the equal rights of every interest in the community and every factor in national prosperity must be asserted and maintained, and the constitutional standard of justice and freedom in commercial transactions must be regained and established.

These things the Republican party will never accomplish, because it can not. Its very existence and perpetuity depend upon the preservation of that system of moneyed monopoly which its policies and practices have founded and fostered. When it pretends to act in any other capacity than as the promoter of trusts and the protector of monopolies, it stands convicted of rank hypocrisy and perfidious ingratitude.

Monument to Pulaski.

SPEECH

OF

HON. THEODORE E. BURTON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 1, 1902,

On the bill (H. R. 16) to provide for the erection of a bronze equestrian statue to the memory of the late Brig. Gen. Count Casimir Pulaski, at Washington, D. C.

Mr. BURTON said:

Mr. SPEAKER: The passage of this bill is in fulfillment of the action of the Continental Congress in 1779, one hundred and twenty-three years ago, in voting for a monument for Count Pulaski when his life work was fresh in the public memory. Actuated by sympathy for the struggling colonists, many men of rank and ability

crossed the sea to aid in the great struggle for liberty—Lafayette, Rochambeau, Kosciusko, Steuben, De Kalb, Pulaski, Conway. No great cause ever called to its assistance more distinguished or more devoted friends. Pulaski and De Kalb gave up their lives in the struggle. Of the others, Lafayette and Rochambeau lived to ripe old age and continued active in the affairs of their own country, Lafayette being prominent even so late as the revolution of 1830.

There is a glamour of romance as well as unswerving devotion to liberty in the career of Pulaski. He belonged to one of the old families of Podolia, in the southern part of Poland. He, with his father and brothers, joined in making up the confederacy of Bar, seeking greater freedom for their country and relief from foreign influence. In this great cause his father and brothers were slain, he himself was outlawed, and a price was set upon his head. His brave, restless spirit sought activity in other lands, first in Turkey and France, and later, by the advice of Franklin, he came to this country in 1777. He was every inch a soldier. Although barely understanding the English language, he was so efficient in the battle of Brandywine that General Washington recommended him to Congress for a commission as a brigadier-general in these words:

This gentleman has been, like us, engaged in defending the liberty and independence of his country, and has sacrificed his fortune to his zeal for these objects. He derives from hence a title to our respect that ought to operate in his favor as far as the good of the service will permit.

This recommendation was adopted, and he was appointed brigadier-general on the 15th of September, 1777, when less than thirty years of age. Always brave and active, he was particularly efficient as a commander of cavalry, and in this arm of the service displayed especial skill on trying occasions. Every State, from Pennsylvania to Georgia, became the theater of his activity. If criticism could be made upon his tactics it was because he was too daring, and never faltered for fear of defeat.

This brave man gave up his life for American independence in the autumn of 1779, when only 31 years of age. He died as the result of a mortal wound received in the attack on Savannah. His resting place is not in the soil of the Old World or of the New, for he was buried at sea, a fitting close to a stormy career, the leading characteristics of which were his fearlessness in battle and devotion to liberty. When he had received his mortal wound and his life blood was ebbing away, he did not ask for the cup of cold water with which the dying soldier desires to slake his thirst, nor for the conveying of messages to friends in distant lands, but his last thoughts were of battle, and his last words, uttered with the feebleness of approaching death, were, "Follow my lancers, to whom I have given my order of attack."

In death, as in life, his spirit was brave and unflinching. In this capital city of Washington, with its monuments of art, which are not so much expressions of the artistic sense as reminders of great deeds and of the conflicts and triumphs of freedom, it is fitting that at the corner of the most prominent square a monument should be erected to this brave man, an exile from his unhappy native land, who crossed the sea to fight in the cause of liberty.

Chinese-Exclusion Bill.

SPEECH

OF

HON. CHARLES F. COCHRAN,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 5, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 13061) to prohibit the coming into and to regulate the residence within the United States, its Territories, and all territory under its jurisdiction, and the District of Columbia, of Chinese and persons of Chinese descent—

Mr. COCHRAN said:

Mr. CHAIRMAN: I am in favor of admitting to our shores and to full fellowship in the Republic every immigrant, no matter from whence he comes, who desires to become an American citizen and is capable of appreciating what it means to become an American citizen. No matter how poor he may be, regardless of his nationality, the immigrant who reveres the great Republic because here all men are equal before the law, and who in casting his lot with us turns his back upon the monarchical institutions of the Old World, and, seeking citizenship and a home under the American flag, is capable of appreciating the beneficence of our institutions, should be welcomed.

I am opposed to making this country the dumping ground for the slums and purlieus of the Old World. I am opposed to tolerating the continuance of the importation of pauper laborers who come to our country unaccompanied by their families, secure employment, remain one, two, three, or more years, accumulate a few hundred dollars, and then return to their homes abroad.

I am opposed to admitting immigrants who neither know nor care anything about our institutions, who care nothing about citizenship, who are wholly indifferent as to whether the Republic shall live or die, because wholly incapable of comprehending its glorious history or lofty purposes.

The man who appreciates the great boon of American citizenship will not be long in adopting American ways. The man who cherishes American ideals will not be long in imbibing the aspirations of Americans. The laborer who, renouncing allegiance to a king, rejoices in the thought that he has thereby asserted the dignity of a freeman will not be a menace to the welfare of his fellows. Their desires will be his desires, their hopes his hopes; and though he may come to us penniless, self-respect, the lever without which there can be no advancement, will speedily lift him to the level of his new environment.

Mr. Chairman, entertaining these views, I am and have been from the very inception of the discussion of the matter, unalterably opposed to admitting Chinese immigrants into the United States. I regard the interference of the Western powers with the affairs of China as unwise, impolitic. I believe that in the long run it will prove disastrous. I believe the Chinese have a right to control their own country and affairs in their own way. I know that the recent interference of Western powers in Chinese affairs is contrary to the advice of many eminent statesmen and diplomats, who have regarded the very questions raised by this interference as pregnant with danger to the whole world.

Mr. Chairman, the great Napoleon summarized this view when he advised the Western world to let China sleep. This advice has not been taken, and at last what has for a century been called by diplomatists, statesmen, and writers "the Eastern question," is forced upon the attention of mankind. And, Mr. Chairman, I believe that the purpose aimed at by those responsible for this, the most astounding blunder of the ages, can not possibly be accomplished. Western nations are seeking a field for profitable commerce in China, when the apparent truth is that China, developed on the lines they propose, would be their most formidable competitor.

In our own country and at the great trade centers of Europe tradesmen and statesmen are busy with schemes for the development of the resources of oriental countries. We are told that China is to be modernized. The United States and Germany have played, and will continue to play, a conspicuous part in this programme. Russia has broken through the wall of Chinese prejudice and leads the procession of Western nations in the assault upon the exclusiveness which long ago found expression in the construction of the wall of stone which for centuries isolated China from the outside world.

It is said that Europe and the United States are to find in China a market for the surplus productions of their industrial hives, and it is this proposal that I desire to briefly discuss.

I appreciate the fact that this country occupies a position in reference to Chinese trade which no other country does. We may reasonably expect a large increase in our exports to China; we may expect to furnish a very large amount of raw material to China. China needs large quantities of certain commodities of which we have a surplus. Of course in oriental countries the most important of all industries is the manufacture of cotton goods, and every step in the direction of developing oriental cotton production on modern lines will create a market for American cotton. It is only a little more than a hundred years since the oriental countries practically monopolized the production of cotton fabrics. It is less than one hundred and fifty years since the weavers of Manchester advertised the production of an imitation of Indian calico; but they made this imitation out of wool.

Until the invention of the modern loom and the cotton gin and the application of steam power the production of cotton goods on a large scale was unknown outside of the Orient. At a more recent date Western nations began the production of the finer textiles. So true is it that the Eastern countries have been the largest producers of textiles of all kinds that even during the period of he development of modern weaving and introduction of machinery the aggregate production in the Orient vastly exceeded the productions of the Western World. Bearing this in mind, is it not apparent that to modernize the Orient is to develop powerful commercial rivals instead of consumers of the surplus productions of our shops and factories?

One of the consequences of the exploitation of British capital in India has been a revival, in a large measure, of cotton manufacturing in India, the result of which appears most conspicuously in the exchanges between the great Empire and other oriental countries. I have not looked at recent figures. Five years ago, in a single year, the export of cotton yarns from India to Asiatic countries increased 101,000,000 pounds. Within the space

of one decade more cotton mills were erected in India, China, and Japan than in all the countries of Europe, including Great Britain.

Is it not apparent that when we talk about developing trade with China we must bear in mind that international traffic can only be increased by increased reciprocal exchange of commodities? If we are to send our products to Chinese markets we must receive in exchange for them a corresponding amount of Chinese products. Is it true that we want to enormously extend our trade in China? If so, we must enormously increase Chinese imports. We must lower the tariff on Chinese goods. Until we do this China can not send her goods here and we can not send our products to China.

Is it true that Germany desires to increase her traffic with China? If the dreams of the German Emperor are to be realized, Germany must consume large quantities of Chinese goods. Otherwise, how will the Chinese pay for goods imported from Germany? The Chinese have no gold with which to pay for imported goods. The Chinese have no raw materials to exchange for goods imported from America or Europe. The Chinese are handiworkers. Where are they to find a market for their wares? If nowhere, how are they to pay for the surplus products of the whole world?

Mr. Chairman, the only countries that may reasonably expect a largely increased trade in China are the United States and Russia. A constantly increasing quantity of American cotton will go there, and when Siberia shall be considerably developed Russian food products will be exchanged for Chinese manufactures on a constantly expanding scale. But in these directions the increase can never reach proportions sufficient to realize the extravagant hopes of those who regard China as the future market for surplus European and American productions.

It has been said over and over again that we must take our share of the responsibility of dealing with China. Why not let China alone? The Chinese are not quarrelsome; they are not disposed to interfere with foreign countries. Do you want to trade with them? They are willing. Open the markets of the world to China, and her goods will be found everywhere.

And it is not true that in order to admit Chinese goods we must admit Chinese merchants. How many distinctively Dutch merchants are here? How many distinctively German merchants are here? I mean as aliens who remain in the country for the purposes of commerce? International exchanges are not necessarily carried on in that manner.

Mr. CLARK. Before the gentleman leaves that point, I want to ask him one question. Is it not true that this European influence forced modern civilization upon Japan in the hope of having an immense trade, and for a few years they did have a large trade; but the Japanese developed so that they not only supplied their own wants, but have become exporters of the same articles produced by the fellows who forced civilization on them?

Mr. COCHRAN. That is absolutely true, and it will finally be true as to the Chinese. As a result of the ingenuity and adaptiveness of the orientals we should realize that our arts and manufactures can be duplicated by them bodily in a short time.

So true is this, that one of the difficulties the Chinese Government has met with in attempting to use paper devices representing money has been that all such devices have been instantly counterfeited by the natives.

In all the oriental countries adaptativeness to skillful handiwork is hereditary. The transmission of qualities through the ages has made them almost naturally weavers and spinners and deft workers in all the ways that man's hands may toil.

Mr. PALMER. May I interrupt the gentleman?

Mr. COCHRAN. Yes.

Mr. PALMER. The gentleman's remedy is to take the tariff off Chinese and Japanese goods?

Mr. COCHRAN. No; it is not. I am opposed to that. I am trying to prove that in the line of manufactures it is absurd to suppose that we can establish a larger trade with China. While I have favored and do favor now more liberal commercial relations with the countries of the Western World and only such tariff taxes as will insure sufficient revenues for our country, because they stand ready to exchange their surplus products for ours, I confess that when I face the industrial situation in the Orient and contemplate the application of modern methods there I find no basis for theories or opinions such as apply to our relations with Europe, and I therefore am in favor of excluding oriental laborers absolutely and minimizing importations from oriental countries.

Mr. PALMER. What is the gentleman in favor of, a tariff on Chinese or Japanese goods, or not?

Mr. COCHRAN. I am opposed to admitting the Japanese and Chinese laborers to this country. I am in favor of tariff laws which would measurably exclude their products.

Mr. PALMER. What is the gentleman in favor of now?

Mr. COCHRAN. The dream of the empire builders has not been realized in China. If it ever shall be, I will favor the exclusion of Chinese goods from our markets. But foreign capital has not built factories there, or sent Chinese goods, made by modern methods, into the markets of the world. The effort of the stock jobber to build factories in China, to be operated by laborers who work for 8 and 12 cents a day, has not yet succeeded.

Mr. PALMER. Do you think that is an answer to my question? Is that all the answer you have?

Mr. COCHRAN. What was your question?

Mr. PALMER. My question was, Whether you are in favor of removing the tariff from Japanese and Chinese goods?

Mr. COCHRAN. I would not modify any existing tariffs for the purpose of adding to our imports from Asiatic countries.

Now, as to Chinese immigration. In 1869 we began the "developing" business in this country. We were anxious to "develop" things. We did so, and have been in the "development" business ever since. What have become of the things we have "developed?" Who owns them? What does "development" as a term in stock jobbery mean? When used in reference to China, the Philippine Islands, and other outlying countries, what does it mean? It means larceny pure and simple. Everything "developed" in the stockjobbers' plan in this country has been made the basis of extortion and the enrichment of speculators. The same is to be done in China. How is this business carried on here? A coal mine is discovered somewhere, and at first it seems to be a great blessing to the public. If utilized in the interest of the neighborhood in which it is discovered, it would be a great blessing.

The law may prohibit the ownership of the coal mine by the common carrier that serves the neighborhood. What of it? Laws are not allowed to stand in the way of its development on the lines of the stockjobber. The owner of land on which the coal is located sells at a good price. The owners of the railroad are the purchasers and become the owners of the coal mine. If it suits their purposes, the coal mine will be operated, but the price of coal will not be affected. Coal will be no cheaper to the people of the neighborhood than it was before. Thirty miles away from the mine coal will continue to cost just as much as if brought from some mine 300 miles away, discovered a century before.

Every step in what has been called "modern development" has been characterized by the appropriation of the natural resources of this country by gentlemen living thousands of miles from the scene of the development, who in the capacity of absentee landlords have thereafter levied an unnatural and unjust tribute upon the natural and rightful owners of the resource appropriated. This is what the stockjobbers propose to do in China, and they call it progress. I call it robbery.

Mr. Chairman, all that China asks is exemption from outside interference. Is this unreasonable? We do not want the Chinese to come here. Let us concede to China the right to exclude aliens from their country. If we are to admit Chinese laborers, we must do it with the knowledge that they will come in great numbers and finally preponderate in the labor market. Under the iron law, the wages of unskilled labor sink to the lowest level compatible with the health of the laborer. In such a field the Chinaman is the fittest and would survive. As wages decline the standard of living and the standard of self-respect must decline. The demand of the labor unions that the Chinese be excluded rests upon this one proposition: The competition of American labor with Chinese labor means that the American laborer must sink to the level of the Chinese laborer.

[Here the hammer fell.]

Mr. HITT. I yield the gentleman five minutes more.

Mr. COCHRAN. It is pertinent to inquire what special peculiarity distinguishes the Chinese laborer from all other immigrants.

The incoming Chinese have no families. They come as mere sojourners. The Chinaman does not come here intending to remain. He takes pains to make arrangements for the shipment of his bones back to China in case of death. He comes here solely for the purpose of obtaining employment at wages very much higher than he could receive in his own country, stays for a limited time, lays by a snug sum, and then returns. During his stay in the country he lives on next to nothing, and so can work for low wages and yet save most of his earnings.

My distinguished colleague [Mr. CLARK] made so plain the basis of objections which exist in the public mind to the admission of the Chinese that little can be added to it. He mentioned the living expenses of a Chinaman. Go over to New York and visit Mott street. As you go through other tenement-house regions you will see pallid faces and withered limbs, and the very stamp of death upon the faces of many of the unfortunates who breathe the pestilential atmosphere of cellars and garrets. Not so on Mott street. There you will see the burly Chinaman in far worse quarters, with every evidence of virility, strength, and the capacity to work.

Go into their dives, in the cellars—for many of them live in cellars—and you will see numerous bunks ranged on the walls as you would place shelves in a library—a bunk for each Chinaman. The rent paid by the most humble American laborer in New York, small as it is, would provide a habitation for half a dozen of these Chinamen. With no families to support, no expenses except the maintenance of these terrible places in which they live, they thrive where white laborers would starve, and grow fat in an atmosphere that would be fatal to their white competitors.

Mr. CLARK. If you will permit me, I will give you a minute for the time that I take up, but I wish to call attention to this book of evidence that was taken here in this Chinese business. It shows that in an investigation in San Francisco, in a cellar that was 10 by 15 feet, there were found 3 Chinamen making cigars, and benches for 15 more. That is, there were 18 Chinamen working in one room that was 10 by 15 feet square. That illustrates just exactly the same idea that the gentleman is on.

Mr. COCHRAN. And that is true wherever the Chinaman lives. Now, then, I want to institute a comparison between the majority report here and the minority report. What objection have you to the minority report? Is it too stringent? Do you want an exclusion act which will exclude the Chinese? As I understand it, the bill brought in here by the minority interposes only such safeguards as experience has shown to be necessary under existing legislation.

For my part, I believe that the expectancy of life of the youngest Chinaman now on this continent should be adopted as a basis of a law declaring that any Chinaman born here or elsewhere found in this country at the expiration of a stated term shall be sent out of the country. And while I have not time to go into it extensively, I desire to say and go on record for one that there are other classes coming to this country by thousands who ought to be halted at the shores of Europe by American consuls and made to show a good bill of health before they set sail for America. [Applause.]

Immigrants who come here as steerage passengers, with no intention of remaining, who leave their wives and children in Europe, are hustled into the immigrant station at New York and thence into box cars and shipped into mining camps, to remain long enough to lay by a few hundred dollars and then return to their own country, should not be admitted to our shores. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Post-Office Appropriation Bill.

"And ye shall know the truth, and the truth shall make you free"—Governor Taft's testimony on who killed General Luna answered—Aguinaldo's statement—And the Filipinos—What they are, have done, and can do.

SPEECH

OF

HON. JOHN W. GAINES,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 13, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 11354) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1903—

Mr. GAINES of Tennessee said:

Mr. CHAIRMAN: The American people are entitled to know the truth, and the whole truth, relating to the Philippine Islands, that they may intelligently instruct their representatives in Congress, and Congress itself, having to deal with and settle all the vital questions growing out of the occupation of these islands by American authority, should not be content with less than the entire truth and the very fullest information relating to the islands themselves, the people, their characteristics and habits, their capabilities and aspirations, that justice may be done.

If the inhabitants of these islands or their leaders are naturally good, or naturally bad people, this fact, or the facts and the evidence going to prove them, should be laid before Congress in clear and unmistakable words.

Every nation has its heroes and its leaders, and we very often form opinions of a people or a nation by reading about or knowing personally their heroes and leaders.

Reflecting the judgment and wishes of the American people, Congress, through the insular committees of the two Houses, is hearing testimony from parties who have visited the Philippine Islands, for the purpose of elucidating all questions that pertain to this archipelago, and I sincerely trust that Congress will continue its investigations until at least sufficient light is thrown upon the entire subject to satisfy the American people as to the entire situation in this archipelago.

We have opposed by force, arms, and legislation the people of the Philippines and their leaders, and just in proportion as we learn what kind of people they are and the conditions there, in the same measure we learn how great or small our task is and how we should meet it.

It is the duty, then, of Congress, confessedly, and those in authority, as well as the witnesses who testify on the subject, when they speak about conditions in the Philippine Islands, to faithfully exploit all the facts within their knowledge that no injustice may be done.

No man should be condemned under the American flag without a fair and impartial trial under the law of the land. The person accused should have a speedy and impartial trial—allowed to face his accuser with his witnesses, and, if he chooses, testify in his own behalf.

No other kind of a trial will satisfy the American conscience or should satisfy the American Congress, and it is our duty to see that such rights are accorded the accused if arraigned under American laws.

Mr. Chairman, there is one leader in the Philippine Islands who is loved to this hour and respected by the Philippine people, and he is being tried, not according to American law nor in a way that will satisfy or should satisfy the American conscience. I allude, of course, to Aguinaldo. With his voice hushed and his hands tied, his feet shackled, imprisoned, and 10,000 miles away from Washington City, he is accused of a crime in his absence, and with no one even to read the omitted portions of the testimony bearing upon the act. This is not right. It is not just. We will not be benefited by this. In the long run it will rebound and hurt us.

Then let us open the books and if this leader is convicted before the American people of a crime, then at least let it be said that all the evidence was in and heard before he was convicted and condemned.

Governor Taft in his testimony a few days ago before the Insular Committee of the Senate stated that he had been informed by General Funston that he (General Funston) had been informed by Aguinaldo that he (Aguinaldo) "directed Luna's killing." Luna was a brother-in-law of Aguinaldo and was a distinguished Filipino general of the Ilocano family.

The testimony taken in 1899 by and before the Schurman Commission, appointed by President McKinley, of Colonel Zialcita, a Filipino cavalry officer, shows that General Luna insulted the guard at Aguinaldo's headquarters, and that General Luna and his companion seized the guard, and in the struggle (thus provoked by General Luna) both Luna and his companion were killed.

This testimony, I think, bears the construction that Luna provoked the assault and was killed. Aguinaldo may have planned to have Luna killed, but I do not believe his plan was executed. Luna met his death by an unexpected assault brought on by himself, as shown by the testimony of Zialcita, found in Volume II of the Schurman Commission Report, which I will now read as follows:

1. Q. Will you be kind enough to give us an account of the killing of General Luna?

A. I told everything that I saw and that I knew about to a representative of El Progresso. That interview tells all I know.

2. Q. Will you be kind enough to repeat that for our benefit?

A. I saw his death, but the occasion of his death I only know from rumor.

3. Q. Where were you?

A. I was in a house where I was waiting, in the plaza, where the convent and the government headquarters and the church are, and commanded a view of the whole place. They say that Luna went up to ask for Aguinaldo, with Francisco Ramon, to visit Aguinaldo. Not finding him there, he became angry and insulted the guard, and when the guard wanted to seize him and his companion, they thought the man was half crazy and immediately began shooting, and the guard returned the fire.

4. Q. Did the guard fire on him?

A. All of them. They wanted to take him, but he had saber and revolver to defend himself, and they could not do anything else.

5. Q. Was he killed by bullets, knives, or bayonets?

A. By knives, and probably by bullet wounds, too, for there were three or four discharges, and so I can not say whether entirely by bolos or bullets.

6. Q. What was the effect of this killing of General Luna there?

A. I could not say exactly. At first the people were much surprised, but afterwards they said it was better so, because he was very cruel. He killed a great many of his own soldiers and officers and was a great tyrant.

7. Q. Aguinaldo did not come back when he heard of the death of Luna?

A. That I could not say, whether he was told of it or whether he returned. I did not see his return up to the time I came away.

8. Q. We have heard his death might have been planned by Aguinaldo on account of jealousy between Luna and himself. Did you hear any such stories?

A. I could not say whether it is true or not, because I did not make any investigation. It was not my business, which was simply to find out the condition of affairs. I heard bad news here in Manila, and went out to see if it were true; but the people did not talk freely to me, because the greater part of the people were unknown to me.

I leave this official testimony, taken by American authorities, of Tialcita, whom I have never heard of being impeached and whose testimony seemed to satisfy the Commission (as they took

no other testimony on this point), that Aguinaldo did not kill or plan to have killed Luna.

I will now read the testimony of two other witnesses, both of whom acquit Aguinaldo, in their opinion, of this crime.

Mr. Albert Sonnischen, an American soldier, was a prisoner in the Philippine Islands, and in his book entitled "Ten Months Captive Among the Filipinos" (1901), at pages 242–244, says:

Shortly before I had listened to rumors of Luna's assassination by Aguinaldo's orders circulating among the Spaniards—

It seems the Spaniards started this story—

and now I requested the young lieutenant (Villimor), whom I certainly put down as a sympathizer with the Ilocano general (Luna), for the particulars and his opinion of the murder.

"No, no," he (Villimor) protested, "Aguinaldo is not responsible for Luna's death. I happen to know the true details of personal friends of mine, also Ilocanos, who were in Cabanatuan at the time the crime was committed."

Then follows a description of the harsh characteristics of Luna and an account of the manner of the killing. I omit this now, but will read the conclusion:

"We, as Ilocanos, have lost a good deal of sympathy for the cause since then, but none of us have ever accused Aguinaldo of being the cause of Antonio Luna's death."

In the last paragraph Mr. Sonnischen, the American soldier and author, who had been a prisoner amongst these people, gives his opinion as follows:

Such was Villimor's account of Luna's assassination, which agrees in all particulars with what has since been told me by other Filipinos, both Tagalogs and Ilocanos. Never have I heard Aguinaldo blamed for that crime.

Thus speaks an American soldier and author after ten months' captivity in these islands, and his book has been printed for more than a year, and yet nothing is heard of the testimony of Zialcita or of Mr. Sonnischen, taken before Insular Committee of either House.

As stated before, Aguinaldo may have planned to kill Luna, but from this testimony the time and manner in which Luna was killed this was not the time and not the manner in which he intended to execute his crime or have it executed, nor can I see from this testimony that the killing occurred otherwise than as a result of a personal difficulty provoked by Luna.

I will here insert the entire article on this point, as given by Mr. Sonnischen in his book:

Shortly before I had listened to rumors of Luna's assassination by Aguinaldo's orders circulating among the Spaniards, and now I requested the young lieutenant, whom I certainly put down as a sympathizer with the Ilocano general, for the particulars and his opinion of the murder.

"No, no," he protested; "Aguinaldo is not responsible for Luna's death. I happen to know the true details of the whole affair from personal friends of mine, also Ilocanos, who were in Cabanatuan at the time the crime was committed.

"Luna, you must know, while a man of rare abilities, was harsh to his inferiors and altogether a strict disciplinarian. An officer or soldier who shirked his duty or showed cowardice on the battlefield could expect no mercy from him, and on several occasions he had culprits executed or otherwise severely punished for such offenses. This severity, combined with the fact of his being an Ilocano, caused a certain faction of young Tagalog officers to entertain a deadly hatred of him, as many of them had already felt the weight of his iron hand.

"One evening, at Cabanatuan, and while that place just then formed the temporary headquarters of Aguinaldo and his staff, Luna called upon the president for a consultation in the convent. With him was Col. Francisco Roman, his chief of staff and warm personal friend.* It was this officer who on February 24 last led that disastrous night attack on Manila from the bay, wherein his whole force nearly became annihilated, he barely escaping with his own life.

"At this meeting Aguinaldo and Luna had an altercation about some subject on which they held diverse opinions, but other officers present say that it amounted to no more than a friendly argument. Shortly after this Luna and Roman departed to return to their quarters. Hardly had they passed the convent door when several shots rang out. The two friends were found lying side by side, Luna with his empty revolver in one hand, Roman grasping the hilt of his broken sword, both dead. About them lay three of the assassins, also dead. Two had been shot by Luna's revolver, the third had been run through by Roman's sword.

"We, as Ilocanos, have lost a good deal of sympathy for the cause since then, but none of us have ever accused Aguinaldo of being the cause of Antonio Luna's death."

Such was Villamor's account of Luna's assassination, which agrees in all principal parts with what has since been told me by other Filipinos, both Tagalogs and Ilocanos. Never have I heard Aguinaldo blamed for that crime.

From all that I can see and read, all three of these witnesses—Zialcita, Villamor, and Mr. Sonnischen—were the friends of Luna and not friendly toward Aguinaldo, yet they acquit Aguinaldo of having planned to or having killed Luna.

Mr. Chairman, when I read the testimony of Governor Taft, and more recently a reiteration of it by General Funston at a banquet in New York, I said to myself that it is very strange that nowadays and for some weeks before the clash of February 4, 1899, at San Juan Bridge, between our forces and the native army, we can hear nothing good of Aguinaldo, whereas before this clash and from a time previous even to the taking of Aguinaldo to the Philippine Islands at the urgent invitation of Admiral Dewey, there were so many complimentary high-sounding words of praise for him by American officials of the Army, Navy, and our consuls and war correspondents.

Let us see what the names of some of these officials are. Who were they who spoke in such high terms of Aguinaldo and the Filipino people?

I recall just now the names of Admiral Dewey, Consuls Wildman, Pratt, Williams, Generals Merritt, Whittier, Anderson, Green, Bell, Commodore John D. Ford, ex-Minister John Barrett, Lieutenant-Commander Calkins, Lieutenant Hazard, who aided in the capture of Aguinaldo, Mr. Murat Halstead, a leading Republican, Richard Brinsley Sheridan (barrister, London), an "eye-witness," and others.

Under the rule granted me to extend my remarks, I here insert a copy of a True Review of the Philippine Rebellion, by Aguinaldo, published September 23, 1899. A copy in Spanish of this document was sent me after my return from the Philippines by an American citizen who had served in Cuba and the Philippine war and is now a high official in the Philippines. Through the kindness of an Army officer it has been translated from Spanish into English. To every one who desires to read all the evidence before he comes to any conclusion of the cause of the Philippine troubles, both before and since the advent of American authority in that country, should carefully read this and then the various authorities that I shall allude to in the course of my remarks. The document in question reads as follows:

TRUE REVIEW OF THE PHILIPPINE REVOLUTION

[By Don Emilio Aguinaldo y Famy, president of the Philippine republic. Reprint by order of Sr. A. Guevara, superior military chief ad interim. In the Camarines, the "Bicol Press," Nueva Caceres, 1899.]

To the civilized nations, and especially to the great North American Republic, is dedicated this humble work, to the end that they may know the international events which have occurred and continue to occur in the Philippines from three years ago up to the present time, and to the end that they may know and be convinced of the justice that is with the Philippine cause. The author offers also herein his homage of respect and admiration to the wisdom and the power of other nations, whom he salutes in the name of the Philippine nation with a full heart.

THE AUTHOR.

I. THE REVOLUTION OF 1896.

Spain ruled the Philippines for more than three and a half centuries, during which time abuses of the friars and of administration exhausted the patience of the natives, forcing them from the 26th to the 31st of August, 1896, to throw off so heavy a yoke and begin the revolution in the provinces of Manila and Cavite.

In those glorious days rose Balintawak, Santa Mesa, Kalookan, Kawit, Noveleta, and San Francisco de Malabon, proclaiming the independence of the Philippines. They were followed in five days by all the other towns of the province of Cavite without the existence of any previous agreement to execute the movement, drawn, without doubt, by the noble example of the former.

As to the province of Cavite, there did indeed circulate there orders, in writing, for the uprising, signed by Don Augustin Rieta, Don Candido Tirona, and myself, lieutenants of the revolutionary troops. Yet there was no assurance that they were attended to, or even received, as, in fact, one of these orders fell into the hands of the Spaniard, Don Fernando Parga, military and political governor of the province, who reported it to Captain-General Don Ramon Blanco y Erenas, who immediately ordered the revolutionists to be attacked.

Providence, which had without doubt indicated the hour of Filipino emancipation, protected the revolutionists, because only thus can it be explained how men armed with only clubs and knives, without discipline and without organization, could conquer Spanish forces of regulars in the rude combats of Bakoor, Imus, and Noveleta, even to capturing numerous rifles. This obliged Captain-General Blanco to suspend operations and try to suppress the revolution by the policy of attraction under pretext that he did not like to be "slaughtering" Filipinos.

The Government of Madrid, not approving this kind of policy on the part of General Blanco, sent Lieut. Gen. Don Camilo Polavieja to relieve him of his charge, and sent also at the same time regular troops of the Spanish peninsula forces. Polavieja, with 16,000 men armed with mausers and a battery of cannons, attacked the revolutionists with energy. He scarcely, however, reconquered half of the province of Cavite, and then fell sick and gave up his charge in April of 1897.

Don Camilo Polavieja having been relieved by Capt. Gen. Don Fernando Primo de Rivera, this old warrior in person pursued the revolutionists with as much firmness as humanity, succeeded in reconquering all of the province of Cavite, and drove the revolutionists into the mountains. Then I took up my headquarters in the steep and unknown mountain of Biak-na-bato, where I established the republican government of the Philippines in the end of May, 1897.

II. TREATY OF PEACE OF BIAK-NA-BATO.

Don Pedro Alejandro Paterno was several times in Biak-na-bato to propose peace, which, after five months and long deliberations stood arranged and signed on the 14th of December, 1897, upon the following bases:

1. That I was free to live abroad with the companions who might wish to follow me, and, having fixed my residence in Hongkong, in this place was to be paid to me the 800,000 pesos indemnity in three payments, 400,000 upon the receipt of all the arms there were in Biak-na-bato, 200,000 when the number of arms surrendered should reach 800, and the last 200,000 when that number should be completed to 1,000 arms, and after the receipt of the cash the Te Deum to be sung in the cathedral of Manila by way of thanks. The second fortnight of February was fixed upon as the maximum limit for the delivery of the arms.

2. The money was all to be delivered to me in person, I being in full liberty with my companions and other revolutionists.

3. Before the evacuation of Biak-na-bato by the Filipino revolutionists, Captain-General Primo de Rivera should send me two generals of the Spanish army, who should remain as hostages until I and my companions should reach Hongkong and the first payment of 400,000 pesos indemnity should be received.

4. It was also agreed to suppress the religious corporations of the islands and to establish autonomy in political order and administration, although, at the request of Gen. Primo de Rivera, these extreme terms were not committed to writing, he alleging that it was very humiliating for the Spanish Government to do so, whose fulfillment thereof, however, he guaranteed upon his honor as a gentleman and a soldier.

Gen. Primo de Rivera delivered the first payment of 400,000 pesos while the two generals yet remained as hostages.

We, the revolutionists, fulfilled our part with the surrender of arms, which exceeded 1,000, as is known to all the world from its having been published in the Manila papers. But the aforesaid captain-general failed to comply with the other conditions—the suppression of the friars and executing the reforms agreed upon; however, the Te Deum was sung. This caused me and my companions profound sadness, a sadness which turned into desperation upon the receipt of a letter from Lieut. Col. Don Miguel Primo de Rivera, nephew and private secretary of the said general, advising me that my companions and I might not yet return to Manila.

Was this a just proceeding upon the part of the representative of the Government of Spain? Let honorable consciences answer.

III. NEGOTIATIONS.

I had not long to remain with my companions in so critical a situation, because in March of 1898 there presented himself to me the name of commander of the North American vessel of war, *Petrel*, soliciting a conference by direction of Admiral Dewey.

Several were had with the said commander on the nights of the 16th of March to the 6th of April, he soliciting me to return to the Philippines to renew the war of independence against the Spaniards, and offering the aid of the United States in case this nation declared war against Spain. Then I asked the commander of the *Petrel* what the United States would concede to the Philippines, to which the commander answered that the United States were a great and rich nation, and did not need colonies.

I laid before the commander the propriety of putting the agreement in writing, to which he replied that he would lay it before Admiral Dewey

These conferences were interrupted on the 5th of April by the receipt of letters from Isabelo Artacho and his attorney, demanding of me 200,000 pesos of the indemnity as the part which he ought to receive as secretary of the interior, which he had been in the Filipino government of Biaknabato, threatening to hale me before the tribunals of Hongkong if I did not yield to his demand.

Although it does not pertain strictly to the matter in hand, I will state here that Isabelo Artacho reached Biaknabato and entered the camp of the revolution the 21st of September, 1897, and was named secretary in the first part of November, when the peace proposed and worked out by Don Pedro Alejandro Paterno was almost agreed upon, as is proven by the fact that on the 14th of the following December it was signed. See, then, the unjust and unmeasured ambition of Artacho in claiming 200,000 pesos for the few days' service that he rendered the revolution.

Besides, it had been agreed between all of us revolutionists in Biaknabato that in case the Spaniards did not carry out their agreement the money proceeding from the indemnity should not be divided, but should be destined for the purchase of arms to renew the war.

Artacho then was working as a spy, an agent of Gen. Primo de Rivera, attempting to annihilate the revolution, stripping it of its most powerful element, money. And so the matter was considered by all the revolutionists, they agreeing together that I should leave Hongkong immediately, avoiding the demand of Artacho, in order that the rest might have an opportunity to meet this new danger against our holy ideals, and they obtained this opportunity in fact. Artacho agreed to withdraw his demand by means of a transaction.

In fulfillment of this agreement I secretly left Hongkong the 7th of April, embarking on the *Taisan*, and passing by Saigon I went and stopped in the greatest retirement at Singapore, arriving at this port on the *Eridan* the 21st of the month. There I was entertained in the house of a countryman of ours. Such was the cause of the interruption of the most important conferences with Admiral Dewey, begun by the commander of the *Petrel*.

But "man proposes and God disposes," a proverb which on this occasion was fulfilled in all its parts, because notwithstanding the incognito which I preserved on the voyage, at 4 in the afternoon of the day of my arrival at Singapore there presented himself in the house where I was being entertained an Englishman, who, with great secrecy, said that the consul of the United States at that post, Mr. Pratt, desired to confer with Don Emilio Aguinaldo, to which reply was given that in that house no such Aguinaldo was known, for so it had been agreed to reply to everybody.

But the Englishman having repeatedly returned, declaring with insistence that it was no use to deny Aguinaldo's presence, because Consul Pratt had received notice from Admiral Dewey of my journey to Singapore, then I yielded to the interview with the said consul, which took place with the greatest secrecy, from 9 to 12, on the night of the 22d of April, 1898, in a retired part of the city, Mr. Pratt declaring to me as soon as he saw me that war between the United States and Spain had been officially declared the preceding day.

In the interview alluded to, Consul Pratt declared to me that the Spaniards not having fulfilled their part of the treaty of Biaknabato the Filipinos had the right to continue anew their interrupted revolution, persuading me to renew the war against Spain, and assuring me that America would give the greatest advantage to the Filipino.

Then I asked the consul what advantages the United States would concede to the Philippines, I indicating at that very time the propriety of putting the agreement in writing; to which the consul replied that he would by telegram lay that matter before Mr. Dewey, who was the commander of the expedition against the Philippines and had ample powers from President McKinley.

On the following day between 10 and 12 in the morning the conference was renewed, Consul Pratt declaring that Admiral Dewey had replied concerning my desires that the United States would at least recognize the independence of the Philippines under a naval protectorate, and that there was no necessity to put the agreement in writing, because the words of Admiral Dewey and the American consul were sacred and would be fulfilled, not being like those of the Spaniards; and he added, finally, that the Government of North America was a most honorable, just, and powerful Government.

I being as desirous as Admiral Dewey and the North American consul to reach the Philippines and renew the holy enterprise to reconquer our independence from the yoke of the Spaniards, I took advantage of the providential occasion which these representatives of the United States offered me, and giving complete credit to their honorable promises, I replied to the insistent solicitation of Mr. Pratt that he might immediately count on my return to arouse en masse the Filipino people against the Spaniards under the sacred ideals above mentioned, provided I could take with me arms to distribute to the patriots, offering him to do all that was possible to obtain the surrender of the Spaniards and the capture of Manila in a siege of two weeks if I could count upon a battery of 12 cannons.

The consul replied that he would aid me to send the expedition, with arms, as I had planned in Hongkong; then that he would telegraph immediately to Admiral Dewey the agreement, in order that on his part he might render aid to the said expedition.

On the 25th day of April the last conference closed in the American consulate, where I had been invited by Mr. Pratt, who, on seeing me, said that he had received telegrams from Admiral Dewey charging him to ask me to go immediately on the first steamer to Hongkong to join the Admiral, who was there with his squadron in Mirs Bay, a port of China, to which I replied affirmatively, ordering immediately my aids to go and engage passage and to prepare our journey under different names in order to maintain ourselves incognito on the journey, as we did coming from Hongkong to Singapore.

On the 26th I returned to take leave of Consul Pratt to embark on the steamer *Malaca*. The consul, after having said to me that before entering the port of Hongkong a launch of the Admiral would come out to take us secretly to the North American squadron—a secrecy which pleased me also in order to avoid publicity in my acts—suggested to me then that I should name him as representative of the Philippines in the United States in order to accomplish promptly the official recognition of our independence.

I answered that as soon as the Filipino government should be formed I would propose him for the charge which he desired, although I considered it an insignificant recompense for his assistance; then, in case of not having the fortune to secure independence, I would name him for a high post in the custom-house, besides giving also mercantile advantages, and sharing the expenses of war which the consul asked for his Government at Washington, since to all that has been set forth the Filipinos beforehand agree as a just proof of gratitude.

Then I went away with my aids, Señors Pilar and Leyva, to Hongkong on the steamer *Malaca*, in which port we arrived at 2 on the morning of the 1st of May without any launch coming out to meet us. On the invitation of the consul of that colony, Mr. Wildman, I went to the consulate and from 9 to 11 of the night of the same day of my arrival I conferred with him. He told me that Admiral Dewey had gone away to Manila without waiting for me, because he had received peremptory orders from his Government to attack the Spanish squadron, leaving a message that he should send for me by a gunboat. In that conference I talked with the consul concerning the expedition of arms which I had in project and we agreed that the said consul and the Filipino, Señor Teodoro Sandico, should take charge of the expedition, I leaving on the same night, in the power of the said gentlemen, 50,000 pesos on deposit.

A steam launch was obtainable for 15,000 pesos, and contract was made for the purchase of 2,000 guns at $7 a piece, and 200,000 cartridges at $33.50 per 1,000.

At the end of the week, the 7th of May, the American gunboat *McCulloch* arrived from Manila, bringing notice of the victory of Admiral Dewey over the Spanish squadron, but it brought no orders to take me to Manila, and at 9 at night I had a conference with the consul at his invitation.

The 15th of the same month the *McCulloch* returned again and brought the order to carry me to Manila with my companions. Having been immediately notified of the embarkation by Consul Wildman and at 10 o'clock at night of the 16th, at the city hall of Hongkong, being accompanied by the consul and the commander of the gunboat and by Mr. Barrett, ex-secretary of the American embassy of the Kingdom of Siam, we went in an American launch to the Chinese port of Kowloon, where lay that gunboat. Mr. Barrett, on taking leave, offered to visit me in the Philippines, and later kept his promise in Cavite and Malolos.

Consul Wildman charged me that as soon as I should arrive in the Philippines to establish the Filipino government under a dictatorial form and said that he would try by all means possible to send soon the expedition of arms, which in fact he did. (Note that after having received this first consignment of arms, pleased and trusting more and more in the sincerity and good faith of Consul Wildman, I charged him to send another consignment, remitting to him $67,000 as a deposit for the expenses of the second consignment. But Mr. Wildman did not fulfill this last charge, kept that sum which, according to my information, he refuses to return.)

The *McCulloch* leaving at 11 o'clock in the morning of the 7th of May for the Philippines, we came to anchor between 12 and 1 in the afternoon of May 19 in the waters of Cavite and immediately the launch of the Admiral, with his adjutant and private secretary, came to take me to the *Olympia*, where I was received with my adjutant, Señor Leyva, with the honors of a general by a section of marines.[a]

The Admiral received me in a saloon, and after salutes of courtesy I asked him if all the telegrams which he had sent to the consul of Singapore, Mr. Pratt, relative to me were true; he answering me affirmatively and adding that the United States had come to the Philippines to protect its natives and free them from the yoke of Spain.

He said, besides that, America was rich in lands and money and did not need colonies. He concluded by assuring me that I must have no doubt concerning the recognition of Philippine independence on the part of the United States. And immediately he asked me if I could raise up the people against the Spaniards and make a rapid campaign.

I answered that events would prove it, but that until the arrival of the consignment of arms which had been intrusted to Consul Wildman in one of the ports of China I could do nothing, since without arms each victory would cost many lives of brave and daring Filipino revolutionists. The Admiral offered to send a steamer to hurry up the consignment of arms, apart from the orders which he had given Consul Wildman, and he placed immediately at my disposition all the cannons which were in the vessels of the Spanish squadron and 62 Mauser rifles with many cartridges, which were on the *Petrel* and came from Corregidor.

I then expressed to him my profound gratitude for the generous aid which the United States was giving to the Filipino people, as also my admiration for the greatness and goodness of the American people. I explained to him also that before I left Hongkong the Filipino colony had had a meeting, in which they had discussed the possibility that, after having conquered the Spaniards, the Filipinos might have a war with the Americans because of the latter's possible refusal to recognize our independence, and that the Americans would be sure to win, because they would find us tired, without munitions of war, and worn-out in the war against the Spaniards, and I asked him at the same time to pardon my frankness.

The Admiral replied that he was delighted with my sincerity and believed that Filipinos and Americans ought to treat among themselves, like allies and friends, expressing clearly all doubts for the most perfect understanding between both parties, adding that, as he had already declared, the United States would recognize the independence of the Filipino people, guaranteed by the honorable word of the Americans, of greater efficacy than documents that can be left unfulfilled when it is desired to do so, as happened with the written agreement with the Spaniards, and he advised me to make immediately a national Filipino flag, offering to do anything in his power to recognize and protect it before the other nations represented by the different squadrons lying in the bay; though he said that we ought to conquer the power of the Spaniards before unfurling [verb "hondear" here used probably should read "ondear," to wave or unfurl] that banner, in order that the act might be more honorable in the sight of all the world and, above all, of the United States; and in order that when Filipino vessels bearing their national flag should pass before foreign squadrons they might inspire respect and esteem.

[a] One of our United States Army officers in Manila said to me he had talked to one of these marines and he told him that by orders given these marines saluted Aguinaldo.—J. W. G.

I thanked the Admiral anew for his good advice and generous offers, making him understand that if the sacrifice of my own life to honor the Admiral before the United States should be necessary I was ready to sacrifice it.

I added that with such conditions I could assure him that all the Filipino people would unite in the revolution to shake off the yoke of Spain, though some few might fail for lack of arms or personal profits.

Thus ended the first conference with Admiral Dewey, to whom I announced that I would take up my quarters in the office of the commander of marine in the arsenal at Cavite.

THE REVOLUTION OF 1898.

I returned to the *McCulloch* to order the discharge of the equipage and the materials of war which she brought, having had occasion to meet in the waters of Cavite various revolutionists of Bataan, to whom I gave two folders that contained orders of uprising for that province and Zambales.

Before landing at the arsenal I met also several boats full of revolutionists of Kawit, my native town, who told me that they had for two weeks been expecting my arrival, which had been announced by the Americans themselves. I felt no little joy at seeing my countrymen and relatives, old companions of the daring campaign of 1896 to 1897. I improved the opportunity to deliver to them the other orders of the uprising, scarcely stopping in the office of the commander of marines in the arsenal at 4 in the afternoon. I continued all that night with my companions writing more and more orders and circulars to the same end. Since, without explaining how or in what manner, there came pouring in from all parts messengers asking news of my arrival, at the same time the password for the uprising against the Spaniards.

God without doubt had designated that moment for the overthrow of the Spanish power in the Philippines, because my unexpected arrival could not have been saluted nor known with the rapidity and publicity that those facts demonstrated.

Seventy-two volunteers of San Roque and Caridad, armed with Remingtons and Mausers, organized by the Spaniards, presented themselves the following day and put themselves unconditionally under my orders. At first the American forces were alarmed by the arrival of these volunteers, and by precaution took positions to defend the entrance to the arsenal; but being informed of the matter I went down to see the volunteers, and gave them orders to guard the post of Dalagican to prevent the entrance of the Spanish troops, which, according to recent notice, were attempting it.

Learning what had occurred, the Americans became tranquil, and, giving the corresponding watchword to all the American force, the commander of the *Petrel* was ordered to deliver to me the 62 guns and ammunition of war offered by the Admiral, which was done. Then, in a little while, at about 10 o'clock in the morning, the launches of the *Petrel* brought and disembarked in the dike of the arsenal the armament referred to. This was immediately distributed to those who had presented themselves, because by thousands they came, begging a place in the ranks of the revolution and a gun to go to the advanced posts.

On the night of that day—the 20th of May—the old revolutionary chief, Señor Luciano San Miguel, to-day brigadier-general, presented himself to me to receive orders, which were given him, for the uprising of the provinces of Manila, Laguna, Batangas, Tayabas, Bulakan, Morong, Pampanga, Tarlak, Nueva Ecija, and others of the north of Luzon, and he went forth that very night to execute them.

The 21st, 22d, 23d, and rest of that month was continued the inpour of revolutionists who presented themselves to take part in the movement, so that I had to leave the arsenal and go to another house in Cavite in order to leave quiet the marines who garrisoned the arsenal.

V. THE DICTATORIAL GOVERNMENT.

On the 24th the dictatorial government was established by circulating a proclamation which I subscribed as chief of that government. Copies of this document were handed to Admiral Dewey and through him to the foreign consuls in Manila, although communication had been cut with the city. In a few days the dictatorial government was moved to the house where the old civil government of the Spaniards had been in Cavite, because the great crowd of persons who flowed hither from all parts overflowed the private house where we had formerly been. Here I received the pleasant notice of the arrival of the consignment of arms which were disembarked in the very dike of the arsenal under the gunboat *Petrel*, 1,999 rifles and 200,000 cartridges, with other munitions.

I immediately sent a committee to thank Admiral Dewey for the prompt arrival of the expedition, thanks to his action, informing him at the same time that the 31st of May had been fixed upon to commence the operation. The Admiral sent his secretary to congratulate me, as also my government, for the animation and activity that were noted in favor of the campaign, and he declared to me at the same time that he believed the day fixed upon too near to begin the uprising, and that I ought to put it off to a more distant day in order that the revolutionary troops might be better organized. I answered him by his secretary that the Admiral might feel easy, because everything was prepared and the Filipinos anxious to shake off and free themselves from the yoke of the Spaniards, and that this took the place of discipline, as time would prove. I thanked him, nevertheless, for his good counsel.

I immediately ordered the distribution to the various provinces of the arms received, sending some to the revolutionists of Kawit, which were introduced in the night of the 27th of May into the village of Alapang.

VI. THE FIRST TRIUMPHS.

On the following day, the 28th of May, 1898, at the hour of the delivery of the arms to the people of Kawit in that town, a column of more than 270 Spanish marines presented themselves, having been sent by the Spanish general, Señor Peña, in pursuit of the said arms.

There was had the first combat of the Filipino revolution of 1898, which we may call a continuation of the campaign of 1896 to 1897. The combat lasted from 10 in the morning until 3 in the afternoon, and through lack of ammunition the Spaniards surrendered with all their arms to the Filipino revolutionists, who entered Cavite with the prisoners. I seized upon this glorious occasion to bring out and unfurl the national flag, which was saluted by an immense multitude with acclamations of delirious joy and great hurrahs for Philippine independence and for the generosity of the United States, the act being witnessed by various officials and marines of the American squadron, who demonstrated clearly their sympathy with the cause of the Filipinos by taking part in their natural jubilee.

This glorious triumph was the prelude to continued victories; since, on the 31st day of May, the date fixed for the general uprising, the whole islands rose like one man to shake off the power of Spain.

The second triumph was in Binakayan, in a place called Polvorin, where a Spanish detachment composed of 250 men were attacked by revolutionists and surrendered in a few hours for lack of ammunition.

I again took occasion of this victory to display our national flag from the top of the barracks of Polvorin, which was on the seashore, in order that the holy sign of our liberty and independence might be seen and looked upon by all the war vessels which, representing all the greatest and most civilized nations of the world, were lying congregated in the bay, observing the providential events taking place in the Philippines after more than three hundred and fifty years of Spanish domination.

Scarcely an hour had passed when another banner of ours was seen waving on the tower of the church of Bacoor, which was also upon the seashore. It was a sign of a new triumph of the revolutionists against the Spanish troops that garrisoned that town, composed of some 300 men, who likewise for lack of ammunition surrendered to the revolutionary army.

And so the revolution went on from triumph to triumph, the Filipino people proving thus their power and resolution to free themselves from every foreign yoke, to live independent, as I had already affirmed to Admiral Dewey. Upon these things this gentleman and his chiefs and the American officials warmly congratulated me and the Filipino army for these undeniable triumphs, attested, as they were, by a great number of prisoners arriving from all parts of Luzon in Cavite.

VII. THE FILIPINO FLAG.

The 1st day of September I ordered that on all Filipino ships should be displayed our flag, which was complied with in the first place by the marines of our small fleet, composed of some eight Spanish steam launches and five other vessels of greater tonnage, called *Taaleño*, *Balayan*, *Taal*, *Bulusan*, and *Purissima Concepcion*, given to the Filipino government by their respective masters. These were immediately prepared in our arsenal to receive cannon, and we gave them 8 and 9 centimeter pieces, which were taken from the Spanish ships of the squadron.

Oh, how beautiful and gallant is our flag unfurled in the air from the masts of our ships upon the very waters of the bay of Manila, alternating with the ensigns of other great nations before whose ships ours came and went, bearing the recent sign of liberty and independence! How respected and admired as borne among the legitimate triumphant echoes of the proud Filipino army after it had received the surrenders of the regular forces of the Spanish Government!

The heart dilates with joy, the soul swells with pride, and patriotism is cheered at so great a contemplation!

At the end of the month of June I visited Admiral Dewey, who, after having complimented me for the rapid triumphs of the Filipino revolution, declared to me that the German and French admirals had asked him why he had consented to the Filipinos using a flag not recognized upon their ships, and that to this question he had replied that with his knowledge and consent the Filipinos were using that flag; besides, by their valor and resolution in war against the Spaniards they deserved henceforth to use that right.

I then broke into demonstrations of lively gratitude before so valorous and decided protection on the part of the admiral, and I immediately ordered that the Filipino fleet should carry troops to the other provinces of Luzon and the isles of the south to carry on the war against the Spaniards that garrisoned them.

VIII. THE EXPEDITION TO THE VISAYAS.

This expedition was made with much good luck, our steamers returning without accident after having left the troops at the points agreed upon. But the *Bulusan*, which went to Masbate to pick up the column of Colonel Mariano Riego de Dios and carry it to Samar, was sighted by the Spanish gunboats *Elcano* and *Uranus*, the first of which attacked the *Bulusan* and sunk it in those waters, not, however, without the Spanish ship having been made to suffer considerable damage by our troops. The crew of the *Bulusan* was fortunately saved by swimming to the shore.

IX. THE STEAMER COMPANIA DE FILIPINAS.

In a short time the Spanish steamer *Compania de Filipinas* presented itself in Cavite, having been seized by the revolutionists in the waters of Aparri. Immediately it was provided with artillery and sent with troops to Olongapo, but it was necessary to order another of our gunboats to bring her back, by request of Admiral Dewey, in order to settle the claim made by the French consul for that vessel. The Admiral, having been informed that the *Compania de Filipinas* had been seized under the Spanish flag, abstained from entering further into the matter and returned the claim to the French consul, declaring that he and his forces had nothing to do with the matter.

Thus ended this incident, which demonstrates clearly the recognition and protection which Admiral Dewey gave to the Filipino revolution.

The *Filipinas*, for so the steamer in question was thenceforth called, continued her journey to Olongapo, and upon her return brought the troops to liberate from the power of Spain the provinces of the valley of Cagayan and the Batanes Islands. This vessel, which again changed name and is now called *Luzon*, went aground in the Cagayan from an accident to its machinery.

In all the expeditions our vessels before setting sail saluted the *Olympia* as the flagship, thereby fulfilling the duty of international courtesy, our salutes being answered with like demonstrations of friendship.

X. THE PROCLAMATION OF INDEPENDENCE.

The dictatorial government prepared the proclamation of Filipino independence in the town of Kawit for the 12th of June. In fact I sent a commission to acquaint the Admiral with it, inviting him at the same time to be present at the act, which took place with all solemnity. The admiral sent his secretary to excuse me,[a] alleging that it was mail day.

At the end of the month of June the Spanish gunboat *Leyte* fled for Manila from the rivers of Macabebe, where she had been besieged by the forces of General Torres. She carried a part of the troops and volunteers which the Filipino Colonel Don Eugenio Blanco commanded; but having been seen by an American cruiser, she voluntarily surrendered. Admiral Dewey delivered to me all the prisoners and all the arms except the steamer, but later claimed the return of the prisoners after the capitulation of Manila

On the 4th of July the first military expedition of the United States arrived under command of General Anderson and was lodged in the arsenal of Cavite. This worthy general visited me in the office of the Filipino government in Cavite, a matter of etiquette which I returned immediately, and which is performed in all cases between two friendly and allied chiefs. In our conferences General Anderson solemnly ratified to me the promises of Admiral Dewey, affirming upon his word of honor that America has not come to the Philippines either to make war upon its natives or to conquer our territory, but indeed only to liberate the Filipino people from the oppressive Government of Spain.

A little before the arrival of this military expedition and of those which afterwards came with General Merritt, Admiral Dewey sent his secretary to the dictatorial government asking my permission to put the American troops in Tumbo and Maytubig, places of Parañaque and Pasay. To all of this the dictatorial government acceded, owing to the honorable promises of Admiral Dewey above set forth.

In the same month of July, the Admiral came to Cavite, accompanied by General Anderson, and after salutes of courtesy, said to me, "You have seen confirmed all that I have said to you and promised." "How beautiful your flag is. It has a triangle and resembles that of Cuba. Will you give me one as a memento when I return to America?"

I answered that I was convinced (or satisfied) by his honorable word, and there was no need to extend in writing the things agreed upon, and that as far as the flag was concerned he might count upon it as though it were already in his possession.

[a] "His absence" first translation.—J. W. G.

Dewey continued: "Writings are not fulfilled where there is no honor, which occurred with what you agreed upon with the Spaniards, who fell short in what had been written and signed. Trust in my word, because I answer for it, that the United States will recognize the independence of the country. But I recommend to you to observe for the present much secrecy in all that we have spoken of and agreed upon. And, besides, I beg you to have patience if our soldiers trample upon some Filipino, since as volunteers they are as yet without discipline."

I answered the Admiral that I would remember his recommendation about reserve, and that as concerned the abuses of the soldiers proper orders had already been given in that matter, giving at the same time like notice to the Admiral with respect to our soldiers.

XI. THE SPANISH COMMISSION.

The Admiral, changing suddenly the course of the conversation, asked me why the inhabitants of Manila do not rise as those of the provinces have done? Can it be true that they accept autonomy offered by General Augustin with the assembly of representatives? Can it be true, as he had heard, that a commission of Filipinos had left Manila to propose the acceptance of that autonomy and to recognize you as general, as also your companions?

I answered that the people of Manila are not rising because they have no arms, and because, as merchants and proprietors which they are, they fear to rise lest the Spaniards should get possession of their riches and burn and destroy; in consequence of which they apparently accept autonomy for the purpose of deception. But I told him that I trusted that all the Filipinos of Manila were partisans in our independence, as would be proven the day Manila should be taken by our troops. Then I believed that the inhabitants of Manila will celebrate with us the independence of the Philippines, making new demonstrations of adherence to our government.

I told him also that it was true that there had come a mixed commission in the name of General Augustin and of Archbishop Nozaleda, which commission had declared to me that it was forced to come by the Spaniards, but that it had demonstrated their adherence to our cause. The individuals of the commission explained to me that the Spaniards had recommended to them to say that they came of their own motion, without being sent and without being led thereto by the Spanish authorities, pretending to be faithful representatives of all the people of Manila, and that they should assure me that, provided autonomy should be accepted, General Augustin and Archbishop Nozaleda would recognize me and my companions as generals, giving me a million pesos, the indemnity not received from the treaty of Biakna-bato, and besides, great gratifications and salaries in the assembly of representatives; that to these promises the commissioners themselves gave no credit, although some advised that the money be accepted to get it out of the Spanish Government treasury and as a contribution of the Filipinos. The commissioners concluded by assuring me that they would rise in Manila if they were furnished arms, and that the best thing that I could do was to attack Manila at the places which they designated as the weak points defended by Spanish detachments easy to surround.

I thanked the commission for their sincerity and frankness and told them that they might withdraw in security, and that they should tell those who had sent them that they had not been received for the lack of credentials, and that although they should have had these credentials, according to what they had seen and heard from other revolutionists, Don Emilio Aguinaldo would not have accepted their propositions of autonomy because the Filipino people had sufficient intelligence to govern themselves and were tired of being martyred by the abuses of a foreign power; wherefore they desired no more than their independence, and so the Spaniards might prepare to defend their sovereignty, because the Filipino army would attack them hard and continuously until they took Manila.

I also charged the commissioners to say to Nozaleda that he was abusing much his high office, conduct contrary to the precepts of the high pontiff; that if he did not mend his ways he should see me the day he least expected, and see me prepared to bring to light things that would fill him with shame; and that he knew that, together with Augustin, he had commissioned four Germans and five Frenchmen who, in disguise, were to assassinate me, in the mistaken hope, without doubt, that I being dead the Filipino people would submit tranquilly to the sovereignty of Spain—a most egregious error, because if I had been assassinated the Filipino people would have continued with greater warmth the revolution. Other men would have arisen like me to avenge my death.

And finally I recommended to the commissioners that they tell the inhabitants of Manila to go on about their business, to be tranquil concerning our Government, whose line of conduct was rectitude and justice, since we had no friars to corrupt those civic virtues which the Filipino government is trying to show before the eyes of all nations. Then that they should go on with their business and not try to come out from Manila to this camp, where there were fewer resources, and because there were already too many people who were serving the Government and in the Army. If we lacked anything, it was arms.

The commission asked me what conditions the United States would impose and what advantages they would give the Filipino people; to which I replied that it was difficult to answer this question in view of the promise I had made to keep silent concerning the terms of the agreement, and I limited myself to inviting their attention to the acts of sovereignty which our dictatorial government was exercising, especially in the waters of the bay.

These words made much impression on the Admiral, even to the extent of causing him to interrupt the translation of my words by the interpreter, Señor Leyva, and he interpolated me, saying, "Why have you revealed our secret? Do you mean to say that you are not fulfilling our agreement as to silence?" I answered him that no revelation had been made of the secret relating to him and the consul. The Admiral, thanking me for my reserve, took leave with General Anderson, not without requesting me to suspend for the time being the attack upon Manila, because they were studying a plan to take with his forces the walled city, leaving the taking of the suburbs to ours. He charged me, nevertheless, to study for my part the other plan to combine it with his, to all of which I agreed.

XII. NEW AMERICAN TROOPS.

In a short time American troops arrived, and with them General Merritt. The secretary of the Admiral, with two chiefs, presented himself to the dictatorial government to ask permission to occupy our trenches at Maytubig from the seacoast to the high road, where they joined with the Filipino troops that occupied Pasay and Singalong. To this I acceded also, owing to the solemnly repeated promises of the Admiral and natural hopes born of them concerning the support and recognition of our independence.

Ten days after the occupation of Maytubig by the American forces the Spaniards, who were in front, fortified in the Polvorin of San Antonio Abad, learning of it, during the night surprised the American outposts, which, being weak, had no more time than to leap out of bed and double back upon their center, abandoning their rifles and six cannons.[a]

[a] This was read to me by an Army officer who said these statements were true, one of his [my] officers so informing me [him], who was present when it occurred.—J. W. G.

The uproar being heard by our troops, they immediately hastened to the aid of their friends and allies, putting the Spaniards to flight and recapturing the guns and cannon, which were returned to the Americans by the law of good friendship.[b]

General Noriel opposed this return, alleging that the arms did not belong to the Americans now, since the Filipino forces took them from the Spaniards; but I did not listen to this reasoning of my general, but, in terms, ordered the return of the arms to the Americans, thereby clearly and evidently demonstrating the sincere friendship of the Filipinos.

These guns and cannons, with much ammunition, were thereupon returned to those who were then our allies, although General Noriel and his troops had captured them at the cost of the lives of many companions.[a] A short time afterwards more American reenforcements arrived, and again Admiral Dewey, through his secretary, asked for more trenches for his army, alleging that those which had already been given were not sufficient, and I gave them the line of trenches up nearly to Pasay.

XIII.—THE 13TH OF AUGUST.

The 13th of August arrived, when I noted a general movement of attack against Manila on the part of the American squadron and of the land forces under command of General Anderson in Paranaque.

Immediately I ordered my troops to attack along the whole line. Gen. Pio del Pilar succeeded in entering by Sampalok and attacked the Spanish troops that were defending the suspension bridge. These fell back toward the bridge of Spain. The column of our Gen. Gregorio H. del Pilar took the suburb of Pretil, Tondo, Divisoria, and Paseo de Azcarraga, to the north of Manila; and the column of General Noriel, in the direction of Pasay, took the suburbs of Singalong and Pako, following the American column and flanking the Spanish forces that defended the line of San Antonio Abad.

When this was seen by the Spanish chiefs, they ordered their troops to retire toward the walled city, whereupon the American forces that occupied the trenches in front entered without firing a shot, through the suburbs of Malate and Ermita. But there they encountered the troops of General Noriel, who had taken possession of the suburbs named, and established his quarters in the convent of Malate and Ermita, in the buildings of the old exposition of the Philippines, in the normal school, and in the house of Señor Perez in Pako. In Santa Ana, eastern part of Manila, General Ricarte, aided by the troops of General Pio del Pilar, succeeded in cutting off five columns of Spaniards.

XIV. THE FIRST CLOUDS.

Our men saw the American forces disembark upon the beach of the Luneta and the promenade of Santa Lucia, and the attention of all was attracted by the fact that the Spanish soldiers who were on the city wall did not fire upon these troops—a mystery which at nightfall was explained by the news of the capitulation of the town, made by General Señor Jaudenas to the American general, Mr. Merritt, a capitulation which the American generals had kept secret in violation of the agreement with Admiral Dewey concerning the formation of plans to attack and take Manila with the two armies, American and Filipino, together and in combination.

This inexplicable conduct of the American leaders was made more evident by the telegrams which General Anderson on the aforesaid day, the 13th, directed to me from Maytubig, asking me to order our troops not to enter Manila. This request was denied, because it was contrary to the agreement and to the high limits of the revolutionary government, which, after undergoing the immense labor of besieging Manila two months and a half and sacrificing thousands of lives and tens of thousands of material interests, could not surely have done so with any other object than that of capturing Manila and the Spanish garrison that defended the town with firmness and tenacity.

But General Merritt, tenacious of his proposition, asked me now, not through the Admiral, but through Major Bell, to withdraw my troops from the suburbs to prevent danger of conflicts, which are ever to be feared in a double military occupation, and also thereby avoid for the American troops ridicule. And he offered in his three letters to negotiate after his plans had been carried out, to which I acceded, but not right away and all at once, but to withdraw our troops gradually to the blockhouses, that all the inhabitants of Manila might be witnesses of our military deeds and of such pregnant conduct with our American allies.

Up till then and up to the date when the Americans openly began hostilities against us I had entertained in my soul deeply founded hopes that the American chiefs would cause their agreements, orally had with the chiefs of the Filipino revolution, to stand with their own Government, notwithstanding the signs to the contrary that were noted in their conduct, above all, in that of Admiral Dewey, who, without any reason whatever, one day in October, seized all our vessels and launches. When I was informed of this strange proceeding from the seat of government, which was then in Malolos, I sent a committee to General Otis to treat about the matter, who sent it on to the Admiral recommended. But they were not received by the Admiral, notwithstanding General Otis's recommendation.

Notwithstanding this conduct of the American leaders, so contrary to all agreements and arrangements above referred to, I continued observing toward them the same friendly attitude, sending a commission which went to take leave of General Merritt when he went away to Paris. After the General had given thanks for this act, he was kind enough to declare to our commissioners that he would defend the Filipinos in the United States. I also sent to Admiral Dewey a dagger, with its scabbard all of silver, and a cane of the finest wood, with a gold head worked by the best Filipino silversmith, remembrances of affection and old friendship, which the Admiral accepted, thus and to a certain extent consoling my afflicted spirits and the spirit of all those Filipinos composing the revolutionary government, and renewing in all our hearts the flattering and deceptive hopes of an arrangement with Admiral Dewey.

XV. FALSE HOPES.

But such hopes disappeared when notice was received that Mr. Dewey had been working and was thus working against the revolutionary government by the order of His Excellency Mr. McKinley, who, controlled by the imperialist party, had decided to annex the Philippines, yielding, perhaps, to the ambition to exploit the immense natural riches that our virgin soil concealed.

This notice fell like a flash of lightning in the camp of the revolution. Some cursed the hour and the day that we had orally treated with the Americans; others censured the fact that we had yielded the suburbs. The greater part advised to send a commission to General Otis to draw out frank declarations upon the situation and to block out a treaty of friendship, if the United States would recognize our independence, or to break out into actual hostilities if this was refused.

In such a grave situation I advised moderation and prudence to all, as I still had hope in the justice and rectitude of the Congress of the United States, believing that it would not approve the tendencies of the imperialistic party, but would listen to the voice of Admiral Dewey, who, as the high representative of America in these islands, concerted and arranged with me and the Filipino people to recognize our independence.

[b] Corroborated by Richard Brinsley Sheridan, barrister at law, Inner Temple, London, "an eye-witness," in his book The Filipino Martyrs, p. 63.

In no other way in fact was so grave an affair to be looked upon, since if America intrusted to Admiral Dewey the honor of its arms in so foreign a land, well also might the Filipinos trust in the honorable promises of such a perfect gentleman and brave sailor, feeling sure that the great and noble American people would not abandon and expose to ridicule the illustrious conqueror of the Spanish squadron.

I was further induced to this judgment by the circumstance no less evident and notorious that the other American leaders who arrived after the celebrated victories of Admiral Dewey—Generals Merritt, Anderson, and Otis—proclaimed to the Filipino people that America came not to conquer territory, but to free their inhabitants from the oppression of Spanish sovereignty.

It would be, therefore, to expose also the honor of these chiefs to universal ridicule should the United States fail to stand by their official and public conduct, but annex the islands by conquest.

XVI. THE AMERICAN COMMISSION.

With such wise and well-founded reflections I continued to calm the minds of my revolutionist companions until the official notice arrived that the Government of Washington, on the motion of Admiral Dewey, had arranged for the coming of a civil commission to come to an understanding with the Filipinos in order to reach an agreement about the definite government of the islands.

Joy and satisfaction again sprang up in the minds of all Filipino revolutionists, and I then arranged to name a commission that should receive the American Commissioners and at the same time gave strict orders to all to keep in the greatest harmony with the Americans, to tolerate and to pass over the abuses and aggressions of the soldiery, since it would be bad for the Commission which was expected to find us at outs with the American forces.

But the abuses of the Americans were becoming in many cases intolerable. In the market of Arroceros, under pretense of being "only in play," they killed a woman and a child, causing indignation on the part of all the multitude that filled the place.

My aids who had passes to enter Manila, armed and in uniform, were annoyed with repeated detentions by all guards that they passed, by which it was clearly seen that it was the intention to provoke them with public ridicule.

And while all these annoyances were being given our men the American leaders and officers who entered our camp were treated with deference and kindness.

In Lacoste street an American watchman shot a little child 7 years old because the latter had taken a banana from a Chinaman.

Searches of houses were as annoying as in the time of the Spaniards and the American outposts invaded our lines, provoking our sentinels. In short, it would be to make this writing too long should I relate one after another the abuses and aggressions committed by the American soldiery in those days of general anxiety.

Abuses seemed to have been ordered, or at least officially tolerated, with the evident intention of provoking us to a struggle. Our spirits were greatly provoked, but the Filipino government, which had assumed the responsibility of the acts of its people, by prudent orders continually repeated, tried to preserve peace, advising all who suffered by aggression to bear with patience and forbearance until the arrival of the civil commission.

XVII. IMPOLITIC ACTS.

In this wretched and critical situation, and before the arrival of the much-desired American Civil Commission, it occurred to General Otis, military governor of the American forces, to put in effect two most impolitic acts—one, the order to search our telegraph office in Sagunto street in Tondo, closing up the machinery, and detaining the official, Señor Reyna, in the fortress of Santiago under pretext that he was conspiring against the Americans.

How and why was Señor Reyna conspiring? Would it not have been sufficient for the Filipino government to have given the order to attack for our whole 8,000 men to have entered into an immediate struggle with the forces of the United States? Was it necessary to conspire when this power was in our hands? And above all, was a telegraph operator to mix himself up in affairs of war when an army existed to whom that duty belonged?

The intention to annoy and directly ridicule the Filipino government in order to provoke it to a struggle is thus seen. It is to be noted that this act was not done by the soldiery but by General Otis himself, whose imperialistic policy was not pleased by the arrival of the Civil Commission and much less that that Commission should find the Philippines in a state of peace, because it was evident to the General, as to all the world, that the Filipinos would have come to an understanding and friendly settlement with the Commission had this Commission arrived and found a state of peace.

The Filipinos would have received this Commission with demonstrations of true affection and complete adhesion as the honorable agents of great America. The Commissioners could have gone through all of our provinces plainly seeing and observing order and tranquillity in all our territory. It would have seen the fields worked and sown. It would have examined our constitution and public administration with perfect tranquility, and would have felt and enjoyed that ineffable enchantment of our oriental manner, a mixture of abandon and kindness, of warmth and coldness, of confidence and suspicion, which marks our relations with strangers, with a thousand agreeable colors.

Ah! but neither General Otis nor the imperialists desired them to take such a journey. It was better for their criminal intentions that the American commissioners should find the desolation of war in the Philippines, and should, from the very moment of their arrival, smell the fetid odor of American and Filipino corpses blended. It was better for their plans that the gentleman, Mr. Schurman, president of the Commission, should not be able to go out from Manila, but should be limited only to hearing the few Filipinos who, led by reasons of money, were partisans of the imperialists.

It was better that the Commission should look at the Filipino problem through flames, through the whistling of balls, and through the shadows of all unchained passion in order that it might not form any exact judgment or idea of the proper and natural terms of the problem. Ah! it was better, in short, that the Commission should return discouraged at not having obtained peace, and should blame me and the other Filipinos, when I and all the Filipino people desired that this peace should be made yesterday, before this, but worthy and honorable peace for the United States and the Filipino republic, to the end that it be sincere and perpetual.

The other impolitic act committed by General Otis was the publication of the proclamation of the 4th of January, establishing in the name of President McKinley American sovereignty in these islands, with threats of ruin, death, and desolation to everyone who would not recognize it.

I, Emilio Aguinaldo, humble servant of all, but president of the Filipino republic, charged, however, with watching over the liberties and the independence of the people who have chosen me for this elevated and thorny charge, distrusted for the first time the honor of the Americans, and understood from thenceforth that this proclamation of General Otis had passed all the limits of prudence, and that there was no remedy except to resist with arms such an unjust and unexpected proceeding on the part of the leader of the friendly army.

I protested then against this proclamation, threatening also to begin hostilities immediately, since the whole people were shouting "treason," declaring with foundation that the announced Civil Commission which had been asked for by Admiral Dewey was a farce, and that what General Otis had pretended was only to entertain us in order to bring reenforcements and more reenforcements from the United States, in order to crush at a single blow our new and ill-armed army.

But General Otis acted for one time with diplomacy, and wrote to me, by conduct of his secretary, Mr. Carmen, a letter inviting the Filipino government to send a commission to come to an understanding with another one, of Americans, about a friendly arrangement between both parties. Although I did not trust in the sincerity of the friendly propositions of the General, whose decided intention to prevent the commission from finding a state of peace was already proven, I nevertheless yielded to his invitations, as much because I saw it officially confirmed, by order of the 5th of January, given by the General, as in order to demonstrate before the whole world my evident desires to preserve peace and friendship with the United States, solemly agreed upon with Admiral Dewey.

XVIII. THE MIXED COMMISSION.

The conferences of the commission composed of Americans and Filipinos were held in Manila from the 11th to the 31st of January. They showed with clearness the desires of our people to be recognized as an independent nation.

They set forth with frankness the complaints of the Filipino people against the abuses and aggressions of the soldiery, and they were heard attentively and kindly by the American commissioners.

The latter replied that they were without power to recognize the Filipino government, but that their mission was limited to hearing and gathering the wishes of our people, and transmitting them faithfully to the Government at Washington, which alone could decide definitely the matter. These conferences were thus concluded in the greatest harmony, auguring better and more definite days of peace until the date when Mr. McKinley should answer General Otis's telegrams transmitting our desires with favorable recommendation, as was said by the American commissioners.

XIX. OUTBREAK OF HOSTILITIES.

And when I, the governor, the congress, and the entire people were awaiting so desired a reply, yielding for the most part to the most flattering impressions, the fatal day, the 4th of February, came, on the night of which the American forces suddenly attacked all our lines. These lines were certainly almost abandoned, because, as it was Saturday, the eve of a feast day, our generals and some other of our noted leaders had asked permission to go home to their respective families.

Gen. Don Panteleon Garcia was the only one who at that critical moment was at his post of Maypajo, north of Manila, since Generals Noriel, Rizal, and Ricarte and Colonels San Miguel, Calles, and others were out of camp enjoying their permissions to be absent.

General Otis, according to true information, telegraphed to Washington that the Filipinos had been the aggressors against the American army. President McKinley read the telegram before the Senate, which was discussing the ratification of the treaty of Paris of December 10, 1898, in so far as it related to the annexation of the Philippines, and he obtained by this criminal means the approval of the whole treaty only by 3 votes, which were given under protest in doing so in consideration of the state of war in the islands.

So singular a comedy could not last long, because we Filipinos never were the aggressors against the American forces, to whom we had sworn friendship, and in whose power we expected to find the protection necessary to obtain from other nations the official recognition of our independence.

The doubt of the first few moments was great, but it soon yielded to the serene grave rays of the light of truth.

When sensible persons considered the acts of Mr. McKinley in sending troops and more troops to Manila after making the armistice and even after peace with Spain; when they reflected that he had gone on delaying to send the civil commission to arrange a treaty of friendship with the Filipinos; when they knew the facts that preceded my alliance with Admiral Dewey, prepared and arranged by Consuls Pratt and Wildman, of Singapore and Hongkong; when they fully understood the true state of things in the Philippines the 4th of February; when they knew that the Filipinos were expecting the reply of Mr. McKinley to General Otis's telegram communicating the peaceful desires of the Filipino people to live as an independent nation; when, finally, they fixed their attention on the terms of the treaty of Paris, whose approval in so far as related to the annexation of the Philippines was greeted with shouts of jubilee and satisfaction by the imperialist party, directed by Mr. McKinley, then they opened their eyes to the light of truth and perceived clearly the low, egotistic, and inhuman policy which Mr. McKinley had followed with us Filipinos, pitilessly sacrificing to his immoderate ambition the honor of Admiral Dewey by exposing this worthy gentleman and illustrious conqueror of the Spanish squadron to universal ridicule, because no other deduction is possible from the fact that about the middle of May, 1898, the *McCulloch*, a war vessel of the United States, brought me with my revolutionary companions from Hongkong, by direction of the Admiral, and is to-day devoted to bombarding the ports and cities of the revolution, whose principle is liberty and independence.

The facts related are recent and ought to be kept still fresh in the memory of all.

Those who in May of 1898 admired the valor of Admiral Dewey's marines and the humane sentiments of that illustrious leader, who lent visible support to an oppressed people in order that they might be free and independent, can surely never harmonize the present inhuman war with those elevated and honorable sentiments.

I will pass over the cruelties with which from the outbreak of hostilities General Otis treated the Filipinos, secretly shooting many who would not sign the writing begging autonomy. I will say nothing of the abuses of power which the American soldiers committed against the innocent and defenseless citizens of Manila, shooting children and women for looking out at the balconies, leveling houses at midnight, breaking open boxes and drawers and carrying away money, jewels, and whatever objects of value they found; breaking chairs, tables, and looking-glasses which they could not carry off, because, in brief, they are the consequences of war, though not of civilized war; but what I will not pass over is the inhuman conduct of General Otis toward the Filipino army, when, in order to arrange a treaty of peace with the civil commission presided over by Mr. Schurman, I three times sent a messenger asking the suspension of hostilities.

General Otis refused so just and prudent a request, and replied that he would not suspend hostilities until the Filipino army had laid down their arms.*

What? Did that army deserve no consideration on the part of General Otis and the American forces? Had the important services rendered by the Filipino army to the American in the past war against the Spaniards been forgotten? Had General Otis forgotten the favor which the Filipino army

*No suspendia hostilidades mientras el ejercito Filipino no depusesiera las armas.

showed him when it gave up to him and his forces the suburbs and the blockhouses which it had taken with so many sacrifices? Why did General Otis impose for peace so humiliating condition upon an army which, together with the American Army, had poured out its blood, and whose bravery and heroism had been lauded by Admiral Dewey and other American leaders?

This inexplicable conduct on the part of General Otis, evidently contrary to all laws of international right and military honor, is proof most eloquent of his decided intention to render useless Mr. Schurman's pacific mission. What peace can be arranged to the thunder of cannon and the hiss of bullets? What kind of proceeding has General Brooke been carrying on and is now carrying on in Cuba? Do not the Cubans continue to bear their arms while at the same time they are treating of peace and the future of that island? And are we, peradventure, less worthy than those revolutionists of liberty and independence?

Oh, beloved Philippines! Blame your riches and your beauty for the great misfortune that is falling upon your faithful sons! You have awakened the ambition of the imperialists and expansionists of North America, and both have sunk their sharp claws into your entrails! Beloved mother, sweet mother! We are here to defend your liberty and independence to death! We do not want war; on the contrary, we desire peace; but peace that will not color your cheek nor stain with shame nor blush your brow; and we swear to you and promise that America, with all her power and riches, shall perhaps be able to annihilate us, killing us all, but enslave us, never!

No, no; it was not this humiliation which I arranged in Singapore with the American consul, Mr. Pratt. Such was not the agreement which I stipulated with Mr. Wildman, consul at Hongkong. It is not, finally, the submission of my beloved country to a new foreign yoke which Admiral Dewey promised me.

Certain it is that the three have abandoned me and forgotten that I was sought by them and brought from my banishment and deportation; forgotten, also, that none of the three had solicited my services for American sovereignty, paying the expenses of the Filipino revolution, for which, evidently, they have sought and brought me to your beloved breast.

If there is, as I believe, a God, root and fountain of all justice, one an eternal judge of international contentions, He will not long delay, sweet mother, to save you from the claws of your unjust enemies. I believe it as I believe in the honor of Admiral Dewey. I expect it, as I rely upon the rectitude of the great people of the United States, where, if there are ambitious imperialists, there exist also valiant circles of defenders of the humane doctrine of the immortal Monroe, Franklin, and Washington, unless the race of virtuous citizens, glorious founders of the actual greatness of the North American Republic, has decreased so much that their beneficent and legitimate influence is overridden by the powerful ambitions of expansionists. In this unhappy case, is it not better to die than be slaves?

O reasonable American people, deep is the admiration produced in all the Filipino people and their new army by the valor of all your soldiers and leaders. Too weak are we before such Titans of the ambitious Cæsarist policy of your present governor to resist their brave onset. Our means are scarce; but we will continue in this unjust struggle, bloody and unequal, not from love of war, because we hate it, but to defend our undeniable rights to liberty and independence, so dearly bought, and our territory, threatened by the ambition of a party that is trying to subjugate us.

Pitiable is the war! Horrible its carnage! Unhappy Filipinos are perishing in the furor of its combats, leaving mothers, widows, and sons. North America may perhaps be able to shut her eyes upon the misfortunes she is heaping on us, but what her people will not undoubtedly consent to is the continued sacrifice of her sons, the weeping of mothers, widows, and sons for the mere caprice of sustaining a war contrary to her honorable traditions proclaimed by Washington and Jefferson.

Turn, then, O North American people, to your legendary liberties; raise your hands to your hearts and tell me, would it please you if, in the course of events, North America should find herself in the situation of a weak and oppressed people, and the Philippine nation, free and powerful, at war with your oppressors, should solicit your aid and promise to free you from so grievous a yoke and then, after conquering your enemy with your aid, should subjugate you and deny you that liberty?

Civilized people, honorable inhabitants of the United States, to whose high and right consideration I submit this unhappy paper, here you have the providential facts that brought forth the Filipino republic, whose existence has been unjustly denied, and a nation of whom, though unworthy, God has made me the principal agent.

The truth hereof rests in the word of the president of this republic and in the honor of a whole people of 8,000,000 souls, who for more than three years have borne the sacrifice of lives and property of their heroic sons to obtain the just recognition of her natural rights of liberty and independence.

If you will grant me the honor to receive and to read this writing, and judge it then impartially, declaring solemnly on which side are justice and right, then I shall remain eternally grateful.

Your respectful servant,

EMILIO AGUINALDO.

TARLAC, *September 23, 1899.*

John D. Ford, fleet engineer of the Pacific coast of the United States Navy, in his book entitled "An American Cruiser in the East," pages 491 and 500, says:

On the 20th of May Aguinaldo, the native insurgent leader, with members of his staff, arrived at Cavite and immediately began to assemble his followers, since which time these brave people have captured nearly all the Spanish strongholds in the province of Cavite, taken thousands of prisoners, and armed themselves by their captures. They have worked their way to the outposts of Manila and control all the country about it.

Aguinaldo's native forces moved into old Cavite, the adjoining towns, and closer to Manila, to make room for our troops, who soon fraternized with their native auxiliaries. The natives regard our people as their liberators from Spanish cruelty and oppression, and do everything in their power to help on the good cause.

U. S. S. BALTIMORE,
Manila, August 18, 1898.

As soon as the Spanish fleet had been annihilated the insurgents began to assemble about Cavite, and on May 20 General Aguinaldo and staff arrived from Hongkong and began operations against the Spaniards on the land side. The people of the neighboring provinces were soon under arms, and the investment of Manila was begun. Captures of small detachments of Spanish troops were of almost daily occurrence, and the arms and ammunition captured in this way supplied the insurgents with the means of continuing the warfare.

Many of the insurgents were armed with machetes, spears, axes, or bows and arrows, and their commissary was of the poorest kind—a handful or two of rice, a few eggs, and an occasional fowl, which were contributed by friends of their cause, was about the extent of it; and on this fare they made long, weary marches, built earthworks, burrowed trenches, and fought a hand-to-hand fight with their enemy right up to the Malate fort and magazine.

The insurgents soon had the neighboring provinces in their possession, and invested Manila on the land side, and a struggle for the possession of the magazine and Fort Malate went on day and night with varying success.

Mr. Ford then says:

The insurgents held many meetings in the church at old Cavite, and on July 1 General Aguinaldo proclaimed the republic of the Philippines with the following declaration:

1. The independence of the Philippines shall be proclaimed.
2. A republic shall be established, with a government designated by General Aguinaldo and approved by the admiral and general commanding the United States forces.
3. The government will recognize the temporary intervention of commissioners designated for the present by the United States.
4. The American protectorate shall be recognized on the same conditions as arranged for Cuba.
5. The Philippine ports shall be opened free for the universal commerce of the world.
6. Precautionary measures shall be adopted against Chinese immigration, so as to regulate the competition with the work of the natives.
7. The corrupt judicial system at present existing shall be reformed, intrusting at the commencement the administration of justice to competent European legal officials.
8. The complete liberty of association, as likewise that of the press, shall be declared.
9. There shall be a general religious toleration, but measures shall be adopted for the abolition and expulsion of the religious communities who, with an iron hand, have hitherto demoralized the actual civil administration.
10. Measures conducive to the working, development, and prospects of the natural resources of the country shall be adopted.
11. The development of the public wealth shall be facilitated, together with the opening up of roads and railways.
12. The existing obstacles to the forming of commercial enterprises and investment of foreign capital shall be suppressed.
13. The new government will keep the public order and will be obliged to prevent every act of reprisal against the Spaniards.
14. The Spanish official element shall be removed to some other safe and healthy island until the opportunity is presented for them to return to Spain.

On July 25 Major-General Wesley Merritt arrived on the transport *Newport*, and assumed command of the United States land forces.

In a recent interview published in the Baltimore Sun Commodore John D. Ford stated:

The fellows we deal with out there are not ignorant savages, * * * but an intelligent, liberty-loving people, full of courage and determination. They have the intellect and stamina to govern themselves, and have done it for three hundred years, although under the rule of Spain. They were the bookkeepers, the assessors, and managed the entire machinery of government. * * * They have a good government now which they are operating successfully, and preserve law and order.

Mr. Sargent, sent out by Admiral Dewey to investigate the people and country, states:

"Throughout the island a thirst for knowledge is manifested and an extravagant respect for those who possess it. The heroes of these people are not heroes of war, but of science and invention. Without rival, the American who is best known by reputation in Luzon is Mr. Edison, and any native with the slightest pretension to education whom you may question on the subject will take delight in reciting a list of his achievements."

And Gen. Charles King, who served in the Philippine Islands, in a telegram to the Milwaukee Journal, stated:

"The capability of the Filipinos for self-government can not be doubted. Such men as Arellano, Aguinaldo, and many others whom I might name are highly educated. Nine-tenths of the people can read and write, and all are skilled artisans in one way or another. They are industrious, frugal, temperate, and, if given a fair start, could look out for themselves infinitely better than our people imagine. In my opinion, they rank far higher than the Cubans or the uneducated negroes, to whom we have given the right of suffrage. There is no culture, excepting among the higher classes, of course, but there is fair education everywhere, and many people have ability. The men in power whom I met are gentlemen, many of them scholars, educated abroad, polished in manners, perfect in courtesy, broad minded, and ripe in judgment. There is no reason in the world why the people should not have the self-government which they so passionately desire, so far as their individual ability to carry it on goes."

Now, Mr. Chairman, I have here a great number of interviews with American officials, soldiers, and citizens bearing upon the feeling that predominates amongst the Filipinos as to the Americans, but of course I have not time to go into that now. I want you to hear me, or rather others, on Aguinaldo and the Filipinos.

General Merritt said, when he went over to Paris to testify before the Paris Commission:

The Filipinos impressed me very favorably.

This is published in the newspapers over there, and is found in a book entitled "The Filipino Martyrs," written by Richard Brinsley Sheridan, who was, he says, "an eye-witness" to the proceedings and conditions of the things there in 1898, and saw the advent of the American arms in the Philippine Islands, and remained there for some time. He is a "barrister of London," a man of repute, and writes well. He wants us to hold the Philippine Islands, but criticises the way we have been treating the Filipinos and the way we have conducted that war, being, as he himself states, a victim of some very discourteous and inexcusable and thoroughly offensive treatment by some of our American people, although the confessed friend of the United States. He is wholly disinterested in this matter. General Merritt said:

The Filipinos impressed me very favorably. I think a great injustice has been done the native population. I have found the Filipinos susceptible to good treatment, and I am certain they would always prove grateful in return for fair dealing. They are much superior in general points of character to the natives of kindred people in any other parts of the world. They are more capable of self-government than, I think, the Cubans are. They are considered to be good Catholics. They have lawyers, and doctors, and men of kindred professions who stand well in the community and bear favorable comparison with those of other countries. They are dignified, courteous, and reserved.

Certainly the members of the Fifty-sixth, if not the present,

Congress are familiar with Senate Document No. 62. It contains President McKinley's message transmitting the Paris treaty, many official papers and much evidence submitted to the Paris treaty commissioners and has been much quoted from in the discussion of this insular question.

Instead of reading from that document I will content myself with reading from the splendidly prepared and brief article bearing upon this subject printed in the Washington Post last year by Rebecca J. Taylor. This author bases this article upon quotations from Senate Document No. 62 and General Otis's report. The quotations are correctly made. I will read the article:

AGUINALDO AGAIN—TRIBUTES TO THE LATE INSURGENT LEADER ARE FOUND IN OFFICIAL DOCUMENTS.

EDITOR POST: Mr. W. C. Dodge has undertaken to tell wide-awake Americans the tale of Aguinaldo's "treachery;" how he sold out to the Spaniards and then went back upon his bargain, a story long since exploded by historians and the official records. I would apologize to the public for presenting such stale facts did I not believe that every repetition of the libel should be disproved.

According to the historians, the Spaniards, by the treaty of Biac-na-Bato, agreed to enact certain reforms and grant Filipinos certain privileges demanded, upon condition that the latter should lay down their arms and the leaders quit the islands during the armistice agreed upon, to give the Spaniards opportunity to conclude the reforms.

Under the terms of the treaty, Spain also agreed to pay a certain sum of money to the leaders and others "whose property had been destroyed or confiscated, and to the Filipino widows and orphans as an indemnity for loss consequent to war."

Of this indemnity only $400,000 was received by the leaders. Concerning this, in his testimony before the Paris Peace Commission, General Greene stated as follows:

"The money was deposited in banks at Hongkong, and a lawsuit arose between Aguinaldo and one of his subordinate chiefs, which is interesting because of the very honorable position taken by Aguinaldo. Artacho sued for a division of the money according to rank. Aguinaldo claimed that the money was a trust fund and was to remain on deposit until it was seen whether the Spaniards would carry out their promised reforms, and if they failed to do so it was to be used to defray the expenses of the new insurrection." (Senate Doc. 62.)

This is corroborated by Mr. Halstead.

Consul-General Pratt, in one of his reports to the State Department, submits a statement of the case as follows: "The Spanish Government, imagining itself secure, desisted from carrying out promised reforms. The Filipinos refused to be made dupes of, and have taken up arms again." (Senate Doc. 62.)

Consul Williams reported to the State Department as follows, May 24, 1898: "To-day I executed a power of attorney whereby General Aguinaldo releases to his attorney in fact $400,000, now in bank at Hongkong, to pay for 3,000 stands of arms bought there and expected here." (Senate Doc. 62.)

July 18, 1898, Consul-General Wildman reported to the State Department: "There has been a sytematic attempt to blacken the name of Aguinaldo and his cabinet. * * * It has been said that they sold their country for gold, but this has been conclusively disproved." (Senate Doc. 62.)

As for Aguinaldo's so-called treachery toward us, it is also a well-established fact that he declined the overtures alike of Spaniards, Germans, and French.

This is corroborated by Mr. Halstead.

As opposed to the wholesale abuse of your correspondent of the great Philippine leader, I submit the following official views:

June 2, 1898, Consul-General Pratt reported: "No close observer of what has transpired in the Philippines the past four years could have failed to recognize that General Aguinaldo enjoyed, above all others, the confidence of the Filipino insurgents, and the respect alike of Spanish and foreigners, all of whom vouch for his high sense of justice and honor. (Senate Doc. 62.)

Mr. Halstead shows that Aguinaldo had acted with conspicuous honesty as to this $400,000.

Again, the same official speaks of the "brilliant achievements" of the "distinguished leader, Gen. Emilio Aguinaldo, cooperating on land with the Americans at sea." (Senate Doc. 62.)

July 18, 1898, Consul-General Wildman reported: "Aguinaldo, Agoncillo, and Sandico are all men who would be leaders in their separate departments in any country." And again he writes to Aguinaldo: "You have certainly fulfilled nobly all the promises I made on your behalf to Admiral Dewey."

General Bell, when testifying before the Paris commission, spoke of Aguinaldo as "honest, sincere, and a natural leader of men. * * * A very popular man, highly respected by all." (Senate Document No. 62.)

And, finally, General Otis reported of Aguinaldo as follows, just before the breaking out of hostilities: "He was hailed from Europe as the savior of his country, and as the first of 'the generous and noble Tagalo people,' and was assured of 'the sympathy of all liberal and noble nations.'" (Otis's Report, p. 94.)

REBECCA J. TAYLOR.

In speaking of Aguinaldo, Lieutenant-Commander Calkins says:

He has never been convicted for corruption or cruelty. His treatment of Spanish prisoners was humane and even generous compared with that which Spain has given her rebels in any civil contest of the nineteenth century. In July, 1898, many prisoners captured by the American forces were placed in his custody.

One thousand three hundred Spanish soldiers were captured, as Dewey says, by Aguinaldo, but he was assisted by two of Dewey's ships, but the soldiers were turned over by Dewey to Aguinaldo and by him kept as prisoners of war.

General Whittier says of the Filipinos:

Their conduct to their Spanish prisoners has been deserving of the praise of all the world. With the hatred of priests and Spaniards, fairly held on account of conditions before narrated, and with every justification to a savage mind of the most brutal revenge, I have heard of no instance of torture, murder, or brutality since we have been in the country.

General Whittier further states:

The military operations and conduct of the insurgents has been most reditable. Positions taken and the movement of troops show great ability on the part of some leaders. His forces (Aguinaldo's) went around the city, taking the waterworks and the north point of the city and running up the city. At that time they occupied a portion of Manila.

General Whittier, before the Peace Commission, when asked: "Were they (the Filipinos) of material assistance to us?" answered "Very great. I think if they (the Spaniards) had not had this experience of having been driven back into the city (by the natives, of course) and the water cut off, so that even Jaubenes said he could not remove his noncombatants, the Government would have insisted upon his making a fight, and he would have made a very good one, for his position was strong, if they had any fight in them at all. But every place had been taken from them by the Filipinos, who managed their advances and occupation of the country in an able manner."

Lieutenant Hazard, one of the American officers who aided in the capture of Aguinaldo and saw a great deal of him, said to me in a written interview:

Aguinaldo told me he paid no attention to the first telegram to him at Malolos (February 4), which told him of this bridge affair—that is, the night the first shot was fired at San Juan Bridge. He mashed it (the telegram) in his hand and continued to turn music for a lady playing on the piano. That when he got the second message, a short while after the first, he called some of his staff officers and went to the telegraph office and remained there the balance of the night. The Filipino congress had met this day (February 4) to see if trouble between the two armies could not be prevented.

Aguinaldo and Luna opposed war. They were in the minority. Nothing was decided on as to when war was to begin, but they decided it would come sooner or later. They were as much surprised that it occurred this night (February 4) as we were ourselves. Aguinaldo said to me he did not want war, but peace, and I believe he is honest in that. His former record as a soldier had been good. He was brave and patriotic. Mentally he is a mediocre. He is to his people conscientious, honest, and faithful, and he has made honest efforts to serve his people. I do not think there is anything low or mean or designing in the man. I have great respect for him as a Filipino. He is a very manly fellow. His conduct after his capture won for him a high place in my heart. He has been used by bad men for bad purposes, like many men are sometimes. Aguinaldo had a pistol on him all night the first night after we captured him, and the next day he voluntarily came up and turned over his pistol to General Funston. I speak Spanish.

Here then is an American officer, a man of courage, intelligence, and a splendid young man, who struggled to capture Aguinaldo and after he did so came in close contact with him, and he thus relates this conversation and the impressions which Aguinaldo made on him.

Mr. John Barrett was in Manila soon after the battle of Manila Bay. In an article published in the Review of Reviews, entitled "The truth of the Philippine situation," he thus speaks of the Filipinos and Aguinaldo during the early days of our undertaking there.

You will notice that he states that with the Filipino army was a "Red Cross Association, at theh ead of which was Aguinaldo's mother and wife." I will read in part what Mr. Barrett says, as follows:

After his arrival at Cavite he organized with wonderful rapidity a provisional government, and in a short time had an army which was capturing Spanish outposts with the frequency of trained regulars. Within thirty days after his arrival he had taken 2,000 Spanish prisoners and had practically gained control of all the country of Luzon outside of Manila, leaving that city to our mercy. During the latter part of May, and all of June, his relations with our forces were most agreeable; there was a perfect understanding between Dewey and himself.

No matter what estimate may be made of Aguinaldo's personal character, there is no reason why credit should not be given for what he actually did. Coming to Manila at nearly the same time I did, I witnessed the beginning as well as the development of his authority. The impression of the people was that Aguinaldo had arrived to establish an independent government and that the Americans would assist him. From one end of Luzon to the other spread the report that Aguinaldo had returned to his home under the protection of our ships, who were at war with Spain and would give them freedom and independence at once. Before he had been in Cavite a month he had more soldiers than he could arm, and contributions of money, with unlimited amounts of rice and other raw food supplies brought in by the people for the support of his army.

THE NATIVE ARMY.

The army, however, of Aguinaldo was the marvel of his achievements. He had over 20 regiments of comparatively well-organized, well-drilled, and well-dressed soldiers, carrying rifles and ammunition. I saw many of these regiments executing not only regimental but battalion and company drills with a precision that astonished me. Certainly, as far as dress was concerned, the comparison with the uniform of our soldiers was favorable to the Filipinos. They were officered largely, except in the higher positions, with young men who were ambitious to win honors, and were not merely show fighters.

The people in all the different towns took great pride in this army. Nearly every family had a father, son, or cousin in it. Wherever they went they aroused enthusiasm for the Filipino cause. The impression made upon the inhabitants of the interior by such displays can be readily appreciated. Aguinaldo and his principal lieutenant also made frequent visits to the principal towns, and were received with the same earnestness that we show in greeting a successful President.

RED CROSS ASSOCIATION.

Along with the army there was a Red Cross Association, at the head of which were Aguinaldo's mother and wife. There were quartermaster and commissariat departments, which were well equipped in view of the lack of experience of the men in charge.

KIND OF PEOPLE WE WERE FIGHTING.

The American who thinks for a moment that we were fighting or have been fighting a disorganized force labors under great error. It would be difficult to imagine the army of any European country being in better shape to fight us than that of Aguinaldo at the time of the outbreak on February 4, with the conditions of climate and country favoring them.

On page 96 Mr. Murat Halstead says:

Aguinaldo and his party have a congress. It might be an approved beginning of the Territorial legislature, and the insurgent general might be the presiding officer. There would be abundant reason for the auspicious exercise of all his rights in the public service.

Had President McKinley followed this advice of his "friend" the tension that existed between our forces and those of the native government would have been relieved and bloodshed avoided; peace had in a short while. Our authorities in the Philippines demanded unconditional surrender, and these people thought they were entitled to more kindly consideration—something short, at least, of unconditional humiliation.

They said: "We have been your allies. Our leaders returned here at the request of Admiral Dewey to cooperate with him against the common enemy, and we have done so. We have kept the faith. We have done in part what we agreed to do and will finish our agreement if you will let us. We have fought side by side with your soldiers. We have recaptured your guns from the enemy and turned them back to you. You agreed to give us the same rights you gave Cuba and protect us until these rights are had, and you have not done so, and if you did not make this agreement you have led us to believe, and what we have done thus far has been prompted by the belief, that you did promise to give us the same rights that you agreed to concede or give Cuba," and so on; and thus they reason.

But I will not stop here to discuss the mooted question as to whether our officials promised the Filipinos independence or not. If they did not, they led the Filipinos to believe they had, and the Filipinos cooperated with our forces laboring under that belief.

But let us see now what kind of a congress the Filipinos had.

HOW THE FILIPINO CONGRESS RANKED—BARRETT.

What does our ex-minister to Siam, Mr. John Barrett, say on that?

The government which was organized by Aguinaldo at Cavite, and continued first at Bacoor and later at Malolos, developed into a much more elaborate affair than its most ardent supporters had originally expected. By the middle of October, 1898, he had assembled at Malolos a congress of 100 men, who would compare in behavior, manner, dress, and education with the average men of the better classes of other Asiatic nations, possibly including the Japanese.

These men, whose sessions I repeatedly attended, conducted themselves with great decorum and showed a knowledge of debate and parliamentary law that would not compare unfavorably with the Japanese Parliament. The executive portion of the government was made up of a ministry of bright men, who seemed to understand their respective positions. Each general division was subdivided with reference to practical work. There was a large force of under-secretaries and clerks, who appeared to be kept very busy with routine work.

MR. MURAT HALSTEAD, "WAR CORRESPONDENT IN AMERICA AND EUROPE, HISTORIAN OF THE PHILIPPINE EXPEDITION, A FRIEND OF PRESIDENT M'KINLEY."

Mr. Halstead, a Republican, in his Story of the Philippines, published in 1898, states that he was "a friend of President McKinley, war correspondent in America and Europe, and historian of the Philippine expedition," and in his preface states that "the purpose of the writer of the pages herewith presented has been to offer, in popular form, the truth touching the Philippine Islands."

So we will expect in reading this book to get the "truth" touching the Philippine Islands. He states that he "made the trip from New York to Manila to have the benefit of personal observation in preparing a history for the people."

He further states: "I have had such advantages in the assurance of the authenticity of the information set forth in the chapters following that I am permitted to name those it was my good fortune to consult with instructive results, and in making the acknowledgments due." He says he was diligent in his "investigations" and "improved an uncommon opportunity to fit myself to serve the country."

He then gives the names of the persons whom it was his "good fortune to consult with instructive results," as follows:

Generals Merritt, Otis, and Green, Admiral Dewey, Major Bell, "General Aguinaldo, the leader of the insurgents of his race in Luzon," the Archbishop of Manila, "and, I may add, the commissioner (Agoncilla) of the organized people of the Philippines, dispatched to Washington accompanying General Green; and of the citizens of Manila of high character and conductors of business enterprises with plants in the community, whose destiny is in the hands of strangers."

HALSTEAD "FAITHFUL TO THE FACTS."

This volume seems to me to be justified, and I have no further claim to offer that it is meritorious than that it is faithful to facts and true to the country in advocacy of the continued expansion of the Republic, whose field is the world.

We then find that Mr. Halstead was the "official war correspondent and historian of the Philippine expedition;" that he was early on the ground, and as he says (p. 15), "with the authorization of the military authorities I shall go to the Philippine Islands with General Merritt"—to do what? To make a "personal observation" and get the "truth," as he said.

On page 87 Mr. Halstead states:

The American priests had informed him (archbishop of Manila) that I was a friend of long standing of McKinley, and he again enjoined that I should declare his sentiments to the President.

Mr. Halstead, at another page of his book, states that he was a close "friend" of President McKinley.

He says he had a long personal interview with Aguinaldo in company with Major Bell; that "General Aguinaldo was neither remote nor inaccessible." On page 54 he describes Aguinaldo's personal appearance and speaks of his very "accomplished interpreter, who speaks English with facility and confessed to be a fine Latin scholar."

FILIPINO INDEPENDENCE PARAMOUNT.

Mr. Halstead here shows that independence was the paramount issue with Aguinaldo and—

It is to be remarked that while Aguinaldo was not a man of high education, he has as associates in his labors for Philippine independence a considerable number of scholarly men. My first point in talking with Aguinaldo was that the people of the Philippines ought to be strongly represented in Paris; and of the reasons briefly presented, the foremost was that they sought independence and should be heard before the Commission by which their fate would be declared for the present, so far as it could be by a tribunal whose work was subject to revision.

It will thus be seen that Mr. Halstead himself states that the "foremost" subject with the Filipinos at this time was independence—that they "sought independence."

At page 55 Mr. Halstead states that Aguinaldo thought it was too late to send a commissioner to Paris, "that the conference would be opened September 15." Halstead advised Aguinaldo to send a commissioner to see the Paris commissioners. Mr. Halstead then suggested that he had time to send the commissioner, that the Philippine problem would not be "speedily" settled, and suggested vessels upon which a quick passage could be made, and that his "commissioners could go by Washington and see the President on their way to Paris;" "that it was certainly not too late to act."

He further states "that Aguinaldo said that the man he wanted to act as commissioner was in Hongkong, whereupon Mr. Halstead agreed that, as he was going to China, he would take instructions to the future commissioner, and that he would telegraph the President that the Philippine commissioners were on the way," if he desired.

These suggestions were received as "if they were agreeable and esteemed of value." So we see the active part taken here by the "friend of President McKinley," which fact, Mr. Halstead for the second time states (p. 54) and the good reason why Mr. Halstead wanted a Philippine commissioner to appear before the the Paris Commission.

He was there on the ground communicating with the leaders, and as they "sought independence," he deemed it highly necessary and proper for this commissioner to go to Paris at once by way of Washington, and Mr. Halstead aided in every way he could to further the appointment by Aguinaldo, and the sending of this commissioner to Paris to represent the Filipinos and their cause.

On page 55 Mr. Halstead states that—

The conversation turned at this point—that is, after they had settled on sending a commissioner to Paris by way of Washington—to the future government of the Philippines, and I inquired what would be satisfactory to the General (Aguinaldo), and got, of course, the answer, Philippine independence.

"OF COURSE PHILIPPINE INDEPENDENCE!"

So we find again, on page 55 of this book, that General Aguinaldo wanted "Philippine independence." Bear in mind, now, that Mr. Halstead went to the Philippine Islands to get, and got, the "truth." Mr. Halstead says he addressed Aguinaldo as dictator of his people. He had the executive word to say.

On page 57, Mr. Halstead says that Aguinaldo made "several inquiries to the effect"—"what had the insurgents got for what they had done in the capture of Manila. Were they not treated by the Americans with indifference?"

This question was answered by Major Bell, who said:

The Americans were in the Philippines, not as politicians, but as soldiers, and a double military authority was not possible—two generals of equal power in one city under martial law. There must be one master and no discussion. The United States could take no secondary attitute or position. They would treat the insurgents with great consideration, but of necessity we were exclusively responsible for carrying out the conditions of the capitulation.

Here the conversation was cut short by the interpreter, and Aguinaldo made no reply to Major Bell's statement. Mr. Halstead further states that the insurgents by removing their capital 40 miles away from Manila proved that they have come to an understanding; that the United States are not in the Philippines for their health entirely or purely in the interest of universal benevolence. This proved to Mr. Halstead that Aguinaldo understood

what Major Bell's one-man military power in the Philippines meant.

On page 61 we find that General Merritt had held the ship that was to take him to Hongkong on the way to Paris, and that Mr. Halstead telegraphed the fact to Aguinaldo, that he might send a commissioner to the United States and Paris. Aguinaldo, he states, seized the opportunity vigorously to send this commissioner and appointed Agoncillo. He then states that—

When the committee (from the insurgent chieftains) saw General Merritt, he was taking leave of Admiral Dewey, and that General Merritt had not heard of that movement until that moment, the question being entirely new, invited the opinion of the Admiral, who said there was certainly no objection, and, on the contrary, it would be very well to permit the passage of the deputation to Hongkong and of the commissioner appointed from that city to Washington. General Merritt then gave the order and the journey began.

General Green—

Mr. Halstead says—

who could read and translate Spanish, treated the committee to Hongkong with marked courtesy, and thence the commissioner and his secretary from Hongkong to San Francisco on his way to Washington and Paris. Sixto Lopez was the secretary to Agoncillo.

Mr. Halstead then states that he called to Agoncillo's attention some newspaper stories that the Germans had formed an alliance, offensive and defensive, with the Aguinaldo government, and Mr. Halstead asked him what he thought of it. He said emphatically that it was "nothing not true; nothing at all," and he laughed at the comic idea.

Bear in mind that Mr. Halstead states in the preface to his book that was to "offer" to the people "the truth touching the people of the Philippine Islands;" that he went in person to get, and in person got, the truth and wrote it in "the pages herewith presented."

"VERY HONORABLE POSITION TAKEN BY AGUINALDO," SAYS HALSTEAD.

On pages 94 and 124 of his book he entirely acquits Aguinaldo of the oft-repeated charge of having sold out his country for gold.

Mr. Halstead says, in speaking of this matter, it "is interesting on account of the very honorable position taken by Aguinaldo."

On page 124 Mr. Halstead says on this money transaction:

INSURGENT CIVIL ADMINISTRATION.

In August, 1896, an insurrection broke out in Cavite, under the leadership of Emilio Aguinaldo, and soon spread to other provinces on both sides of Manila. It continued with varying successes on both sides, and the trial and execution of numerous insurgents, until December, 1897, when the Governor General Primo de Rivera entered into a written agreement with Aguinaldo, the substance of the document—which is in the possession of Señor Felipe Agoncillo, who accompanies me to Washington—being attached hereto, and marked "A." In brief, it required that Aguinaldo and the other insurgent leaders should leave the country, the government agreeing to pay them $800,000 in silver, and promising to introduce numerous reforms, including representation in the Spanish Cortes, freedom of the press, amnesty for all insurgents, and the expulsion or secularization of the monastic orders.

"Aguinaldo and his associates went to Hongkong and Singapore. A portion of the money, $400,000, was deposited in banks at Hongkong and a lawsuit soon arose between Aguinaldo and one of his subordinate chiefs named Articho, which is interesting on account of the very honorable position taken by Aguinaldo.

"Articho sued for a division of the money among the insurgents according to rank. Aguinaldo claimed that the money was a trust fund and was to remain on deposit until it was seen whether or not the Spaniards would carry out their promised reforms, and if they failed to do so it was to be used to defray the expenses of a new insurrection. The suit was settled out of court by paying Articho $5,000."

No steps had been taken to introduce the reforms; more than 2,000 insurgents who had been deported to Fernando Po and other places are still in confinement, and Aguinaldo is now using the money to carry on the operations of the present insurrection.

AGUINALDO ACTUALLY USED THE $400,000 TO CARRY ON THE WAR AGAINST SPAIN.

And Aguinaldo is now using the money to carry on the operations of the present insurrection.

This is what Mr. Halstead says, who went in person to the Philippine Islands to get, and says he did get, "the truth." It seems to me, in the face of this testimony, the slander that he sold out his country for money should be by all fair-minded people hushed.

On page 94 Mr. Halstead speaks of this money transaction and again acquits Aguinaldo of having sold out his country or having been himself bought. Mr. Halstead says:

Of course it was claimed by the enemies of Aguinaldo that he was bought and paid for, but he had maintained the fund, though there were those professors of rebellion who made claims to a share of the money.

I have already shown that Mr. Halstead says that Aguinaldo "is now using the money to carry on the operations of the present insurrection."

I will insert here what Mr. Halstead says at length on the subject:

We desire to speak with respect of the General, for he has shown in trying times under strong temptations the presence in his character of personal integrity in public matters, and reference is made to his refusal to consent to the division among insurgents, alleged to be leaders, of the money paid by the Spaniards for the disarmament of the rebels, when two years ago there was an agreement upon the terms of a truce. This money transaction has been referred to as the sale of their cause by Aguinaldo and his associates, as if they, as individuals, had pocketed the usufruct of the bargain.

The money was paid by Spain as an earnest of her sincerity, the captain-general representing the force and good faith of the Kingdom in granting reforms to the Filipinos. On condition of insurgent disarmament the people of the islands were to be allowed representation in the Spanish Cortes, the orders of the church were to be removed from relations to the government that were offensive to the people. There was a long list of articles of specification of the reforms that were to be granted, the usual liberality of words of promise always bestowed by Spain upon her colonists.

The representatives of Spain denied nothing that was asked; and to give weight to the programme of concessions there was paid in the hands of Aguinaldo, through a transaction between banks in Manila and Hongkong, $400,000, the first installment of $800,000 agreed upon. The Spaniards probably understood that they were bribing the insurgents and paying a moderate sum to cheaply end the war, and it did not cost the authorities of Spain anything, for they exacted the money from the Manila Bank of Spain and still owe the bank.

Aguinaldo's understanding acted upon was different. He accepted the money as a war fund, and has held and defended it for the purchase of arms and resumed hostilities when all promises of reform were broken and nothing whatever done beyond the robbery of the bank to bribe the rebel chiefs, which was the Spanish translation.

Of course it was claimed by the enemies of Aguinaldo that he was bought and paid for, but he had maintained the fund, though there were those professors of rebellion who made claims to a share of the money. The second installment of the money that the rebels were to have been paid is yet an obligation not lifted, and the hostilities were revived as soon as the craft of the Spanish negotiators in promising everything because they meant to do nothing became obvious.

Turn now to page 63 of Mr. Halstead's book and we find additional evidence, "the most complete, authoritative, and careful that exists in vindication of Aguinaldo and his relations with Admiral Dewey."

Mr. Halstead says:

Señor Agoncillo, the commissioner of the Philippine insurgents at Paris, made in conversation on the steamer *Chile*, in crossing the Pacific Ocean from Nagasaki to San Francisco, this statement in vindication of Aguinaldo:

IT IS THE MOST COMPLETE, AUTHORITATIVE, AND CAREFUL THAT EXISTS OF THE RELATIONS BETWEEN ADMIRAL DEWEY AND THE INSURGENT LEADER—BRIEF NOTES BY SEÑOR AGONCILLO.

On the same day that Admiral Dewey arrived at Hongkong Señor Aguinaldo was in Singapore, whither he had gone from Hongkong, and Mr. Pratt, United States consul-general, under instructions from the said Admiral, held a conference with him, in which it was agreed that Señor Aguinaldo and other revolutionary chiefs in cooperation with the American squadron should return to take up arms against the Spanish Government of the Philippines, the sole and most laudable desire of the Washington Government being to concede to the Philippine people absolute independence as soon as the victory against the Spanish arms should be obtained.

By virtue of this argument Señor Aguinaldo proceeded by the first steamer to Hongkong for the express purpose of embarking on the *Olympia* and going to Manila; but this intention of his was not realized, because the American squadron left Hongkong the day previous to his arrival, Admiral Dewey having received from his Government an order to proceed immediately to Manila. This is what Mr. Wildman, United States consul-general in Hongkong, said to Señor Aguinaldo in the interview which took place between them.

A few days after the Spanish squadron had been destroyed in the Bay of Manila by the American squadron, the latter obtaining a most glorious triumph, which deserved the fullest congratulation and praise of the Philippine public, the *McCulloch* arrived at Hongkong and her commander said to Señor Aguinaldo that Admiral Dewey needed him (le necesitaba) in Manila, and that he brought an order to take him on board said transport, as well as other revolutionary chiefs, whose number should be determined by Señor Aguinaldo; and in fact he and 17 chiefs went to Cavite on the *McCulloch*.

Señor Aguinaldo began his campaign against the Spaniards the very day that he received the 1,902 Mauser guns and 200,000 cartridges which came from Hongkong. The first victory which he obtained from the Spaniards was the surrender or capitulation of the Spanish general, Señor Pena, who was the military governor of Cavite, had his headquarters in the town of San Francisco de Malabon, and his force was composed of 1,500 soldiers, including volunteers.

The revolutionary army, in six days' operations, succeeded in getting possession of the Spanish detachments stationed in the villages of Bakoor, Imus, Benakayan, Novelete, Santa Cruz de Malabon, Rosario, and Cavite Viejo.

On June the 9th, last, the whole province of Cavite was under the control of the provisional revolutionary government, including many Spanish prisoners and friars, 7,000 guns, great quantities of ammunition, and some cannon.

At the same time that the province of Cavite was being conquered, other revolutionary chiefs were carrying on campaigns in Batangas, Laguna, Tayabas, Nueva Ecija, Bulacan, Batangas, Pampanga, and Morong, which were under the control of the revolutionary army by June 12, and such progress was made by the Philippine revolution in the few days of campaign against the Spaniards that by August 3 last it held under conquest 15 important provinces of the island of Luzon. These provinces are being governed by laws emanating from the provisional revolutionary government, and in all of them perfect order and complete tranquillity reign.

It is to be noted that the Spanish Government has sent to Señor Aguinaldo various emissaries, who invited him to make common cause with Spain against the United States, promising him that the Government of the Spanish nation would concede to him anything he might ask for the Philippine people. But Señor Aguinaldo has invariably replied to these emissaries that it was too late, and that he could not consider any proposition from the Spanish Government, however beneficial it might be to the Philippines, because he had already pledged his word of honor in favor of certain representatives of the Government at Washington. In view of this positive resolution of Señor Aguinaldo, there began forthwith the intrigues of the Spanish enemy directed against the life of Señor Aguinaldo.

PEACE CONVENTION OF DECEMBER, 1896.

Señor Aguinaldo, in his own name and in that of the other chiefs and subordinates, obligated himself to lay down their arms, which, according to an inventory, were to be turned over to the Spanish Government, thus terminating the revolution. His excellency the governor and Captain-General Don Fernando Primo de Rivera, as the representative of His Majesty's Government in the Philippines, obligated himself on his side (1) to grant a general amnesty to all those under charges or sentenced for the crime of rebellion and sedition and other crimes of that category; (2) to introduce into the Philippines all reforms necessary for correcting in an effective and absolute

manner the evils which had for so many years oppressed the country in political and administrative affairs, and (3) an indemnity of $800,000, payable at the following dates:

A letter of credit of the Spanish-Filipino Bank for $400,000 against the Hongkong and Shanghai Bank in Hongkong was to be delivered to Aguinaldo on the same day that he could leave Biakvabato, where he had established his headquarters, and should embark on the steamer furnished by the Spanish Government (this letter of credit was, in point of fact, delivered); $200,000 was to be paid to Señor Aguinaldo as soon as the revolutionary general, Señor Ricarte, should receive his telegram ordering him to give up his arms, with an inventory thereof, to the commissioner designated by his excellency the governer and Captain-General Don Fernando Primo de Rivera, and the remaining $200,000 should be due and payable when the peace should be a fact, and it should be understood that peace was a fact when the Te Duem should be sung by order of his excellency the governor and captain-general of the Philippines.

Señor Aguinaldo complied in every respect, so far as he was concerned, with the peace agreement. But the Spanish Government did not observe a similar conduct, and this has been deplored and is still deeply deplored by the Philippine people. The general amnesty which was promised has remained completely a dead letter. Many Filipinos are still to be found in Fernando Po, and in various military prisons in Spain, suffering the grievous consequences of the punishment inflicted upon them unjustly and the inclemencies of the climate, to which they are not accustomed. Some of these unfortunates who succeeded in getting out of these prisons and that exile are living in beggary in Spain, without the Government furnishing them the necessary means to enable them to return to the Philippines.

In vain has the Philippine public waited for the reforms also promised. After the celebration of the compact of June and the disposition of the arms of the revolutionists the governor-general again began to inflict on the defenseless natives of the country arbitrary arrest and execution without judicial proceedings solely on the ground that they were merely suspected of being secessionists, proceedings which do not indisputably conform to the laws and Christian sentiments.

In the matter of reforms the religious orders again began to obtain from the Spanish Government their former and absolute power. Thus Spain pays so dearly for her fatal errors in her own destiny.

In exchange for the loftiness of mind with which Señor Aguinaldo has rigidly carried out the terms of the peace agreement, General Primo de Rivera had the cynicism to state in the congress of his nation that he had promised no reform to Señor Aguinaldo and his army, but that he had only given them a piece of bread that they might be able to maintain themselves abroad. This was reechoed in the foreign press, and Señor Aguinaldo was accused in the Spanish press with having allowed himself to be bought with a handful of gold; selling out his country at the same time. There were published, moreover, in those Spanish periodicals caricatures of Señor Aguinaldo, which profoundly wounded his honor and his patriotism.

Señor Aguinaldo and the other revolutionists who resided in Hongkong agreed not to take out one cent of the $400,000 deposited in the chartered bank and the Hongkong and Shanghai bank, the only amount which Señor Aguinaldo received from the Spanish Government on account of the stipulated indemnity, but to use it for arms to carry on another revolution in the Philippines in case the Spanish Government should fail to carry out the peace agreement, at least in so far as it refers to general amnesty and reforms.

All the above-named revolutionists, Señor Aguinaldo setting the example, resolved to deny themselves every kind of comfort during their stay in Hongkong, living in the most modest style, for the purpose of preventing a reduction by one single cent of the above-named sum of $400,000, which they set aside exclusively for the benefit of their country.

LAWSUIT BETWEEN DON J. ARTACHO AND DON E. AGUINALDO.

Señor Artacho, induced by the father solicitor of the Dominicans and the consul-general of Spain, filed in the courts of that colony a summons against E. Aguinaldo, asking for a division of the above-mentioned $400,000 between those revolutionary chiefs who resided in Hongkong. Artacho and three others, who joined the revolution in its last days and rendered little service to it, were the only ones who desired a division of the money; whereas forty-seven revolutionists, many of whom were most distinguished chiefs, were opposed to it, supporting the resolution which Señor Aguinaldo had previously taken in regard to it.

Señor Aguinaldo, in order to avoid all scandal, did everything possible to avoid appearing in court answering the summons of Artacho, who, realizing that his conduct had made himself hated by all Filipinos, agreed in a friendly manner to withdraw his suit, receiving in exchange $5,000. In this way were frustrated the intrigues of the solicitor of the Dominican order and the Spanish consul, who endeavored at any cost to destroy the $400,000 by dividing it up.

Artacho is now on trial before a judicial court on charges preferred by various revolutionists for offenses which can be proved. He has no influence in the revolutionary party.

We thus see the "intimate friend of President McKinley," the "war historian of our Philippine expedition," a leading Republican. Mr. Halstead, who in person investigated this mattter, returns and writes his book, in which he says he states "the truth," and in doing so clearly shows that Aguinaldo took a most "honorable position," to use Mr. Halstead's words, in reference to this money, and used it to renew and prosecute the revolution against Spain in the Philippine Islands by purchasing munitions of war, and that in so doing he aided the Americans in the easy subjugation of the Spanish forces when Manila city was reduced. So, if not directly, the American Government was indirectly aided by the very "honorable" disposition which Aguinaldo made of this money.

On page 124 Mr. Halstead says:

On the 24th of April Aguinaldo met the United States consul and others at Singapore and offered to begin a new insurrection in conjunction with the operations of the United States Navy at Manila. This was telegraphed to Admiral Dewey, and by his consent, or at his request, Aguinaldo left Singapore for Hongkong on April 26, and when the *McCulloch* went to Hongkong, early in May, to carry the news of Admiral Dewey's victory, it took Aguinaldo and 17 other revolutionary chiefs on board and brought them to Manila Bay.

They soon after landed at Cavite, and the Admiral allowed them to take such guns, ammunition, and stores as he did not require for himself. With these and some other arms which he had brought from Hongkong, Aguinaldo armed his followers, who rapidly assembled at Cavite, and in a few weeks he began moving against the Spaniards. Part of them surrendered, giving him more arms, and the others retreated to Manila.

Soon after, two ships, which were the private property of Señor Agoncillo and other insurgent sympathizers, were converted into cruisers and sent with insurgent troops to Subig Bay and other places to capture provinces outside of Manila. They were very successful, the native militia in Spanish service capitulating with their arms in nearly every case without serious resistance.

In leaving this last subject I may state that these ships were subsequently taken away from the insurgent forces by American arms and by order of Admiral Dewey.

Aguinaldo was reared on a farm. His father, I believe, was a farmer. Aguinaldo had been a "schoolmaster" and a "municipal captain" in the province of Cavite, says Mr. Halstead, and further—

Aguinaldo is not devoid of ability and he is surrounded by clever writers. But the educated and intelligent Filipinos of Manila say that not only is he lacking in the ability to be at the head of affairs, but if an election for president was held he would not even be a candidate.

He is a successful leader of insurgents; has the confidence of young men in country districts, prides himself on his military ability, and if a republic could be established the post he would probably choose for himself would be general in chief of the army. But after that is done they fully realize that they must have the support of some strong nation for many years before they will be in a position to manage their own affairs alone. The nation to which they all turn is America, and their ideal is a Philippine republic under American protection, such as they have heard is to be granted to Cuba.

Protection such as they had heard we were giving Cuba. What protection did we give Cuba? Protect them against Spain? Protection until they established a stable government of their own making. With what else? With a declaration by the American Congress, signed by the President, that Cuba is and of a right should be free and independent. So, if Mr. Halstead is correct in saying the Filipinos wanted what Cuba was receiving at our hands, then they wanted and expected assistance against Spain and independence and protection until a government was set up for them.

Mr. Halstead is supported in this contention by Commodore Ford, who was aboard the *Baltimore* at the battle of Manila Bay, who, with other leading writers on the "Philippines," states that Aguinaldo proclaimed as early as July 1, 1898, "The Republic of the Philippines," with the following declaration:

1. The independence of the Philippines shall be proclaimed.
2. A republic shall be established with a government designated by General Aguinaldo and approved by the admiral and general commanding the United States forces.
3. The government will recognize the temporary intervention of commissioners designated for the purpose by the United States.
4. The American protectorate shall be recognized on the same conditions as arranged for Cuba.

It should be remembered that everything that Aguinaldo did was under the observation, at least, of Dewey, if not by his direct order. Dewey cabled to Washington that he had "advised" Aguinaldo, and so he did. Whatever he did was practically in sight of Dewey's guns, certainly within their reach. Dewey then permitted and acquiesced in what he did. He even turned over Spanish prisoners to Aguinaldo which Aguinaldo said Dewey captured in Subig Bay, but which Dewey says Aguinaldo captured. They numbered several hundred. They were held as prisoners of war by Aguinaldo.

Mr. Halstead gives briefly some of the various proclamations issued by Aguinaldo, which Dewey at least permitted to be done. Mr. Halstead begins chapter 6, page 69, of his book with a statement of the contents thereof, as follows:

THE PROCLAMATIONS OF GENERAL AGUINALDO.

June 16, 1898, establishing dictatorial government.
June 20, 1898, instructions for elections.
June 23, 1898, establishing revolutionary government.
June 23, 1898, message to foreign powers.
June 27, 1898, instructions concerning details.
July 23, 1898, letter from Señor Aguinaldo to General Anderson.
August 1, 1898, resolutions of revolutionary chiefs asking for recognition.
August 6, 1898, message to foreign powers asking for recognition.

Aguinaldo arrived at Cavite May 19, 1898. He was received by Dewey's representatives and carried aboard the *Olympia*, consulting there with Dewey for about an hour and a half; then he left the ship and proceeded, by issuing certain instruments, to announce his arrival and his intentions to renew war against Spain.

On May 24, five days after his arrival, he issued three proclamations. Consul-General Wildman states that he (Wildman) had "outlined" one proclamation for him before he left Hongkong, and from the description Wildman gives of it (to conduct honorable warfare), this must be the one:

FILIPINOS: The great North American nation, the cradle of genuine liberty, and therefore the friend of our people, oppressed and enslaved by the tyranny and despotism of its rulers, has come to us manifesting a protection as decisive as it is undoubtedly disinterested toward our inhabitants, considering us as sufficiently civilized and capable of governing for ourselves our unfortunate country. In order to maintain this high estimate granted us by the generous North American nation we should abominate all those deeds which tend to lower this opinion, which are pillage, theft, and all sorts of crimes relating to persons or property, with the purpose of avoiding international conflicts during the period of our campaign.

I decree as follows:

ARTICLE I. The lives and property of all foreigners, Chinese being included in this denomination, shall be respected, as well as that of all Spaniards who neither directly nor indirectly contribute to carry on war against us.

ARTICLE II. Enemies who lay down their arms must also be respected in like manner.

ARTICLE III. All hospitals and ambulances must likewise be respected as well as all persons and goods found therein, including the staff on duty, unless they manifest hostility.

ARTICLE IV. Those who disobey what is prescribed in these preceding articles shall be tried by summary process and put to death if the said disobedience has resulted in murder, robbery, or rape.

Given in Cavite the 24th of May, 1898.

EMILIO AGUINALDO.

Mr. Wildman says that the proclamation which he had "outlined" for him was one compelling an honorable warfare to be conducted by the natives. Surely this proclamation calls for nothing else. It states also that the "North American Nation," as represented there, of course, by Admiral Dewey, who had complete control—the power to compel obedience—permitted this to be done, "considering us (the natives) as sufficiently civilized and capable of governing for ourselves our unfortunate country."

Here Dewey and others permitted in five days after Aguinaldo arrived at Cavite (and possibly some before this) the issuance of this proclamation making this statement—that is, the capacity of the natives for self-government and a determination to fight Spain for their independence.

In another proclamation of May 24, Aguinaldo states:

FILIPINOS: This dictatorial government proposes to begin within a few days our military operations, etc.

In another proclamation, of May 24, he states that—

He had returned to resume operations against Spain, assisted by the advice of eminent persons until these islands are completely conquered and able to form a constitutional convention and to elect a president and a cabinet, in whose favor I will duly resign the authority.

Then Aguinaldo was not to perpetuate himself as a ruler, but in a democratic way agreed to "resign" his authority to his successor nominated by the people.

June 27 Dewey cabled to Secretary Long that Aguinaldo's success "has been wonderful." "Have advised frequently to conduct the war humanely, which he has done invariably."

Wildman said it was necessary for Aguinaldo to set up a "dictatorial government" at once, which Dewey permitted him to do. Surely Dewey would not have allowed all this, when he could have prevented it, if he had not thought well of Aguinaldo.

Gen. J. F. Bell, August 29, 1898, in a letter (Senate Document No. 62) to General Merritt, then in command at Manila, in describing the "principal leaders" of the Philippines, begun first with Aguinaldo, of whom General Bell says:

Aguinaldo—honest, sincere, and poor, not well educated, but a natural leader of men, with considerable shrewdness and ability. He has the power of creating among people confidence in himself and is undoubtedly a very popular man, highly respected by all; but there are better educated and richer natives who do not think he has sufficient education or experience to be a suitable president. He was a "little governor" of a small town in one of the provinces. It is also said that he was a school-teacher, but I have been unable to verify this assertion.

General Bell says the Filipinos are "unfit for self-government." However, he says:

There are a number of Filipinos whom I have met, among them General Aguinaldo and a few of his leaders, whom I believe thoroughly trustworthy and fully capable of self-government, and the main reliance for small official positions and many larger ones would be upon people who know no standard of government other than that the Spaniards have furnished. * * * Aguinaldo has many adjutants, most of whom are young, smart, and well educated. * * * There is not a particle of doubt but what Aguinaldo and his leaders will resist any attempt of any government to reorganize a colonial government here. They are especially bitter toward the Spaniards, but equally determined not to submit any longer to being a colony of any other government.

General Bell then refers to a long list of "educated and honest" Filipinos, among whom I note: Arelano, Trias, Bara, Ramar, Escamilla, Malabini, Agoncilla, Sandico, Dios, Ricati, Garcia, Pila, Estrella, Mascardo, Gregorio del Pilar, Noriel, Montenegro, Arevela.

In speaking of Aguinaldo's adjutants, he says:

Nearly all the adjutants of all the generals belong to the Jeunesse Doree Filipino, in whom insurrectionary ideas seem to breed spontaneously. They are all bright, ambitious, and well educated.

This remarkable statement of General Bell is found in Senate Document 62, pages 381, 382, and 383.

And yet the Filipino is denounced as uneducated and dishonest from one end of this country to another by those who want to exploit their country and hold them as subjects and their native land as a colony. And all this in the face of the fact that these people loyally kept faith with us in fighting the Spaniards in the Philippines until, as I believe, the American authorities provoked an irritation and ill feeling until finally a clash came.

I say that it is a burning shame that we can not at even this day do these people justice, that we find no virtue in them, that we denounce them from the White House, through the War Department and its great multitude of offices, and through a party press, and partisan members of Congress as being unfit for anything but murder, treachery, and treason.

As for me, I shall try, and have ever here and elsewhere, to do them justice, and in doing so I feel that I am doing my full duty as a member of this House, believing nothing short of it is in keeping with the great Republic we represent, whose statesmen have always paraded the policy of "equal and exact justice to all," and I have made this effort and others to try to bring indisputable facts, found, in the main, in our own official records, before the people of this country, that the people may demand of their lawmakers that they act, in passing laws to govern these people, with the facts, and as near the whole truth as possible before them.

These people are no longer foreigners to this country. By the treaty of Paris and by the judgment of the Supreme Court of the United States the Philippine Islands are within the jurisdiction of the United States and subject to the laws of this country, and we should meet them and treat them not as outcasts or as natives in a "foreign country," but at least with a degree of charity, kindness, and consideration that we should show and have shown even to those who are beyond the jurisdiction of the United States, which we have not done.

Cuban Commerce—The Relation of Reciprocity with Cuba to the Commercial Embargo Laid Upon the People of the Philippines by the United States—Protection and the Trusts.

SPEECH

OF

HON. CHARLES F. COCHRAN,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 16, 1902.

The House being in Committee of the Whole on the state of the Union and having under consideration the bill (H. R. 12765) to provide reciprocal trade relations with Cuba—

Mr. COCHRAN said:

Mr. CHAIRMAN: The discussion of the pending measure can not fail to produce a deep and lasting impression upon American public sentiment. The bill proposes a reduction of 20 per cent of the tariff imposed on Cuban products, including raw sugar, by the Dingley tariff law, the reduction to become effective only upon condition that the Cuban Government grant a similar reduction of the Cuban tariff upon American goods.

The arguments made in favor of the bill are simple and easily understood. It is urged that Cuba must depend upon our markets, and that the Dingley tariff tax on sugar, added to the actual cost of production, not only absorbs all the profits of the planter, but entails upon him an actual loss, and that, therefore, unless this concession be made, irretrievable ruin and bankruptcy must be the fate of the people of the infant Republic.

In my opinion this is not a serious exaggeration of the facts.

In opposition to the bill two arguments have been made. The producers of beet sugar contend that the passage of the measure will be followed by such a reduction in the price of sugar as will injure that industry and insist that the American Sugar Refining Company, known as the sugar trust, and not the Cuban planters, would pocket the profits arising from the proposed reduction of the tariff.

Others have fully discussed this phase of the question, and so I pass to another ground of opposition to the bill which, on account of its relation to the material interests of our vassals in Asia, is of grave importance. The productiveness of Cuba's soil has been made to do service as an argument against the proposed arrangement. It is said that if we open our markets to the planters of the island, Cuba will in the near future produce enough sugar to supply the American market and at prices so low that our beet-sugar producers can not compete with the islanders and will therefore be driven out of the business.

Inasmuch as the Philippine Islands are equally well adapted to sugar culture, this argument applies to them with equal force. Hence, inseparable from this discussion is the reflection that it has a direct bearing upon the future of our vassal dependencies in the Far East. Their most valuable export products are precisely the same as those of Cuba—tobacco and sugar.

Their capabilities are equally as great as those of Cuba. If we are to bar these products out of our markets upon the ground that their great productiveness render them dangerous rivals, what is to become of them. They are not at liberty to make commercial treaties with other countries. They are our vassals. The United States, with 75,000,000 of the most enterprising and intelligent people in the world, find it necessary to enact high tariff laws and maintain an expensive consular service in foreign countries

for the purpose of closely watching and guarding our commercial interests abroad. In addition to protective tariffs which enable our trusts to monopolize the home market, we seek reciprocal trade contracts with foreign countries. If this great country must do these things to safeguard its commerce—if not even the people of our dependencies are to be allowed to market their wares in the United States—what, I say, is to become of them? They may not do as we are doing, go to other countries and seek reciprocal trade relations. We have tied their hands. We have set the bounds within which they must move. We define the orbit within which they must revolve. They can not vary from it.

If we dare not permit the islanders to sell their products in our markets, why do we insist on holding possession of their country? Of what value is their productiveness if we dare not use their products? During three years of discussion of the subject the imperialists have urged that because the islands are rich—that is, highly productive—therefore the retention of sovereignty over them will be of great material benefit to the United States. How are we to be benefited by their productiveness if we bar their products out of this country or offset the results of the fertility of their soil by superimposing exorbitant tariff taxes upon their sugar and tobacco, thereby robbing their planters of the advantages accruing from natural advantages and depriving American consumers of the advantage of lower prices for prime necessaries of life?

What a commentary upon the whole system of protection! Cuba and the Philippines, with greater productive capacity than any similar area of the world—one an American island lying at our doors and inevitably destined to become finally a part of our country, the other a vassal dependency—are denied access to our markets on the theory that the richness of their soil renders them dangerous to American commerce!

Gentlemen, again I inquire what is to become of the Cubans and Filipinos?

Suppose every Filipino now in arms should throw down his gun, seize a hoe, cultivate a field, and raise a crop of sugar cane. Where would the poor devils find a market for their sugar? Suppose they should raise a crop of tobacco. Where would they find a market for it? The tobacco growers of Connecticut and Pennsylvania, and some of the other States, would bristle with the declaration that if we allow it to come into our market it will destroy their business.

I do not agree with gentlemen who have argued that necessarily what has come to be known as reciprocity is a Republican doctrine. A proposal for reciprocal trade between this country and another upon terms mutually beneficial involves commonsense principles and should be settled on its merits.

The platform of 1892 has been cited. Does it say that reciprocity is necessarily un-Democratic? It does not. It denounces the sham reciprocity as proposed and acted upon by Republicans. The reciprocity treaties which called forth this denunciation were without exception with countries that export agricultural products and were entered into for the sole benefit of the protected manufacturers who were selling their wares to South Americans at prices lower than were demanded from American consumers. Instead of trade agreements with European countries, the treaties entered into while the McKinley bill was in force were with the rivals of American farmers. This was justly denounced by the Democratic national platform of 1892 as sham reciprocity.

Aside from the fact that our relations with Cuba must necessarily be most intimate, this criticism of reciprocity treaties with such countries as the Argentine Republic are not applicable to the proposed arrangement with Cuba. The Cubans have heretofore been liberal patrons of the American farmer, and have never been his competitor. Cuba will consume whatever American products she can pay for with her own products. She will consume American goods, including manufactured goods and products of our farms, up to the measure of her producing capacity, always provided that she be permitted to exchange one for the other. If we are unwilling to make the exchange, or hamper exchanges, our trade with Cuba will be correspondingly depressed.

My understanding of the Democratic position on the tariff is that the tariff taxes should be imposed solely for the purpose of raising revenues to defray the expenses of the Government, and, moreover, that they should be imposed in such a way as to impair as little as possible the flow of commerce between this country and other countries. My understanding of the Republican position on the tariff is that some tariff taxes should be imposed for the purpose of raising revenues and others for the purpose of obstructing as much as possible the flow of trade between this country and other countries. Hence, we have a tariff law which imposns heavy duties upon goods actually imported, and in some of its schedules imposes duties so high as to wholly prevent imports. This is protection run mad.

It is well to keep constantly in mind the circumstances under which the pending bill is brought to our attention. It is said that at the present price of raw sugar the American tariff is prohibitive; that is, that the Cubans can not produce sugar and market it here except at a loss. Therefore we are asked to reduce the tariff on raw sugar, the theory of the author and friends of the bill being that the result of this measure will be a corresponding increase in the profits of the Cuban planters.

This latter proposition seems plausible, but it is stoutly denied by the beet-sugar statesmen. They insist that the benefits, if the bill be passed, will go to the sugar trust. What sugar trust do they refer to? There are two in this country soon to be merged into one. The Oxnard trust makes sugar out of beets. The American Sugar Refining Company refines imported raw sugar. I predict that before this time next year the whole business will be consolidated. A few days ago there appeared in the newspapers the annual statement of the Oxnard sugar trust. I have not the figures in hand, but I think I can state them. This beet-sugar trust has outstanding five millions of preferred stock and fifteen millions of common stock. Common stock is a significant phrase. Fifteen millions of water; that is what it means.

According to the statement published last year, the earnings were sufficient to devote $300,000 to the extension of the plants, besides paying dividends on the preferred stock. Of course princely salaries were paid to the promoters and officers who have charge of this infant industry. I noticed also that interest to the amount of $225,000 was paid out of the earnings. Probably this was on borrowed money used in the construction of the plants. If so, probably the preferred stock, as well as the common, represents only wind. At par it would be sufficient, possibly, to satisfy the present aspirations of the promoters. Later, when American consumers of sugar shall have been plucked sufficiently to pay dividends on the $15,000,000 of common stock, it will be worth par. A pretty healthy infant!

And I am told that this beet-sugar industry must be fed with taxes or it can not live. I deny it. The watered stocks, and not the farmers who grow beets, are clamoring for and receiving the benefits of this sugar tariff. What are the facts about the growing of sugar beets in this country? Have we better soil than Germany or Austria? Most assuredly. Every acre in Europe that is devoted to the cultivation of the sugar beet must be regularly enriched with fertilizers year after year. Every inch of it is tilled in what is called the "intense" way of farm culture. How is it that, notwithstanding all this, sugar growing is profitable over there? It is easily explained.

In Germany, Austria, Russia, and France whole families work in the fields—men, women, and children. They cultivate their beet fields as our farmers do the little garden that furnishes vegetables for their tables. We may not soon expect to see farming carried on in this way in America in this generation or the next. The average American farmer will not grow a crop that must be thus attended. Yet I believe that in some parts of the country sugar beets will be extensively grown, and that beet-sugar manufacturing will be profitably carried on without a protective tariff.

In advertisements and circulars sent out to induce subscriptions for the stock of beet-sugar companies it has been said that acre for acre our land produces a larger quantity of sugar beets of better quality than is produced anywhere else in the world. If this be true, then the only question remaining is whether we can manufacture the sugar at as small cost as our foreign competitors. In applied machinery we lead the world. We are supplying foreign countries with machines of all kinds, and in this field, as in others, can outdo all competitors.

But, Mr. Chairman, even if I could be brought to believe that without the help of a high protective tariff the beet-sugar industry can not be profitably followed in this country I would not favor the imposition of taxes for the purpose of making the industry profitable. I am a Democrat. I contend that no industry should be quartered upon the taxpayers of the country. For every farmer that cultivates an acre of sugar beets there are a thousand farmers who market their produce at prices sometimes profitable and sometimes unprofitable and who buy sugar. Protectionists would increase the burdens of the thousand to the end that one may try the experiment of growing sugar beets. It is the old story. I have no patience with it. For myself, I solemnly declare that if this beet-sugar infant can not live without being fed on taxes, I am in favor of strangling it in its crib.

Protection subjects the consumer to monopoly and compels him to pay not only an unfair share of the taxes imposed to support the Government, but still heavier taxes for the benefit of trusts and corporations. At the ports of entry the taxgatherer collects a given rate on each pound or dollar's worth of product that comes into the country. In the countingrooms of the protected trusts other taxgatherers collect four or five dollars for every dollar collected by the Government. And who will say that I am not authorized to say that the trusts are in fact the sole beneficiaries of this system of taxation?

The gentleman from Colorado [Mr. BELL] says that the sugar industries of Colorado are menaced by the approach of the Havemeyers. He says that agents are now negotiating for the purchase of the Colorado beet-sugar factories and that this means that the sugar trust seeks to monopolize the industry. Gentlemen, history is repeating itself. I recall other industries which in my boyhood flourished in every business center in the Missouri Valley. Nearly thirty years ago linseed-oil mills were in operation in half a dozen cities in Missouri, Kansas, and Nebraska. We had also a number of extensive glucose factories. These industries were profitable.

Much of the corn produced in the immediate neighborhood of the glucose factories was sold to them at prices slightly higher than could be obtained by shipping it. Farmers cultivated flax, and the flaxseed crop came along in June and furnished the farmers with money with which to harvest other crops. These factories were long ago absorbed by the trusts and closed. The sugar trust swooped down on the glucose mills and the Standard Oil Company closed the linseed-oil mills. In every city on the Missouri River silent mills and factories, with crumbling smokestacks, attest the fact that in fields monopolized and controlled by tax-fed monopolies the hope of developing neighborhood industries upon any plan or in any way is out of the question.

Mr. WEEKS. Will the gentleman allow me a question?

Mr. COCHRAN. If I can have my time extended.

Mr. WEEKS. Would the gentleman like to see the smokestacks of all the beet-sugar factories of the country ranged alongside the smokestacks that the gentleman has just described?

Mr. COCHRAN. No, sir; I would not. But what does the gentleman mean by propounding that question? The gentleman from Colorado [Mr. BELL] has just told him that the Havemeyers are now out in Colorado with the intention of buying up the sugar-beet factories. Does he think they will operate them? Does he know of any case where a local industry absorbed by a trust has been operated?

Mr. WEEKS. That is the question. Does the gentleman want to encourage the Havemeyers to put to sleep our beet-sugar factories?

Mr. COCHRAN. No, sir. May I inquire when did gentlemen on the other side discover that there are really trusts in this country? Heretofore the speakers and writers of the Republican party have not been disposed to admit that trusts are an unmixed evil. In fact they have grudgingly admitted that these great combinations are "trusts." They have insisted that they are the necessary outgrowth of modern business development. Gentlemen, now that you have discovered that there is at least one trust in the United States, and that it is a menace to your local industries as well as a robber of the thousands of consumers who sent you here, let me urge you to look about you and see if there are not other monopolies equally injurious. The sugar trust has a surplus fund of $25,000,000. This is its war fund. It is sufficiently powerful to crush all rivals, and if the beet-sugar industry ever becomes a dangerous rival it will be crushed or absorbed by the Havemeyer corporation.

Mr. Chairman, I desire the prosperity of all forms of industry. I hope and believe that the beet-sugar factories will thrive, but I do not want a single farthing of taxes imposed on the people of Missouri for the enrichment of the owners of any private enterprise. We are willing to pay taxes for the support of the Government. We are not willing to pay taxes to support Mr. Oxnard's $15,000,000 of watered stocks.

I have been amazed at the complacency with which Republican Representatives of Western farmer constituencies on this floor view the rapacity of the trusts which are preying upon our people. They know that between the date of the enactment of the Dingley law and this hour the wire and nails and other commodities that enter into the construction of the farmers' fence have been doubled in price in the home market, while they are sold abroad at only a small advance on former prices. They know that the same is true of other prime necessities on which we levy prohibitive tariff taxes. Ask them whether the tariff ought to be repealed as to these trust-made goods, so as to prevent the pillage of the farmers who sent them to Congress, and they will tell you, "Oh, well, I would vote to take it off." But they see their party in this House dominated by Eastern influence, and sit here supinely while licensed plunder of their constituents goes on.

Mr. Chairman, is your protective system based upon the theory of the fathers of protection? Does it foster only industries which, on account of the superiority of processes abroad or the greater skill of foreign labor or the cheapness of foreign labor, can not thrive here, imposing only such tariff as will build up those industries? No. This was the plea upon which the system was imposed upon the country, but now the claim is boldly made that the great trusts are so useful to the country that sound public policy requires the exclusion of foreign competition, to the end that trusts may be formed as auxiliaries of our struggle for supremacy in foreign markets.

Meantime, all the mineral and oil deposits, as well as all our industries, are being monopolized by the Standard Oil crowd, and also the great trunk line railroads which distribute their products throughout the country. All competitors are destroyed and the people are compelled to pay trust prices for nearly everything essential to their comfort and the improvement of their houses and homes. They have control of the mills, factories, railroads, street railroads, waterworks, street-lighting plants, quarries, zinc and lead mines, coal mines, salt deposits, and forests, from Maine to California and from British Columbia to the Gulf of Mexico.

You can not name a single natural deposit calculated to bless a Western Commonwealth or community that is not to-day in the ownership of an Eastern combine or corporation which has watered its stock to fabulous values, and is compelling consumers to pay prices correspondingly enhanced, so that instead of making such natural resources a blessing to the neighborhood they become a source of constant drain upon its resources and a means of constant robbery of its people.

Now we come to the proposition that agriculture is on its knees begging that we grant the Oxnard beet-sugar trust protection. I say "the Oxnard sugar trust" advisedly; for I can see no difference between an aspiring infant trust, with fifteen millions of watered stocks, and one which sits enthroned to-day in New York, as dominant in American politics as any of the other great commercial combines with which the country is cursed.

Mr. DARRAGH. The gentleman, as I understand, is arguing in favor of a reduction of the tariff on raw sugar. Would not a reduction of that tariff or free trade in the product benefit the sugar trust?

Mr. COCHRAN. I will make myself clear enough on this subject to be understood. There may be on the tariff list some rate low enough so that I would not vote to reduce it. But my impression is that if you should work from now till the end of the session and bring in three bills a day you could not strike any item in the schedules of your tariff bill that I would not vote to reduce.

Mr. DARRAGH. Does the gentleman think that the sugar trust would object to free raw sugar in this country?

Mr. COCHRAN. I would put raw sugar on the free list, if I could not strike at the sugar trust in any other way.

Mr. DARRAGH. Then, you are willing to hit the sugar trust in that way?

Mr. COCHRAN. I would hit it in any way.

The CHAIRMAN. The time of the gentleman from Missouri [Mr. COCHRAN] has expired.

Mr. COCHRAN. I ask for ten minutes additional.

There was no objection.

Mr. COCHRAN. Mr. Chairman, at this time the question is not what I would do in reference to raw sugar. The other side of the House will have an opportunity, I think, before this matter ends to say whether it will take the differential off refined sugar. It rests with the Republicans, who profess to favor removing the tariff from goods controlled by monopolies, to say whether the differential on refined sugar shall be taken off or not. And after all that is the principal advantage conferred upon the sugar trust by existing tariff laws.

Now, a few words as to the general question that comes up in connection with this bill. I said a little while ago I did not believe that a single element in the problem warranted the statement that the sugar-beet industry needs protection any more than any other farming industry.

If you are going to legislate in the interest of industries that do not return large profits, adopt the German practice and pay a bounty on export wheat and corn. Why single out the sugar beet? Until crop failures in foreign countries for three or four years successively gave us unusual prices in foreign markets, no branch of agriculture could be sure of a paying crop, and yet nobody seriously proposed a Government bounty on farm products. Corporations with watered stocks begin manufacturing sugar out of beets, and for the first time we hear that protection is essential to the salvation of the farmer. But the rake off goes to the manufacturer and not to the farmer who cultivates the beets.

Mr. DARRAGH. May I ask you a question at this time?

Mr. COCHRAN. Yes, sir.

Mr. DARRAGH. Do you know of any country where sugar beets are raised successfully without a bounty or tariff?

Mr. COCHRAN. Probably there is none. I am not prepared to name any such country.

Mr. DARRAGH. If you know of any country such as that, please name it.

Mr. COCHRAN. I do not know of a country where a bounty is paid on sugar manufactured for home consumption. Do you? I know that in some of the foreign countries a bounty is paid on sugar that is exported. Do you know of any country where it is paid for sugar used for home consumption?

Mr. SMITH of Kentucky. Do not ask such perplexing questions.

Mr. DARRAGH. Germany.

Mr. COCHRAN. No; only an export bounty is paid in Germany.

Mr. DARRAGH. There is an import duty also.

Mr. COCHRAN. Probably; but a duty is a tax imposed on foreign sugar and not a bounty paid to a domestic producer. But I suppose the gentleman is aware that all foreign countries are preparing to drop the bounty on sugar. Germany is turning here and there to get rid of the embarrassment created by it. So are her neighbors. Only a few days ago a congress of representatives of bounty-paying countries in Europe assembled at Vienna to devise some way of readjusting their business upon a rational basis.

If bounties are to feed industries, let all be fed alike. Very frequently the corn crop is sold at a loss to the producer. I recall a year in which tenant farmers from one end of the Western corn-producing belt to the other begged their landlords to take the entire crop for the rent. Overproduction was said to be the cause; but in that same year soup houses administered to the wants of the working people from one end of the country to the other.

In average years the margin of profit made by the farmers who cultivate the staple crops, and who are the mainstay of the business world, is very small. Make it larger by a bounty. If the fact that the beet is sold to a manufacturing corporation to be converted into sugar entitles the product to consideration, why, wheat is made into flour, and corn into meal. Why not pay a bounty on flour and meal?

Mr. Chairman, the world approaches a crisis in the policy of trade restrictions. Reprisals are being made, and in the end retaliatory measures, devised for the purpose of neutralizing just such measures as the Dingley bill, will surely compel their abandonment.

Furthermore, if each country shall conclude to bar out, to a large extent, the products of all others, we may expect to witness a readjustment all over the world. Countries now heavy importers of wheat, corn, and meat products will resume agricultural pursuits long ago measurably abandoned. To bar out imports must, in the long run, cut down exports. If the commercial conditions you would fix should obtain for a lengthy period, the poverty of foreign countries would compel them to cease purchasing our surplus farm produce. We can not hope to send out of the country more in value than we are willing to receive.

And do not imagine that any of the foreign countries are compelled to continue purchasing our food products on the enormous scale that has prevailed during the past thirty years. England, our best customer could surely produce food sufficient for her wants. Belgium has 285 people to the square mile and England not half of that, and yet Belgium exports annually $5,000,000 in food products more than she imports. The British Islands, by the tillage of all the arable lands of the country, could produce food stuffs for export. The United States, more than any country in the world, should cultivate conditions which will enable us to exchange our surplus for the surplus of other countries.

In conclusion, your protective theory is wrong, because it assumes that somehow a country may prevent an equilibrium of its exchanges with foreign countries. Limit your exports to a thousand dollars abroad and you import only $1,000 worth of foreign goods. Limit your imports to $1,000 and you can only export $1,000 worth of your commodities. This proposition does not hold good as to the transactions of a single year or of a decade, but in the long run there must be approximate equality of exchanges.

Mr. Chairman, the clamor of Mr. Oxnard and his associates for protection for the sugar beet will not bear investigation. It is the watered stocks of the corporations, and not the farmers, that reap the benefits conferred by the Dingley bill.

Mr. DARRAGH. Does the gentleman claim that there is any beet-sugar factory in the United States, or in Michigan at any rate, that has any watered stock?

Mr. COCHRAN. Do you claim there is none in Mr. Oxnard's company?

Mr. DARRAGH. I do not know anything about Mr. Oxnard's company.

Mr. COCHRAN. If you do not know anything about that company you do not know much about the true inwardness of the beet-sugar industry.

Mr. DARRAGH. In the State of Michigan there are 13 factories, and there is not one dollar of watered stock in any of them.

Mr. COCHRAN. I will not say that I should like to live in Michigan; were I in the final resting place of the saints and could get back to Missouri, I would want to get back there; but you are living in a very blessed State, if in Michigan they do not water corporation stocks. I will say to the gentleman that the Oxnard company has $25,000,000 of capitalization, and there is no pretense that it has one-third of $25,000,000 in property. Go on feeding this infant on taxes and its $15,000,000 of watered stocks will gradually approach par, and this will only be history repeating itself.

All through the years of my boyhood, and up to the meridian of life, I heard the plaintive story of the steel producers and iron producers of this country. For years the tariff controversy turned on the price of steel rails here and in foreign countries. There was a great discrepancy. Tariff reformers contended that the steel and iron mills were making inordinate profits; they retorted that they were living from hand to mouth, and that without high protective taxes they would be driven out of business. Carnegie, that great humanitarian who now lies awake o' nights studying ways to give away his money, and others who waxed exceedingly fat along about that time, satisfied the Committee on Ways and Means of the House of Representatives that our infant steel industries, now grown into the billion-dollar steel trust, would go into bankruptcy and ruin if they did not receive protection. We all know the result.

Had Andrew Carnegie, instead of acquiring a fortune of approaching $200,000,000 in the space of thirty years, accumulated only a million and left $199,000,000 of his stupendous fortune in the pockets of the people, the country would be better off. Now, every man who buys a pound of nails or a rod of barbed wire, every man who buys any article of iron or steel used in the construction of a house, is helping to pay dividends on the outrageous overcapitalization of a monopoly composed of the industries thus fostered at the expense of a plundered country.

Mr. Chairman, I would gladly vote to put sugar on the free list.

In repealing the Spanish-war taxes we took the tariff off of many things that should be taxed. Why did you not reduce the price of sugar—an article consumed in every household in the country?

Mr. LESSLER. Did you vote for that bill?

Mr. COCHRAN. I have had no opportunity to vote for a bill embodying my views or the views of the minority on this subject. I will ask you a question. Did you or anybody on your side of the House propose a reduction of the taxes upon any necessary of life when the Cuban-war taxes were repealed? Have you given anybody an opportunity to vote upon any such bill? [Applause on the Democratic side.]

[Here the hammer fell.]

Is the Right of Petition Denied?—Labor—Immigration.

SPEECH

OF

HON. JAMES M. ROBINSON,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1902.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 12199) to regulate the immigration of aliens into the United States—

Mr. ROBINSON of Indiana said:

Mr. CHAIRMAN: Is the right of petition denied to the citizen? This is a pertinent inquiry at the close of this first session of the Fifty-seventh Congress. Never before did a Congress receive petitions so numerous and so numerously signed. Nine-tenths of these were prayers for labor legislation and legislation affecting laboring men.

Within this class can be mentioned the act effecting Chinese exclusion, the act restricting the immigration of undesirable immigrants, the letter-carriers' act, the act providing eight hours on Government work, the act for overtime, and the act for the construction of ships in the Government navy-yards.

Petitions on these subjects of legislation contain several million of signatures. The petitions from New York and Brooklyn alone have 325,000 names appended, and the letter-carriers' petition is said to have a million and a quarter of names.

The Constitution accords the people the right to petition Congress for a redress of grievances, and these millions of American citizens availed themselves of the right under the Constitution, but nothing has been molded into law to show that the Republican party has listened to or heard their prayers.

With the power in their hands, and charged, as they rightfully are, with the duty and responsibility on them, the party in power has ignored these appeals by inaction in some instances and by positive adverse enactment in others, and utterly failed to give

any measure of thought and consideration to these many petitions bearing upon important matters of legislation.

Mr. Samuel Gompers, president of the American Federation of Labor, in a signed article that appeared in the Washington Times of June 10, 1902, discusses the Chinese law and incidentally refers to the power that controls, diverts, and turns away labor legislation. It reads:

The United States Congress has passed and the President has signed a bill enacting into law what purports to be a measure for the exclusion of Chinese laborers from the mainland of the United States and its possessions. In point of fact the entire measure is as defective, deceptive, and inefficient to accomplish the desired purpose as such a piece of patchwork, of which the present law is composed, well can be.

Realizing that the exclusion law of the ten years just terminated, and which is now superseded by the law just enacted, was spread over a series of acts, treaty stipulations, court decisions, and Treasury regulations which required vast research in order to ascertain the exact status of any tangible features, the American Federation of Labor representatives, together with the representatives of the California Chinese-exclusion convention, drafted a bill, which was a codification of all these various laws, treaties, decisions, and Treasury regulations into a comprehensive measure, so that if it had been enacted it would have presented to the Government officials, as well as any student or ordinary citizen of this or any other country, a comprehensive law that anyone might run and read.

But the solons of our Congress decreed otherwise, and they have imposed upon the country a law which, unless remedied soon by further legislation rectifying the wrong and the shortcomings, or by the voluntary acquiescence of China, as well as other foreign countries, or the interpretation and the administration of its provisions by the judicial and administrative officers of the country, will open the mainland of the United States to the dangers of an overwhelming horde of Chinese laborers and coolies.

Under the old law Chinese or persons of Chinese descent were excluded from the United States no matter from whence they came. Under the law just passed they can be excluded only when such exclusion shall be "consistent with treaty obligations."

In no way does the law designate that the exclusion shall be consistent with treaty obligations with China, and hence, while the provision is made that they shall be excluded if they come from China to the United States, or from China to the Philippine Islands, there is no provision of law against Chinese going to Hongkong, which is under the British Government, or from China to Mexico, and coming from either of these places into the United States.

In view of the treaties between the United States and the Governments of Great Britain and Mexico, providing for free and unlimited coming and going of their citizens and subjects to and from the United States, and with the well-known desire on the part of Chinese laborers to come to our country and compete with American workmen, and this desire fostered and encouraged by the shipping and transportation companies, as well as the purpose of the Chinese Six Companies and a large number of American employers who constantly harp upon the idea of introducing into the United States a horde of cheap laborers, it is not difficult to understand the danger which threatens and confronts the workers of our country.

Then, again, there is a direct invitation to China to give notice six months before December 7, 1904, that the treaty between it and the Government of the United States shall terminate on the date named, and, inasmuch as the present law pretends to exclude Chinese only when it shall be "consistent with treaty obligations," upon termination of the treaty there will be neither statute, law, nor treaty provision which in any way will deny Chinese coolies and laborers coming direct from China into the mainland of the United States.

It is admitted by all that the treaty of 1868, granting free and unrestricted immigration of Chinese, whether laborers or others, into the United States, was not abrogated, but simply suspended by subsequent treaty stipulations, and that it will come into full force and effect upon the termination of the present treaty, unless another specifically providing otherwise shall be negotiated and ratified in the meantime.

Scarcely was the ink dry enacting the present law when it was incidentally attacked in the interest of the Chinese. A Chinaman sought admission into the United States, claiming allegiance to Mexico, and offered to place bond for his return. Our Government officials evaded rendering a decision upon the Chinaman's right to enter the United States from Mexico by declaring that he had no right to come in under bond. Thus the main question is undecided, but that it soon will have to be decided no one seriously disputes.

Taking the entire law as it stands, it is a menace to not only the workers of the United States, but to our Republic and to our civilization, and, unless rectified by timely legislation at this session of Congress, the entire responsibility for the injury to our people will rest upon the heads of the managers of the legislation in our Congress—a responsibility which the workmen and the people generally of our country will not fail to appreciate and repay in every lawful and honorable way within the power of American manhood and American citizenship.

The Republican members of the House of Representatives, remembering the ruse of the last session of the Fifty-sixth Congress—the confessed political makeshift legislation on trusts, providing for the amendment of the Constitution to control them, which was not afterwards heard of in Congress—have followed in their footsteps of that session in this Congress, and have permitted to pass through the House of Representatives certain measures which will never be heard of again after the election.

Evidence is multiplying that it is not the intention of the Republican leaders to pass these bills through the Senate to give relief; and if at all, only after the elimination of all the provisions designed for the protection of labor. In this class are the immigration and the eight-hour bills.

The Republican Senate, against the universal protests of the laboring masses, passed the ship-subsidy bill, which is designed to grant its annual millions to the shipping trust while labor is overlooked and injured by a provision in the Chinese-exclusion act permitting the employment of Chinese seamen to take the place of the higher priced American seamen.

Thus the ship-subsidy bill provides for the payment from the taxation of the people of millions each year to promote and encourage an enterprise that employs cooly labor to man its ships to the exclusion of American labor. This unpopular bill only awaits the result of the elections to be passed through the House of Representatives if the Republicans be successful.

These are but instances of the power exerted against labor while it waits and waits for a consideration at the hands of Congress and while its petitions remain unanswered.

The party in power has not listened to the appeals of labor to have war ships, cruisers, and gunboats built in the United States navy-yards, but does listen to the shipbuilding trust and in opposition to the wishes of the country, as repeatedly expressed by their representatives; and controlling legislation on the subject, as the ship trust does, labor must be satisfied with the construction of but a single battle ship in the great navy-yards of the United States.

Is the ship trust entitled to more consideration than the voice of labor, more favored legislation than the working man?

The labor bills presented for consideration and indorsed by these millions in petitions, were, at the behest of powerful shipping interests, cast aside and bills of their own selection and liking took the time of Congress and were adopted.

Why not hear the petitions of the people?

Truly it can be said, surely it should be said in the language of Mr. Gompers:

Unless rectified by timely legislation at this session of Congress, the entire responsibility for the injury to our people will rest upon the heads of the managers of the legislation in our Congress, a responsibility which the workmen and the people generally of our country will not fail to appreciate and repay in every lawful and honorable way within the power of American manhood and American citizenship.

With this evidence of neglect and inattention to petitions. With this inaction on matters of vital legislation. With this array of facts and delinquencies it is time for labor to rise and cast off this party of promises and roseate professions but of utter lack of performance.

Isthmian Canal.

SPEECH
OF
HON. DORSEY W. SHACKLEFORD,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 8, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 3110) to provide for the construction of a canal connecting the waters of the Atlantic and Pacific oceans—

Mr. SHACKLEFORD said:

Mr. CHAIRMAN: I have always favored a canal connecting the Atlantic and Pacific oceans, but I have always regarded such an enterprise as an American affair, with which European powers are precluded from meddling by the terms of the Monroe doctrine.

When the Nicaraguan Canal bill passed this House in the last Congress there was then pending in the Senate the Hay-Pauncefote treaty, which it was generally thought would be ratified. This treaty recognized the right of Great Britain to dictate the terms upon which we might construct this great American waterway, and denied to us the right to fortify and defend it after we had constructed it. There were, I believe, 19 Democrats voting against the bill, 12 of whom were from Missouri, I among the number.

We voted against the bill, not through opposition to the canal, but because the canal provided for was not an American canal. We believed more strongly in the principles of the Monroe doctrine than we did the necessity for the canal. We felt that Congress was presenting the United States to the world in a sorry plight when by the terms of our legislation it was confessed that she could not deal with a purely American affair without the consent of Great Britain.

We believed the United States should construct the canal, but that she should do it without European dictation, and that when completed it should be owned, controlled, fortified, and defended by the United States. Entertaining these views, it is with pleasure that I recur to having cast my vote against the bill.

I believe that bill was a reflection upon the paramountcy of this Government in cis-Atlantic affairs. The objectionable treaty was not ratified, and a modified one was substituted for it, whereby the United States may fortify and defend any canal she may construct. We may therefore consider the pending bill upon its merits.

The first question, then, is what route shall be selected. I do not believe the question of route has received as much attention as it should, and I very much fear the route proposed in this bill is not the best. I favor the selection of a route which will give us an ocean-level canal. It would cost more than the estimate of this bill, but we are financially able to construct it and the greatness of the achievement and its benefit to our commerce would justify the expenditure.

Geographically I do not believe that either Nicaragua or Panama is the best route for this country. My personal opinion is that Tehuantepec is the best route for us, and I believe Captain Eads's proposed ship railway is the most feasible plan yet sug gested for transporting ships from one ocean to the other.

But it will not do to stop to cavil about routes. Any route is better than none. If we should wait till all agreed on a route, we should never have a canal. Therefore we must come to some determination and commence construction. We must take either the Panama or Nicaragua route.

I have always had a prejudice against the Panama project, but this has resulted from the scandals connected with the management of the affairs of the Panama Company, rather than any physical defects of the route. The same mismanagement of the Nicaragua route would have resulted in the same scandals. Hence such scandals could be no argument against either route.

A commission composed of men of the highest character and attainments has been sent to examine both routes, and its report is before us. From a perusal of this report we are driven to the conclusion that the Panama is the best route.

The superiority of either route over the other is not enough to warrant any delay. I shall therefore at the proper time offer an amendment giving to the President power in the alternative to select either route. If the amendment is adopted the President can, with the aid of the Commission, select the best route, and without delay enter into negotiations for the land upon which to construct it. Surely we may trust the President to make an honest selection.

I am very firm in my belief that Panama is the better route, but either is better than neither, and if my amendment shall be defeated I shall vote for the bill as it has been reported, in favor of Nicaragua. The people whom I represent want the canal and want it without delay.

Mr. BARTHOLDT. Will the gentleman allow a question?

Mr. SHACKLEFORD. I will.

Mr. BARTHOLDT. You have just stated that you are in favor of this bill whether it is amended or not. If that be true, why did you and your Democratic colleagues from Missouri oppose the bill in last Congress?

Mr. SHACKLEFORD. Because in the last Congress the bill was passed to the tune of "God save the Queen," while now it is passing under the sweeter notes of "Hail Columbia." [Applause.] We believed the canal was a necessity, but we believed the maintenance of the Monroe doctrine was a greater necessity. We were not willing to suffer dictation from Great Britain or any other European monarchy.

Mr. BARTHOLDT. On that proposition I thoroughly agree with my colleague.

Mr. SHACKLEFORD. If you agreed with me you should have voted with me.

Mr. BARTHOLDT. Wait a moment. I want to ask the gentleman whether the legislation now proposed here, and for which the gentleman proposes to vote, is not the same as was pending last session?

Mr. SHACKLEFORD. No. I commend to the gentleman the reading of the last bill and the treaty under which it was proposed to pass it, as compared with the bill now pending and the treaty now in force.

Mr. BARTHOLDT. This bill is word for word as the previous bill.

Mr. SHACKLEFORD. The gentleman is mistaken. This bill does not deny us the right to fortify and defend the canal when we have made it.

Mr. Chairman, I have no doubt in my mind but the Panama is the better route. The Commission has so reported. Let us, then, give the President power to choose with the advice of the Commission. It will occasion no delay. It will hasten action. If he is allowed some latitude in selecting the route, he can the more easily negotiate for the territory upon which to construct the waterway. We should lose no advantage in the choice of routes. The enterprise is a gigantic one, costing millions and millions of dollars. We should have the best route and upon the best terms.

But whatever route we select, let the work be commenced and pushed to a speedy completion. This international waterway would extend our commerce and influence and through all the ages testify to the enterprise, power, and wisdom of the American people.

Equestrian Statue to Memory of Baron Steuben.

SPEECH

OF

HON. JAMES A. HEMENWAY,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 13, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (S. 3057) appropriating the receipts from the sale and disposal of public lands in certain States and Territories to the construction of irrigation works for the irrigation of arid lands—

Mr. HEMENWAY said:

Mr. CHAIRMAN: As the representative of a large number of German-American citizens, I am pleased to know that the great service of Baron Steuben in the struggle of the American colonies for independence is to be recognized by the erection of an equestrian statue to his memory at the city of Washington.

The country is indebted to the energy of Hon. RICHARD BARTHOLDT for securing the passage of the bill providing for this statue through the House of Representatives, as it is indebted to him for his eminent service as a member of the Congress of the United States for many years.

In the report submitted to Congress, Representative Bartholdt says:

There is reason, perhaps, for the failure of historians to accord a fitting position to Steuben in the record of the struggle of the American colonies for independence, however regrettable the fact may be to the impartial student of the man's worth and work. Readers of history are attracted to the part played by men who lead battalions in stirring charges, to the heroes in action on the battlefields, just as the patrons of a theater applaud the star, unmindful, if not ignorant, of the importance of the work of the stage manager, who has furnished the settings for the play, arranged the scenic effects, and made the actor's triumph possible.

Steuben was the stage manager, as it were, in the presentation of the Revolutionary war drama, and his work has been forgotten in the applause and admiration of the incomparable genius of Washington and the dash and daring of other leaders in the field whose efforts resulted in brilliant feats of arms and the achievement of American independence. Baron Steuben worked behind the scenes. He took over the ragged tatterdemalions of Washington at Valley Forge and in the face of almost insuperable obstacles worked them into an army that did yeoman service on so many fields later. It was Steuben who took in charge the raw material, the undisciplined recruits, and developed an army which for efficiency has challenged the admiration of the world.

It is not, however, my intention to go into the history of the life of Baron Steuben, but only to refer briefly to same.

He left Europe, where he had won hard-earned distinction and fame and where he had a sufficient competence, and came to this country and immediately addressed the following communication to Congress:

HONORABLE GENTLEMEN: The honor of serving a nation engaged in defending its rights and liberties was the motive that brought me to this continent. I ask neither riches nor titles. I am come here from the remotest end of Germany, at my own expense, and have given up honorable and lucrative rank. I have made no condition with your deputies in France, nor shall I make any with you. My only ambition is to serve you as a volunteer, to deserve the confidence of your general-in-chief, and to follow him in all his operations, as I have done during seven campaigns with the King of Prussia. Two and twenty years spent in such a school seem to give me a right of thinking myself among the number of experienced officers, and if I am possessed of the acquirements in the art of war they will be much more prized by me if I can employ them in the service of a republic such as I hope to soon see America. I should willingly purchase at the expense of my blood the honor of having my name enrolled among those of the defenders of your liberty. Your gracious acceptance will be sufficient for me, and I ask no other favor than to be received among your officers. I venture to hope that you will grant this, my request, and that you will be so good as to send me your orders to Boston, where I shall await them and take suitable measures in accordance.

He also addressed to General Washington the following:

SIR: The inclosed copy of a letter, the original of which I shall have the honor to present to Your Excellency, will inform you of the motives that brought me over to this land. I shall only add to it that the object of my greatest ambition is to render the country all the service in my power, and to deserve the title of a citizen of America by fighting for the cause of your liberty. If the distinguished ranks in which I have served in Europe should be an obstacle, I had rather serve under Your Excellency as a volunteer than to be an object of discontent to such deserving officers as have already distinguished themselves among you. Such being the sentiments I have always professed, I dare hope that the respectable Congress of the United States of America will accept my services. I could say, moreover, were it not for the fear of offending your modesty, that Your Excellency is the only person under whom, after having served the King of Prussia, I could wish to follow a profession to the study of which I have wholly devoted myself. I intend to go to Boston in a few days, where I shall present my letters to Mr. Hancock, member of Congress, and there I shall await Your Excellency's orders.

At Boston, Steuben was entertained by John Hancock, who had just retired from the Presidency of the Congress, and here, after waiting five weeks, he received Washington's answer to his letter. It advised him to report at once to Congress, then sitting at York, Pa., since it belonged exclusively to that body to enter into negotiations with him.

Congress, through its President, Mr. Laurens, accepted his generous proposition and directed him to report to General Washington at Valley Forge. Here Steuben began a work the value of which can scarcely be overestimated.

In a letter to Gen. John Sullivan, dated at Valley Forge, April 8, 1778, A. Scammel thus comments on the work of Baron Steuben and its influence:

Baron Steuben sets us a truly noble example. He has undertaken the discipline of the Army, and shows himself to be a perfect master of it, not only in the grand maneuvers, but in the most minute details. To see a gentleman dignified with a lieutenant-general's commission from the great Prussian monarch condescend with a grace peculiar to himself to take under his direction a squad of ten or twelve men in the capacity of drill-sergeant, commands the admiration of both officers and men and causes them to improve exceedingly fast under his instructions.

Speaking of his work at this time, William North, who was his aid-de-camp, and therefore familiar with the subject, says in his biographical sketch of Steuben:

Certainly it was a brave attempt. Without understanding a word of the English language, to think of bringing men, born free and joined together to preserve their freedom, into strict subjection, to obey without a word, a look, the mandates of a master—that master once their equal, or, possibly, beneath them. * * * It was a brave attempt, which nothing but virtue or high-raised hopes of glory could have supported. * * *

From the commencement of instruction no time, no pains, no fatigue were thought too great in pursuit of this great object. Through the whole of each campaign, when troops were to maneuver, and that was almost every day, the baron rose at 3 o'clock. While his servant dressed his hair, he smoked a single pipe and drank one cup of coffee; was on horseback at sunrise, and, with or without his suite, galloped to the parade. There was no waiting for a tardy aid-de-camp, and those who followed wished they had not slept. Nor was there need of chiding; when duty was neglected or military etiquette infringed, the baron's look was quite sufficient.

On the 30th of April, 1778, about six weeks after Steuben had commenced his active duties, Washington made the following report to Congress:

The extensive ill consequences arising from a want of uniformity in discipline and maneuvers throughout the Army have long occasioned me to wish for the establishment of a well-organized inspectorship, and the concurrence of Congress in the same views has induced me to set on foot a temporary institution, which, from the success which has hitherto attended it, gives me the most flattering expectations. * * *

Baron Steuben's length of service in the first military school of Europe, and his former rank, pointed him out as a person peculiarly qualified to be at the head of this department. This appeared the least exceptionable way of introducing him into the Army, and the one that would give him the most ready opportunity of displaying his talent. I therefore proposed to him to undertake the office of Inspector-General, which he agreed to do with the greatest cheerfulness, and has performed the duties of it with a zeal and intelligence equal to our wishes. * * *

I should do injustice if I were to be longer silent with regard to the merits of Baron Steuben. His knowledge of his profession, added to the zeal which he has displayed since he began upon the functions of his office, leads me to consider him an acquisition to the service, and to recommend him to the attention of Congress.

The "recommendation" of Washington was that Steuben be made Inspector-General of the American Army with the rank of major-general. The recommendation of Washington was followed by Congress, and by act of May 5, 1778, Steuben was created a major-general and assigned to the duties of Inspector-General of the Army.

The last act of General Washington before resigning his commission as Commander in Chief of the American Army was to write an appreciative letter to Baron Steuben, as follows:

ANNAPOLIS, *December 23, 1783.*

MY DEAR BARON: Although I have taken frequent opportunities, both in public and in private, of acknowledging your great zeal, attention, and abilities in performing the functions of your office, yet I wish to make use of this last moment of my public life to signify in the strongest terms my entire approbation of your conduct, and to express my sense of the obligations the public is under to you for your faithful and meritorious service.

I beg you will be convinced, my dear sir, that I should rejoice if it could ever be in my power to serve you more especially than by expressions of regard and affection; but, in the meantime, I am persuaded you will not be displeased with this farewell token of my sincere friendship and esteem for you.

This is the last letter I shall write while I continue in the service of my country. The hour of my resignation is fixed at 12 to-day, after which I shall become a private citizen on the banks of the Potomac, where I shall be glad to embrace you and testify the great esteem and consideration with which I am, my dear baron, etc.

On March 24, 1784, Steuben gave in his resignation, which Congress accepted on April 15, with the following resolution:

Resolved, That the thanks of the United States, in Congress assembled, be given to Baron Steuben for the great zeal and abilities he has discovered in the discharge of the several duties of his office; that a gold-hilted sword be presented to him, as a mark of the high sense Congress entertain of his character and service, and that the superintendent of finance take order for procuring the same.

Baron Steuben was only one of that sturdy, honest type of Germans who left the fatherland to become an American citizen. And loyal citizens they have been both in time of war and in time of peace.

They have responded to the call of their country in three wars—the Revolutionary war, the great war between the States, and the Spanish-American war—and in each of these wars their names have been recorded on the roll of honor of their country.

And in time of peace they have been successful in every avocation in life—in the professions, on the farm, in the factory, at the compass—and they have delighted the world with their music.

And in politics, not wedded to any particular party, but always conservative and voting for what they believe is to the interest of the Government, they have in the past by their votes prevented radical changes in legislation and Government policies that would have resulted in bringing distress to their country.

To the German-American citizens this country of ours is greatly indebted for its wonderful progress and for the fact that this day our beloved flag floats over the most prosperous and happy people on earth.

Civil Government for the Philippine Islands.

SPEECH

OF

HON. D. E. FINLEY,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1902.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (S. 2235) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes—

Mr. FINLEY said:

Mr. CHAIRMAN: With probably one exception, the American people are more divided on the question of the final disposition of the Philippine Islands than they have been on any other question within the past fifty years, the issues leading up to the civil war being the exception that I speak of. These issues involve the race question, and say what you will, when the Philippine question is considered in its last analysis, this is the main question with a large number of the American people. No doubt this proposition will be contested by many. Whether I am correct in stating the question or not, it is evident that the American people are divided, and since the conclusion of peace between Spain and the United States nearly four years ago, the Republican party, through the Administration and a majority of the members of the party, have contended that it is not only best for this country in the matter of trade and commerce, and from an international standpoint, but that it is also best for the people of the Philippine Islands that the United States hold and exercise sovereignty over this people.

As an argument why that should be done, the Republican Administration has insisted, first, that the United States has become a world power; second, that by retaining the Philippine Islands we would derive great benefits and profits in the way of trade and commerce; and, third, that it would be for the civilization and uplifting of the Filipino people, and that we can hold them in subjection without being restrained by the limitations of the Constitution of the United States.

The Republican party, in carrying out this policy of innovation and departure from the history and practice of this country prior to the Spanish-American war, has taken possession of the Philippine Islands by armed force, made war upon the people of those islands, and claimed the right to hold them in subjection as colonies, and to rule the country without being restrained, as is evidenced by the bill under consideration.

The Democratic position, on the other hand, is correctly set forth in the Democratic platform of 1900.

This declaration has recently been reaffirmed by the Democratic convention in my State, as follows:

We hold with the United States Supreme Court that the Declaration of Independence is the spirit of our Government, of which the Constitution is the form and letter.

We declare again that all governments instituted among men derive their just powers from the consent of the governed; that any government not based upon the consent of the governed is a tyranny, and that to impose upon any people the government of force is to substitute a method of imperialism for those of a republic. We hold that the Constitution follows the flag, and denounce the doctrine that an Executive or Congress, deriving their existence and their powers from the Constitution, can exercise lawful authority beyond it or in violation of it. We assert that no nation can long endure half republic and half empire, and we warn the American people that imperialism abroad will lead quickly and inevitably to despotism at home.

We condemn and denounce the Philippine policy of the present Administration. It has involved the Republic in an unnecessary war, sacrificed the lives of many of our noblest sons, and placed the United States, previously known and applauded throughout the world as the champion of freedom, in the false and un-American position of crushing with military force the efforts of our former allies to achieve liberty and self-government. The Filipinos can not be citizens without endangering our civilization; they can not be subjects without imperiling our form of government; and as we are not willing to surrender our civilization to convert the Republic into an empire,

we favor an immediate declaration of the nation's purpose to give the Filipinos, first, a stable form of government; second, independence; and third, protection from outside interference.

We are not opposed to territorial expansion when it takes in desirable territory which can be erected into States in the Union, and whose people are willing and free to become American citizens. We favor expansion by every peaceful and legitimate means. But we are unalterably opposed to the seizing or purchasing of distant islands to be governed outside the Constitution, and whose people can never become citizens. We are in favor of extending the Republic's influence among the nations, but believe that influence should be extended not by force and violence, but through the persuasive power of a high and honorable example. The burning issue of imperialism growing out of the Spanish war involves the very existence of the Republic and the destruction of our free institutions. We regard it as the paramount issue of the campaign.

The position of the Democratic party is embodied in a practical way in the views of the minority of the Insular Committee and the substitute bill presented by them in their report.

I am one of those who believe in adhering to the letter and spirit of the Constitution of the United States. The Republican party does not believe in this doctrine. On the contrary, it holds to the doctrine of opportunism, and in practice fits the Constitution to exigencies as they arise. I do not propose to go into an extended discussion of this phase of the question. During the past four years this has been repeatedly done on the hustings, in the halls of Congress, and in the courts. What I have to say is directed to the practical, rather than to the academic, side of the question.

In all our previous acquisitions of territory we have secured sections of country contiguous or adjacent and which were, practically speaking, in an unsettled state, awaiting only the extension of American sovereignty—the coming of American emigrants to settle the country and pave the way for its admission into the Union as sovereign States. This was the case with Florida, and all of the territory now included in the States and Territories west of the Mississippi River were acquired in this way by Democratic Administrations, carrying out the Democratic policy of expansion. But at no time has the Democratic party advocated or practiced expansion when to do so would bring in foreign territory, such as the Philippine Islands, inhabited by an alien and inferior race, unfit ever to become citizens of the United States.

We have the race question to contend with in the United States. Of the 80,000,000 people in this country 10 per cent or, in round numbers, 8,000,000 are of the colored race.

In the Philippine Islands we will have the race question intensified a thousandfold more than here. There the proportion of whites to the colored population must always remain very small, for the reason that on account of the tropical situation of the country and climatic conditions it is impossible for a white man to live there and perform manual labor to any extent. History teaches that where in any country there are more races than one, one of these races will be dominant and rule. The history of civilization shows that where these conditions exist and the white race enters into the equation it will rule.

The Democratic party does not slander and abuse the Army or wish to see its efforts crowned with failure; the Army is our Army, and whatever criticism has been made against cruel and barbarous acts in the conduct of the war in the Philippine Islands (and there have been cruel and barbarous acts committed in the conduct of the war) is directed to the individuals ordering the commission of these acts, or those who have of their own accord committed them. The Army, as such, is not responsible for the acts mentioned, but only the individuals voluntarily engaged.

When war is unavoidable, acts of cruelty and inhumanity will sometimes occur, and there should be no unnecessary war, to the end that the commission of such acts be limited as much as possible. It may be said that under the circumstances the United States Government is compelled to assert its authority. If this be admitted, it does not follow that we are compelled to follow the course we are pursuing. I have listened very attentively to the debate, with a view to ascertaining the ultimate purpose and intention of the Republican party with respect to the Philippine Islands and their people. The title of the bill under consideration is:

An act temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes.

Judging from the title of the bill, the government of the islands under it is to be temporary, and it also appears from the title that the Republican party has other purposes in view than to provide a temporary civil government for the Philippine Islands. Judging the purposes of the Republican party from the utterances of its members on this floor, it appears that they are divided somewhat as to the final disposition of our oriental possessions. A few of them have stated that they are unwilling to hold the people in subjection longer than the time when they are capable of self-government; others have failed to state their view on this question, while a number of others have boldly avowed themselves in favor of permanent retention.

But perhaps it is not well to decide the question as to what is the intention of the Republican party as to the future of the Philippine Archipelago by the statements of the Republican politicians in debating the question. In a general way it may be stated that the first section of the bill under consideration ratifies the executive orders of the President in the matter of governing the Philippine Islands, and provides for a continuance of this course under certain conditions. Sections 4 and 5 relate to the judiciary and section 6 provides that appeals may be taken from the supreme court of the Philippine Islands to the Supreme Court of the United States. In civil actions the amount in controversy must be $25,000 or more. There is no provision for an appeal to the Supreme Court of the United States in any case involving life or liberty, or where the amount in controversy is less than $25,000.

Section 7 provides for a legislature consisting of two houses, one of these to be the Philippine Commission, the members of which are appointed by the President of the United States, and the other to be known as the Philippine assembly, the members of which are to be elected whenever, in the words of the bill, "a condition of general and complete peace shall have been established and the fact shall be certified to the President by the Commission." Whether or not this much-to-be-hoped-for state of affairs will ever be reached in the Philippine Islands I have reason to doubt. There is no record of any such peace in the Philippine Islands within the past one hundred years, and I am inclined to believe there will be none for many years to come.

Section 8 provides for the election by the people of the Philippine Islands of two resident commissioners or delegates to the Government of the United States at the same time the legislative assembly is elected.

Section 11 constitutes the Filipino people a corporation or body politic under the style of "the people of the Philippine Islands."

Section 12 gives all residents of the islands owning allegiance to the United States protection in respect to their relations with foreign governments.

Sections 13 and 14 relate to franchises, privileges, and concessions, and give to the Philippine Commission authority to grant charters, authority to provide the means to exploit fully the Philippine Islands in all matters, including the right to acquire and hold real estate.

The words "and for other purposes" in the title of the bill, when considered in connection with the bill, throw some light on the purposes and intentions of its framers.

An examination of the first 23 sections of the House bill shows that for the present and for many years to come the only government there in the Philippine Islands will be an arbitrary one of the imperial order.

Sections 24 to 49, inclusive, provide for the acquisition and exploitation of timber lands, mineral lands, and mineral rights.

The timber in the Philippine Islands is rare and valuable; minerals are abundant. The bill provides a way for acquiring all public utilities in the Philippine Islands, including railroads, telephone and telegraph lines, electric-light lines, timber, and minerals, and affords an opportunity for peculation and plunder unequaled in the history of the world within the past fifty years, unless it be the "reconstruction" period in the South, beginning with 1868, when the Southern States were left to the tender mercies of the carpetbaggers, scalawags, and the poor benighted and deluded negroes.

Sections 50 to 57, inclusive, provide a generous, if not extravagant, provision for the issue of municipal bonds. This, as the history and issue of municipal bonds even in civilized countries show, amounts to mortgaging posterity.

Sections 58 to 75, inclusive, provide for a coinage system, and in this is included a provision for the coinage of silver at the rate, as I remember it, of 27½ to 1. What form the bill will take when it is finally enacted into law I do not know, but such is the provision in the bill at this time.

Sections 76 and 77 provide a wild-cat banking system, with authority to issue notes for circulation.

So much for the efforts of the Republican party along the line of imperialism.

The minority members of the Insular Committee, in their report and draft of a bill which they recommend be substituted for that under consideration, state the Democratic position. The report and essential parts of the bill are:

VIEWS OF THE MINORITY.

The undersigned members of the Committee on Insular Affairs, to which was referred House bill (No. 13445) entitled "A bill temporarily to provide for the administration of civil affairs in the Philippine Islands, and for other purposes," are constrained by what they regard as a just and proper sense of public duty to withhold their assent from the report accompanying said bill.

The subject with which this bill deals is one of momentous importance. It concerns the lives, liberties, and property of 10,000,000 Filipinos and the integrity and good faith of the American Republic.

The chief question involved is whether, under the guise of the forms of civil government, a policy unjust and cruel to the people of the Philippine

Islands, and injurious and dishonoring to American citizenship, shall be indefinitely, if not perpetually, continued, or that there shall be substituted in its stead a more righteous and humane policy, the intent and purpose of which is to confer upon that people within the shortest practicable period, and upon certain reasonable and proper terms and concessions, an autonomous system of free self-government, based upon the principle of an independence, modified as to their foreign affairs, which modified independence, after the lapse of a reasonable period (affording that practical training and actual experience in the art of self-government so necessary to fit them for its ultimate exercise and full enjoyment) shall eventuate into an unqualified and absolute independence.

To hold the Filipinos in a condition of subjection to and dependence upon the Government of the United States, in the opinion of the minority members of this committee, is violative of the declaration solemnly made by the Congress of the United States at the incipiency of the war with Spain, is repugnant to the principles upon which the American Republic was founded, and incompatible with a system of free government based upon the consent of the governed, and must, if indefinitely persisted in, result in the subversion of the liberties and the destruction of the free institutions of the American people.

Believing, therefore, that this bill is vicious in principle, bad in its details, unjust, inexpedient, and, from the view point of either the inhabitants of the Philippines or the American people, absolutely indefensible, the minority file herewith, and as more fully embodying their views, the draft of a bill which they recommend shall be substituted for and in the place of that presented with the report of the committee.

Recognizing that three centuries of Spanish dominion have destroyed all self-government in the Philippine Islands, and that its people at this time are unprepared for its exercise, the theory upon which this substitute measure is framed is that there should be conferred upon them for a period of eight years the largest possible share in the government of themselves and in the conduct of their affairs consistent with our safety and best interests and our duty and obligations to the nations of the world, in order to fit them for that absolute independence and self-government to which the minority believe them entitled.

Such a course as this involves a protectorate on the part of the United States of only eight years, and will, it is confidently believed, demonstrate that the Filipinos are capable of self-government and result in a firmly established and stable government for them.

W. A. JONES.
JOHN W. MADDOX.
J. R. WILLIAMS.
R. L. HENRY.
JNO. S. WILLIAMS.
M. R. PATTERSON.

A bill to establish a stable and autonomous government in the Philippines, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled:

Whereas, the people of the United States, in order to establish justice and sure tranquillity in the Philippines, and to provide for the defense and promote the welfare of the people of the islands, and to secure the blessings of liberty to them and to their posterity, do ordain and establish this act of Congress as a constitution for the Philippine Islands:

SECTION 1. That the provisions of this act, and the name, "The Philippines," as used in this act, shall apply to and include the Philippine Islands ceded to the United States Government by treaty of peace concluded between the United States and Spain on the 11th day of April, 1899, the boundaries of which are set forth in Article III of said treaty, and also any other islands belonging to said archipelago, not included within said boundaries, and now territory of the United States.

SEC. 2. That on and after the 4th day of July, 1903, and for eight years thereafter, the qualified independence of the Philippines, under the terms and conditions herein prescribed, and under a government established in accordance with the provisions of this act, and on and after July 4, 1911, the full and complete independence of the said Philippines shall be and is hereby acknowledged.

SEC. 3. That the terms and conditions precedent under which this acknowledgment is made, and after compliance with which on the part of the government and the people of the Philippines, the said acknowledgment takes place, are as follows:

First. That there shall be on the 4th day of July, 1903, neither war nor insurrection existing within said Philippines, nor any organized armed opposition to the temporary sovereignty of the United States.

Second. That the United States are to have and retain control, ownership, and complete sovereignty over such land and harborage waters as are actually necessary for three coaling stations and two naval stations, and convenient terminal points for submarine cables, to be situated at such places and within such boundaries as shall be selected and designated by a commission sitting on behalf of the United States of America, composed of the President of the United States, the Secretary of State thereof, and the Secretary of the Navy thereof.

Third. That the government of the Philippines, established in accordance with the provisions of this act, shall assume and carry into effect the treaty obligations of the United States with the Kingdom of Spain.

Fourth. That the government of the Philippines, established in accordance with the provisions of this act, shall, by legislative act and by treaty, guarantee that no higher tax shall ever be levied upon the property, merchandise, or business of citizens of the United States resident in or doing business in the Philippines than shall be at the same time levied upon like goods, wares, merchandise, or business of the citizens of the Philippines.

Fifth. That the government of the Philippines, established in accordance with the provisions of this act, shall, by legislative act and by treaty, guarantee to American citizens for all time freedom of access to and of travel in the Philippines for purposes of business or for missionary purposes, and shall throw around such citizens of the United States coming to or traveling or residing in the Philippines the same legal protection and advantages as shall be furnished to the citizens of the Philippines.

SEC. 4. That the government, in accordance with the provisions of this act, shall be known as the "Republic of the Philippines."

The Democratic party proposes to treat the Philippine Islands as we have treated Cuba. It is urged that the Filipinos are incapable of self-government. I agree that they are not as capable, according to our standard, as we are. I am convinced also that they will never be, but we have Admiral Dewey's statement for it that they are more capable than the Cubans. We have given the Cubans a stable form of government and independence, and have what is, or soon will be, a monopoly of their trade. Why not treat the Filipinos in the same way? With a declaration that such is our policy, in my judgment the Philippine question would be settled in a much shorter time than the Cuban question was settled. While Cuba is now costing us nothing, at present and for years to come the Philippine Islands will cost the United States for the support of the troops necessary there from $25,000,000 to $40,000,000 annually. While it is given out by the Administration that the cost of the war in the islands up to this time is about $172,000,000, yet well-informed people are convinced that they have cost us more than $300,000,000.

Along the line of showing what the cost of imperialism is to the country, I will quote some figures showing the expenditures for the National Government for the years—

1860	$63,130,598.39
1876	258,459,797.33
1886	242,483,138.50
1893	383,477,954.49
1897	365,774,159.57
1899	605,072,179.85
1901	509,967,353.15

Regular and permanent appropriations made by this session, as stated by Hon. L. F. LIVINGSTON, the minority member of the Committee on Appropriations, amount to $300,193,837; contracts authorized, $259,373,215.

We have seen our expenditures increased by more than 100 per cent since Clevelend's last administration. But our friends, the Republicans, tell us that when the actual and authorized appropriations for a single session of Congress exceed a billion of dollars that this is made necessary because we are a world power, and when pressed for the reasons why we are a world power they answer: "Oh! on account of the war with Spain and the acquisition of the Philippine Islands;" or, stated in another way, it would be that on account of the war with Spain we acquired the Philippine Islands, and on account of this acquisition we became a world power, and because we have become a world power our total annual appropriations exceed $1,000,000,000 annually. Does it pay? Let us calculate.

Money for the support of the Government must come out of the pockets of the people of the United States. The total trade of the Philippine Islands is little more than $30,000,000 annually. Of this the United States has a beggarly $5,000,000, or about that amount.

By the treaty of peace between the United States and Spain the latter country for ten years from that date is to have the same tariff rate and trade advantages with the Philippine Islands that the people of the United States have.

In addition to this, the Administration was, and probably now is, committed to the policy of the open door with the nations of the world with respect to the trade in the Philippine Islands.

I invite the attention of my Republican friends and the country to the following table of imports into the Philippine Islands for the year 1900.

Let us look at the imports for this year, the first year after the treaty of peace with Spain in which a comparison can fairly be made between the trade with the United States and that of other leading countries.

Country.	Amount.	Increase (+) or decrease(−).	Per cent.
United States	$2,153,198	+$801,344	59
Great Britain	5,576,931	+2,337,865	72
Germany	1,631,816	+708,941	77
France	978,095	+686,057	235
Spain	1,989,235	−714,101	26

Now that the Philippine Islands are a part of our territory, the probability is that many of its people will emigrate to the United States. These people are an inferior race, and in time no doubt will prove as obnoxious and as objectionable as the Chinese. When that time arrives, probably not in the near future, but at some time, they will attempt to invade the field of labor in our factories and our mills, and it will be found, as it has been demonstrated, that this field is only broad enough for the white laborer. And particularly is this true of the cotton mills in the South, which to-day manufacture 42 per cent of all the cotton manufactured in the United States, and whose abundant success has been phenomenal during the past twenty years.

This success is attributable more than anything else to the fact that our cotton-mill operatives are, as a class, educated, law-abiding, and among our best citizens. I have no fears that the field of labor will be at once invaded by people from the Philippine Islands. It is a matter of time, and I apprehend that the race issue will in the end prove to be the most serious phase of the Philippine question. If we are to expand and acquire more territory, the most desirable to acquire is Canada and British America.

Efficiency of the Militia.

SPEECH

OF

HON. CYRUS A. SULLOWAY,

OF NEW HAMPSHIRE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1902,

On the bill (H. R. 11654) to promote the efficiency of the militia, and for other purposes.

Mr. SULLOWAY said:

Mr. SPEAKER: Availing myself of the opportunity to print, I submit the following statement on the subject of pensions, showing what has been done during this session and what was done in former Congresses:

The first session of the Fifty-seventh Congress, now drawing to a close, has been an extremely busy one in the Committee on Invalid Pensions, and the largest number of bills, both public and private, that were ever sent to committee in the history of Congress have been referred to this committee. There are various reasons for this, the two chief ones being, however, the unsatisfactory administration of affairs in the Pension Bureau during the four years past and the fact that a great many of the veterans of the civil war—or, to be exact, 107,000, in round numbers—who were drawing pensions under the general law were induced, under a misapprehension, to apply under the act of June 27, 1890, and as old age and infirmities creep upon them they find that the $12 per month which they are drawing under the act of June 27, 1890, is wholly inadequate to provide for themselves the necessaries of life, and as a result, unless they secure aid from Congress, many of them would be obliged to find homes in almshouses.

As stated above many of these men were formerly drawing pensions under the general law, and had they remained there until to-day they would have been entitled to a much larger pension than can be allowed under the act of June 27, 1890. Another class of cases which appeal to all, and which have engrossed the attention of the committee, and for whom a large number of bills have been passed, come right along in this same line. They are a class of men who are drawing $12 per month under the act of June 27, 1890, and who have since become totally blind or paralyzed and require the aid and attendance of another person. This class of cases has been raised from $12 to $24 or $30 per month. It has been the aim of the committee to place all these cases on an equal and just rating, and as a result the committee reported and there passed the House of Representatives on June 16, as an amendment to the "maimed soldiers act," giving all veterans of this class who had a year's service a rating of $30 per month where they are so disabled as to require the aid and attendance of another person. It is the opinion of your committee that the passage of this will reduce to a large extent the passage of private acts by Congress, and at the same time bring needed relief to a most worthy class of veterans, many of whom can trace their disabilities to the service, and who but for technicalities in the law, and the fact that many of their witnesses who, if living, could prove their claims, would be entitled to a rating of from $50 to $72 under the general law.

Statement of work of the House Committee on Invalid Pensions up to and including June 27, 1902.

PRIVATE BILLS INTRODUCED AND REFERRED TO THAT COMMITTEE.

First session Fifty-seventh Congress, up to June 27, 1902:	
House bills	6,348
Senate bills	433
Total number of bills	6,781

There were referred to that committee in the—

Fifty-sixth Congress, private bills	5,817
Fifty-fifth Congress, private bills	3,883
Fifty-fourth Congress, private bills	2,690
Fifty-second Congress, private bills	2,101

BILLS REPORTED BY THE COMMITTEE IN THE FIRST SESSION, FIFTY-SEVENTH CONGRESS.

Up to and including June 27, 1902:	
House bills	953
Senate bills	392
Total	1,345

Of this number there were passed in the House 901 House bills and 339 Senate bills; total, 1,240; and there are now remaining on the Calendar 52 House bills and 53 Senate bills, all reported by this committee; total, 1,345.

The Committee on Pensions of the House reported 228 private bills (its own and Senate bills combined), 226 of which passed the House and 2 of which are still on the Calendar, so that the total number of private pension bills reported to the House in the first session of the Fifty-seventh Congress amounts to 1,573.

Number of special acts passed in prior Congresses.

In the Forty-ninth Congress	856
In the Fiftieth Congress	1,015
In the Fifty-first Congress	1,385
In the Fifty-second Congress	217
In the Fifty-third Congress	119
In the Fifty-fourth Congress	378
In the Fifty-fifth Congress	694
In the Fifty-sixth Congress	1,391
In the Fifty-seventh Congress, first session, approvals	892
Before President for approval up to June 27, 1902	213
Total	1,105

GENERAL LEGISLATION.

Senate bill 4850, granting an increase of pension to those who lost limbs in the service of the United States, was reported to the House with an amendment, and another amendment was added increasing the pension of those entitled to the maximum rating under the act of June 27, 1890, to $30 per month in cases where the soldier requires the frequent and periodical aid and attendance of another person, provided his service during the war of the rebellion was for one year or more.

This bill was passed by the House on June 16, 1902, and is now before the Senate for concurrence.

Senate resolution No. 8, repealing section 4716, Revised Statutes, as to disloyalty in claims under the act of June 27, 1890, was also reported to the House, with an amendment, so that the Union soldier who rendered two terms of service and was honorably discharged from the last term of service only may also have title under the act of June 27, 1890.

This bill is now on the House Calendar.

House bill 9324, construing the act of March 3, 1879, as to the filing of claims by children under 16 years of age, also reported by this committee, is on the House Calendar.

House bill 12141, amending the act of March 3, 1901, relative to remarried widows, passed the House June 16, 1902, and is now before the Senate.

Senate bill 1359, increasing the pension for total deafness from $30 to $40 per month, has been reported to the House and is now on the House Calendar.

Amendment of Bankruptcy Law.

SPEECH

OF

HON. SAMUEL L. POWERS,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 17, 1902.

The House having under consideration the bill (H. R. 13679) to amend an act entitled "An act to establish a uniform system of bankruptcy throughout the United States," approved July 1, 1898—

Mr. POWERS of Massachusetts said:

Mr. SPEAKER: I have been somewhat surprised to-day to notice that the sentiment in favor of the repeal of the bankruptcy law comes very largely from the other side of the House. When we look into the history of bankruptcy legislation we find that the bankruptcy clause in the Constitution originated in the State of South Carolina and was put in largely through the instrumentality of Pinckney and Rutledge, of that State. Later on it was strongly advocated by Senator Hayne, who at that time was one of the idols of the South in the United States Senate. It had the support of the Bayards, of Delaware, for generations in the halls of Congress, and they supported it because they said it was necessary in a commercial country to have a uniform bankruptcy law. I desire to call the attention of my friends on the other side of the House to the language of James A. Bayard as long ago as 1799, when the first bankruptcy law was under consideration, in which he used these words:

The necessity of a bankruptcy law results wherever a nation is in any considerable degree commercial. No commercial people can well be governed without it. Wherever there is extensive commerce extensive credit must necessarily be given.

Later on, in the year 1803, he said:

The commercial world can not exist without such an act. Its necessity arises from the nature of trade, and does not belong to other classes of citizens. It is founded on the principle that commerce is built on great credits, and great credits produce great debts.

As late as 1824 Daniel Webster, then representing the State of Massachusetts, referred to the 24 different and clashing systems such as we then had in this country. To-day, without any bankruptcy act, we would have 45 different and clashing systems; and to undertake to say that a country with 80,000,000 people, a commercial people possessing property amounting to $90,000,000,000, with the great lines of transportation established throughout the

length and breadth of the land, so that the merchant in Massachusetts trades with the merchant in Texas, so that the merchant in Alabama trades also with the merchant in New England, to say that such a country shall have 45 different systems of distribution and administration of property of debtors in the different States simply means that you can not have a commercial system for the administration of the estates of debtors. It seems to me that the Speaker of this House, when we were considering the present bankruptcy law, put the case very strongly when he said, using his language exactly as it appeared in the CONGRESSIONAL RECORD:

Ought the United States to be classed hereafter with England, Germany, France, and their associates, having bankruptcy laws, or continue in the class with China?

There is not to-day a single great commercial nation on the face of the globe that has not a uniform system of bankruptcy.

Mr. CLAYTON. May I interrupt the gentleman?

Mr. POWERS of Massachusetts. Certainly.

Mr. CLAYTON. Have England and France the dual system of government that we have—that is, separate State governments performing nearly all the functions of government and a Federal Government with limited and delegated powers?

Mr. LANHAM. With express authority, however, to establish uniform bankruptcy laws.

Mr. POWERS of Massachusetts. I do not think the question of government has anything to do with it. England is a great commercial nation, and she has had a bankruptcy law for more than a century. France is a great commercial people, and she has a bankruptcy law. The United States is a great commercial nation, and she ought to have the bankruptcy law amended as provided in the bill that we have before us.

Mr. CLAYTON. May I interrupt the gentleman to say that our system of government is essentially different from Great Britain and France, and that what may be proper there may not be proper here, and that our people are quite capable in the States to administer the estates both of dead men and live men?

Mr. POWERS of Massachusetts. Commerce is the same the world over.

All the leading nations of the world have had for many years upon their statute books laws on the subject of bankruptcy. Nearly four centuries ago England adopted a uniform system of bankruptcy, which has remained in force up to the present time. For more than four centuries France has continued a bankruptcy law, and though both England and France have from time to time amended their statutes upon bankruptcy, they have never throughout these centuries repealed the act, and, so far as I am able to learn, there has never been a sentiment in either of these countries in favor of such repeal. The Empire of Germany enacted a bankruptcy law twenty-five years ago which has been continuously in force since that time, and Russia has had a bankruptcy law in force for nearly a century.

The policy of this country with reference to bankruptcy legislation has been a shifting one, but, in my opinion, it is now upon a permanent basis, and there is no strong sentiment in any part of this country in favor of the repeal of the bankruptcy law.

We have had four bankruptcy laws enacted by Congress, the first in 1800, second in 1841, third in 1867, and the fourth in 1898. The laws prior to 1898 appear to have been enacted largely on account of financial calamities, and in no case were they perfected with care before enactment. The theory upon which the early laws were enacted appears to have been an erroneous one. They were enacted apparently for the simple purpose of giving relief to debtors who were hopelessly bankrupt. The act of 1898 was based upon an entirely different theory, and was largely in accord with the sentiment which led to the enactment of the bankruptcy laws of England and France. To my mind it was never the purpose of the framers of the Constitution to vest in Congress power to "establish uniform laws upon the subject of bankruptcy throughout the United States" for the sole purpose of giving relief to distressed debtors. The framers of the Constitution had in view the necessity of uniform laws upon the subject of bankruptcy as necessary and essential to the growth and development of a commercial people.

The bankruptcy clause in the Constitution was largely due to the influence of Rutledge and the Pinckneys of South Carolina, all of whom had been educated in England in boyhood, and had more or less knowledge of the working of the bankruptcy law in that country. The two Pinckneys were representatives in the constitutional convention, and in the discussions of that famous convention showed an intimate knowledge of the workings of the bankruptcy laws under the English system.

It is also worthy of note, inasmuch as most of the sentiment in favor of the repeal of the present bankruptcy law comes from representatives of Southern States, that nearly all of the great statesmen of the South who have represented that section of the country in Congress have favored the enactment of a bankruptcy law. To start with, you have the two Pinckneys from South Carolina, who sat as delegates in the constitutional convention, and also Mr. Rutledge, afterwards Chief Justice; James Madison, of Virginia; James Pinckney, of Maryland; John Rutledge, jr., of South Carolina; Senator Hayne, of South Carolina; Senator Berrien, of Georgia; Henry Clay, of Kentucky; James A. Bayard, of Delaware, a State which was formerly classed with the Southern States; and John Marshall, of Virginia, afterwards Chief Justice.

To my mind these statesmen from the South took the correct view of the object and purpose of bankruptcy legislation. They were also ably supported by many of the illustrious statesmen of the North, the Commonwealth of Massachusetts furnishing as advocates of a uniform system of bankruptcy Rufus Choate, John Quincy Adams, Daniel Webster, Harrison Gray Otis, Samuel Sewell, Caleb Cushing, and Robert C. Winthrop; and Massachusetts has been conspicuously in favor of bankruptcy legislation, not because she favors a bill simply for the relief of poor debtors, but because, as a commercial State, she regards some system of uniform bankruptcy as absolutely essential to the prosperity of the country.

Now, what is the real purpose of a bankruptcy law? It certainly is not confined to furnishing relief to the debtor alone. The commerce of every nation is built up of great credits, and, as has been very properly said, "Great credits produce great debts." It is said that more than 90 per cent of traders ultimately fail, and have to compromise or settle with their creditors. The commercial world well knows that the great majority of men engaged in commerce sooner or later will meet with reverses, and that their assets must of necessity be distributed among their debtors.

As long ago as 1799 James A. Bayard, then a Representative from Delaware in Congress, said, "The necessity of a bankrupt law results wherever a nation is in any considerable degree commercial. No commercial people can be well governed without it. Wherever there is an extensive commerce, extensive credits must be necessarily given;" and in 1803, Mr. Bayard, speaking on the same subject, which was bankruptcy, said, "The commercial world can not exist without such an act. Its necessity arises from the nature of trade, and does not belong to other classes of citizens. It is founded on the principle that commerce is built on great credits; and great credits produce great debts. Owing to the risks arising from these and other circumstances, the most diligent and honorable merchant may be ruined without committing any fault. Not so as to the other classes of citizens; either the cultivators of the soil, the mechanics, or those who follow a liberal profession. They live on the profits of their labor, not on profits derived from credit. These circumstances make a bankrupt law necessary to the merchants. The insolvent law is an ample provision for others." And he argued that he considered it absolutely essential that there should be one uniform rule coextensive with the Union, so that the merchant in one State should fully understand the laws of every State in which he was called upon to do business.

Daniel Webster in 1824 referred to the State insolvency laws then in existence as "twenty-four different and clashing systems," and said that he was fully of the opinion that in a country like ours, so commercial, with so many States interlinked by commercial relations, that bankruptcy laws ought to be uniform through all the States and of course established under the authority of the National Government. Now, the foundation principle of the bankruptcy law is the administration and the distribution of the property of the bankrupt and incidentally the relief of the debtor. If a debtor is embarrassed and can not continue in business, of course everyone will agree that his property should be distributed among his creditors upon some equitable basis.

While there may be certain debts that should be treated as preferred debts, the great bulk of the property should be distributed pro rata among the creditors. More than that, in a country as commercial as is this the law for the distribution of the bankrupt's estate should be uniform in all parts of the Union. Prior to the enactment of the present bankruptcy law in 1898, nearly every State of the Union had what is known as insolvency laws, and there were no two States where the law was identical. In many of the States the debtor was permitted, acting within the provisions of the law, to prefer relatives and such other creditors as he saw fit to designate. In some States there existed no insolvency law, and the first creditor who obtained an attachment of the debtor's property secured his entire claim, and the creditor who came last received nothing. In other words, we had what Mr. Webster described—45 "different and clashing systems," where the domestic creditor had a great advantage over the foreign creditor.

Now, the practical effect of that system was greatly to restrict commercial credit. The merchant in Massachusetts, for instance, would hesitate to sell goods to the trader residing in a State where they had no bankruptcy or insolvency law which permitted the home creditors to make attachments of the property

to the exclusion of the foreign creditor, or to the trader residing in a State the laws of which permitted him to make preference in favor of his own relatives and certain favored creditors residing in that State. So that the practical effect of the State insolvent law was to greatly restrict credit and also to render business upon credit far more hazardous than it would be where a uniform system of bankruptcy was in force.

The very fact that the United States is a Union composed of 45 States renders it particularly important that there should be a uniform system for the distribution of the estates of the bankrupt. In other words, our system renders it possible for the different States to enact laws so unlike as to greatly interfere with commerce between the different States, which is carried on upon credit. The commercial interests of this country fully understand the importance of continuing in force a bankrupt law, and if the present bankruptcy law were amended as recommended by the Committee on Judiciary, it would be not only entirely satisfactory to the great commercial interests of this country, but would be a law that would be absolutely just both to the creditor and the debtor. The argument that a bankruptcy law is intended as an oppression to the debtor is without foundation. The very fact that the great proportion of bankruptcy petitions are voluntary is conclusive proof that the debtor avails himself of the advantages of the law for his own relief.

In the absence of some national law it is impossible for a debtor to obtain relief from all his creditors unless they reside within the State where the debtor resides. If they reside outside of the State they are not affected by the debtor's discharge. Under the provisions of the present law the debtor's discharge, if he should be an honest debtor, relieves him of all his debts wherever in the United States his creditors may reside. So that the present law operates not only to make an equitable distribution of the assets, but also to furnish a proper and adequate relief to the bankrupt.

We have, however, reached that stage in commercial progress where the bankruptcy law becomes absolutely necessary, not alone for the relief of the debtor, but for the equitable distribution of the assets among his creditors; and it would certainly be most remarkable if this nation, which to-day must fairly be regarded as the most important of the commercial nations of the world, should be willing to dispense with a system which is so absolutely necessary for the commercial prosperity of our people.

In the last sixty years the American people have constructed and are now operating 180,000 miles of railroad—enough in length to reach around the globe more than seven times. They have invested in this gigantic system nearly twelve billions of dollars, or about one-eighth of the entire property of the country. This railway system has brought the people into commercial relations with each other and the freight rates have reached that point where it is possible for the manufacturer and the merchant in any one State to compete with the manufacturer and the merchant in any other State, The very fact that it costs less than three-fourths of one cent to move a ton of freight one mile renders it possible to carry on competition at long distances. The result of this great transportation system has been to build up a tremendous interstate commerce between the different parts of the country and this commerce has rendered it absolutely necessary to do business on large credit.

Now, the merchant in New England is perfectly willing to trade with the merchant in the South and in the West, provided there is some uniform system for the distribution of the estate of the debtor in case he meets with reverses in business and his estate has to be distributed.

State lines ought not to change commercial conditions, and particularly conditions which of necessity must affect the question of credit. I do not believe that there is to-day any strong sentiment in any State in this Union in favor of the repeal of the present law.

Mr. James Monroe Olmstead, a learned and distinguished member of the Boston bar, in a very able article entitled "Bankruptcy as a commercial regulation," which appeared recently in the Harvard Law Review, very pertinently says that—

> There would seem to be as much sense in asking for a repeal of the interstate-commerce law, patent laws, and postal law, all of which are authorized by the same section of the Constitution, which provides for "uniform laws on the subject of bankruptcies throughout the United States." Certainly bankruptcy legislation vitally affects the interests of the commercial and debtor and creditor classes quite as much as any of these other subjects, which do not appear to invite constant attack. If, however, the administrative or distributive function of the law is made prominent, permanency and stability—both jewels in legislation—will be the result, and thus the objects of the framers of the Constitution in securing uniformity throughout the nation in this branch of commerce will be always realized.

In the Fifty-third Congress, while the Torrey bill, so called, was under discussion, Representative Dingley, of Maine, speaking in advocacy of the enactment of some bankruptcy law uses the following language:

> In the early history of this country, before interstate commerce had been developed to the extent that it has within recent years, before the construction of railroads and telegraphs and the growth of the intimate business relations now existing between every part of this country, which makes Texas commercially as near to New York and New York as near to San Francisco as Philadelphia was to Pittsburg seventy-five years ago, we can see in the development of the means of communication a reason, a necessity for national bankruptcy legislation that did not exist fifty or seventy-five years ago. We have become a great nation commercially as well as politically. Every part of this country is commercially linked with every other part. The merchant in New England is dealing every day with the merchant in New Orleans and Galveston. The merchant in St. Paul is selling to and purchasing from the merchant of Boston every day. State lines have been broken down, commercially, in the progress of this nation.

There can be no question but that the time has passed for any serious consideration of the repeal of all bankruptcy legislation. The time has come when the commercial interest of this country insists upon some national uniform bankruptcy law. More than 90 per cent of the merchants, manufacturers, and professional men of the country who have expressed themselves upon this subject favor the continuance of some bankruptcy law. The amendments which have been submitted by the committee have met with the cordial approval of all business men. The only question that is now before us, Mr. Speaker, is the question whether the present law will be repealed or whether the present law shall continue in force and be amended to meet the wishes of the business community. The American people demand the continuation of bankruptcy law and demand its amendment in the manner recommended by the committee. If the present law be so amended, I have no question but that it will remain in force permanently, and that our people will have the same views of the necessity and importance of a national law on this subject as has been taken by the great commercial nations of England and France.

To allow the present law to be repealed and the reinstatement of the insolvency laws of the different States would be decidedly a step backward, and one that would be directly in opposition to the sentiment of the business interests of this country. The law is not in any way opposed to what is popularly known as State rights. When the States were admitted into the Union they came in under a Constitution which authorized Congress to "establish uniform laws upon the subject of bankruptcy throughout the United States." In other words, when they accepted the Constitution they had reason to suppose that Congress would exercise the authority vested in it by the Constitution and establish a uniform system of bankruptcy.

It has been urged upon the floor to-day that the continuance of this law interferes with the rights of the several States. Certainly the States when they came into the Union must have assumed that the question of regulating bankruptcy would be exercised by the nation and not by the States. The State has no right to enact bankruptcy or insolvency laws except when Congress has failed to exercise the authority vested in it by the Constitution. State lines ought not to be commercial lines. While they are political lines they ought not to interfere with the commercial relations of the people. As years go on we shall take a far broader view of this question, and we shall ultimately all of us reach the conclusion that commerce will be better promoted by uniform national laws than by State laws which conflict with each other.

Civil Government for the Philippine Islands.

SPEECH

OF

HON. HENRY ALLEN COOPER,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 19, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (S. 2295) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes—

Mr. COOPER of Wisconsin said:

Mr. CHAIRMAN: The cession of the Philippine Islands to the United States was one of the events which mark the beginning of a new era in the history of mankind. However considered, it is in its every aspect and relation of momentous, world-wide significance. It has at once and inevitably brought the United States forward as one of the commanding figures in the arena of world politics. We led the diplomacy of the world in China in a recent crisis in international affairs, and we had that signal opportunity, we rendered that great service to humanity, because the fortunes of war had given us possession of the Philippine Archipelago.

Upon its purely commercial side, the fact that the United States of America, with its unrivaled industrial power and possibilities, is now located at the very gateway of the Orient must enter into every consideration of the great question of trade supremacy in

Asia, a portion of the earth which discerning minds everywhere perceive is to be the scene of the world's commercial conflicts in the future. And it would not be difficult for one who, from this point of view, has given thought to the possibilities of the situation to occupy more time than can be accorded him in this debate in a discussion of the effects which the possession of the archipelago by the United States may reasonably be expected to have in the coming world-struggle to conquer the markets of the East. For when these wonderfully fertile islands have felt the full effect of modern methods, when railroads have been constructed and highways built; when, with the development of their rich resources. trade shall revive from its long sleep, and the people be busy, prosperous, and happy, as busy and prosperous people always are; when in the fullness of time—and the time will not be long—Manila shall become a city of half a million or three-quarters of a million of people, with its great harbor perfected so that it may accommodate the shipping of the world certain to seek it; then, unquestionably, the possession of these islands by the United States will be a source of inestimable advantage to the nation in its efforts to extend trade and commerce in the Orient.

But, sir, to look upon the cession of the Philippines as a mere commercial transaction, however broad and comprehensive in scope, which may result in financial profit to the United States, is, after all, to take a selfish and belittling view of a great opportunity. For, Mr. Chairman, it is an opportunity, a transcendent opportunity, far above and beyond any mere struggle for trade. We must, we do justify our entry into world politics and our attitude toward the archipelago and its inhabitants upon broader, higher ground than that the islands will help us to get more dollars in Asia. Duty is not mercenary. We are in the Philippines, sir, to discharge a duty, a duty which we owe to ourselves, to the people of the archipelago, and to the cause of civil liberty everywhere throughout the earth. We are in the islands, and, despite all harsh utterances to the contrary—there have been many of these of late—we are there for no other purpose than to set wider the bounds of freedom, to secure liberty and opportunity and all the benefits of the best of modern civilizations for a downtrodden race to whom, through hopeless centuries, these blessings have been denied, and in the place of an ancient, decrepit monarchy and the divine right of kings to establish the invincible young republic and the inalienable rights of man. [Loud applause.]

This is the high, the sacred mission, which, in the course of human events and under the providence of God, the United States is called upon to perform. On distant shores, in the immediate presence—at the very door—of oriental despotism, and under circumstances so conspicuous and commanding that our work and its results shall forever be seen of men, this Republic is laying the foundations for a new order of things. No other event, sir, since the nation-saving civil war, so brings to mind and justifies the prophetic saying of the great Scotchman: "The world is all so changed; so much that seemed vigorous has sunk decrepit, so much that was not is beginning to be! What sounds are these, new in our centuries? Behold democracy announcing that she is born and will envelop the whole world!"

Heretofore, Mr. Chairman, our occupation of the Philippine Archipelago has been purely military, under the direction of the President of the United States as Commander in Chief of the Army and Navy. The ratification of the treaty did not change the status. Our occupation continued to be military after that event as it was before. Now Congress is about to assume control and enact general legislation for the islands. At the outset, we are confronted by two questions: First, what can we do?—a question of law. Second, what ought we to do?—a question of policy, or of constructive legislation; or, it may be said, of constructive statesmanship.

The first question, What can we do? involves an interpretation of the treaty of Paris. Under and subject to the Constitution, the treaty has become the "supreme law of the land." Manifestly, then, the first and most important question concerning this "supreme law" is as to how to interpret it. The treaty contains a provision not known to any other treaty to which the United States has been a party—a provision which reserves to Congress the authority to determine the political status and civil rights of the native inhabitants of the ceded territory. This provision, new to the politics of the United States, aroused a serious conflict of opinion, in which the people and the press, irrespective of previous party affiliations, took sides. The question finally resolved itself into this: Does the Constitution, of its own force, extend to the ceded territory? Fortunately, Mr. Chairman, the Constitution itself provides for a court where this gravely important question could be taken for authoritative decision. In that court this question has been heard, and answered in opinions which awakened a profound interest among our own people, and attracted the attention of the civilized world.

Much has been said and written in denunciation of these opinions. I am not here to criticise nor to indulge in fulsome eulogy of the Supreme Court of the United States, nor to say that it is always the duty of the citizens of this Republic to accord to its decisions their unreasoning approval. That court is not infallible. Its members are human. But, sir, it is a noble tribunal. No other court has ever had such power; no other court could have proven more worthy of the sacred trust. During all the generations of its existence it has had the deep-seated respect and confidence of the people; and to-day, in its personnel, in the high character of the justices, and in their devotion to public duty, the people believe it to be worthy of its honorable traditions. [Applause.]

That court in the case of De Lima against Bidwell decided only one proposition, viz, that upon the ratification of the treaty the ceded territory ceased to be "foreign" within the meaning of the Dingley Act, which provides for a tariff on all goods coming to the United States from "foreign" countries. That decision is of importance in relation to one provision of the pending bill. In Downes *v.* Bidwell the court decided that the Constitution did not of its own force extend to the islands ceded by the treaty of Paris; that these islands did not become a part of the United States within the meaning of the clause of the Constitution which requires uniformity in tariffs, duties, and excises; and that in legislating for the islands, Congress is bound only by the express prohibitions of the Constitution and by those implied prohibitions or fundamental limitations in favor of personal rights which are formulated in the Constitution, or are to be inferred from the nature of our Government and its institutions.

Mr. Chairman, from the bill presented by the minority I assume that our opponents have abandoned their former views concerning the constitutional question, and that we are all now in accord as to what, under the Constitution and the treaty, Congress can lawfully do—that is, what legislation it may lawfully enact—for the Philippines. I assume this because the minority propose that the United States shall surrender all title to the islands and abandon them to their inhabitants. Heretofore our opponents have steadfastly maintained that the Constitution is in full force and effect in the Philippines. But, sir, if the Constitution be in full force and effect in the islands we can not surrender our title and abandon them, except compelled to do so by force of arms.

Gentlemen upon the other side can not successfully urge that the disposing clause of the Constitution will suffice to relieve them of this dilemma. I refer to the clause which gives to Congress the power "to dispose of and to make all needful rules and regulations respecting the territory and other property" of the United States. This precise point has received attention in the Supreme Court. In Downes against Bidwell, Mr. Justice White—who upon this particular proposition undoubtedly voices the opinions of at least eight of the nine justices—says:

> In view, however, of the relations of the Territories to the Government of the United States at the time of the adoption of the Constitution and the solemn pledge then existing that they should forever "remain a part of the confederacy of the United States of America," I can not resist the belief that *the theory that the disposing clause relates as well to a relinquishment or cession of sovereignty as to a mere transfer of rights of property is altogether erroneous.* * * * The argument is that citizenship of the United States is precarious and fleeting, subject to be sold at any moment like any other property. * * * It is impossible for me to say at one and the same time that territory is an integral part of the United States protected by the Constitution, and yet the safeguards, privileges, rights, and immunities which arise from this situation are so ephemeral in their character that by a mere act of sale they may be destroyed. * * * *If the treaty with Spain incorporated all the territory ceded into the United States, it resulted that the millions of people to whom that treaty related were * * * indissolubly made a part of our common country.*
>
> Undoubtedly the thought that under the Constitution power to dispose of people and territory, and thus to annihilate the rights of American citizens, was contrary to the conception of the Constitution entertained by Washington and Jefferson.

It is therefore evident that gentlemen upon the other side must either change their former views and agree with the court as to the law, or abandon their bill.

But as of course the minority bill is not to be abandoned, I am justified in assuming that both majority and minority are in accord upon the law and upon the question of what Congress can do and that in legislating for the Philippines we are bound only by the prohibitions and limitations which I have before mentioned.

This brings us to the second question, What ought Congress to do?—a question of practical sense, good judgment, sound policy.

Mr. Chairman, to the candid investigator of the problem of the Philippines it is plainly apparent that mere partisanship can have but little rightful place in its discussion. A glance at the record makes this clear. Therefore, before beginning the discussion of the pending bill, I invite attention to the record of events leading up to the present situation. I shall make this review as brief as possible, but I deem it important, for it will not only conduce to a frame of mind proper to the consideration of this transcendently important question, but by refreshing our recollection of what has been done we shall be the better prepared to determine what we ought now to do.

The treaty of peace between the United States and Spain was signed at Paris on the 10th of December, 1898, and soon thereafter sent by the President to the Senate for ratification. No member of the House has forgotten the long and arduous struggle which ensued. Nor was the contest confined to the Senate. Everywhere throughout the country it raged. People and press, irrespective of party, took sides. Opponents of the treaty denounced it and denounced the Republican Administration which negotiated it, as a hundred years before other men had heaped denunciation upon Thomas Jefferson and the Democratic Administration which negotiated the treaty by which we acquired the territory of Louisiana. A century before, men had vehemently declared that the territory of Louisiana was a mere trackless wilderness, inhabited only by wild beasts and wilder savages; that it must remain a home for beasts and savages for untold generations, and that a treaty which proposed to annex such a territory to the Republic of the United States was "unconstitutional," "improvident," "dangerous," "wicked."

Possibly the members of the House can think of some of the other adjectives which were hurled at that treaty. [Laughter.] Just as in 1867, other men, equally sincere but equally mistaken, declared that another wise and far-seeing statesman, William H. Seward, was guilty of a shameful proposal to squander the public moneys for the purchase of a mere barren desert of rock and ice, unfit for human habitation or for any other civilized purpose, when he negotiated the treaty by which we acquired the rich Territory of Alaska. So, while this treaty of Paris was pending, men said that the Philippine Islands were a mere tropical jungle, where white men could not and would not wish to live. Yesterday I talked with a white man who with his wife has for two years been residing in Mindanao. He said that he had never suffered so much from the climate anywhere as he had in Washington within the last two weeks and that he wanted to get back as quickly as possible. [Laughter.] He has friends who were born in the Philippines and who have lived there all their lives.

Here is a dispatch from General Chaffee to the War Department, which I find in the Washington Post. It is under date of May 12. General Chaffee, in speaking of the lake country in the island of Mindanao, says:

> The lake country is beautiful and more suitable for the occupancy of Americans than any other part of the archipelago; *elevation, soil, and climate perfect, comparing favorably with any valley of the Alleghenies.*

The opponents of the treaty also said that if we accepted these islands they would be a source of endless expense to the United States—always an unbearable burden upon the public Treasury. How facts can annihilate theories! The Taft Commission in their last report to the War Department set forth that after paying all expenses of the insular government and making considerable appropriations for purely naval and military purposes, after paying for the insular police, after appropriating $1,000,000 in gold to help along the improvement of Manila Harbor, after appropriating $1,000,000 in gold to build highways—they still had in the insular treasury available for appropriation more than $5,000,000, gold values.

In order that I may be exact about this—to satisfy those who are so solicitous lest it may cost us something to do our duty, and to relieve them of all anxiety—I will read from the report of the Taft Commission. After reciting the fact that they have appropriated these $2,000,000 and more in gold for the purposes I have specified, they say:

> At the date of this report, September 30, 1901, there is in the treasury, available for appropriation, the sum of $5,106,518.46, gold values.

Mark this, if gentlemen are afraid that it will cost us something—

> Meanwhile all the expenses of the insular government have been met and very large appropriations have been made out of the insular treasury during that period for purely military and naval purposes.

After making these expenditures for military and naval purposes there is still a working balance. Observe the next statement:

> It is only a reasonable and conservative statement to say that *under any proper management of the finances of the islands the revenues will be at all times sufficient to meet all ordinary expenses of good administration and to make considerable appropriations for large general improvements and the erection of public works.*

That is not all. I ask careful attention to what follows:

> In the ordinary current expenses of the island we include for the purposes of the statement now made the establishment and maintenance of an efficient police system for the preservation of good order and of necessary means of communication between the islands for the transportation of mails and public officials and revenue-customs inspection. *There is no reason why the Government of the United States should ever be called upon to contribute toward the support of the insular government, and within a comparatively few years after the complete restoration of good order, it is entirely reasonable to anticipate that the revenues in the islands will be sufficient to pay all the expenses incurred for troops, native or American, and insular police sufficient to maintain good order throughout the whole archipelago.*

That is on page 111 of the last report of the Philippine Commission.

Mr. COCHRAN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield to the gentleman from Missouri?

Mr. COOPER of Wisconsin. I do.

Mr. COCHRAN. I would ask the gentleman if that would not be applying precisely the system applied by Great Britain in India?

Mr. COOPER of Wisconsin. What? For the islands to pay their own expenses as they go along? I think it would. I do not see the relevancy of the question.

Mr. COCHRAN. It is simply to show that we are acting precisely as England does in its establishment of colonial governments——

Mr. COOPER of Wisconsin. Oh, that is a non sequitur. I was simply replying to the assertion that the islands would always be a financial burden to this Government, and I read from this report to prove that they will be entirely self-supporting. Now, the gentleman goes into the general subject of England's colonial governments.

Mr. SHAFROTH. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield to the gentleman from Colorado?

Mr. COOPER of Wisconsin. Yes; I yield.

Mr. SHAFROTH. Is there any claim that the insular government has paid any material part of the expenses of the soldiers in the Philippine Islands?

Mr. COOPER of Wisconsin. They have paid $1,000,000 in gold toward highway construction carried on under military supervision. They appropriated that sum out of the insular treasury, and some of the highways were constructed largely for the benefit of the Army.

Mr. SHAFROTH. Has the gentleman got the figures as to how much during the last fiscal year?

Mr. COOPER of Wisconsin. And we are also substituting native police for the military with this insular fund all the time.

Mr. SHAFROTH. Has the gentleman the figures as to how much the United States Army has cost over there out of the Treasury of the United States? When the gentleman is talking about the islands paying, it seems to me the total cost ought to be taken into consideration.

Mr. STEELE. I would ask the gentleman from Colorado what the cost of the Army is in Colorado? [Laughter.]

Mr. SHAFROTH. We do not need any army there.

Mr. KAHN. Mr. Chairman, if the gentleman will permit, I will state that the Navy Department has some 14 small gunboats that were paid for out of the insular funds, and the Quartermaster's Department has a large fleet of tugs and launches which were paid for also out of these funds.

Mr. COOPER of Wisconsin. Mr. Chairman, the gentlemen on the other side evidently do not comprehend the purport of the statement made by the Commission which I have just read. The Commission do not say that they are paying the present expenses of the army for the suppression of rebellion—nothing of the sort, but they say: "*There is no reason why the Government of the United States should ever be called upon to contribute toward the support of the insular government, and within a comparatively few years after the complete restoration of good order it is entirely reasonable to anticipate that the revenues of the island will be sufficient to pay all expenses incurred for troops, native or American, and insular police sufficient to maintain good order throughout the whole archipelago.*"

Mr. COCHRAN. Mr. Chairman——

The CHAIRMAN. Does the gentleman yield?

Mr. COOPER of Wisconsin. Mr. Chairman, this is a voluminous subject, and a voluminous bill, and I want to get through as quickly as possible so as to permit other members to speak. The gentleman can get his time upon the other side.

I have just been informed by the gentleman from Connecticut [Mr. HILL] that on June 15 the insular treasury contained over eleven millions in various kinds of money, or nearly $6,000,000 in gold values.

Mr. Chairman, the opponents of the treaty said also that come what might those islands never should be accepted by the United States; the treaty must not be confirmed. On the other hand, the friends of the treaty declared that it ought to be, must be ratified for reasons which made the path of duty clear. First, the United States must never consent that Spain retain the possession of the islands—she must give them up. Second, the United States must never consent that Spain shall cede them to Russia or China or to any other power. Third, the Filipinos can not themselves maintain free self-government, and to relinquish the islands to their inhabitants would mean simply bloodshed, civil war, anarchy, and their early seizure and partition by the powers.

Therefore, because as a matter of right the United States could not permit Spain to retain the islands, because as a matter of right we could not permit Spain to cede them to any other country, and

because the Filipinos could not govern themselves, there was but one alternative, but one right thing to do, and the United States was bound by every consideration of honor and of duty—duty to itself, to other nations, to the people of the Philippines, and to the cause of humanity around the world—to ratify the treaty and accept the cession of the archipelago. [Applause on the Republican side.] Here was the issue over which the contest raged.

Mr. THAYER. Mr. Chairman——

The CHAIRMAN. Does the gentleman from Wisconsin yield?

Mr. COOPER of Wisconsin. I do.

Mr. THAYER. I should like to ask the gentleman how it has been demonstrated that that people are unable to control and govern themselves?

Mr. COOPER of Wisconsin. I shall demonstrate it by the unanimous testimony of witnesses who, I think, are competent to testify.

Mr. THAYER. Soldiers?

Mr. COOPER of Wisconsin. Not at all; by civilians, and by no one more than by Mr. Schurman, whom you will undoubtedly quote.

Mr. PAYNE. Soldiers are not incompetent witnesses.

Mr. COOPER of Wisconsin. Soldiers are not incompetent witnesses.

Mr. TAWNEY. Only in the estimation of Democrats, that is all.

Mr. COOPER of Wisconsin, No; I will not say that.

Mr. Chairman, I have stated the issue over which the contest occurred. For weeks the result hung wavering. Finally, as it approached its culmination, with the result still in grave doubt, the then recognized leader of the Democratic party came to this city of Washington, and, precipitating himself into the midst of the conflict, rallied his party associates to the support of the treaty. His efforts were most effective, and, at last, on February 6, 1899, the treaty was saved, but saved by a very narrow margin and saved only by the aid of Democratic votes. Distinguished Senatorial opponents of ratification, men of both parties, have repeatedly and publicly declared—and their statements are not doubted, I apprehend, by any person familiar with the circumstances—that but for the arduous efforts of the Democratic leader the treaty would have been rejected.

These well-known facts are in themselves interesting and instructive; but, Mr. Chairman, they derive their chief significance from the further fact that after these arduous and successful labors of the Democratic leader to ratify the treaty, to annex the Philippines, and to expand the United States, the national Democratic party, with full knowledge of all these things, set the seal of approval upon his annexation and expansion record by renominating him as their candidate for the Presidency, and, as the newspapers said, with unanimity and amid great enthusiasm. [Applause on the Republican side.]

Mr. BALL of Texas and Mr. THAYER rose.

The CHAIRMAN. Does the gentleman yield?

Mr. COOPER of Wisconsin. Well, if the gentlemen desire to dispute this statement of facts, I will yield; but if they wish to indulge in a general line of comment, I object.

Mr. THAYER. I am not here to defend the gentleman to whom the gentleman from Wisconsin refers. He is amply able to defend himself; but I want to ask the gentleman if it was not generally tacitly understood that when that treaty was ratified the Filipinos were to be treated as we were treating the Cubans?

Mr. COOPER of Wisconsin. Mr. Chairman, what was tacitly understood by men who did not put themselves upon record in an authoritative way at that time does not enter into this question. The only question is as to what are the inevitable consequences of a treaty ratified by both parties, as the record shows. [Applause on the Republican side.]

Mr. Chairman, how is it possible justly to attribute the inevitable results, the complications, the perplexities resulting from a treaty thus ratified by the votes of men of both parties, solely to the Republican party, and why has it been deemed necessary to attempt to drag this great business of our island possessions down to the level of mere partisan politics? Both parties voted to begin the war; both parties voted to ratify the treaty which ended it. Both parties voted to appropriate $20,000,000 out of the National Treasury to meet one of the stipulations of the treaty. Both parties voted to raise money to support armies to enforce American sovereignty upon American soil in the Philippines [applause on the Republican side]—made American soil by that treaty. Both parties are in honor bound as Americans to assume their share of the responsibility for the obligations which the treaty imposes.

Mr. SHAFROTH. Will the gentleman yield to a question there?

Mr. COOPER of Wisconsin. Yes, sir.

Mr. SHAFROTH. Did not President McKinley in the message that accompanied the treaty, which was sent to the Senate, use, in substance, these words:

Do not let us discuss the question now. After the ratification of the treaty is the time to discuss what disposition we shall make of the Philippine Islands.

Mr. COOPER of Wisconsin. I do not know, but I think that is sound, and I am disposed to indorse it if President McKinley said it.

Mr. DALZELL. What of it?

Mr. OLMSTED. That is what we are doing now.

Mr. COOPER of Wisconsin. That is what we are doing now. The treaty has been ratified.

Mr. SHAFROTH. Yes; but you object to a discussion of the question of giving them independence, or what disposition shall be made of the Philippine Islands.

Mr. COOPER of Wisconsin. This is not a Republican problem, this is not a Democratic problem, this is a great national problem, which concerns all of our people everywhere, and vitally concerns the good name and fame of this Republic now and forever. [Applause on the Republican side.] A national problem which for its proper solution demands that it be considered in a national spirit—a spirit which recognizes the magnitude of the task and its essential nobility, and looks not to any mere party advantage, but only to the welfare and happiness of the Filipino people and to the maintenance, inviolate, of the national honor. [Loud applause.] And yet, sir——

Mr. VANDIVER. Will the gentleman yield to a question?

Mr. COOPER of Wisconsin. I am glad to yield, with a qualification.

Mr. VANDIVER. Then in the interest of fairness—I am sure the gentleman does not wish to be unfair—when he says that both parties ratified the treaty, would it not be fair to connect along with that statement another statement as to how many of each party in the Senate ratified that treaty. And furthermore, in connection with that, the further question, that while it may be true that in the Senate a number of Democrats voted with the Republicans to ratify the treaty, it was done with the understanding that a resolution then pending in the Senate was to be considered, and sufficient pledges were supposed to have already been made to pass it, pledging this country to treat the people of those islands as they were to treat Cuba.

Mr. COOPER of Wisconsin. As to the proportion of the Democracy who contributed to the support of this treaty, I should say about 90 per cent, because William J. Bryan was in favor of it, and because the Democracy nominated him as their candidate for President after they knew that he had used his great influence to secure its ratification.

Mr. VANDIVER. When you say Democrats voted to ratify the treaty, it seems to me reasonable to expect and to require you to show the fact, and where the Democratic party ratified that treaty. Did not the majority of the Democrats in the Senate vote against it?

Mr. COOPER of Wisconsin. Mr. Chairman——

Mr. VANDIVER. Answer the question.

Mr. COOPER of Wisconsin. Yes; I think so. I said by the aid of Democratic votes. The Democratic party ratified it when they made Mr. Bryan their candidate for the Presidency, and when the Democrats of this House voted the $20,000,000.

Mr. VANDIVER. I beg the gentleman's pardon. I did not vote for it. They did not all vote for it.

Mr. OLMSTED. What proportion did not?

Mr. VANDIVER. I am one of those who did not vote for it.

Mr. COOPER of Wisconsin. Mr. Chairman, I am compelled to decline to yield further.

Mr. VANDIVER. Well, then, let the gentleman be fair in his statement.

The CHAIRMAN. The gentleman declines to yield.

Mr. COOPER of Wisconsin. Notwithstanding these indisputable facts, Mr. Chairman, from the day on which the treaty was ratified our whole policy in the Philippines has been the object of the most relentless, violent, virulent, partisan attack. Every day we are told that but for Republican sins of omission and commission we should to-day have no island problems to agitate the public mind, and the ship of state would be sailing on tranquil seas. Every day we are told that our whole policy in the Philippine Archipelago is in flagrant violation of every principle of liberty, "unjust and cruel" to the people of the islands, and "injurious and dishonoring" to American citizenship. That is practically what the minority of the Committee on Insular Affairs report that they believe. A "policy"—not an isolated instance of cruelty here and there, but a "policy"—a Republican "policy," deliberately entered upon, unjust, cruel. and dishonoring to American citizenship.

Sir, these charges demand attention. They constitute a fierce indictment. What is there to justify them? Our policy in the

Philippine Islands was inaugurated by William McKinley. From its inception to the month of September last he was directly responsible for it. Was William McKinley the author of a policy of cruelty dishonoring to his countrymen? Will history try him upon that indictment and write "guilty" opposite his name? Is that to be its judgment upon the most important work in the life of the man who of all the men of his generation was the best beloved? [Applause.] Is the name of William McKinley to be stricken from the pantheon of great Americans and enrolled among the names of the despoilers of liberty—the enemies of mankind? What man believes it? And yet it must be true if these charges against our "policy" in the Philippines be true. What man believes it? What man believes it who knew him in this life? What man believes it who ever looked into his noble countenance, illumined as always it was by the consciousness of duty performed? [Loud applause.] What man believes it, now that William McKinley has gone to his long home?

Sir, what is this policy? Let us see what justification there may be for the attacks upon it.

Mr. VANDIVER. Will the gentleman yield for another question?

Mr. COOPER of Wisconsin. I beg the gentleman to excuse me. I must decline to yield further. I have not the time to do so.

What is there to justify these attacks upon our Philippine policy? As I have said, when the treaty of Paris was signed our military forces were occupying the islands under the direction of the President as Commander in Chief of the Army and Navy, and until Congress should act, it was his sworn duty to maintain absolute control of affairs in the archipelago. He did not usurp this authority. It was forced upon the President by the Constitution and the laws. He could not evade the tremendous power and responsibility. He was compelled to assume both the power and the responsibility and to do his duty. He did not fail. Here, sir, we touch upon our policy in the Philippines, in the directions which the President gave to the commander of our military forces:

The military commander of the United States is enjoined to make known to the inhabitants of the Philippine Islands that in succeeding to the sovereignty of Spain, in severing the political relations of the inhabitants and in establishing a new political power, the authority of the United States is to be exerted for the securing of the persons and property of the people of the islands, and for the confirmation of all their private rights and relations. It will be the duty of the commander of the forces of occupation to announce and proclaim in the most public manner, that we come not as invaders or conquerors, but as friends, to protect the natives in their homes, in their employments, and in their personal and religious rights.

President McKinley was not content to rest with these instructions to our military commander. He was intent on superseding, without needless delay, the arbitrary processes of military government by the milder methods of civil administration. He felt, as he himself said, that the treaty committed the Filipinos to the generous sympathies, the guiding hand, the uplifting education, "not of their American masters, but of their American emancipators," and he sought without delay to extend these blessings. Accordingly, in January, 1899, while the treaty was still pending in the Senate, he appointed the first Philippine Commission, in order, as he declared, promptly to secure an effective and generous protection of life and property to the inhabitants.

What, under the circumstances, would any President of any party have done?

Is fault found with the personnel of that Commission? Schurman, the president of a great college; Dewey, an illustrious officer of the Navy; Otis, a distinguished officer of the Army; Worcester and Denby, civilians of high attainments and of wide experience in public affairs? No blame can attach to their appointment.

The President gave instructions to the Schurman Commission, which are found on page 185 of their report. I shall read only an extract from them, but will incorporate other portions in the RECORD.

In the performance of this duty, the commissioners are enjoined to meet at the earliest possible day in the city of Manila and to announce, by a public proclamation, their presence and the mission intrusted to them, carefully setting forth that, while the military government already proclaimed is to be maintained and continued so long as necessity may require, efforts will be made to alleviate the burden of taxation, to establish industrial and commercial prosperity, and to provide for the safety of persons and of property by such means as may be found conducive to these ends.

* * * It is my desire that * * * the commissioners exercise due respect for all the ideals, customs, and institutions of the tribes which compose the population, emphasizing upon all occasions the just and beneficent intentions of the Government of the United States.

The President then expresses the hope that the commissioners may be received in a manner due to them as "bearers of the good will, protection, and the richest blessings of a liberating rather than a conquering nation."

Mr. Chairman, is fault found with these instructions? What instructions would a Democratic President have given? What policy would he have inaugurated?

We wish to know at what point in this record of honorable endeavor and honorable achievement these charges are supposed to find their justification. [Applause.] At what exact point? That Commission made a study of the islands and their inhabitants and submitted their report—an admirable document—to the President. I will not take time to read much from it, but I desire to read a little of what they said, particularly because of the position taken by our friends on the other side.

The Commission say on page 175:

Deplorable as war is, the one in which we are engaged was unavoidable by us. We were attacked by a bold, adventurous, and enthusiastic army. No alternative was left to us except ignominious retreat. It is not to be conceived of that any American would have sanctioned the surrender of Manila to the insurgents. Our obligations to other nations and to the friendly Filipinos and to ourselves and our flag demanded that force should be met by force. *Whatever the future of the Philippines may be, there is no course open to us now except the prosecution of the war until the insurgents are reduced to submission.* The Commission is of the opinion that there has been no time since the destruction of the Spanish squadron by Admiral Dewey when it was possible to withdraw our forces from the islands either with honor to ourselves or with safety to the inhabitants.

Should our power by any fatality—

fatality is a strong word, gentlemen. "Fatality" means that this was and is a matter of life or death. And, sir, it was and is a matter of life or death to the welfare of the Filipino people—

should our power by any fatality be withdrawn, the Commission believe that the government of the Philippines would speedily lapse into anarchy, which would excuse if it did not necessitate the intervention of other powers and the eventual division of the islands among them. *Only through American occupation, therefore, is the idea of a free, self-governing, and united Philippine commonwealth at all conceivable.* And the indispensable need from the Filipino point of view of maintaining American sovereignty over the archipelago is recognized by all intelligent Filipinos, and even by those insurgents who desire an American protectorate. The latter, it is true, would take the revenues and leave us the responsibilities. *Nevertheless, they recognize the indubitable fact that the Filipinos can not stand alone.*

Here, from competent witnesses, we have an answer to the question as to whether the Filipinos can govern themselves.

Thus the situation of the Filipinos coincides with the dictates of national honor in forbidding our abandonment of the archipelago. We can not from any point of view escape the responsibilities of government which our sovereignty entails; and the Commission is strongly persuaded that the performance of our national duty will prove the greatest blessing to the people of the Philippine Islands.

[Applause.]

Mr. JONES of Virginia. As a matter of fact, I want to ask the gentleman——

The CHAIRMAN. Does the gentleman from Wisconsin yield?

Mr. COOPER of Wisconsin. This is the only time that I can yield.

Mr. JONES of Virginia. I want to ask the gentleman whether he meant to say that Professor Schurman was on the ground at the time the war commenced——

Mr. COOPER of Wisconsin. No; I did not say that; but before the report was written he had been on the ground and had seen numbers of witnesses—hundreds of them.

Mr. JONES of Virginia. I believe your expression was that the statement was made by a witness who was upon the ground at the time.

Mr. COOPER of Wisconsin. I said he knew the facts and had been on the ground. That is what I meant to say. Everybody understands that he was not on the ground at the time referred to, but shortly after.

Mr. THAYER. Is it not true that Admiral Dewey stated that the Filipinos are more competent for self-government than the Cubans?

The CHAIRMAN. Does the gentleman from Wisconsin yield?

Mr. COOPER of Wisconsin. Mr. Chairman, our opponents declare that we are responsible for the origin of the war. I am not going to stop to discuss that; I do not deem it to be really germane at this time. We all deeply regret that the war began; we all rejoice that it is ended. For, sir, as a war it is ended. The flames of insurrection have died away. Here and there at remote and widely scattered places—as I see this morning is the case in Mindanao—there may be an occasional snapping among the embers of revolt, but the war as a war is over.

Mr. THAYER rose.

Mr. COOPER of Wisconsin. I am compelled to decline to yield.

Mr. THAYER. You have 40,000 troops there.

Mr. COOPER of Wisconsin. In view of the misstatement just made, unintentionally, of course, I will say that we have not 40,000 troops there.

Mr. THAYER. How many?

Mr. COOPER of Wisconsin. Twenty-three thousand, and that number is at once to be reduced to 18,000. Orders for the reduction have been issued. But that is a minor error in view of some other misstatements that have been made in discussing this question. It is a matter of only about one-half. At one time two years ago our forces in the islands numbered within a few hundred of 70,000.

Mr. Chairman, the war as a war is ended. Its origin is therefore

not of the first importance at this time. While it might be interesting to enter upon an analysis of the various causes by which it was precipitated, or of the events out of which it developed, there are other things connected with the Philippine problem, the consideration of which to-day will, in a broad and patriotic sense, be found far more profitable for us and for the people of the islands.

Our duty is not merely to mourn because the war came, not merely to grieve over the irrevocable past, and with each recurring political campaign to raise our voices in lamentation because events gone beyond recall were not ordered as we think that they ought to have been. Our duty is with the present and with facts as they are. Our duty is to examine with care and candor the circumstances and conditions of to-day, and those probable to develop in the future, and then, with such ability as we may command, enact laws to meet them. But, inasmuch as these charges concerning the origin of the war are being constantly reiterated, I desire briefly to notice the testimony relating to them. It is conflicting and voluminous, but, as is usual in such cases, there are a few vitally important portions of the evidence by which an intelligent and honest juror can interpret all of the rest and thus reach a conclusion as to the truth. I want to notice one or two of these. The first is a dispatch of Admiral Dewey sent six or seven months before the treaty was ratified, five months before the treaty was signed, weeks before even the protocol was agreed upon, before anybody knew what the terms of peace were to be, while we were actively engaged in the war with Spain:

July 26, 1898—

Remember the date. The war broke out February 4, 1899. This is dated July 26, 1898.

Merritt—

General Merritt had been ordered to the Philippines to take command of the land forces—

Merritt arrived yesterday. Situation is most critical at Manila. The Spanish may surrender at any moment. Merritt's most difficult problem will be how to deal with the insurgents under Aguinaldo—

He had only been back there about two months—

who have become aggressive and even threatening toward our army.

Threatening us while we were fighting Spain! They had abundant opportunity in the ensuing seven months to get prepared to fight, had they not? The testimony of Mr. Felipe Buencamino on this point is very significant. Mr. Buencamino was at one time secretary of state under Aguinaldo. I read from the testimony taken before the Committee on Insular Affairs:

The CHAIRMAN. Where were you at the time of the fighting, or when the war, so called, began, on the 4th of February, 1899?—

Mr. BUENCAMINO. In Malolos.

The CHAIRMAN. How far from the scene of conflict?

Mr. BUENCAMINO. Thirty-six miles.

The CHAIRMAN. Prior to the outbreak at that time you were secretary of state of Aguinaldo's cabinet?

Mr. BUENCAMINO. I was not at that time secretary of state, but director of justice in the army. Mabini was at that time secretary of state.

The CHAIRMAN. Do you know whether prior to that outbreak there had been preparations made by the insurgents themselves for the beginning of hostilities?

Mr. BUENCAMINO. There had been preparations made.

The CHAIRMAN. For how long a time prior to that outbreak had the preparations been in progress?

Mr. BUENCAMINO. Since October, 1898. At that time they received a telegram from Agoncillo, from Washington, stating that he had not been received by President McKinley as the representative of the Philippine government and that we should make preparations for war.

The CHAIRMAN. Of what did those preparations consist?

Mr. BUENCAMINO. The preparations were to organize the army through General Luna; organize volunteer corps in Manila in order to assist the insurgents the day of the breaking out of hostilities, and in order to get the American forces between two fires.

The CHAIRMAN. Were the preparations in Manila secret?

Mr. BUENCAMINO. Yes; they were secret.

The CHAIRMAN. What was the intention of the insurgents after those preparations were completed; what did they intend to do?

Mr. BUENCAMINO. The Philippine government established by Aguinaldo at Malolos was established because Aguinaldo had promised that the United States would recognize their independence, giving in evidence the statement of Admiral Dewey—

Of course we all know that Admiral Dewey has long since repeatedly denied that statement—

and we all gathered around Aguinaldo under the hope of obtaining the realization of that promise, and in order to obtain a confirmation of this proclamation to us from the lips of President McKinley himself we sent Agoncillo to Washington, and as this telegram was sent from Washington saying that we would be deceived, preparations for war were at once begun, having lost confidence in the Americans on account of the error committed by Aguinaldo in stating that the promise had been made by Admiral Dewey of recognizing the Philippine independence by the United States.

The CHAIRMAN. The Filipinos have understood since that Admiral Dewey has denied that statement?

Mr. BUENCAMINO. At that time Aguinaldo was their idol and they had great faith in him, as he was the only one who had relations with Admiral Dewey; they thought he was telling the truth.

The CHAIRMAN. Is it not a fact that the only one of the Filipino leaders who had personal dealings with Admiral Dewey was Aguinaldo?

Mr. BUENCAMINO. Yes, sir; he was the only one.

The CHAIRMAN. And no one else among the Filipino leaders pretended that he knew anything of this alleged promise of Admiral Dewey except Aguinaldo?

Mr. BUENCAMINO. General Alexandrino has also said this, that he was on a transport with Admiral Dewey, coming with his squadron from Hongkong to Manila.

The CHAIRMAN. The Filipinos now understand that Admiral Dewey denies that statement, and that Admiral Dewey in his report says he obeyed the instructions of President McKinley not to make any such promise or alliance?

Mr. BUENCAMINO. They know that now.

The CHAIRMAN. Do you know how the hostilities began on the night of the 4th of February?

Mr. BUENCAMINO. I know, because I was charged by General Aguinaldo to prepare the necessary papers showing the manner of the breaking out of hostilities.

The CHAIRMAN. Just describe that as you understand it.

Mr. BUENCAMINO. On the 4th of February the towns of Santa Ana and San Juan del Monte were under the command of General Ricarte and Colonel San Miguel. On this day those two commanders abandoned their posts and went to a ball, leaving a major by the name of Gray, about 26 years of age, very young and without experience, in command of about 1,800 troops. They extended along the eastern part of the outskirts of Manila and were about half a mile distant from the American troops. We took the deposition of this major, who said that about 9 o'clock p. m. the sergeant of the guard came to his headquarters and told him that a party of American troops desired to cross their lines or were attempting to cross their lines, which was opposed by the Philippine guards. At this time a shot was heard; that he could not say for certain whether the shot came from the American command or from the men under his command, but he ran to the place from which the shot appeared to come, and seeing the American troops in a belligerent attitude gave an order to fire. That is the way the hostilities began.

The CHAIRMAN. The major gave the order to fire upon the American troops?

Mr. BUENCAMINO. Yes, sir; he gave the first order to fire upon the American troops.

The CHAIRMAN. *Then the beginning of hostilities was premature?*

Mr. BUENCAMINO. *On our part it was premature, because three engineering corps and four cavalry troops had still to be organized.*

The CHAIRMAN. *If the engineering corps and the cavalry troops had been afterwards organized, what was the intention of the insurgents under Aguinaldo?*

Mr. BUENCAMINO. *The intention was to attack the Americans.*

Remember Dewey's dispatch of the previous July.

The CHAIRMAN. So then the opening of hostilities was simply premature. The hostilities were to be begun by Aguinaldo, anyway, a little later?

Mr. BUENCAMINO. Yes, sir. The basis of this was a lack of confidence in the Americans.

What kind of a "republic" had Aguinaldo established? I am amazed that men of candor, and many of them, I think, are men of candor, will persist in asserting that we destroyed a "republic."

Mr. GILBERT. What would they have been fighting for if we had promised them independence?

Mr. COOPER of Wisconsin. Prior to that insurrection the Filipinos had never demanded independence. Rizal, the greatest of that people—and if any man is entitled to be called the Washington of the Filipinos, he is the man—in his books and other writings expressly made his demand for reforms on the basis of a continued union with Spain. A few minutes ago I declined to yield.

Mr. GILBERT. Oh, I beg the gentleman's pardon. I did not know that he had.

Mr. COOPER of Wisconsin. Mr. Chairman, Aguinaldo was in China on the 1st of May, when Dewey sunk the ships. He came back nineteen days after that event, and the preposterous statement is made that between the 19th of May and the 26th of July—two months—they had elections throughout an archipelago which it takes weeks merely to traverse, got out notices for an election to establish a "republic," had such an election, the first of its kind in all their history, in a country where there are over 70 dialects—20 in one island—and where, as is the uncontradicted testimony, people speaking one dialect can not understand those 20 miles away speaking another dialect! Yet, in that very short time they had a republic established, with Aguinaldo at the head of it! And it is charged that we destroyed it! Let us see what kind of a "republic" it was.

Mr. WILLIAMS of Mississippi. Mr. Chairman——

Mr. COOPER of Wisconsin. Mr. Chairman, I am again compelled to decline to yield. The testimony of Mr. Buencamino is that General Luna was in charge of the secret conspiracy in the city of Manila. Luna was the lieutenant-general of the Filipino army. I read from the testimony:

Aguinaldo objected to many of his orders, and that was the reason for the differences between them. Two bands were then formed within the Philippine army, one for General Luna and the other for General Aguinaldo.

Remember that this was a "republic!"

Then he says that Luna went out with a lot of troops looking for another officer, and finally Aguinaldo took 4,000 troops and went over to Luna's house; and the witness adds that it has always been a mystery, but it so happened that on the same day, at practically the same hour, Luna was 75 miles away with his bodyguard at Aguinaldo's house, calling upon Aguinaldo. [Laughter.] Luna was killed at the door of Aguinaldo's house, with Aguinaldo's wife and mother upstairs.

What was the effect of that assassination?

Everybody lost confidence in this insurrection by this occurrence. It can be said that from that time the insurrection had morally died and since that time I have felt that we could never be independent unless we had an independence such as some small State.

* * * * * * * *

Mr. OLMSTED. Is it not apparent from the fact that he was accompanied

only by his staff, that General Luna's visit to Aguinaldo's house was not hostile?

Mr. BUENCAMINO. Yes, sir; it appears to be.

Mr. OLMSTED. Has any explanation been given of the fact that he did meet his death in Aguinaldo's house?

Mr. BUENCAMINO. Nothing at all.

Mr. OLMSTED. Has any attempt been made to learn of the reason of his being put to death?

Mr. BUENCAMINO. Nothing, to my knowledge. *I do not know if Aguinaldo made any investigation, but at that time there was such secrecy that none of us could speak a word about it, fearing that we would suffer the same fate, and for that reason the Philippine insurrection morally died; there was no more confidence in anybody.*

Very important testimony bearing upon this question of Aguinaldo's "republic" is given by the Schurman Commission in its report. Soon after the insurrection began Aguinaldo sent two emissaries, with whom the Commission had long interviews.

The Commission say (p. 7):

They (the emissaries) were told that, after a careful consideration and study, *it was the opinion of the Commission that the Filipino people were not capable of independent self-government, and that independence, for which some of them said they were fighting, was, in the opinion of the Commission, an ideal at present impossible, not only because of their unfitness for it, but because of their inability to preserve it among the nations if it were granted.*

Arguelles said they were beginning to realize this fact; that moreover no nation had been willing to recognize them as independent or as belligerent, and thereupon *he stated that he was authorized to say, on behalf of Aguinaldo, that they were not fighting for the sovereignty of the island, but for the honor of the army.* Being asked, "You accept, then, the sovereignty of the United States?" he replied, "Yes; we do." Being asked if he was duly authorized to make that statement also, he replied that he was.

Here were Aguinaldo's emissaries admitting that they were fighting not for independence, for they knew that they could not maintain it, but "for the honor of the army." If they had been promised independence by Admiral Dewey, himself a member of the Commission to whom they were speaking, it is unaccountable that they should have made this admission.

On page 172 of the same report Admiral Dewey says:

No alliance of any kind was entered into with Aguinaldo, nor was any promise of independence made to him then or at any other time.

Mr. Buencamino has prepared a statement of great importance concerning Aguinaldo's "republic" and the Malolos congress, which I will not stop to read. I will print it in the RECORD as an appendix to my remarks.

Finally, as to the origin of the war, the Schurman Commission say (p. 175):

Deplorable as war is, the one in which we are engaged was unavoidable by us. We were attacked by a bold, adventurous, and enthusiastic army. No alternative was left us except ignominious retreat.

Mr. Chairman, another of these charges is that our soldiers in the Philippines have been guilty of cruelty. Grant that in exceptional instances this charge may be true, yet it is also unquestionably true that on the whole the conduct of the war on our part has been humane and even generous. It is also absolutely true that these acts of inhumanity, if any, were not in pursuance of the policy of this Government, but in direct violation of its whole purpose and spirit. They are such acts, if any there have been, as seem inevitably to follow in the wake of war, however righteous. Deplorable as they are, severely as they must be condemned and punished, nevertheless, Mr. Chairman, it is not well to attempt unduly to exaggerate their character and importance.

In discussing them, we must not lose all sense of proportion. We must not permit these instances of wrongdoing to blind us to the noble, the beneficent work done in the islands by our military and civil officers, nor make us unable to see the great tide of civilization and freedom setting toward the archipelago. [Applause on the Republican side.] Men are wont to magnify such occurrences. Some of this exaggeration is attributable to mere partisanship—to what Daniel Webster called the "headlong and plunging spirit of party devotion"—some of it to an improper sense of proportion. Mr. Chairman, we sent officers to Cuba and they became embezzlers. Is it therefore to be said that the whole policy of this Government in Cuba was a policy of embezzlement?

Mr. WILLIAMS of Mississippi. Mr. Chairman, may I ask——

Mr. COOPER of Wisconsin. I am compelled to decline to yield.

The CHAIRMAN. The gentleman declines to yield.

Mr. COOPER of Wisconsin. I have already yielded as I think quite liberally. I know and highly respect the gentleman from Mississippi, and would be very glad to accommodate him, but I must, to use a common expression, "draw the line" now, in order that I may complete my remarks and give others an opportunity to speak. The gentleman will have abundant opportunity, and I know that we shall all listen with great pleasure to his speech, because ever since our acquaintance began here I have deemed him one of the ablest debaters in the House.

But to return to these charges of cruelty. Mr. Chairman, if 5 physicians or 50 physicians break the law or violate the ethics of their calling, we do not therefore denounce the whole medical profession. If 5 priests or ministers or 50 priests or ministers disregard the tenets of their faith and the laws of their country, we do not therefore denounce the church itself, nor heap maledictions upon the whole system of Christianity. The American people, without distinction of party, denounce whatever may have been done in violation of the laws of war, and demand the prompt and rigorous punishment of the guilty; but earnest as is their demand for justice, deep as is their sorrow and indignation if wrongful acts have been committed, they, nevertheless, see clearly the true proportion of things, and they do not despair. These exceptional instances of cruelty—unfortunate, deplorable as they are—this or that lapse from duty, none of these, nor all of them combined, can suffice truly to characterize the policy of this Government as a policy of cruelty. Men are prone to gaze upon details and defects, to the forgetting of their true proportions.

Some men can think so long and feel so bad about George Washington's profanity at the battle of Monmouth as entirely to forget the glorious, the stupendous total of his life. So every day we see persons who are willing, even anxious, to exaggerate these unfortunate incidents in the Philippines, and utterly to overlook the successful establishment there of local self-government in 37 provinces and 800 municipalities; to forget the system of universal education, the separation of church and state, the lightening of the burden of taxation, and the blessed feeling of security and confidence and contentment coming like a benediction everywhere into the hearts of this long distracted people. [Applause on the Republican side.]

No intelligent mind has ever thought that there would be no mistakes by Americans in the Philippines, no local failures, no individual wrongdoing. On the contrary, thoughtful men have expected these things and brave men are not to be disheartened by them. For, sir, they know that though these mishappenings may retard the accomplishment of the Government's policy, nevertheless they are in no sense a part of the policy itself. The American people know that if, alas, it be true that a few soldiers have forgotten the duty which they owe to their country, disregarded the policy of their Government, violated the letter and spirit of their instructions, shocked the feelings of their countrymen and brought dishonor upon themselves, they have not brought—they can not bring—dishonor upon the American Army; they have not brought—they can not bring—dishonor upon the Administration of William McKinley, nor upon the Administration of Theodore Roosevelt, now and always striving to the utmost to do its duty, its whole duty, and nothing but its duty in the Philippines, and honorably, gloriously succeeding. [Applause on the Republican side.]

The American people know that if, alas, it be true that these soldiers have brought dishonor upon themselves, they have not tarnished the good name and fame of Merritt, and Otis, and MacArthur, and Chaffee, nor heaped aught of obloquy upon the memory of Lawton [applause] and Logan and their heroic comrades, the "unreturning brave" who have poured out their life-blood to consecrate the Philippines to freedom. [Applause on the Republican side.]

Mr. Chairman, another of these charges is that we are imperialists. In the Washington Post of yesterday I observed that a State convention had formally resolved (a member of the House was there, and he also formally resolved) that our Philippine policy is "imperialism." The House knows how they say that word, "imperialism," and follow it with, "Your liberties and the liberties of your fellow-citizens are in danger! The Republican party is trampling on the Constitution of your country, the palladium of your liberties!" Right there they get great applause. [Laughter.] You can always secure applause from our Democratic friends when you tell them that you think there is something the matter with their palladium. [Laughter.]

I read this morning in a newspaper a quotation from another paper calling the President "The man on horseback," and intimating that our liberties are in danger also from that source. It is not the first time that a President has been characterized in language akin to that. They say that we are establishing a government in these islands without the "consent of the governed;" then they become alarmed and resolve that we ought not to do it. This is not the first time that we have heard the cry of "imperialism" and "consent of the governed" in this country.

On June 28, 1864, in the Congress of the United States a man arose and said—I quote from the Globe, volume 35, part 4, page 3298—

Great God, a free American citizen—

He was thinking of Vallandigham—

A free American citizen arrested by telegraph—a telegraphic dispatch from the seat of the Emperor at the other end of the Avenue!

Remember who was the "Emperor" in the White House on that day.

In the same year (1864) a great political party adopted a national platform containing this:

Resolved, That under the pretense of military necessity or war power higher than the Constitution, *the Constitution itself has been disregarded in every part, and public liberty and private rights alike trodden down.*

I think that is the correct accent. [Laughter.]

Resolved, That the administrative usurpation of extraordinary and dangerous powers not granted by the Constitution—

That also has a familiar sound.

Is calculated to prevent—

What—

the perpetuation of a government deriving its just powers *from the consent of the governed.*

[Laughter.]

Who was the "Emperor at the other end of the Avenue?" Who was he? A man who was the embodiment of all the holiest aspirations of the New World. A man who by his greatness and his goodness, his love, his charity, his magnanimity, his consecration, rescued this nation from destruction, and saved liberty to the world, and dying, left a memory upon which his countrymen and the friends of human rights everywhere throughout the earth will never cease to call down the benedictions of heaven—the emancipator of a race—Freedom's apostle and her martyr—Abraham Lincoln. [Loud and long continued applause.]

Yet a great party declared that he was a tyrant dangerous to the liberties of the people. Is there anywhere on earth to-day a man willing to indorse that sentiment? No, Mr. Chairman, our friends on the other side do not approve it, nobody in the world approves it now. I simply cite it as an instance to show how easy it is for patriotic and sincere men in times of high party excitement to make charges against political opponents which the facts subsequently do not justify.

Mr. Chairman, this is not the only time our friends have been frightened. They had another alarming attack of "imperialism" only four years later. Only four years later they were profoundly impressed by the idea that Freedom was in danger and called for her sons. Let me read from their platform of 1868:

We arraign—

Usually, you know, when they think of us they "view with alarm." [Laughter.] But this time they "arraign."

We arraign the radical party for its disregard of right and the unparalleled oppression and tyranny which have marked its course.

This picture is all in high lights.

Under its repeated assaults the pillars of the Government are rocking on their base.

[Laughter.]

My baseball friends will observe that the "pillars" are all on one base.

Pillars are rocking on their base.

Somebody ought to get out. [Laughter]. Mark what follows:

And should it succeed in November next—

That is, in November, 1868—

and elect its President we will meet as a subject and conquered people.

[Laughter.]

This is sad. [Laughter.]

We will meet as a subject and conquered people amid the ruins of liberty and the scattered fragments of the Constitution.

[Great laughter and applause on the Republican side.]

I desire in all sincerity to ask if anybody ever heard of anything more terrible than that? [Laughter.] There have been some most remarkable things in party platforms in the United States. Men of all parties have indulged in some strange, weird utterances; but I give it as my opinion, after mature, deliberate, prayerful consideration, that this plank in the platform of 1868 is entitled to first place for unique, picturesque, masterful—asininity: [Great laughter and applause on the Republican side.]

A subject and conquered people amid the ruins of liberty and the scattered fragments of the Constitution!

Everything, everything going straight to irretrievable destruction—back to the "reign of Chaos and old Night!" Despite this dreadful warning and prophecy, the American people persisted in their headlong course, elected that candidate and inaugurated him President, and that is the reason—members of the House may never have known it before—but that is the reason why ever since that time we have been "a subject and conquered people," groping around "amid the ruins of liberty," and stubbing our toes on "the scattered fragments of the Constitution." [Great laughter and applause.]

What man was it who, in that year, made a great political party go about whispering through white lips and chattering teeth, "Ruins of liberty!" "Scattered fragments of the Constitution!" Who was he? His name springs unbidden from every tongue. He was the silent man of Belmont and Donelson and Shiloh and Vicksburg and the Wilderness and Appomattox, the marvelous story of whose marvelous life the world knows by heart, from his lowly cradle amid the forest trees of Ohio to the cottage on the heights of Mount MacGregor, whence, at the summons of the only conquerer he ever knew, his great soul went forth to meet his God. [Loud applause.]

The thunder of his guns has rolled away into the silence of the ages, and now from his tomb on the banks of the Hudson there comes a voice like a low-breathed prayer continually appealing to all of his countrymen—"Let us have peace; let us have peace." [Applause.]

And yet they declared that to elect Grant meant ruin to the liberties of the people; that he was a tyrant who, like the conquerors of old, would "wade through slaughter to a throne, and shut the gates of mercy on mankind." Is there to-day anywhere on earth a man willing to indorse that sentiment?

Mr. Chairman, after the return of the Schurman Commission to the United States the next important step in the development of our Philippine policy was the appointment by President McKinley, in the spring of 1900, of the Taft Civil Commission, composed of William H. Taft, of Ohio; Luke I. Wright, of Tennessee; Dean C. Worcester, of Michigan; Henry C. Ide, of Vermont, and Bernard Moses, of California. I shall not stop to read the instructions given to this Commission. The House and the people became acquainted with these during the campaign of 1900. Nor shall I elaborate upon the really great work which it has done in the islands.

Between November of 1900 and April of the present year the Commission enacted 347 laws, or nearly one law for every three days. Among these are the municipal and provincial codes, each of which has more than 300 sections, and the code of civil procedure, which comprises more than 700 articles. The Commission has visited every portion of the archipelago; it has established civil government in 37 provinces and in 800 municipalities. These municipalities are autonomous, as that word is understood when applied to municipalities in the United States. The people elect their own officers and within limitations established by law fix their salaries; they measure their own taxes.

These provincial and municipal governments are proving most successful and also most useful in teaching the people self-government. Schools have been established, now attended by 200,000 children. Business is reviving, and everywhere there is a general rapidly improving condition among the people. All of these facts have of late been so frequently brought to the attention of the House that I will not further discuss them at this time. In this connection I will only add that no critic of our Philippine policy can, in justice, find fault with the personnel of the Taft Commission, with the instructions given it, or with the arduous and splendid work which it has done in the archipelago.

Mr. Chairman, I come now to the bills presented, repectively, by the majority and the minority of the Committee on Insular Affairs. The minority measure proposes that in four years the United States shall leave the islands; that regardless of what the situation may then be, and without regard to future consequences, the islands shall be abandoned to their inhabitants. As to this proposition of the minority, nothing else can be so effective as are the respective statements of the members of the Schurman Commission and of the Taft Commission. The Schurman Commission in their report (p. 103) say:

It is impossible, even approximately, to fix a time for the withdrawal of American sovereignty over the archipelago, as no one can foresee when the diverse peoples of the Philippine Islands may be molded together into a nationality capable of exercising all of the functions of independent self-government. They are certainly incapable of such a work to-day; whether in one or more generations they can be trained to it only the future can disclose. If American sovereignty over the archipelago should ever be relinquished, if all American authority should ever cease and determine, then the United States should renounce all obligations to foreign nations for the good conduct of the Filipinos.

The Commission evidently had in mind the obligations to other nations assumed by the United States in the treaty of Paris.

The Commission continues:

Undoubtedly, the raising of the American flag in the Philippine Islands has entailed great responsibility upon us; but to guarantee external protection while renouncing internal dominion, is no way of escaping from them; on the contrary, *while you pull down the flag, you only pile up difficulties.*

I commend this language of the Schurman Commission to all real friends of the Filipino people.

Governor Taft—than whom there is no person more competent to speak on this subject—gave most convincing testimony before the Senate committee respecting the proposition for the United States to abandon the islands. I will not stop to read his statement, but will insert it in my remarks at this point.

Governor TAFT. *I think the great evil to-day is the discussion of something that is utterly impossible of settlement to-day.* The thing the Filipino people need to-day is a stable government under the guidance of American control, teaching them what individual liberty is and training them to a knowledge of self-government, and when they have that, the question of what relations shall then exist between the islands and this country may be settled between them and the citizens of the United States.

But to attempt to decide in advance something that it is utterly impossible wisely to decide now, it seems to me, with deference to those who differ with me, very unreasonable.

* * * * * * *

Governor TAFT. It is quite possible, as we say in our report, that it may take a generation, or two generations; but no matter how long it is, it is, in my judgment, the duty of the United States to continue a government there which shall teach those people individual liberty, which shall lift them to a

point of civilization of which I believe they are capable, and which shall make them rise to call the name of the United States blessed.

I have thought over this subject a great deal; we have become intensely interested in the problem, and of course motives, the charge of which we can not avoid, are given to us in reaching such a conclusion; but if I ever was convinced of anything in my life it is that the problem which the United States there has is a great problem worthy of its solution, and which, when solved by establishing a stable government there under the guidance of American control, will redound to the honor and the benefit of this country, and I am proud to have to do with that work.

* * * * * * *

Governor TAFT. Nothing that can to-day be said to the Filipino people in the nature of a promise as to the form of government which may take place after an established stable government shall be formed could be otherwise than misleading to them and confusing in establishing that government.

It would at once begin the agitation among those who desire that separation to have that separation, because, in their opinion, they are fitted for it at once. It would drive away from the support of the stable government that conservative element who are strongly in favor of American guidance and control, because they would anticipate an early change.

They would think they would early be left without the support which the presence of the American Government necessarily gives, and the promise of something in the future, instead of helping to establish, would render unstable any government which was attempted to be established.

* * * * * * *

My proposition is that it is the duty of the United States to establish there a government suited to the present possibilities of the people, which shall gradually change, conferring more and more right upon the people to govern themselves, thus educating them in self-government, until their knowledge of government, their knowledge of individual liberty shall be such that further action may be taken either by giving them statehood or by making them a quasi-independent government like Canada and Australia, or, if they desire it, by independence.

My point, and the point I insist upon, if I may be pardoned for using that expression, is that the discussion to-day of independence, of statehood, of a colonial form of government, in the sense of a permanent relation of colony to mother country, is altogether aside from the questions which are now presented.

Those are, and those concern, the establishment of a firm and stable government in which the Filipino people shall learn self-government by exercising it partially.

* * * * * * *

Senator MCCOMAS. What would happen to them if we withdrew in this fashion?

Governor TAFT. *The personal hostility between leading Filipinos at times has been so great as to lead to bloody measures. How far they would be carried here I have no idea. That is conjectural.*

I should like to say, if I may, although I had not expected to come to this part of the discussion now, that it is a very logical and reasonable proposition on its face to say, Will not the insurrection come to an end; will not there be general peace and tranquillity if you promise to give these people independence when they shall be fitted for it? That proposition, put in that way, seems to have a great deal of force.

Practically the effect of such a promise would be exactly the opposite from that which the argument presupposes. The promise to give them independence when they are fit for it would be accepted by them as a promise to give them independence certainly during the lifetime of the present generation. *It would at once bring into a discussion of every issue the question whether now were not the people ready for independence.* It would drive out capital; prevent capital from coming there; and upon the investment of capital, the building of railroads, the enlargement of vision of the Filipino people, much of our hope of progress must depend.

In addition to that, by reason of the constant agitation as to the granting of this independence in a year or two years or three years or a decade, it would at once discourage the sincere efforts of the educated Filipinos who are with us to-day in building up a stable government. For those reasons I think that such a promise as that would be a great mistake.

Senator MCCOMAS. Could you, in deciding the question of leaving the sovereignty of the islands, determine now, from your several years' experience there, to which inhabitants you would leave it, with their rivalries and confusions of tongues?

Governor TAFT. Of course, if you left the islands to anybody you would leave them, I assume, to some sort of a committee or parliament, appointed or selected, who would be dominated probably by those whose violent methods have continued the guerrilla warfare; and that such a body could be created by proclamation within a reasonable time I have no doubt. *But that it would not constitute a stable government, that it would give rise to anarchy and division between the tribes and between individuals of power and force, I have no doubt.*

Mr. Chairman, there is another most important witness, one abundantly well qualified to testify on this abandonment proposition. I refer to Felipe Buencamino. At this point in my printed remarks I shall insert an extract from the testimony which he gave before the Committee on Insular Affairs. I hope that every member of the House will read it, because it sets forth very clearly the inevitable results which would follow our withdrawal from the archipelago.

Mr. BUENCAMINO. Self-government, according to my sad experience, not in theory, belongs only to people and nations who can inspire their neighbors with respect and consideration, because international life has become so closely united with national life that the distance between America and France, for example, may be compared to the distance between that gentleman and myself. Electricity and steam have cut down all distances, and consequently all countries are neighbors. The Philippines are now surrounded by the following countries:

On the Chinese Sea by China, Japan, England, and France, and if Russia continues, it will be nearer the Philippines than America, because there will only be a distance of twelve days between Port Arthur and Manila. On the south there is Australia, which is a rising nation. Then there are the Philippines themselves. We have British subjects, French subjects, and German subjects, who represent a capital of many millions of dollars. In the State Department here there are claims from the British Government for indemnity for damages caused with regard to a railroad in Manila. There are also claims of the German, Belgian, and Swiss Governments for damages incurred in Iloilo with regard to the bombardment of that town by the American squadron.

If the American Government should now abandon us and give us our own government, all these claims would go to the Philippines, probably each one backed up by a squadron. Let it be supposed that Aguinaldo established a free government under a system of independence, and he would have a conflict with any of the hundreds of these natives, because he has no idea of what the international responsibility would be. *Then we would have been an international conflict. Thus he would go on until we would extinguish ourselves forever, and we would suffer the fate of Samoa or of China. For all these reasons I have deduced the inadvisability of our being independent.*

This testimony, in the aggregate, disposes of the proposition of the minority that in four years we withdraw from the islands and abandon them to their inhabitants.

Before beginning a discussion of the provisions of the pending bill reported by the majority of the Committee on Insular Affairs, it is important to have a knowledge of the size of the territory in the Philippines which we have acquired and for which we propose to legislate. Mr. Chairman, if you were to take the northeast corner of the area which we secured by the treaty and put if at the intersection of latitude 45° north and 75° east, near Ogdensburg, N. Y.; then follow that degree of longitude to its point of intersection with latitude 28° north, in the ocean near Palatka, Fla.; then follow that parallel of latitude to the point where it intersects longitude 84° east, near Apalachicola, Fla.; then follow that degree of longitude north, passing immediately west of the west boundary of Ohio to the intersection of longitude 84° east and latitude 45° north, near Mackinaw, Mich.; then follow along latitude 45° north to the place of beginning, near Ogdensburg, N. Y., this would give a correct idea of the extent of territory included within the boundary lines of the Philippine Archipelago.

This, of course, includes land and water. The land area is larger than New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, and New Jersey combined. It is larger than New Jersey, Pennsylvania, and New York combined. The area of the archipelago is by several thousand square miles larger than the British Isles. It is nearly as large as Prussia, and ten times the size of the Netherlands. The whole area which I have described, from Ogdensburg around, includes the State of Pennsylvania, a large portion of the State of New York, a portion of New Jersey, all of Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, northern Florida, a large part of Kentucky and of Tennessee, all of Ohio, a large part of Michigan, and nearly all of the territory of Ontario, in Canada.

I shall not discuss separately each provision of the bill at this time, for as to many of its features there will be no contention here. Detailed discussion upon these may be reserved for the five-minute debate upon the bill by sections.

The bill differs in certain important features from the one which came to us from the Senate. The Committee on Insular Affairs, after a careful study of the Senate measure, which in many respects is a good one, and after much deliberation, concluded that it would be wise to introduce the House bill as a substitute amendment.

Nothing in the bill is of greater importance than the provision for a legislature. There is entire misapprehension in certain quarters as to the purport of this provision. It does not provide that the people of the Philippines shall immediately proceed to elect a legislature. We propose that before there is any election there must be general and complete peace in the provinces not inhabited by Moro or pagan tribes, which fact the Commission shall certify to the President.

That then the President, being satisfied of this, shall so certify to the Commission, and that the Commission shall thereupon proceed to take a census; and that when such census is completed, the Commission shall then take steps to carry out the provisions for an election by the people of the Philippines of a popular assembly to constitute the lower house of the Philippine legislature, of which the upper house is to be the Philippine Commission. So that the establishment of a legislature can not take place for a considerable time in the future. As I have said, the people of the Philippines are at present to elect only the lower house, just as the people of Porto Rico do to-day.

Here I am reminded that when the legislation for Porto Rico was pending, many gentlemen, with much of distrust in voice and manner, said to me that it would be a serious mistake for us to allow the people of that island to elect the lower house of their legislature. These fears, however, have all proven groundless, as the Porto Rican legislature has been a complete success, and to-day no one would suggest the doing away with it. But every day men say: "We must not give the Filipinos an elective lower house—it would be wrong to do it." Sir, it would be wrong for us not to do it.

Mr. Chairman, whether we keep or whether we relinquish the Philippine Islands, our duty is to instruct their people in the principles and practice of self-government. President McKinley recognized this duty very early. He was willing to allow the Filipino people to elect a lower house. This is evidenced by his telegram to the Schurman Commission which I will read:

MAY 5, 1899.

SCHURMAN, *Manila:*

You are authorized to propose that under the military power of the President, pending action of Congress, government of the Philippine Islands shall consist of a governor-general appointed by the President; cabinet appointed

by the governor-general; and *general advisory council elected by the people;* the qualifications of electors to be carefully considered and determined; and the governor-general to have an absolute veto.

The Schurman Commission also recognized this duty, and in their report recommended that these people be allowed to elect a lower house:

From the very outset—

This was the report of such men as Schurman, Dewey, Otis, Worcester, and Denby—

From the very outset it will be safe and desirable, in the opinion of the Commission, to extend to the Filipinos larger liberties of self-government than Jefferson approved of for the inhabitants of Louisiana * * * the Commission believes that *the people of these regions, under suitable property and educational qualifications, should be permitted to elect at least the members of the lower branch of the territorial legislature.*

After speaking of the horror which the Filipinos have for military government, because there has been instilled into their minds by the tyranny of Spain the feeling that military government is always cruel, the Commission continue:

The changes suggested in the Jeffersonian scheme of government for Louisiana, in the light of the ideals formulated by prominent and progressive Filipinos—that is, an elected lower house with an upper house half elected and half nominated—would practically convert the scheme into *a territorial government of the first class. And this, after due consideration of circumstances and conditions in the Philippines, is what the Commission earnestly recommends.*

Thus we have President McKinley and the Schurman Commission in favor of substantially the provision in the pending bill for a legislature.

Then we have the Taft Commission urging this policy with even more earnestness. That Commission is an admirable body of men. Fortunate indeed is the nation which can send such men on such a mission. Before reading from their report I ask gentlemen to remember what manner of man it is at the head of that Commission. Mr. Chairman, I have met many persons of distinction—not a few whose names have gone to the uttermost parts of the earth; but I give it as my opinion—and I do not wish to indulge in superlatives—that I have never met a rarer combination of intellect and conscience, of strength, gentleness, power, tact, and sound judgment, than is William H. Taft. [Loud applause.]

This Commission say:

It is perhaps right that we should express our views as to the wisest course for Congress to take at the coming session. We think that if Congress were to give the present government the benefit of Congressional authority to continue under the limitations which it now has by virtue of the President's instructions until January 1, 1904.

They desired the present form of government to continue until 1904; but we have changed that so as to make the establishing of the new government to depend upon a condition of general and complete peace.

This would probably give time enough to form a complete government as a going concern, and at the end of that time provision might well be made for a change in the form of government, so that it should consist of the civil governor, of a legislative council, and of a popular assembly chosen by a limited electorate. * * * The legislative council, to consist of Americans and Filipinos, should be created by appointment of the President. * * * *The popular assembly should * * * be elected from districts to be determined after a census of the islands.* * * *

We believe that this system would satisfy the Filipino people, because it would give them an opportunity to take part in the government through an electorate, and it would form a place in which public discussion could be effectively had. * * * What the Filipino people desire is a definite knowledge of the intention of Congress with respect to this country, and a passage of a law such as the one here indicated would place before them within a definite period the opportunity for that which they wish—a popular assembly. * * * We further recommend that by the act establishing the government above recommended provision be made for the selection after January 1, 1904, by a joint vote of the popular assembly and the executive council, of two delegates to represent the interests of these islands and the Filipino people before Congress and the Executive at Washington. * * * This is something which the Filipino people have very much at heart. We believe that such representation would be useful both to these islands and to the United States.

Every day we hear men declare that the people of the Philippines are "pirates," "barbarians," "savages," "incapable of true civilization." This has been said by a very prominent gentleman within the last two days. Newspapers of prominence—I do not refer to any published in this city—newspapers of prominence have repeatedly indorsed this view.

Mr. Chairman, I am not here to join in this cry so often heard that the Filipino people are "pirates," "savages," incapable of civilization. Such broad generalizations are always unwarranted. Leckie, in his history of religion in Europe, says that a majority of the harsh judgments of the world are attributable to a lack of imagination in those who utter them. He means, in other words, that they are unable to put themselves in the place of those whom they condemn.

Before we say that the Filipino people are barbarians and savages whose future is hopeless we should remember their past and not forget how largely human beings are the product of environment. Our own country affords abundant proof of this in the story of some of the immigrants who have come to our shores. With many good immigrants we have received many who were ignorant and depraved—ignorant and depraved, gentlemen, not from choice, but because of their surroundings and the laws under which they had been compelled to live. In their old homes they and their children were doomed to have their intellects dulled and moral natures perverted by lives of enforced squalor and degradation. Here we witness a wondrous transformation. Under the stimulus of American ideals and opportunities these poor immigrants become useful, honorable members of society, and their children indistinguishable from the descendants of the Pilgrims.

The Filipino people are largely the product of their environment, as we are of ours. Think of their history! For three hundred hopeless years they had seen Spanish officials treat office merely as a means by which to rob a helpless people. For three hundred years they had lived under a government which deliberately kept the masses of the people in ignorance, which deliberately sought to close to them every avenue of political or social preferment; a government under which it was well-nigh useless for a man even to attempt to acquire property, because his accumulations furnished only so much more of temptation and opportunity for the rapacity of government officials; a government which punished even the most respectful protest against its infamous exactions with banishment or death; a government under which the Filipinos had seen their friends, relatives, and neighbors who had dared to speak or write against the wrongs heaped upon them suddenly disappear, and the places which had once known them know them no more, forever; a government which did not hesitate, treacherously, to violate its solemn agreement made to end a rebellion into which its cruelties had driven these poor but desperate people; a government whose whole record in the Philippines is one almost uninterrupted story of conscienceless avarice, deceit, and tyranny.

For long and weary generations this oppression had lain heavy on the hearts of the Filipino people. Do you wonder that they are suspicious? Now that we have come to take the place of those formerly in authority, why should we expect their doubts to change to faith instantly, at the mere sight of us?

What the Filipinos think, what they feel, what they do, are only the natural results of what they have undergone. Yet, sir, despite this environment, this deprivation, this wrong, and contumely and outrage, this unfortunate race has given to the world not a few examples of intellectual and moral worth—men of height of mind and power of character.

Governor Taft, himself a distinguished lawyer and judge, said, in his testimony before the Committee on Insular Affairs, that the supreme court of the Philippine Islands will compare favorably with that of any State in the Union; and yet, of its seven members, three, including Arellano, the chief justice, are native Filipinos. These people have afforded other evidences of their claims to our sympathy and respectful consideration.

It has been said that if American institutions had done nothing else than furnish to the world the character of George Washington, "that alone would entitle them to the respect of mankind." So, sir, I say to all those who denounce the Filipinos indiscriminately as barbarians and savages, without possibility of a civilized future, that this despised race proved itself entitled to their respect and to the respect of mankind when it furnished to the world the character of José Rizal.

To understand the possibilities of that people, every American called upon to legislate for them should know the history of Rizal. He was born in the Philippines in 1861 of almost pure Tagalo blood. At 13 years of age he wrote a drama in verse, which was performed with success in Manila. In that city he captured all of the prizes at the Jesuit college. He had been educated by a Jesuit priest, and was himself all his life an ardent Catholic; but though he captured the prizes and showed such genius, he was an "Indian," and caste drove him away. He went from Manila to the University of Madrid. Here he took the degrees of doctor of philosophy and of doctor of medicine. He went to Germany, to France, and to England, becoming an adept in the language and the literature of those countries. He went to Austria, and in Vienna acquired skill and fame as an oculist. He wrote letters in behalf of his country, never advocating the independence of his people, but always asking for reforms. Then he went to China and from there volunteered to go to the Philippines in order, as he wrote, to "help heal the wounds reopened by the recent injustices." This was in 1891, when he was 30 years of age. He would go and help them if he could be promised immunity. He closes his letter to the governor general in this way:

I shall at least be conscious of having done all in my power while seeking the good of my country to preserve her union to Spain through a stable policy based upon justice and community of interests.

Under promise of protection he went to Manila. The promise was broken. He was arrested and banished to the island of Mindanao. There, says his biographer, he "helped the people in their schools, taught them agriculture, and treated their sick

(the poor without charge)." They all learned to love him. He was visited by people from abroad because of his skill as an oculist. One gentleman came to him from Hongkong with a foster child, the daughter of an Irish sergeant. Her name was Josephine Bracken, and Rizal, the banished patriot, and this girl became engaged to be married.

When the rebellion in Cuba broke out in 1895 he knew that his life was in danger, and to save it volunteered to go to Cuba as a surgeon in the Spanish army. The governor-general of the Philippines sent him a letter of recommendation, and with it he went to Spain. He was arrested immediately upon his arrival, put in prison, sent back to Manila, and tried for treason, though absolutely innocent, as the facts have since abundantly established. The witnesses who testified against him have, since our occupation, sworn that their evidence was wrung from them by torture. He was condemned to be shot the next day at dawn. On the day of his condemnation he was married to Josephine Bracken. She spent that night on her knees outside the prison walls. He received the ministrations of his church. In the morning, perfectly calm, he said, "What is death to me? I have sown; others are left to reap." Then he was shot.

On the night before his death he wrote a poem. I will read it, that the House may know what were the "last thoughts" of this "pirate," this "barbarian," this "savage" of a race "incapable of civilization!"

MY LAST THOUGHT.

Land I adore, farewell! thou land of the southern sun's choosing!
Pearl of the Orient seas! our forfeited Garden of Eden!
Joyous, I yield up for thee my sad life, and were it far brighter,
Young, rose-strewn, for thee and thy happiness still would I give it.
Far afield, in the din and rush of maddening battle,
Others have laid down their lives, nor wavered, nor paused in the giving.
What matters way or place—the cyprus, the lily, the laurel,
Gibbet or open field, the sword or inglorious torture—
When 'tis the hearth and the country that call for the life's immolation?

Dawn's faint lights bar the east, she smiles through the cowl of the darkness,
Just as I die. * * *

* * * * * * *

Vision I followed from far, desire that spurred on and consumed me!
Greeting! my parting soul cries, and greeting again! O my country!
Beautiful is it to fall, that the vision may rise to fulfillment,
Giving my life for thy life, and breathing thine air in the death throe;
Sweet to eternally sleep in thy lap, O land of enchantment!

If in the deep rich grass that covers my rest in thy bosom,
Some day thou seest upspring a lowly, tremulous blossom,
Lay there thy lips, 'tis my soul. * * *

* * * * * * *

And if at eventide a soul for my tranquil sleep prayeth,
Pray thou, too, O my fatherland! for my peaceful reposing;
Pray for those who go down to death through unspeakable torments;
Pray for those who remain to suffer torture in prison;
Pray for the bitter grief of our mothers, our widows, our orphans;
Oh, pray, too, for thyself, on the way to thy final redemption.

When our still dwelling place wraps night's dusky mantle about her,
Leaving the dead alone with the dead, to watch till the morning,
Break not our rest, and seek not to lay death's mystery open.
If now and then thou shouldst hear the string of a lute or a zithern,
Mine is the hand, dear country, and mine is the voice that is singing.

When my tomb, that all have forgot, no cross nor stone marketh,
There let the laborer guide his plow, there cleave the earth open.
So shall my ashes at last be one with thy hills and thy valleys.
Little 'twill matter, then, my country, that thou shouldst forget me!
I shall be air in thy streets, and I shall be space in thy meadows.
I shall be vibrant speech in thine ears, shall be fragrance and color,
Light and shout, and loved song, forever repeating my message.

Idolized fatherland, thou crown and deep of my sorrows,
Lovely Philippine isles, once again adieu! I am leaving
All with thee—my friends, my love. Where I go are no tyrants;
There one dies not for the cause of his faith, there God is the ruler.

Farewell, father and mother and brothers, dear friends of the fireside!
Thankful ye should be for me that I rest at the end of the long day.
Farewell, sweet, from the stranger's land, my joy and my comrade!
Farewell, dear ones, farewell! To die is to rest from our labors.

[Applause.]

Pirates! Barbarians! Savages! Incapable of civilization! How many of the civilized, Caucasian slanderers of his race, could ever be capable of thoughts like these, which on that awful night, as he sat alone amidst silence unbroken save by the rustling of the black plumes of the death angel at his side, poured from the soul of the martyred Filipino? Search the long and bloody roll of the world's martyred dead, and where—on what soil, under what sky—did Tyranny ever claim a nobler victim?

Sir, the future is not without hope for a people which, from the midst of such an environment, has furnished to the world a character so lofty and so pure as that of José Rizal.

Mr. Chairman, Governor Taft has given testimony before the Insular Committee as to the character and capacity of these people, which every member of the House should read. I regret that time prevents my reading it now. Governor Taft is also an earnest advocate of an elective lower house of a Filipino legislature. He has written me more than once on this subject. Here is a letter, written at Cincinnati on the eve of his departure for Rome:

CINCINNATI, OHIO, *May 13, 1902.*

MY DEAR MR. COOPER: I write to urge upon you that you use your influence with your committee and with your fellow Republicans in the House to insist upon that part of your bill for the government of the Philippine Islands which provides that after a census shall be taken the Commission shall have power and it shall be its duty to divide the Christian Filipino provinces into districts and call a general election for the selection of members of a popular assembly, and the further feature which provides that two delegates may be elected by that popular assembly and the Commission to come to Washington and represent the Filipino people before the Executive Departments and on the floor of the House.

I know that there are some members of our party that are fearful that this gives too great power to an electorate, many of whom were lately in insurrection, but we are convinced from our knowledge of the Filipino people that they will accept this extension of a share in the government as showing a desire on the part of the American people to elevate them and give them as large a measure of self-government as is possible. The qualification of voters will exclude the great mass of uneducated and ignorant Filipinos, and we feel confident that the delegates who would be elected would be friendly to the present government. The provision that the appropriations shall not fail because of any obstruction in the popular assembly will prevent its being made an instrument for choking the government. The Filipino people earnestly desire the popular assembly. It will be the means of educating them in self-government and will not, I believe, expose us to the danger which some members of our party fear.

I should very much regret having to go back to Manila without such a provision. We have studied the provision with great care and have deliberately reached the conclusion stated in our recommendation upon this point. What the Filipino people most desire are expressions of confidence and friendship from the American people, and compliance with the recommendations made by the Commission in this regard they would accept in that spirit.

You can use this letter in any way that you see fit.

Thanking you sincerely for your assistance and cooperation, and expressing to you the high appreciation that I have of the debt that the Filipino people owe to you for your energy and hard work in this matter, believe me, my dear Mr. COOPER,

Warmly and sincerely, yours,

WM. H. TAFT.

Hon. HENRY A. COOPER,
House of Representatives, Washington, D. C.

Mr. CRUMPACKER. Will my colleague allow me to ask him if the provision for the legislature applies to the archipelago or only to the Christian provinces?

Mr. COOPER of Wisconsin. I am obliged to the gentleman from Indiana for calling my attention to that provision. It does not apply to Mindanao. It applies only to the provinces not inhabited by Moros or other non-Christian tribes.

Mr. HILL. Will the gentleman kindly state the qualification of the franchise?

Mr. COOPER of Wisconsin. The existing law in regard to municipal electors applies. The elector must be 23 years of age. He must be able to speak, read, and write either the Spanish or the English language, or have held an office under the Spanish administration, or pay a tax amounting to $15 in gold, equivalent to 30 pesos, or own real property of the gold value of $250. Either of these qualifications will suffice. These are the qualifications recommended by the Commission.

Mr. Chairman, it is being said that we propose to open these islands to exploitation. Nothing could be further from the truth. Every right-minded man is opposed to their exploitation, and the bill proposes nothing of that kind. The franchise restrictions are stronger than those of the respective States in the American Union. They are very stringent, being practically those of the law in Porto Rico, which have proven so successful there. The gentleman from Virginia [Mr. JONES], to whose intelligence and high sense of justice I am glad to testify, has been in Porto Rico. He informed me that while there he was told by the officials of the island that their franchise law was an excellent statute, and that it had saved the island from exploitation. It came originally from the House. The original Porto Rican act which came from the Senate did not contain it, and it was put on as an amendment to another bill by the House.

This provision of the pending bill will prevent the exploitation of the Philippine Islands. A paper which was handed to me this morning says that one corporation can be organized and another corporation can be organized and a dozen corporations organized by the same people, and thus they will be enabled to exploit the islands. That is a mistake. The law expressly and absolutely prohibits any man from being connected with two corporations which are engaged in agriculture in the islands.

Mr. JONES of Virginia. I know my friend and colleague on the committee did not intend to misrepresent me when he made the statement just now as to what I said about the franchise law in Porto Rico. The gentleman, I am sure, will remember, that the point we were discussing was this: There was an effort made on the part of a certain party, promoters, through their legal representatives, who were very anxious to secure an amendment in the law. The law as I remember—I do not pretend to quote it accurately—provided that any franchise granted should be subject to alteration, repeal, or amendment by the Congress of the United States. This party of promoters desired that part of the law should be repealed. They did not want these franchises

subject to repeal by the Congress of the United States. They said that if the provision was left in there it would be impossible to secure capital to go down there to build the railroads that they wanted to build, that the people they represented would not supply capital if this provision was not repealed.

The committee refused to listen to that, and the impression was made on the committee that our governor down there and the council favored this change. When I visited Porto Rico I was informed by Governor Hunt that, on the contrary, the matter had been brought before the council and the council had entered an order disapproving of any change, which he read to me and which I spoke about to my friend the chairman of the committee when I returned. I also asked Governor Hunt in the future to send the orders of that sort to the Insular Committee or the chairman of the Insular Committee so that the committee might be informed about things that we were going into before Congress. That was the matter that I spoke of. I had no knowledge whether the people down there approved of the franchise law which we had passed or not. I do not remember now that anything was said on the subject; possibly it may have been discussed.

Mr. COOPER of Wisconsin. The gentleman from Virginia will recall the fact that he told me of his conversation with the officials of the Porto Rican government and that they did not want the franchise restrictions amended.

Mr. JONES of Virginia. In the respect that I have spoken of.

Mr. COOPER of Wisconsin. I asked him if the law was satisfactory, and the gentleman told me it was entirely so and had saved the island from exploitation.

Mr. JONES of Virginia. I heard no objection, but I was referring to matters as far as that part of the law was concerned, that the law limited the holding of agricultural land to 500 acres by corporations. I think we stood together on the proposition that 500 acres was enough for an agricultural corporation to hold, and I think it has practically, to a great extent, saved exploitation of the island by large corporations.

Mr. COOPER of Wisconsin. The bill provides that there shall be no stock watering, and that no stock shall be issued except for actual cash, or for property at a fair valuation equal to the par value of the stock issued. There shall be no stock or bond dividends, and in the case of public service corporations the law provides for the effective regulation of the charges thereof and for official inspection and regulation of their books and accounts, and for the payment of a reasonable percentage of the gross earnings into the treasury of the island or the province or the municipality within which the franchise is granted and exercised. No corporation shall be authorized to buy or sell real estate, or be permitted to own or hold real estate except such as may be necessary to enable it to carry on its business.

Mr. MARTIN. Mr. Chairman, may I ask the gentleman a question?

Mr. COOPER of Wisconsin. Certainly.

Mr. MARTIN. Referring to the legislative provision, about what proportion of the province, what proportion of the Filipino people will be included in the legislative provisions?

Mr. COOPER of Wisconsin. About 15 per cent.

Mr. MARTIN. Fifteen per cent of the provinces or 15 per cent of the people?

Mr. COOPER of Wisconsin. It will take all of the Christian provinces, about 34 or 37, and about 6,000,000 people—all of the people, practically, except the Moro and pagan tribes.

Mr. PEARRE. May I ask the gentleman a question?

Mr. COOPER of Wisconsin. I will yield to the gentleman.

Mr. PEARRE. In how many of these provinces that will be represented in the legislative assembly do they speak a common language?

Mr. COOPER of Wisconsin. The dialects number about 70 in the archipelago—20 of these are in Luzon. In every province there are intelligent people, educated people, who speak the Spanish language, and that at present will be the common tongue. There will be found men in every province who speak the Spanish language and who can be elected to the popular assembly, so that there need be no trouble in that respect. The Schurman Commission touch upon this point, and I will print what they say in the appendix to my remarks.

Mr. PEARRE. The law does not provide that the electors shall be able to speak the Spanish language.

Mr. COOPER of Wisconsin. They would not send a man to the assembly who could not hold communication with the other members of the lower house, and they will elect some one of their number who can speak the Spanish language.

There are important provisions of the bill which relate to the coinage. The Senate provided for unlimited free coinage of silver, but the House Committee on Insular Affairs did not believe in establishing the free coinage of silver in the United States, or the Philippine Islands, or in any place subject to our jurisdiction. [Applause.] We do not believe in taking a system which we opposed and decried in the United States and putting it upon a people unable to help themselves. [Applause.] We do not believe that the business of the Philippines should be longer harassed by being obliged to pay large tolls to the banks for the privilege of trading with the rest of the world. We tried to get rid of that abuse in this country and we succeeded. We hope to accomplish a similar result in these islands. The House bill provides for the establishment of a gold standard. The gold dollar of the United States is to be the unit of value.

They have now several kinds of money. There are, first, the Spanish pesos. They are a token coin which have floated at par for many years with the Mexican dollar, although intrinsically the latter is worth much more. The residue of their coin is practically all Mexican silver dollars. The aggregate of the pesos and Mexican dollars is about $40,000,000—$20,000,000 gold valuation. They have bank currency issued by one of their banks of quite large capital.

The plan proposed in the pending bill has been called the "Conant scheme," after Mr. Charles Conant, a financial expert and gold-standard advocate of international fame, although it was not originally proposed by him. The term "scheme" has a sinister sound when applied to finance, and is here improperly applied, because this is not the "scheme" of anybody. It was originally proposed in its essential features by the Taft Commission in its first report two years ago.

The Government of the United States through Secretary Gage, in selecting a representative to go to the Philippines, chose Mr. Conant, one of the greatest advocates of the gold standard in the United States, a gentleman whose name as a financial expert, as I have said, is known throughout the world. He went to the archipelago somewhat prejudiced in favor of the immediate introduction of American money. I so infer from what he has told me. When he arrived there he observed the differences in dialects—the time it requires to go from island to island and from province to province—the difficulty of communicating between the various parts of the islands—the state of nervous tension prevailing among the people, and that the first of all things to be established must be confidence—freedom from irritation. Therefore he coincides entirely with the views of the Philippine Commission in recommending this coinage plan. He advocates it with great ability in his report to the Secretary of War.

First, the standard is to be the United States gold dollar. Then there is to be a distinctive Filipino coin called the peso, which is to be of exactly the same weight as two of our half dollars. It is to be practically of the same weight as the French 5-franc piece. This peso is to be a legal tender. It is to be slightly depreciated in bullion value; that is, there is to be such an amount of silver put into it as to make it a token coin. The amount of these coins issued is to be regulated by the Government. There is not to be free coinage. The theory is—and such has been the experience of India with her rupees, as stated by various witnesses, among them Mr. Roberts, the Director of our Mint, who supports this plan—that the peso will be kept at par because of its limited coinage and because it will be received for public dues and for debts public and private. The peso will be a legal tender for 50 cents, gold. It will be .835 fine, the same fineness as that of the subsidiary coinage of the Latin Union. It is to be divided into 100 parts, each called a centavo and equivalent in value to one-half of one of our cents.

The bill provides that the peso must be maintained at parity with gold. To effect this, six powers are to be conferred upon the Philippine government. In the first place, at the option of the government, gold is to be exchanged for silver. In the second place, silver is to be exchanged for gold, the option being left with the government as it is with the Bank of France, to pay gold or not, when gold is demanded. These six powers which are conferred upon the Philippine government to keep this coin at parity with gold are similar to the provisions of the law of 1900, empowering the United States Treasury to keep silver at a par with gold. The other four powers conferred upon the Philippine government for this purpose are:

Third. Sell drafts on its deposits in the United States at a reasonable rate, not exceeding the usual cost of exchange.

Fourth. Transfer any form of money from the current funds of said government to the currency reserve fund.

Fifth. Issue temporary certificates of indebtedness, bearing interest at a reasonable rate, payable at periods of three months or more, but not later than one year, from the date of issue, which shall be in the denominations of $50 or 100 pesos, or some multiple of such sum, and shall be redeemable in gold coin of the United States or in lawful money of said islands, according to the terms of issue prescribed by the government of said islands; but the amount of such certificates outstanding at any one time shall not exceed $5,000,000.

Sixth. Buy gold coin or bullion at a cost not exceeding reasonable charges for its importation into said islands.

Mr. Roberts, the Director of the Mint, in his testimony before our committee, said that in India the rupee—gold value about 19

cents, exchangeable value about 30 cents, or approximately that—is circulated practically upon this plan. In other words, our plan here is identical with the one pursued in reference to the rupee in India which has proven an entire success. Instead of there being a drain of gold in that country as was at first feared, the treasury there was filled with gold and they had difficulty in knowing just what to do with it, as their official reports show. The Director of the Mint presented one of those reports before the Committee on Insular Affairs. As against the plan proposed by the bill, there are three alternative propositions: First, to continue the use of the Mexican dollars; that is, to continue an abuse—to continue the use of money coined in Mexico—a foreign country with unlimited free coinage, a system which now operates in the Philippines as a constant burden upon importers and exporters, who have to adjust their prices to the constant fluctuations of exchange. Second, the Senate plan, to adopt a coin of the same weight and fineness as the Mexican dollar, to be coined in the islands, but to have no fixed relation to gold.

This is the free coinage of silver—in effect another trade dollar. I presume that other members of the House—I know that other members of the Insular Committee—have had poured in upon them letters from financiers, business men, all over the United States, protesting against the recoinage in this country or elsewhere under our authority of the old trade dollar which has once proven so great a failure.

The third alternative proposition is at once to introduce the American system of money complete. The objections to this are forcibly stated in the report of the Taft Commission.

On page 100 they say:

It is not desirable, in our opinion, to attempt to introduce American gold currency at the present time as the exclusive money of the Philippines. Such a course would produce serious disturbances in prices and wages. Quiet is what they wish here above all things. Substantially all the benefits anticipated from the introduction of American gold money can be obtained for the commerce of the United States and that of other gold-standard countries by establishing a definite relationship between the present silver coins and the American gold dollar.

They then proceed to elaborate upon this point. The Director of the Mint, Mr. Roberts, in his testimony before the Committee on Insular Affairs, said (p. 3):

By reducing the fineness from 0.900 to 0.835 the value is reduced without at the same time reducing the size of the coin.

That is one of the reasons why the Commission, Mr. Conant, Professor Hollander, and Mr. Roberts all feel that we ought not to adopt the American currency. They appreciate the importance of not changing the size of the coin and also at the same time the importance of fixing its value firmly with regard to gold.

By reducing the fineness from 0.900 to 0.835 the value is reduced without at the same time reducing the size of the coin. The value is so reduced that no ordinary fluctuation in the value of silver is likely to send the coin above its legal par and thus crowd it out of circulation.

The CHAIRMAN. Such a plan will insure its retention in the Philippines?

Mr. ROBERTS. Yes.

Again, on page 4 he says:

It is precisely what they have done in India. It is exactly the system of India. They have practically no gold circulation in India. The money of ordinary retail use is the rupee, just as it always was, but it is held at a fixed value to the English sovereign.

We propose to hold the Philippine peso at a fixed value to the United States gold dollar.

Professor Hollander, who was in Porto Rico when we made the substitution there of American money, says that if it were to be done again there would be considerable changes in the plan then pursued; that while now all the difficulties have worked out, and while he would not say that the plan adopted in Porto Rico was a failure, but nevertheless the circumstances in the Philippines are so different that he would not advise the immediate arbitrary introduction of American money into the archipelago. Porto Rico is a little island, a parallelogram, approximately 90 by 40 miles. In the Philippines we have an archipelago 1,000 miles or more long, with many varieties of dialect and tribe. One can go over Porto Rico in a day; it would take a month even to traverse the Philippines.

Professor Hollander, a financial expert of high standing in this country and in Europe, says (I read from page 8 of his testimony) in answer to the question I put to him:

So, then, you think that the plan proposed (the plan in the bill) is entirely feasible; that is, the establishment of an American gold dollar as the standard of value with a silver coinage limited in quantity, which shall be received for public dues; that the demand for it will keep it at par with gold, and that that has been the experience of other countries mentioned in this report?

That is my opinion.

Would you think in a country in such a disturbed condition recently as the Philippines, where the restoration of confidence in the executive and government is of prime importance, that it would be advisable at once to force the American coinage system?

Unhesitatingly I should say no; it would be inadvisable.

That being the condition of the Philippines, then you would be opposed to the immediate introduction of the American system of coinage in the Philippines?

Yes.

On this point Governor Taft, in his testimony quoted in the report accompanying this bill, says—I read from the report, page 6:

I am very certain that to attempt to adopt as a whole the coinage of the United States in those islands would be productive of nothing but disaster.

Mr. Conant also gave exceptionally strong and effective testimony in support of the plan proposed by the bill and in opposition to the immediate introduction of the American coinage system. The Committee on Insular Affairs deemed it their duty to retain this plan in the bill. We hope that the Committee of the Whole will stand by it.

The bill contains provisions to regulate mining. I can only glance at one or two of these. The claim unit is a hectare in extent—practically 2½ acres. Where lands contain metalliferous ores an individual is limited to 8 and a corporation to 16 claims.

Mr. HILL. I would ask the gentleman why he does not adopt the views of his experts and the Commission in regard to banking if he appreciates their opinions so highly on the coinage question?

Mr. COOPER of Wisconsin. Because the testimony is not so unanimous and strong on that point. I could make further explanation if permitted to divulge some of the secrets of one of the meetings of the Committee on Insular Affairs.

Mr. TAWNEY. Perhaps the gentleman from Illinois [Mr. CANNON] could answer.

Mr. COOPER of Wisconsin. Yes; and at the proper time the gentleman from Connecticut will have abundant opportunity to propound that interrogatory where it will receive an answer.

Where lands contain coal, petroleum, stone, or similar minerals, an individual is limited to 64 and a corporation to 128 claims. Placer claims are limited to 8 for an individual and 64 for a corporation.

The bill contains a bill of rights and legislative limitations. The bill of rights is complete, except that there is no provision for a jury system, and none permitting the people to bear arms. The jury system is not provided for because the Committee on Insular Affairs are convinced that it is impracticable in these islands at the present time. Governor Taft's testimony on this point is convincing, and I will print it in the appendix to my remarks.

One of the subdivisions of the bill of rights provides that neither slavery nor involuntary servitude, except as a punishment for crime, of which the party shall have been duly convicted, shall exist in the islands.

An important provision of the bill relates to the lands of the friars. The Filipinos are a Catholic people, ardently devoted to their church, yet for many generations they have been determined enemies of the Spanish friars in their midst, although followers of the same religious faith. In his testimony before the Committee on Insular Affairs Governor Taft was most forcible in asserting that the welfare of the Filipino people demands the prompt and thorough eradication of the whole friar controversy. The trouble between the Filipinos and the Spanish friars (there has been no trouble with the Jesuits, nor with any except Spanish friars) is not at all religious, but, on the contrary, is wholly political.

It is believed that an amicable adjustment of the controversy can be effected by which the titles to these lands can be purchased by the Philippine government at a fair valuation, and with substantial justice to all interested. The bill authorizes the Philippine government to acquire the lands by purchase, or by the exercise of the right of eminent domain, and to sell bonds and apply the money thus received in payment for the property. The amount involved is variously estimated at from three to seven millions of dollars. This is not in the slightest degree an attack upon any church or upon any religion, but simply an endeavor to remove the source of an animosity which has become dangerous to the peace and prosperity of the islands. The situation is summarized in the report accompanying the bill, an extract from which I will print in connection with my remarks.

Another provision of the bill authorizes the Philippine government, by general legislation, to provide for the granting of agricultural lands, under rigid restrictions, to actual occupants and settlers, and to corporations. This is in the nature of a homestead law, and each such grant, whether to an individual or to a corporation, is to be conditioned upon actual and continued occupancy, improvement, and cultivation of the premises sold for a period of not less than five years, during which time the purchaser or grantee can not alienate or encumber either the land or the title.

I can not stop now to analyze the other features of the bill. I have of necessity presented the subject cursorily, because of the many provisions of the bill, its numerous details, and the impossibility of covering them all thoroughly in the time which I am permitted to occupy.

The bill is presented by the Committee on Insular Affairs as affording a satisfactory solution of the immediate problem which confronts us in the Philippines.

Whether we succeed or fail in these islands, we are engaged in a business the result of which will profoundly and forever affect the prestige and influence of this Republic, and so, in its ultimate consequences, the welfare of the whole human race. We should remember what we are. The United States of America is to-day at the highest point in its career. Never before has it stood forth in the presence of the world in such majestic plenitude of power—76,000,000 people without a master, occupying the sublimest position among the nations of the earth—free and invincible. Like a city that is set upon a hill, our work can not be hidden. If we fail in the Philippines, our failure will be seen of all the world, and seen forever.

But we shall not fail. The nation, which in the awful days of 1861 to 1865, wrought and fought through gloom and disaster to enduring success, will not fail now to carry to a triumphant consummation its lesser task in the Philippine Archipelago. [Applause on the Republican side.] We will fill that land with schoolhouses. We will sever church from state, and each shall be the stronger and the better for the separation. We will establish justice and make its administration pure. We will plant firmly the principles of free government and fix forever all of the priceless guaranties of civil and religious liberty. We will emancipate a race from the thraldom of centuries and lead them in the pathway of the world's highest civilization. And then, when in after years the current of transforming, vitalizing influences has made the Philippine Islands the home of contentment, the abode of industry, and of all the arts of peace, we who are permitted to participate in this initial legislation will look back, with hearts filled with grateful, honorable pride, to this hour, and say, "Thank God, we—we, also—bore a part in the glorious work of a people's redemption." [Prolonged applause.]

APPENDIX.

BILL OF RIGHTS AND LEGISLATIVE LIMITATIONS.

SEC. 10. That no law shall be enacted in said islands which shall deprive any person of life, liberty, or property without due process of law, or deny to any person therein the equal protection of the laws.

That no money shall be paid out of the treasury except in pursuance of an appropriation by law.

That in all criminal prosecutions the accused shall enjoy the right to be heard by himself and counsel, to demand the nature and cause of the accusation against him, to have a speedy and public trial, to meet the witnesses face to face, and to have compulsory process to compel the attendance of witnesses in his behalf.

That no person shall be held to answer for a criminal offense without due process of law; and no person for the same offense shall be twice put in jeopardy of punishment, nor shall be compelled in any criminal case to be a witness against himself.

That all persons shall, before conviction, be bailable by sufficient sureties, except for capital offenses, when the proof is evident or the presumption great.

That no law impairing the obligation of contracts shall be enacted by the legislature.

That the rule of taxation in said islands shall be uniform.

That no person shall be imprisoned for debt arising out of or founded on contract, express or implied.

That the privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.

That no ex post facto law or bill of attainder shall be enacted.

That no private or local bill which may be enacted into law shall embrace more than one subject, and that subject shall be expressed in the title of the bill.

That no warrant shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched and the person or things to be seized.

That all money collected on any tax levied or assessed for a special purpose shall be treated as a special fund in the treasury and paid out for such purpose only.

That no law granting a title of nobility shall be enacted, and that no person holding any office of profit or trust in said islands shall, without the consent of the Congress of the United States, accept of any present, emolument, office, or title of any kind whatever from any king, queen, prince, or foreign State.

That excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishment inflicted.

That the right to be secure against unreasonable searches and seizures shall not be violated.

That neither slavery, nor involuntary servitude except as a punishment for crime whereof the party shall have been duly convicted, shall exist in said islands.

That no law shall be passed abridging the freedom of speech or of the press, or the right of the people peaceably to assemble and petition the Government for a redress of grievances.

That no law shall be made respecting an establishment of religion or prohibiting the free exercise thereof, and that the free exercise and enjoyment of religious profession and worship, without discrimination or preference, shall forever be allowed.

A JURY SYSTEM IN THE PHILIPPINES AT PRESENT IMPRACTICABLE.

[Testimony of Governor Taft before the Committee on Insular Affairs, p. 37.]

The question was put to me in the Senate committee why we did not provide a jury system in the procedure act, and the query was made whether if we extended to such an eligible list the qualifications to vote, it would not also be proper to constitute that same eligible list for a jury system and provide juries. That I conceive is a fair question, and ought to be frankly answered. To begin with, they never have had a jury system in the islands. No layman has ever taken any part in the administration of justice. The eligible list would include many who, while sufficiently educated to speak or write Spanish, would still be lacking in the elements that are necessary to make a safe jury system.

The example of the Spanish method of conducting government, the environment to which the people have been subjected, make it impossible for men included in that class of the less educated to act impartially as judges. The difficulty with that people is that they are not now so constituted that in any case they could give their unbiased judgment. The danger of corruption in such a system would be so great that we became convinced that it was most unwise to extend that system at this time. We have provided in a way a system of assessors, two assessors to be selected, much as a struck jury is selected in this country, who are to sit with the judge. That we have made as the beginning of an ultimate jury system, but at present we are convinced that even limiting the selection of jurors to those having the qualifications to vote would lead to abuses such that no desire to conform to the American Constitution would justify it. The administration of justice in Spanish times was so perverted, even with educated men on the bench, that to hope that a casual selection from the whole list of qualified voters would secure an honest, a just, and impartial tribunal would be to hope against what the facts require us to know.

STATEMENT BY FELIPE BUENCAMINO—DATA RELATING TO THE MALOLOS CONGRESS AND AGUINALDO'S "REPUBLIC."

1. Emelio Aguinaldo proclaimed himself dictator on May 24, 1898, for the purpose of establishing a military government in the city of Cavite, *which, with the generous assistance of America, would liberate the Filipinos from the yoke of the Spanish Government.* (The underlined words are the same as those used by Aguinaldo in his decree—proclamation of said date.)

2. Aguinaldo took as his sole counselor Apolinario Mabini, an eminent attorney, but paralyzed in the lower part of his body, and, in addition, a philosophical dreamer. Mabini, the following June, prepared regulations for the election of municipal and provincial councilors, and also for the election of municipal and provincial presidents and representatives for a future congress; and in view of the fact that many of our provinces were not as yet in communication with the government at Cavite, he added thereto a clause authorizing the dictator, Aguinaldo, to appoint representatives for such provinces as were not in communication with the said government.

I was one of those appointed, and the number of provinces whose representatives were appointed are the following:

Isabela, Nueva Vizcaya, Bataan Islands, Mindoro, Romblon, Masbate y Ticao, Marinduque, Carolinas Marianas Islands, Paraguas Islands, Jolo, Mindanao, Capiz, Antique, Iloilo, Cebu, Leyte, Samar, Bohol, Surigao, Misamis, Dapitan, and four of Manila, which at that time was a province, and no elections could be held in Manila because it was occupied by the American army. The remaining provinces of Luzon had representatives in the congress who were elected, but the electors were only the municipal councilors. The suffrage, therefore, was very limited. (Dictated by Felipe Buencamino.)

CHARACTERISTICS OF THE FILIPINO PEOPLE.

[Extract from Report of Schurman Commission, p. 119.]

The Filipinos themselves are of unusually promising material. They possess admirable domestic and personal virtues, and though they are uncontrollable when such elemental passions as jealousy, revenge, or resentment are once aroused, most of them—practically all of the civilized inhabitants of Luzon and the Visayas—are naturally and normally peaceful, docile, and deferential to constituted authority. On the suppression of the insurrection the great majority of them will be found to be good, law-abiding citizens. * * * The educated Filipinos, though constituting a minority, are far more numerous than is generally supposed, and are scattered all over the archipelago, and the Commission desires to bear the strongest testimony to the high range of their intelligence, and not only to their intellectual training, but also to their social refinement, as well as to the grace and charm of their personal character.

These educated Filipinos, in a word, are the equals of the men one meets in similar vocations—law, medicine, business, etc.—in Europe or America. It is scarcely an exaggeration to say that these picked Filipinos will be of infinite value to the United States in the work of establishing and maintaining civil government throughout the archipelago. As leaders of the people they must be the chief agents in securing their people's loyal obedience to the new government, to which, therefore, the dictates of policy, as well as plain common sense and justice, require us to secure their own cordial attachment. And it has been a leading motive with the Commission in devising a form of government for the Philippines to frame one which, to the utmost extent possible, shall satisfy the views and aspirations of educated Filipinos. They believe that the Territorial system herein set forth will accomplish that object, and this is a fifth and most important reason for their conviction that the administration of the government will, in the proper hands, not be attended with insuperable or even extraordinary difficulties.

FRIARS' LANDS.

[Extract from Report.]

In his testimoney before the Committee on Insular Affairs, Governor Taft said:

"It is difficult to say that in the islands there is any public opinion on any issue, such as we understand that expression here, except with respect to the friars. On that one issue substantially all the people are in accord. * * * No country of that size, educated or uneducated, was ever so unanimous as the Filipino people are with respect to the issue of the friars. * * *

"It is not whether the friars are justly charged with various offenses and interpositions in civil matters to the detriment of the people. The important fact is that all the people believe it, and prejudice, even if unfounded, if deep seated, every student of politics knows must be regarded as a fact. It is not to be moved out of your way by saying 'it is unreasonable.' It exists, and because it exists the position of the Commission, without looking into the merits of it, was that in every way possible we ought to avoid the dangers of disturbances which such a deep prejudice would be sure to cause."

Your committee has no desire to enter into the merits of this controversy. It is sufficient for the purpose of the proposed legislation that the animosity exists, that it is deep seated and widespread, that it has heretofore resulted in uprisings of the Filipino people, in bloodshed and civil war, and that it still is an element dangerous to the peace and prosperity of the islands.

Oleomargarine Bill.

The validity [of the tax] can not be determined by the money returns. This rule has been applied when the levy produced no returns whatever. (Cooley's Principles of Constitutional Law, page 56.)

SPEECH

OF

HON. JOHN W. GAINES,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 10, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9206) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine—

Mr. GAINES of Tennessee said:

Mr. CHAIRMAN: Congress has the power granted it by the Federal Constitution to regulate commerce between the States, Indian tribes, and foreign nations.

Under this power, as construed by the Supreme Court in many decisions, and especially in the recent Addyston Pipe Trust case, which arose in Chattanooga, Tenn., instituted and first prosecuted under a Democratic Administration and by Democratic officers, clearly states and holds that Congress has the power under this commerce clause to "prohibit"—the word "prohibit" is used by the court—the transmission of objectionable interstate commerce or the making or executing of objectionable interstate commerce contracts, that case being one to destroy and prohibit objectionable interstate trust combines and contracts.

That combine or trust was crushed in this, a civil case, and those in the combine punished by a criminal prosecution, two suits having been in this instituted and prosecuted, to wit, one to criminally prosecute and the other to enjoin and crush this unholy combine or trust.

Thus we see the far-reaching effect and great good that arises from the vigorous prosecution of the law based upon this commerce clause of the Federal Constitution.

Now, then, if objectionable interstate commerce or interstate combines or contracts can be thus successfully dealt with, why should not Congress without further delay pass a law invoking the power of this commerce clause and say that oleo shall not be shipped from one State to another, or that oleo branded as butter shall not be shipped from one State to another, or that oleo colored as butter shall not be shipped from one State to another, or that oleo colored as butter and branded or not branded as oleo shall not be shipped from one State to another?

If such a law was passed—and it would clearly be legal under these decisions—why should not Congress invoke at once the crushing power of a statute based upon this commerce clause, giving the people the right to indict offenders just as in other criminal cases?

A bill could be passed to do any one of the things I have suggested, and I believe that under these decisions (and I am following the opinions of the Supreme Court of the United States in thus exploiting the law) such a bill we could promptly enact into law. It would meet with little objection, I believe.

Of course, to prohibit the transmission of oleo branded as oleo and sold as oleo might meet with objections, and not without reason, for it is said that pure oleo is as healthful as butter, and it is one of the great industries of the country, which being true, such an industry should not be crushed, it seems to me; but should be when colored as butter or branded as butter and sold as butter, this being a deliberate, premeditated, and outrageous fraud on the farmers' cow butter, whether it is white butter or yellow butter, for in either case such butter is butter and comes from cows' milk. It is nature's butter, and, regardless of its color or quality, it is still butter in fact and law, while oleo is not nature's butter and is not butter in fact or law.

When oleo is sold as butter, it is a fraud on the maker and user of butter. Cows' butter is a product ancient in use and one of the needs of the family from the time the infant can eat, and even before, throughout life.

By thus destroying the cow-butter interests of the country we reduce the number of cows, and this in turn reduces the amount of cows' milk and butter and beef as well—all necessaries—and that, too, when there is no necessity for such an outrage upon the farmers' business and the people's rights.

When our children are sick or well, indeed, from the very time they are brought into this world, in health or in sickness, they are obliged to have milk from the mother's breast or from the cow.

In allowing this oleo fraud to thus crush the butter interest we deny mankind not only butter, but milk, which you see is, has always been, and must ever remain an absolute necessity for the maintenance of mankind from the time God breathes life into the infant until he becomes too weak, too near death, to swallow it.

Simply because a very small portion of cotton-seed oil that is made from the products of the South is used in the manufacture of oleomargarine, must I vote to defeat this bill? Although objectionable, as I say, in some respects, yet I hope these objections may be removed by amendment later on in the House or Senate. I am asked to do something that I can not and will not do.

My judgment rebels against it, and my conscience will not permit me to rest easy if I take sides with such a fraud upon the farmer and mankind generally, and I shall not do it.

It is immaterial to me that any expert, from an ex-governor down to those gifted in the X-ray business, say to me this, that, and the other. I have listened to them and I have listened to what has been said pro and con on this bill, but it only strengthens me in my determination to see that equal and exact justice is meted out as near as can be and to protect God's gift, the milch cow, the companion of God's child in every fireside in the land.

It is not my purpose to unnecessarily restrain the business of dealing in honest oleo—not at all. That would not be just; but to protect the honest oleo business and restrain the dishonest oleo business is my purpose. I intend to do so as near as I can.

I know, born and reared in the country, where I lived beyond my majority, that to sell oleo as butter when in fact, and, indeed, in law, it is not butter, when oleo is one thing and butter is another, is a fraud on the buyer and a fraud on the person who makes cow butter—the farmer. When a man sells to me oleo as butter, when I call for butter and that man knows it is oleo, he not only commits a willful fraud on me, but he willfully lies, and the law should prevent, as near as the law can, both the fraud and the falsehood. [Applause.]

The law has said what oleomargarine, the work of man, is and shall be. Nature has said what cow butter is, and the law, following the definition that nature has given butter, says what cow butter is and shall be. That is right. The law can say to what standard butter shall be before it shall be offered for sale, for even in the course of nature nature gives different standards of butter.

I have the right, and so has every man, woman, and child in this country, by all rules of morality, when I go to my prescriptionist and ask him for quinine to expect that he shall not give me flour, or, if you please, strychnine, and yet quinine and strychnine and flour are all healthful when taken in the proper quantities. I have, and so has every man, woman, and child in this country, by the same rule of morality, to expect when I go to my grocer and ask him to sell me butter that he shall not knowingly sell me oleomargarine.

On the other hand, every man, woman, and child has the right to be sold oleo when they call for it, and not cow butter.

Again, if the oleo manufacturer or if the oleo retail or wholesale merchant sells oleo as oleo, they are required to pay one-fourth of a cent tax, which will raise enough money to police oleo and execute the law. On the contrary, when they manufacture or sell oleo as butter, or color it as butter and sell it as butter, by their own act, by this their own deliberate, willful, and premeditated fraud, the law says they must pay a tax of 10 cents per pound.

This 10-cent tax does not apply or operate on any individual unless that individual colors or sells oleo as butter. In other words, if he makes oleo and sells it as oleo, not colored like butter, he does not have to pay the 10 cents per pound tax about which we have heard so much in this debate.

Mr. RICHARDSON of Alabama. Will the gentleman allow me to ask him a question?

Mr. GAINES of Tennessee. Certainly.

Mr. RICHARDSON of Alabama. Do not you think it is a fraud or a misrepresentation and deceit to pay a tax of 10 cents when you do not expect to realize any revenue from it at all?

Mr. GAINES of Tennessee. If that be true, that is no excuse for the failure to prevent this "fraud," nor would that incident invalidate the law, and the books so declare.

Mr. RICHARDSON of Alabama. You do not want it as revenue?

Mr. GAINES of Tennessee. Why not? The revenue would then come from taxing a fraud or a fraudulent business. This bill is not satisfactory to me in all its provisions. If we do not succeed in amending it here in the House I shall hope that the Senate will amend and perfect it.

Mr. RICHARDSON of Alabama. Answer my question.

Mr. GAINES of Tennessee. I will do so if the gentleman will just wait. This 10-cent tax does not apply to a human being unless he undertakes to perpetrate a fraud—that is, palm off on our people as butter that which is not butter, when they do not call for oleo and do not want it, but call for and want butter. In

other words, when the manufacturer of oleo or the retail or wholesale merchant undertakes to perpetrate this fraud in this manner, when they undertake to visit upon the people of this country this fraud in this way, then, with his eyes wide open, with a full knowledge of the law that when he does so he must pay a 10-cent tax per pound, such parties visit upon themselves the wrath of the law, to wit, they must pay the 10-cent tax if they obey the law.

Mr. RICHARDSON of Alabama. You have not answered the question.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GAINES of Tennessee. I would like to have time to answer the gentleman's question. I ask unanimous consent for five minutes longer.

Mr. HENRY of Connecticut. I yield to the gentleman five minutes.

The CHAIRMAN. The gentleman from Connecticut yields five minutes more to the gentleman.

Mr. RICHARDSON of Alabama. Then is it not a misrepresentation that no man can deny when you advocate a bill here which imposes a tax of 10 cents when you do not expect to realize 1 cent of revenue? Is not that misrepresentation and fraud?

Mr. GAINES of Tennessee. I hope the gentleman will let me answer his questions one at a time. But we may; I hope we will not. That would be proof that this fraudulent business has been abandoned. You say we do not want this 10-cent tax as a revenue and that we do not expect to realize any revenue from it at all. But do not tax laws sometimes fail to produce revenue? For my part I hope there will not be one cent derived from it. Our people are already taxed all they can stand—certainly in time of peace. We can stand and have stood every kind of taxation in time of war. But why do I say that I hope there will not be one cent of revenue from this 10-cent tax provision?

Because I hope that no man in this country after the passage of this law will undertake to perpetrate this fraud upon the people. It is only when the fraud is perpetrated that the law applies; then this tax has to be paid; then the law says it shall be paid. If this imitation butter, this fraud, is not imposed on the country, then of course not one cent of revenue will come from this provision, which I hope will be the case. The provision only operates when the fraud is imposed on the people.

Mr. RICHARDSON of Alabama It is suppression by law.

Mr. GAINES of Tennessee. But suppose it is. Can not Congress levy a high or a low tax on a fraudulent act or business? What does it suppress? A fraud, an outrage on the cow butter maker as well as the people who want to buy cow butter and pay their cow butter price for the article which proves to be on the table oleo, and not cow butter. Does the gentleman object to suppressing a vice?

What right have you or any other man to make a living by perpetrating frauds? It is a fraud, and the gentleman knows it. Then, will you tell me what right you have, or any other man has, to engage in the business, earn a livelihood by selling a fraud to or perpetrating frauds on your neighbors and on the country at large?

Mr. RICHARDSON of Alabama. Where is the revenue to come from?

Mr. GAINES of Tennessee. Why, of course the revenue from the 10-cent provision will come from the man who is engaged in perpetrating frauds on his neighbors and on the people in this country by selling them imitation butter, or oleo that is not butter. Not one cent of revenue will come unless such a fraud is imposed on the people, and hence I hope that not one cent of revenue will be derived from this 10-cent clause, because in such an event we are convinced that none of this oleo fraud is sold to the community, at least if it is the fact is not reported to the officers of the law.

Mr. RICHARDSON of Alabama. Does not the 10 per cent legalize it?

Mr. GAINES of Tennessee. Not any more than if we had no law. If we had no law on the subject there would be nothing in the world to prevent the person committing the fraud from going right along unmolested in this fraudulent business.

You may repeal all the statutes, National and State, on the subject, and this fraud can be carried on. There would be no law to prevent it, and then the gentleman has already stated that the 10-cent tax is "a suppression by law." If that is true, no one will perpetrate this fraud. This nefarious business of selling oleo will be thus suppressed—the fraudulent act prevented. And what objection has any gentleman, well founded, to suppressing a fraud?

Who has the right to make a living by committing frauds? Law is made to promote good morals, to promote a healthy growth of public sentiment; and to permit this oleo imitation butter to be sold as cow butter, either without any law or by permission of any law, encourages bad morals, dishonesty, and misrepresentation, which neither good society nor the law should permit.

Unless the law takes this fraud in hand, what relief have the people? Suits for damages and injunctions are inadequate, and if not there would be a multiplicity of suits, if any were brought by people who had been imposed upon in the sale of this imitation butter. The courts would be crowded with such litigation if the victims of this fraud were to undertake to prevent it or to recover damages. There would be no end to the suits. Such litigation would be a nuisance to the balance of the litigants in any court.

So to prevent this multiplicity of suits the States have stepped in and undertaken to restrain or prohibit this fraud, and now the Federal Government has said: We need revenue to run the Government. We will tax this fraud 10 cents a pound and that which is not a fraud one-fourth cent per pound.

But, the gentleman says, we need no revenue. We have just reduced the tariff. That is true. We have just reduced it and I voted for it, and so did every Democrat in the House. But would it not be a more just tariff law to tax vice than virtue; to tax wrong than right; to liberate virtue and tax vice?

This bill proposes to lay 10 cents tax on the wrong, not the right. To sell oleo as butter is wrong. It is a vice, and the party committing the act must pay 10 cents for each pound. Thus we restrict the vice. The incidental effect of the tax is to "restrict," and that is what the Supreme Court of the United States says is the moral effect of a license law. Then I ask what do we restrict? We restrict vice, we restrict wrong, we restrict the evil and give the virtuous, the righteous efforts of man the right of way; the honest man a better chance in his long, tedious journey to make an honest living by the sweat of his face.

In addition to this, do not you know it would require a more strenuous police effort to execute the law and prosecute the offenders who undertake to commit a fraud than one who does not?

Here is a man who sells oleo as oleo and we levy one-fourth per cent tax to execute the provisions of the law which the oleo men want themselves, it is said here in the committee. But here is a set of men with millions behind them who are engaged in selling this fraud, carrying on this fraudulent business. The provision of the law that applies to this fraudulent act levies a tax of 10 cents per pound, so that if the millions who are engaged in this oleo fraud, the thousands of persons who are engaged in making it and selling it, insist on selling this fraud, then in such an event there will be presumptively a large enough revenue coming from this nefarious business (taxed 10 cents per pound) to more vigorously prosecute the law than by a smaller tax.

In addition to this there may be many who are not reporting the sale of this oleo as butter, and a vigorous police watch must be kept, for a man who will deliberately perpetrate a fraud on his neighbor and on the country at large is a man that will require more watching than a man engaged in honest oleo business, that is, making and selling oleo as oleo.

I am not here to defend the levying of taxes to destroy moral rights or business, nor do I favor the levying of a tax to destroy an immoral business. I prefer, as I stated in the beginning, that this olio fraud be prohibited outright under the commerce clause. Such an act would aid the State to execute their respective oleo laws, Congress yielding back, if you please, to the States the right, as we have in other similar matters, the power to take charge of and control the "original package" before it has become local commerce or local property.

With the interstate power invoked, as I have suggested, with the State laws executed, Congress yielding to the States the right to take charge of the original package and control it, just as though the oleo was made or the contract for it within the State, this fraudulent business would disappear.

You will then have the trouble between interstate business and State business well in hand. But there is no such bill here proposed.

I have hoped for such a bill from the Interstate Commerce Committee. I know there are able lawyers there. That committee is controlled by Republican members, they being in the majority. This House is controlled by a Republican majority and therefore I can not hope for—though I have since I have been in Congress—such a bill from that committee on this vital question along the lines I have suggested, but they have failed to report such a bill; and now the question that confronts me is, Shall we permit this fraudulent business to continue and destroy the farmers' business, destroy his butter making—which means the destruction of his dairy, and the destruction of the dairy means less cow butter and less cow milk, both of which are absolute necessaries of life—simply because I can not get exactly the kind of law enacted I think is best? No; and I can not and will not stand by here and permit it, when it can be prevented by the pending measure. The Constitution gives no man the right to perpetrate a fraud.

This Bill, with Others Pending on the Calendar, Foreshadows the Ultimate Purpose of the Republican Tinkers, Who Propose a Financial System in which Gold is to be the Only Legal Tender and National-Bank Notes the Only Paper Money—No Other Country on the Earth has ever Dreamed of Establishing a System so Preposterous and Dangerous.

SPEECH

OF

HON. CHARLES F. COCHRAN,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 28, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 12704) to increase the subsidiary silver coinage—

Mr. COCHRAN said:

Mr. CHAIRMAN: I was not astonished to hear the gentleman from Connecticut [Mr. HILL] say, when he took the floor against this amendment, that it is a proposal to array the United States against the experience of the entire civilized world. A speech by the gentleman from Connecticut on financial questions which did not include this statement, coupled with the solemn assurance that only by following the path pointed out by him may we avoid this catastrophe and observe the ways of civilization, would be such a novelty that nobody expects it to occur. [Laughter on the Democratic side.]

How we would keep ourselves in line with civilization, progress, wisdom, knowledge, science—everything that makes statesmanship complete—without the gentleman from Connecticut to continually assure us that he holds the lamp which lights this pathway is beyond my comprehension. [Laughter.] But, Mr. Chairman, a few of us will reserve the right to believe that it is possible for even the gentleman from Connecticut to err as to what are the lessons of civilization in reference to the question under discussion.

I deny that human experience has ever proved anywhere at any time the wisdom of keeping in circulation in any country a single farthing of money that could not be used by the citizen in discharging any debt or obligation owing by him to his government, in the form of taxes, or to his neighbor in discharge of indebtedness.

And, Mr. Chairman, I digress right here from discussion of the matter in hand sufficiently to observe that of all the unwise measures engrafted upon our financial policy during the past thirty-five years, what is called the gold-contract clause of the coinage laws has been the most mischievous. I contend that every dollar of money placed in circulation, whether gold, silver, or paper, should be fabricated by the Government, and that no private corporation should exercise the sovereign power to issue money. I believe that every dollar placed in circulation should have equal legal-tender power, and that no private interest should have a right to subvert the general law of legal tender by private contract, thus striking down the legal-tender laws as to any particular form of currency.

The amendment proposed by the gentleman from Nevada declares that all coins of the United States shall be received as full legal tender for all debts, public and private. Without going any further into the discussion than sufficiently to show the error into which the gentleman from Connecticut [Mr. HILL] has fallen, I say to him that he can not name in all the history of the world at any time or place a country which has or has ever had the monetary system which the Republican financial tinkers propose to fasten on the United States.

What country is there where gold and nonlegal-tender bank notes are the only currency in existence? Pass this bill, destroy the legal-tender power of silver, and retire the greenbacks—and bills aiming at all these results have been approved by the committees and are now on our Calendar—and you would have in the last analysis a financial system with gold and bank notes as the only money and gold the only legal tender for debts. You propose to retire the Treasury notes, coin the silver dollars into subsidiary coin, and give to national banks alone power to issue paper money.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SHAFROTH. Mr. Chairman, I ask that the time of the gentleman be extended.

The CHAIRMAN. For how long?

Mr. SHAFROTH. I ask that enough time be allowed him that he may conclude his remarks.

Mr. HILL. Oh, no, Mr. Chairman, I object to that. I will consent to ten minutes.

Mr. SHAFROTH. Then I ask that the time of the gentleman be extended for twenty minutes.

The CHAIRMAN. The gentleman from Colorado asks that the time of the gentleman from Missouri be extended twenty minutes. Is there objection?

Mr. HILL. I object.

The CHAIRMAN. Objection is made.

Mr. SHAFROTH. Then I ask unanimous consent that fifteen minutes be allowed.

Mr. HILL. Mr. Chairman, I ask that the same privilege be extended to the gentleman from Missouri that was extended to the gentleman from Iowa [Mr. SMITH].

Mr. COCHRAN. I do not want anything as a courtesy. If an extension of time is not granted to me as the right of a Representative, I do not want it.

Mr. SHAFROTH. Mr. Chairman, I ask unanimous consent that the time of the gentleman be extended for fifteen minutes.

The CHAIRMAN. The gentleman from Colorado asks unanimous consent that the time of the gentleman from Missouri be extended fifteen minutes. Is there objection?

Mr. HANBURY. Mr. Chairman, I object.

The CHAIRMAN. Objection is made.

Mr. SHAFROTH. Then I ask unanimous consent that the time of the gentleman be extended ten minutes.

The CHAIRMAN. Unanimous consent is asked that the time of the gentleman be extended ten minutes. Is there objection?

There was no objection.

Mr. COCHRAN. Mr. Chairman, I do not wonder that the gentlemen on the other side shrink from the discussion of this question. They say it has all been thrashed out. They say this, and all other questions pertaining to our finances have been effectually settled. What party has ever declared that its purpose is to retire the greenbacks? What party has ever declared its purpose to melt down the silver dollars? When have the people had an opportunity to pass upon the proposal to give to private banking corporations full control of the volume of paper currency?

The Republicans in this House are trying to fasten upon this country a financial system unheard of before in all the world. I deny that the platforms or the public utterances of Republican statesmen have avowed this purpose. You would make gold the only legal-tender money of the country. What country has such a system now? What country ever had such a system? Is there a country on earth to-day where gold is the only legal-tender money? Is there a country to-day where gold is the only money that may be used as bank reserves? Why, even the advocates of the gold standard in England have never dreamed of such a system.

The Bank of England notes are full legal tender for all debts and are available for reserves, just as our greenbacks are. The notes of the Bank of France and of the imperial banks of Germany and Austria are a legal tender and form the reserves of provincial banks and private bankers, just as our greenbacks are a legal tender and available for bank reserves. In this country and nowhere else under the sun the money merchants find statesmen who are willing to place upon the statute books laws which would impose upon their countrymen the harsh basis of specie payments.

Mr. Chairman, this proposal comes during a period of inflated credits and rising prices. It may not be possible to draw public attention to the danger that lurks in it, but who that recalls the bitter days of periods of liquidation and depression can contemplate the possibility of consummating this wretched scheme without the gravest apprehension. Certainly in a period of stringency, with creditors clamoring for their dues, bank credits grudgingly extended, and debtors in despair, it would not be proposed as a remedy.

Mr. Chairman, it was to be expected that this bill would be brought in here under a rule limiting the discussion to two or three hours. The Republican tinkers do not care to have the measures they propose forced upon public consideration by Congressional debates. If they could be induced to do so, we could well afford to submit the matter to the people upon the case made by the Republican orators of this body. We have listened to one speech in addition to the oracular utterances of my friend from Connecticut [Mr. HILL], in support of this bill. What a raking of the rubbish heaps of Republican campaign oratory it was! I never have heard nor have I ever read a Republican speech of the orthodox sort on this question which from start to finish did not palpably misrepresent facts and statistics, pervert all known and accepted economic theories, and ride rough-shod over every precept of history.

Take the speech of the gentleman from Iowa [Mr. SMITH], who, after the performance of the gentleman from Connecticut, gallantly brought up the rear. He began with the old, threadbare story that the idea of coining the silver dollar was totally absurd, because it was impossible to get it in circulation; and when I asked him if silver dollars were not effectively in circulation

through the medium of silver certificates representing them and rendering them effective as the money of the country, he declined to answer that question because, he said, it had been answered two or three times before. It never has been answered. It is absolutely unanswerable. Like gold, silver circulates in the form of its paper representatives. If you would cease the coinage of silver because the silver dollar does not actually circulate, then stop the coinage of gold, for it never did circulate, and never will.

Republicans here and on the hustings and through the medium of the press say, "Would you carry around twenty, thirty, or forty silver dollars in your pocket, if you had a debt of twenty, thirty, or forty dollars to pay?" Certainly not. You would carry the silver certificates that represent the twenty, thirty, or forty silver dollars, and that is precisely what every business man in the country does do and has been doing for nearly twenty years. Would you carry twenty, thirty, forty or a hundred gold dollars around if you had that much gold to-day? Certainly not. You would carry the paper representative of gold dollars. Specie in the modern financial system is represented by paper symbols, which perform the active office of specie in the arteries of trade.

Ignorant beyond reclamation is the man who does not know this, impudent beyond description is the lawmaker who denies it, yet every speech attempting the impossible task of the defense of Republican quackery in finance begins with this old homily, which even the school children penetrate and regard as a mask for ignorance or something worse in every man who attempts it. In the enlightened part of the country which I have the honor to in part represent a speech containing this statement made by the gentleman from Iowa would send everybody home but the janitor, and put him to sleep. [Applause and laughter.]

The gentleman from Iowa [Mr. SMITH] may say that the silver dollars will not circulate when talking to Republican Congressmen. He would be perfectly safe in saying it in the neighborhood of Wall street or down among the shopkeepers and manufacturers of New England, who, without knowing what the term means, only know that they want "sound money;" but he would not pretend to say it in the county where he lives, for fear some old farmer in homespun would arise on one of the back benches and proceed to skin him and tan his hide. I do not blame him for doing it in the company he is in, for he sits very close to the distinguished gentleman from Connecticut [Mr. HILL]. [Laughter.]

The gentleman from Connecticut says we are on the eve of a great glut of gold. He thinks the danger confronting the world now is too much gold, that it may result in inflation. Is there a glut of gold in Russia, where since 1895 they have lost $145,000,000 of their gold stock and suffered a depreciation in the value of all kinds of property of from 40 to 80 per cent? Is there a glut of gold in Germany, where, during the same period, the stock has increased just a little, or in England, where half a billion of bonds have been sold for gold—a part of them in the United States—resulting in an increase of $90,000,000 as a war fund, or in Italy or Austria, countries that have been on a paper basis since the beginning of the century?

Where is this glut of gold? Lately I had prepared by the Treasury Department for my own information a table showing the transfer of gold balances between nations during the last ten years—a period of unprecedented gold production. This table hardly shows that there is danger of a glut of gold or justifies all this boasting about the increase in the world's money supply through the increased production of gold. It shows that the United States have gained between four and five hundred million dollars.

But how much has all the rest of the world gained? What has been the increase in the amount held in the depositories of the Old World during the past ten years? I put this question to Secretary Gage one morning, when I asked him to have a table prepared showing the balances in depositories in Europe in each of the years succeeding 1893 down to 1902, and he expressed the opinion that the table would show that it had been very large. The table was prepared and it shows that in ten years all Europe combined, including Great Britain, has added barely $62,000,000 to the store of gold held in banks and depositories. What do you argue from this? Do you know that if at this time we were to give to each of the civilized countries of Europe two-thirds of the amount of gold per capita which the United States now has, that the $400,000,000 production you speak of so boastfully would be several years in accomplishing the replenishment?

It is not true that the recent large production of gold has increased the supply of specie in an unprecedented degree. The period of the greatest specie inundation of civilized countries known to the world was in Europe between 1860 and 1875. At that time Russia was strictly on a paper basis and had not begun the accumulation of the gold fund which afterwards in 1896 had reached a total of nearly a billion dollars. Hence, the product of the Russian gold mines went to Europe.

The California and Australian mines had been enormously productive for over ten years prior to 1862, and the accumulations from this source in the United States went to Europe, to be added to the largely increased store which had accumulated there between 1849 and 1862. From 1862 until in the seventies, when we begun the accumulation of a specie redemption fund, this country used only paper money. And so, between 1862 and say 1875, there was piled up in countries having an aggregate population of a little over 100,000,000 the specie of the whole western world. Unquestionably it was this glut of specie that contributed to the forward strides of Great Britain and the tremendous vitality and recuperative power of France, which, notwithstanding half a dozen of revolutions and the catastrophe of Sedan, maintained her proud position as one of the wealthiest of the great commercial powers. It was this that rehabilitated Germany and made the Empire possible.

Mr. Chairman, I submit that it is no exaggeration to say that in the period I have mentioned, through the operation of the causes I have set forth, European countries experienced a glut of gold exceeding the approaching glut which seems to excite apprehension in the mind of the gentleman from Connecticut, but the glut of thirty-five years ago did not enable either Austria or even Russia, with her vast gold mines, to escape a paper basis, and notwithstanding the present glut of gold Austria still remains on a paper basis, and had not economic error crept into her administration Russia would still be on a paper basis instead of experiencing the throes of the most serious financial crisis the world has known.

Let me console the gentleman from Connecticut with the assurance that there is no danger of a glut of gold. Go on expanding credits, watering stocks, and selling bonds and mortgages on property overvalued for the purpose of speculation by the promoters of trusts and combinations. Pile the pyramid of credit sky high, and deplete the base of legal-tender money upon which it rests by retiring the greenbacks and putting the silver dollars in the melting pot. Make gold the only legal tender for debts, and when the catastrophe, which all this mad tinkering invites, shall come the fear of a glut of gold will vanish, and my friend from Connecticut will suffer no longer the harrowing fear that too much money is about to ruin the country.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BARTLETT. I ask unanimous consent that the time of the gentleman may be extended.

Mr. LACEY. I want to speak in regard to this amendment.

Mr. BARTLETT. The gentleman from Missouri is a member of the committee.

Mr. LACEY. Does the gentleman desire further time?

Mr. COCHRAN. I do; but I am not very particular about it.

Mr. LACEY. I ask unanimous consent that the gentleman may have five minutes more.

The CHAIRMAN. Unanimous consent is asked that the time of the gentleman from Missouri may be extended for five minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. COCHRAN. In conclusion, I desire to point out the significance of statistics submitted to the House at a former session, when the Overstreet banking bill was under consideration. Between 1849 and 1870 the output of the Australian and California gold mines was the largest which up to that time the world had ever known. In his speech in support of his banking bill, the gentleman from Indiana [Mr. OVERSTREET] used, as an argument in favor of the gold standard, a table showing the production of gold through the ages. It is a table familiar to all of us. It shows the estimated stock of the world in 1492 and the production and stock on hand from year to year thereafter. It shows, also, the amount of gold in use as money from year to year. This table shows that all the gold produced throughout the ages prior to 1862 has disappeared. It shows that at the time Mr. OVERSTREET presented the statistics to the House there was in use as money in all the world less gold than the mines have produced since 1862.

I have not looked at the statistics recently, but I hazard the assertion that even the exaggerated statistics published in our mint reports and other statistical works do not show that there is in use as money in the world to-day as much gold as the mines have produced since 1860. Here we have a basis upon which to estimate the amount of gold consumed in the arts and for the various other uses which divert it from use as money. Since only the product of the mines during the past forty years is now in use as money then it follows that between 1850 and 1902 the world consumed in uses other than monetary all the gold in existence in 1849, plus the gross product of the mines up to 1862.

It should be borne in mind that this enormous consumption of gold in the arts and in uses other than monetary occurred during a period when the world was far less given to luxury than in this age of multimillionaires.

Mr. Chairman, I deny that the large increase in gold production

results necessarily in a corresponding permanent increase in the world's supply of gold money. In periods like the present, when business is under high pressure and everything goes on swimmingly, the encroachments of the arts and manufactures upon the gold supply is enormous. Therefore it is easy to make a mistake in estimating the increase in the stock of gold money occasioned by increased production.

While gold is not used by all the people of the world as money, it is used by all people as an ornament, and the more barbarous the people the more desirable is gold as an ornament.

If the extravagant figures used by the gentleman from Connecticut are to be accepted as true, four hundred millions in gold was produced by the mines last year. Coin every dollar of it into money and divide it among the gold-standard countries of the world, and it would add less than 75 cents per capita to their stock of money. This is not a serious glut of gold after all. The fact is that in ten years the world's stock of gold has not been increased more than $600,000,000.

Who thought, when the Australian and California mines were so productive that all European States except France demonetized gold as a base material on the ground that it was about to become so plentiful that it would be no longer suitable for money, that within thirty years the world's trade would be stagnant for the want of specie and half the civilized nations doing business on paper? Who thought then that in 1902 the world's stock of gold money would be less than the product of the mines for the forty preceding years? The product of the mines for twenty years succeeding the discoveries of forty years ago in Australia and California in relation to the commerce of the world, in relation to the volume of business and credits, was far greater than the production of recent years.

The CHAIRMAN. The time of the gentleman has expired.

The Republican Party Stands for Prosperity and Progress—The Democratic Party Stands for Hard Times and Old Times—Bravery and Patriotism of our Soldiers in the Philippine Islands—Democratic Attacks on Them Unwarranted and Unpatriotic.

SPEECH

OF

HON. HENRY R. GIBSON,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 23, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (S. 2295) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes—

Mr. GIBSON said:

Mr. CHAIRMAN: The Republican party took possession of this country in 1861, and its first great work was the preservation of the Union. This it did after four years of the most tremendous, the most bloody, and the most expensive war ever waged in the history of the world. It was Greek against Greek, American against American, hero against hero, from start to finish.

The war ended, the Union preserved, the Constitution strengthened, the nation perfected, then began in our country under Republican rule the most extraordinary era of development ever known by any nation in any period of time.

Our population has increased to 80,000,000, not counting the people of Porto Rico and the Philippines; and these 80,000,000 the freest, the best educated, the most progressive, the most prosperous, and the most wealthy in all the world.

Our railroads, telegraphs, and telephones cover the whole land from ocean to ocean with a marvelous network of rails and wires, so that it is possible to travel to any point, with comfort and often with pleasure, at the average rate of 20 miles an hour; and if you wish to send a message to a friend 100 or 1,000 miles away, you can send it and get an answer sooner than you can write a letter and get an answer from a neighbor 1 mile away; and in many cases you can talk with your friend by telephone, miles away, as though he stood by your side.

REPUBLICAN PROSPERITY.

We have speedy and frequent postal facilities whereby we can send letters thousands of miles for 2 cents, can get a paper every day containing not only the news of our neighborhood but the great news of yesterday over the whole world; and through the rural free-delivery now being extended into the farming districts, inside of five years more almost every farmer will have his mail delivered at his door every day.

Schools and school facilities are better and nearer than ever before known in the history of the world. Academies, colleges, and universities are in reach of all, and at rates far less than ever before. Great newspapers gather the news in every nation and lay it before us every morning, so that we are kept in touch with all mankind and know what is going on in all lands. There are to-day at least a dozen newspapers any one of which publishes more pages of printed matter in a week than all the newspapers of the United States combined printed fifty years ago. Books of all sorts are published so cheaply as to be in reach of all, and the amount of literature—political, religious, and educational—circulated gratuitously is so great as to reach every family. The means of education and the sources of information have never before been so numerous and so near at hand as now.

The wealth of the nation is stupendous beyond all precedent. The amount of capital invested for the accommodation of the public looms up into the thousands of millions. The many great cities, filled with mighty and imposing structures, are marvelous to behold. The public utilities, gas and electric lights, street cars, telephones, water in every house, streets paved, public parks, all combine to make our cities marvels of comfort, convenience, economy, and pleasure, not dreamed of even fifty years ago. The immense steamships, like floating palaces, crossing the oceans at a speed of over 20 miles an hour, and telegraph cables thousands of miles long running under the sea and binding continent to continent, tend to annihilate the mighty wastes of water and bring all nations face to face. And in all of these stupendous advances the United States, under the government of the Republican party, has taken and kept the lead, easily first among the foremost, admittedly mightiest among the mighty.

DEMOCRATIC CONTRARINESS.

For the last forty years, while all of these wonderful improvements were being made, while under the guidance of the Republican party, our nation has become the leader and wonder of the world, while liberty has been secured to all, even the humblest, while blessings have been multiplying on every hand, while education has been made the rule and not the exception in every neighborhood, while law and order have guarded every home as the cherubim guarded the Eden of old, while such was our progress and such our growth and such our good fortune, the Democratic party has gone along with us finding fault with all that we have done, predicting evil results from all of our actions, praying for the old times of slavery and ox carts, grieving when the sun shone, the rains fell, and the crops flourished, lamenting when the buds of beneficence burst forth into blossoms of joy and bore fruits of blessedness—yes, this Democratic party, happy only when calamity threatened, smiling only when pestilence struck our cities, contented only when drought or floods destroyed our crops, glad only when foreign complications portended national trouble, rejoicing only when labor strikes stopped the wheels of commerce and closed the doors of the factory, this Democratic party, like a foul and black bird of evil, has flapped over our heads as the grand procession of prosperity moved along, croaking its lamentations and trying to tear our flag with its beak or befoul its folds with its slime.

And yet this Democratic party, notwithstanding its crimes, notwithstanding its incapacities, notwithstanding the incoherences and absurdities of its platforms, notwithstanding the nonfulfillment of its promises and prophecies, this Democratic party is again asking the votes of patriotic, liberty-loving, and self-respecting American voters.

We tried the Democratic party in 1892, and what was the result? Hard times, bankruptcy, poverty, starvation; the cities full of paupers looking for soup houses to eat in, and the country full of tramps looking for places to die in. Three millions of laborers out of work, the Administration compelled to borrow hundreds of millions of dollars to prevent the Government from going into bankruptcy; and distress, despondency, and destitution written on almost every face in almost every household in the whole land.

BRYAN ON CLEVELAND.

Do you want any more of this Democracy? God forbid. When Grover Cleveland was last nominated and elected the Democrats swore by Thomas Jefferson and all their other gods that he was the best man in the world and would do the right thing all the time. Now, what sort of a President did Cleveland make? I will call William Jennings Bryan as a witness. On this very day Bryan has given to the world the following statement about Cleveland and his Administration:

He (Cleveland) secured his nomination in 1892 by a secret bargain with the financiers; his committee collected from the corporations and spent the largest campaign fund the party ever had; he filled his Cabinet with corporation agents and placed railroad attorneys on the United States bench to look after the interests of their former clients. He turned the Treasury over to a Wall street syndicate, and the financial member of his official family went from Washington to become the private attorney of the man who forced (?) the Treasury Department to sell him Government bonds at 105 and then resold them at 117. He tried to prevent the adoption of the income-tax provision, he refused to sign the only tariff-reform measure passed since the war, and while thundering against the trusts in his message, did even less than Knox has done to interfere with their high-handed methods.

Such is the picture Bryan, the present apostle of Democracy,

draws of Cleveland, the last preceding apostle of Democracy; and Mr. Cleveland draws a picture of Bryan almost as black. Behold how these brethren love one another!

The Democratic party, Mr. Chairman, seems to have no faith in the future greatness of our country. On the contrary, the Republican party has an unwavering faith in our country. We believe it has a great destiny. Some still, small voice seems to tell us that we are destined to give laws to all the world, not necessarily by the power of the sword and the bullet, but by the force of our good example, by the blessedness of our institutions, by the superiority of our civilization, and by our devotion to the rights of men. We believe we have duties to perform, and that wherever any people by choice, by conquest, or by purchase, comes within the circle of our influence it is our duty to confer upon them as much of our civilization and as many of our institutions as they are capable of utilizing.

DEMOCRACY THE INCARNATION OF ANTAGONISM.

And now, you Democrats, after denouncing McKinley and the Republican party for ruling the Philippines with military law, and after protesting that civil law and self-rule should be given the people of those islands—after filling the debates here and the newspapers and the whole land with your outcries against the Army and government by the Army, strange to say, here is the Democratic party in this House fighting, step by step, every section of the pending bill, which is designed to give the Philippines the very sort of government this same Democratic party has been so long and so vociferously demanding should be given them.

The fact is, Mr. Chairman, the Democratic party has done so much opposing it has acquired a habit and heredity of opposition. It is the very incarnation of antagonism. This spirit has existed all along the ages. It encouraged Eve to eat the forbidden fruit. It prompted Cain to kill Abel. It scoffed at the warnings of Noah. It rebelled against Moses in the wilderness. It opposed the crossing of the Jordan by Joshua. It criticised King David and encouraged Absalom to fight his own father. It preferred Barabbas to Jesus. It tried to prevent Columbus discovering America. It stirred up strife against Washington. It belittled Abraham Lincoln. It villified Grant. It abused McKinley. What then can we expect, Mr. Chairman, of the Democratic party except opposition, antagonism, criticism, abuse, villification, misrepresentation, and slander?

Mr. Chairman, in discussing the questions relating to the Philippine Islands we should rise above the low plane of partisan politics and endeavor to think, speak, and act like statesmen. We should deal with these islands and their inhabitants not as though we were mere Democrats or Republicans, but as Americans, as patriots, as men who remember our country's past and who have faith in our country's future.

PREVIOUS TERRITORIAL ACQUISITIONS.

In dealing with the Philippine Islands we are not treading a trackless wilderness or sailing an uncharted sea. We have abundant precedents. In our brief existence as a nation—for one hundred and twenty-seven years is but a brief existence for a nation—we have made many territorial acquisitions; and I maintain that we have never made any that was more honorable, more regular, or more legal than the acquisition of the Philippine Islands. While the Louisiana purchase is ordinarily considered our first acquisition, and is our first acquisition as a nation, it is not our first acquisition as a people. The people of the United States, you may say, began to exist as a people in 1754, in the month of June, when the Congress of the American colonies met at Albany in that year, wherein it was agreed that we would make common cause and fight as one people, for the country between the Allegheny Mountains and the Mississippi River, then held by the French and Indians. That struggle we kept up for the period of ten years, first and last, and we were victorious. George Washington commanded the first expedition that ever was started by the American people in their career of expansion.

When England acknowledged our independence as a nation she, at the same time, recognized our title to this region that between 1753 and 1763 we conquered from France, then called New France, constituting the whole of that magnificent domain between the Allegheny Mountains and the Mississippi River. This territory thus conceded to us was no part of the original thirteen States. The territory between Pennsylvania and the Mississippi River was no part of Pennsylvania. The country between Virginia and the Mississippi and between North Carolina and the Mississippi and between Georgia and the Mississippi was no part of the thirteen original colonies, though some of it was claimed by them.

THE LOUISIANA PURCHASE.

It was a territory that belonged to all; it was a part of the national domain, separate and distinct from the thirteen colonies themselves, and was acquired by them all in a joint war, first with France and last with England. When the territory, out of which has since been carved the States of Ohio, Indiana, Illinois, Michigan, Wisconsin, Kentucky, Tennessee, Alabama, and Mississippi, was ceded to us by England she had no valid title to it, was not in possession of any considerable part of it. It was occupied by Indians. So that the title we acquired depended entirely upon treaty, treaty with a nation that had no considerable possession, treaty with a nation whose only title was derived from France, another nation that had no considerable possession.

Our second acquisition was the Oregon country. Our third acquisition was the Louisiana territory, comprising the whole of that vast region between the Mississippi River and the Rocky Mountains, out of which we have carved the States of Iowa, Minnesota, North Dakota, South Dakota, Montana, Wyoming, Nebraska, Kansas, a portion of Colorado, Missouri, Arkansas, and Louisiana, and the Territory of Oklahoma and the Indian Territory. What sort of title did we acquire to the Louisiana Territory? We acquired all the title that France had. But what sort of a title did France have? She had no title except at the mouth of the Mississippi. She did not have possession of 1 square mile out of 10,000. It was occupied by Indians. The great proportion of the territory no Frenchman had ever seen. A very large proportion of it they had never heard of, and it became necessary for President Jefferson to send an expedition under Lewis and Clarke to find out where in the world that Louisiana country ended, anyhow.

So all the title we got to that vast region between the Mississippi River and the Rocky Mountains was the French title, a title based upon nothing in the world except that some Frenchmen had sailed down the Mississippi River and had builded a sort of city at New Orleans.

There is another thing about the French title. France had no title in equity to the Louisiana country. She had recently acquired it from Spain by a secret treaty which required her to transfer it back to Spain when a convenient opportunity arose, and Spain never consented to the sale to us. So all we got was the naked legal title of France to the Louisiana country, and we paid $15,000,000 for it, for better or for worse. When the question of limits came up nobody knew where the boundaries were, and Napoleon himself remarked that it would be well enough to leave the limits indefinite, his secret purpose being to involve the United States in a quarrel with England over the question of boundary.

FLORIDA, TEXAS, AND CALIFORNIA.

The fourth territory we acquired was the territory of Florida. Spain had some sort of title to a portion of that, a very small section up in the north. Jackson had gone down there in 1817 and practically conquered the country; but we gave it up, and to settle the trouble we agreed to pay Spain $5,000,000 for the territory. That was a title based upon purchase exclusively, only a part of the country being in possession of Spain, nineteen-twentieths of it being owned by Indians. It took a war of seventeen years, which cost us more than $100,000,000 and between 5,000 and 10,000 American lives, to drive out these Indians—the Seminoles, Creeks, and Cherokees and escaped negroes. And when we did drive them out and conquer them it was the result of several monstrous acts of treachery on our part, compared with which the capture of Aguinaldo was a marvel of honor and chivalry. Our fifth acquisition was Texas, which came voluntarily into our Union, being already peopled and governed by men born and raised in the United States.

Our sixth acquisition was California and New Mexico. We conquered that country first. Then our title was recognized by treaty, and then we paid $15,000,000 besides. This was a sort of threefold title, the best title down to that time we had ever obtained to any of our acquisitions—a title based, first, on conquest; second, on treaty, and, third, on purchase.

Our seventh acquisition was the Gadsden purchase, sometimes called Arizona. That was based exclusively on purchase. The eighth acquisition was Alaska, based exclusively upon purchase. The ninth was the Hawaiian Islands; and Porto Rico and the Philippine Islands are the tenth.

Now, Mr. Chairman, what sort of title have we to the Philippine Islands? We have exactly the same sort of title to the Philippine Islands that we have to New Mexico and California—first, conquest; second, treaty, and third, purchase. It is said that we did not go into the war with Spain for the purpose of acquiring the Philippine Islands. That is true, Mr. Chairman. When the lightning breaks forth you can not tell which way the bolt will fly. So when war breaks forth you can not tell what the result will be.

In 1846 a Democratic Administration went to war with Mexico to defend the soil of Texas, then American territory; but in a short time we find General Taylor invading Mexico and fighting at Monterey and Buena Vista. Then we find General Scott bombarding Vera Cruz, a thousand miles from Texas, and battling his way for 300 miles over many obstacles to the capital of the Montezumas; and this, mark you, in a war ostensibly to defend

the soil of Texas, a thousand miles from the City of Mexico. Then there was a third American army that invaded California, on the other side of the continent; and when the war ended we took from Mexico all that great region now covered by California, Nevada, Utah, New Mexico, and Arizona. And yet, mind you, the Democrats just went to war to protect the soil of Texas, and went without any authority from Congress. General Taylor was ordered by President Polk to cross the Rio Grande and invade the soil of Mexico while Congress was not in session.

THE DEMOCRACY AND THE CONSTITUTION.

And yet, to hear some gentlemen on the other side of this House talk here upon the floor you would think that when the Democratic party was in power, before it or any of its leaders took any step, they got down on their knees and said their prayers to the Constitution of the United States. And when the Democratic Administration conquered and annexed and paid for all this great region, did they consult the inhabitants? Did they get their consent to be bought and governed? What, then, became of their present objections to a people "alien in race, language, and religion?" What, then, did they say when charged with "imperialism?" The people we found in New Mexico and California when Kearney and Doniphan went there, when Fremont raised our flag over the city of Monterey and wiped out the forces of Generals Castro and Pico in 1846, were just as "diverse from us in race, language, and religion" as are the inhabitants of the Philippine Islands to-day.

But, Mr. Chairman, that was under a Democratic Administration, and whatever is done under a Democratic Administration you know is right. It reminds me of a story of a little girl who was maintaining that a certain thing was so, and her little playmate said it was not so. The first little girl said: "It is so, for my mother says it is so, and what my mother says is so, is so, even if it ain't so." And so whatever these Democrats do is all right and strictly in accordance with the Constitution, whether constitutional or not. The fact that Democrats do it makes it constitutional. They always follow the path of constitutional precedent and never vary the millionth part of a hair's breadth from the Constitution as construed by Thomas Jefferson, a man that a great many Democrats believe made the Constitution, when he had nothing in the world to do with it, and was not even on this side of the Atlantic when it was made. By the way, Thomas Jefferson was the first man in all our history that ever violated the Constitution, according to his construction, and violated it knowingly, designedly, and avowedly. That was when he signed the treaty whereby we acquired the Territory of Louisiana. Jefferson, you know, maintained that Congress and the President could not do anything unless there was plain authority for it written on the face of the Constitution, and there was no such authority to purchase territory from another nation.

THOMAS JEFFERSON THE FIRST IMPERIALIST.

I have heard it said that when he signed the treaty with France whereby we acquired Louisiana, Jefferson turned around to those who were about him and asked, "Did you hear anything crack?" [Laughter.] "No," they answered, astonished at the remark, and asked, "What was it?" Jefferson replied, "The Constitution of the United States." Yes, the Constitution, according to his construction of it, like the veil of the Temple, was rent in twain when he signed that treaty; and he called upon Congress to amend the Constitution and ratify what he had done and forgive him for this sin upon the pledge that he would do it no more. [Laughter.]

This mighty act of imperialism was done by Thomas Jefferson, the father of the Democratic party. But I think it very likely if he were here to-day and heard these Democratic speeches against "imperialism," he would not recognize his own progeny, and if he did he would disown them. Some of these Democrats say that we bought these Filipinos at $2 a head when we paid $20,000,000 to Spain. Well, if we did, did not you Democrats in 1848——

Mr. BARTLETT. Will the gentleman permit me to ask him a question?

Mr. GIBSON. Yes, if it is pertinent.

Mr. BARTLETT. Yes, it is pertinent to the point that you are speaking of. The first person to whom I ever heard that attributed was ex-Speaker Thomas B. Reed. He was the first man that said we bought them at $2 apiece.

Mr. GIBSON. Oh, yes, you Democrats always claim that Republicans say this or do that, and then you go around repeating what you say they have said or have done. I do not know what you would do in a campaign if it was not for what you claim Republicans have said or have done. I understand you delight to circulate some of our speeches in your campaigns.

Mr. GAINES of Tennessee. The hardest task is to circulate some of the gentleman's from Knoxville.

PEOPLE PURCHASED BY DEMOCRATIC PRESIDENTS.

Mr. GIBSON. Some of you Democrats say that we paid Spain $2 apiece for the Filipinos when we paid the twenty millions to Spain. Well, if we did it, gentlemen, did not you Democrats in 1848 pay $50 a head for the 300,000 Greasers you bought in New Mexico and California when you paid fifteen millions to the Mexican Government? I say as between the Greaser and the Filipino I believe I would prefer the Filipino; and yet you paid twenty-five times more a head for them than we did for the Filipinos; and what is a little singular about that, these Greasers are nearly all Democrats. I suppose they think they ought to belong to the Democratic party, inasmuch as the Democratic party bought them! Yes; the Democrats bought the Greasers and paid the price, and, stamping the insignia of American citizenship upon their brows, said they were all right; and of course as Democrats did it, they were all right. You want to admit them into the Union as one of the States, and yet you are complaining at us for acquiring the people of the Philippine Islands.

And when the Democratic President, Andrew Johnson, bought Alaska for seven and a fifth millions——

Mr. BARTLETT. Do you charge Andrew Johnson to us?

Mr. GIBSON. Of course I charge him to you. He never was anything else but a Democrat. Never was. You do not believe that because a Democrat became a Union man he ceased to be a Democrat?

Mr. BARTLETT. Oh, no.

Mr. GIBSON. All that Andrew Johnson was in contradistinction with the other Democrats of the South was that he stood by his country and stood by the Union; and the Republicans, out of gratitude for his manhood and his patriotism and his boldness and his integrity joined him with Abraham Lincoln upon their Presidential ticket. But that did not make a Republican of him. He never claimed to be a Republican and the Republicans never claimed him to be such. Your speakers in campaigns for the last thirty years have gone all over my district and all over Tennessee making the claim that every square inch of the territory of the United States had been acquired under Democratic Administrations, claiming that Alaska had been acquired by a Democratic Administration; and you are the first intelligent Democrat I have ever heard contend that Johnson was not a Democrat, or that Alaska was not acquired under a Democratic President. And Johnson paid $150 a head for the Alaskans, and no questions asked.

DEMOCRATS GOT NO CONSENT FROM THE GOVERNED.

When you in 1803, under your first President, Thomas Jefferson, bought Louisiana and paid $15,000,000 for it, did you Democrats then ask the consent of the people? Did you ask the consent of the Greasers of New Mexico and California when you bought them? Did you ask the consent of the people of the Territory of Louisiana? Did you ask the consent of the Sioux and the Sacs and Foxes, the Winnebagoes, the Kiowas, the Comanches, and all those other Indians living west of the Mississippi? And let me say of them, they were just as good men as are the Filipinos, just as good, just as brave, just as noble, just as fond of liberty, just as devoted to their country, and having as much right to the soil as these people of the Philippine Islands. And yet Thomas Jefferson, the founder and apostle of the Democratic party, never asked a man of the million he bought whether he was willing to be bought and to be governed by the United States; but just dumped the whole lot into his game bag as though they had no rights he was bound to respect. And yet they were "aliens in race, language, and religion." Was there no "imperialism" in all this?

Yes; Thomas Jefferson, the author of the Declaration of Independence, the father of the Democratic party, the be-all and end-all of all that is good and noble, grand, patriotic, and wise, according to the Democratic creed, never thought of such a thing as asking the consent of the people of that great territory between the Mississippi River and the Rocky Mountains when he bought them from the French at $15 a head. I would like to have seen some Democrat of that day go to Thomas Jefferson and say to him: "Mr. Jefferson, what about the consent of the governed?" Jefferson would not have answered. But he would have given him a look which would have signified that that was an occasion when silence was golden and speech was silver, and worth only about 30 cents. [Laughter.]

And suppose somebody had then gone to Mr. Jefferson and asked him about "imperialism." And what sort of a government did Thomas Jefferson give to the people of Louisiana? He sent a military governor there and an army, and notified them to come to time, and he gave that military governor supreme authority. Mr. Chairman, the first governor of my State of Tennessee, when it was the territory south of the Ohio River, was William Blount, appointed by George Washington, and he made the first laws of the territories south of the Ohio River—made

them solitary and alone. In the law books of Tennessee they appear as ordinances of William Blount.

And the government set up by Thomas Jefferson to the Northwest Territory was practically a military government. But when the people were allowed to be represented, it was only in one branch; the other branch was composed of men appointed by the President of the United States, exactly as the bill now pending provides for the government of the Philippine Islands, except that the government proposed by the committee bill is more liberal than the government for the Northwest Territory devised by Thomas Jefferson.

DEMOCRATIC MILITARY GOVERNMENT.

Mr. GAINES of Tennessee. Will the gentleman allow me an interruption?

Mr. GIBSON. Yes; but only for a short time.

Mr. GAINES of Tennessee. Does not the distinguished lawyer know that the ordinances that controlled that Territory provided for jury trials and the Philippine Island bill does not provide for it, and you do not propose to give it to them?

Mr. GIBSON. Does the gentleman maintain that a Filipino is the equal of an American citizen?

Mr. GAINES of Tennessee. I maintain that the Americans in the Philippine Islands are entitled to jury trial, and if the Filipinos are under American government they ought to have it, too.

Mr. GIBSON. I will have to have the gentleman from Tennessee [Mr. GAINES] gagged. [Laughter.]

Yes: when Thomas Jefferson bought Louisiana, there were prophets of evil, just as there are now, who declared that the purchase was a crime against our country; that nothing but calamity would be the result; that the Mississippi was the irrevocable western boundary of our country, and that when it was crossed the Union was dissolved.

But now look across the Mississippi. Behold the great States of Louisiana, Arkansas, Missouri, Iowa, Minnesota, Nebraska, Kansas, North Dakota, South Dakota, Wyoming, and Montana, all carved out of the Louisiana purchase, and yet not quite one hundred years gone by since we bought that imperial domain.

Who now sneers at Jefferson for paying $15 a head for a million savages in a savage land, the nearest part of which was then a month's journey from the Potomac?

And when James K. Polk conquered and then bought California and New Mexico, what a furious storm of opposition broke forth in our politics—just such a storm as rages now. It was charged that we had robbed Mexico without provocation or a shadow of justification. The region was declared to be a trackless waste of sand unfit for human habitation, and that the people who lived there were so low in the scale of humanity as to be unworthy of the name of men. And yet, "aliens in race and religion" as they were, and too ignoble to be called men, Polk's Administration paid $50 a head for them, and made Americans of them besides.

But now look at New Mexico, Arizona, Nevada, Utah, and California, and tell me what American now regrets that James K. Polk acquired that country? Who now sneers at him for paying $50 a head for the Greasers and Indians living there? Who complains that he bought them without their consent? Who denounces him for introducting into our citizenship "a people alien in race and religion?" Who remembers that Polk was charged with "imperialism?"

THE PURCHASE OF ALASKA.

Even Alaska, that Territory that used to be the butt of our ridicule, that supposed region of eternal snow, unhabitable and inaccessible, that domain where the Frost King was supposed to exercise universal and invincible sway, what now about Alaska? Presto, change! It has been transfigured. It is an El Dorado. Thousands and tens of thousands of Americans are flocking thither. The streams are found to be sanded with gold, the mountains stored with coal, the ridges and hills are covered with timber, and millions of acres of land responsive to cultivation.

And where now is the patriotic American who now thinks that Andrew Johnson and William H. Seward made a mistake in acquiring Alaska? What has become of the gibers, the lampooners, and the calumniators? What has become of the men who denounced Johnson and Seward for paying $150 a head for a bargain counter lot of human rubbish? What is now being said about governing them without their consent? The giber gibes no more. The lampooner has gone way back and sat down. The calumniator denies that he ever said it. [Laughter.]

One of the ludicrous features of the present situation is that most of the men who now oppose the acquisition of the Philippines are either the descendants of the very men who favored the acquisition of Louisiana, Texas, and California or are the inhabitants of the regions acquired; and the men who are now charging "imperialism" upon the Republicans are the descendants of the men who in 1803 and 1848 were themselves charged with being imperialists! Such are some of the ironies of fate.

Twenty-five years from now, when the Philippines will be happy, prosperous, and mighty, rejoicing in their American civilization, and glorying in their devotion to the American flag, the philosophic historian, looking over the debates of this and the last Congress, will have no trouble in finding out that the opposition to the retention of the Philippines is nothing but politics; and he will say that if the Democrats had been in power when the Philippines were acquired they would have boasted of the acquisition, and would have declared that the purchase of the Philippines was a worthy companion piece to the purchase of Louisiana.

And no doubt, if the Democratic party should then be surviving, they will point with pride to the fact that they favored the war and their candidate for the Presidency, William Jennings Bryan, caused to be ratified the treaty whereby the Philippines were acquired.

Oh, but we are told the Philippines are different from Louisiana, California, and Alaska. Yes, and in 1803 we were told that the Louisiana country was different from the Atlantic States, and in 1848 we were told that New Mexico and California were different from Louisiana, and in 1867 we were told that Alaska was different from California.

THE PHILIPPINE ISLANDS NEVER TO BE SURRENDERED.

Mr. Chairman, it takes all sorts of people to make a world, and it takes all sorts of lands to make a great country. In our country we have Europeans, Africans, Asiatics, and islanders of all the oceans. We need the products of all peoples and of all lands, and when Providence drops into our lap such a grand country as these Philippine Islands I will not be one of those who spurn the gift. There was a day when we could have run Oregon up to Alaska, and this same Democratic party swore by all their gods in 1846 that they would have it or fight, but they backed down; and England got the country between Oregon and Alaska, and we have been grieving about it ever since. It may yet cost us a bloody and expensive war to reclaim what was once in our hands.

So, if we should give up the Philippines, other nations would at once step in and take them. The moment it became known that we proposed to abandon the Philippines, that very moment the fleets of England, France, Germany, and Japan would set sail for those islands to seize them and hold them forever. And the day our flag was hauled down in the Philippine Islands would be the day when history would mark the beginning of the downfall of the United States.

But, Mr. Chairman, that day will never come. Never, by the heroic spirits of Jefferson, Jackson, Polk, Johnson, and McKinley, through whose inspiration and statesmanship our country has expanded to her present gigantic dimensions. We went to Louisiana in 1803 to stay, and there we are to-day. We raised our flag in Florida in 1819, and there it floats to-day. We annexed Texas in 1847, and it is annexed to-day. We acquired New Mexico and California in 1848, and they are ours to-day. We purchased Alaska in 1867, and we hold it to-day. Yes, we hold them all to-day, and we propose to hold them all and hold them forever. And so we propose to hold the Philippines, and hold them forever.

We are not a people who take steps backward. "Forward!" has been our battle cry from the time the Pilgrim Fathers set sail for America down to the present day. We have sailed forward across the Atlantic; we have marched forward to the Alleghenies, thence to the Mississippi River, thence to the Rocky Mountains, thence to the Pacific Ocean, thence to the Philippines, and as we have marched forward we have planted our flag, we have opened our Bible, we have built our schoolhouses, we have established our civilization, and disseminated the blessings of free institutions and progressive ideas.

THE TRUMPET OF DESTINY.

"Forward!" it is and "Forward!" must it ever be. We are not a crawfish race, nor were our fathers before us, nor will our children be after us; and that is a false and spurious type of Americanism that seeks to build Ne Plus Ultras and discovers Ultima Thules. Our race has not degenerated into a brood of cowards that imagine monsters in their pathway and fear to go forward and farther. We fear no Zamzummim or Anakim and are not to be terrified by rumors of giants in our pathway. We ourselves are the giants that others fear, and than us there are no greater anywhere.

In 1607, standing on the shores of Europe, Destiny blew her trumpet and pointed toward the west, and hundreds of thousands of the choicest people of Europe, feeling the impulse of fate, crossed the Atlantic Ocean and settled on the shores of North America. In 1753, standing on the Allegheny Mountains and still pointing toward the west, Destiny again sounded her trumpet, and the descendants of the men who crossed the Atlantic, headed by George Washington, crossed the Allegheny Mountains and drove the French out of the country east of the Mississippi River. In 1775, unfurling at Philadelphia the Stars and Stripes, Destiny again blew her bugle, and a new and mighty nation, shouting

the battle cry of freedom, uprose on the North American continent, the sons of those who had crossed the mountains and conquered the French, and the grandsons of those who had crossed the ocean and conquered the Indians. In 1803, Destiny again sounded her trumpet, and Thomas Jefferson, the first imperialist, ordered the Stars and Stripes to cross the Mississippi, and extended our sovereignty from the Mississippi River to the Rocky Mountains.

In 1845, the trumpet of Destiny again stirred the spirit of our country, and under the orders of James K. Polk, the second great imperialist, instigated by Andrew Jackson, another great imperialist, American soldiers entered the State of Texas, crossed the Rio Grande, and marched thence to the Pacific Ocean, and there our flag and sovereignty rested until 1898, when above the roar of battle and the thunder of conflict the thrilling tones of Destiny's bugle sounded in our ears, and William McKinley, out last great imperialist, sent our flag across the Pacific Ocean and had it planted on the other side of the world, and made the Philippine Islands a part of our mighty Republic.

Where Jefferson planted our flag in 1803, on the western side of the Mississippi, there it still floats, supreme, in spite of the prophecies of evil and the threats of opposition that saluted its unfurling. Where Polk planted our flag in 1846, on the shores of the Pacific, there it is still triumphant and unquestioned, notwithstanding the fiery invectives of the malcontents and the forecasts of fatalities to result.

OUR FLAG NOT TO BE HAULED DOWN.

Where McKinley planted our flag in 1898 in the Philippine Islands there it floats to-day, victorious and invincible, and the prophecies of calamity and the maledictions of the malcontents of the present day will be as unavailing as were such prophecies and maledictions in the days of Jefferson, Jackson, and Polk. There will be no retreat from the Philippines, Mr. Chairman. You may as well talk of retreating from the Mississippi River and the Rocky Mountains. You may as well talk of retreating from the Rio Grande and the Pacific Ocean. We are in the Philippine Islands to stay, and to stay forever. [Applause.]

But we are told that it is costing money to keep our flag afloat in the Philippine Islands. Yes; but did we not pay out many millions to keep our flag afloat in Florida as against the Seminoles and Creeks? And did we not pay out hundreds and hundreds of millions to keep our flag afloat in the Louisiana country? Indeed, Mr. Chairman, for every American killed in the Philippines it is safe to say that there have been more than a hundred killed west of the Mississippi River, and for every dollar spent in the Philippines to assert American supremacy more than a hundred have been spent in the Louisiana territory. And when we were battling with the Indians in Florida and the Louisiana country we were small in population and poor in purse compared with what we are to-day.

When we were waging our wars against the Indians many men with weak hearts were begging us to let the Indians hold the country. Some of us forget the awful battles we had with the Indians from the days of Washington to the present. They forget the defeat of Braddock, the defeat of St. Clair, the massacre at the river Raisin, the butchery at Fort Mimms, the destruction of Major Dade's command by the Seminoles, and the many awful massacres in the country west of the Mississippi.

Yes, thousands and tens of thousands of American men, women, and children have been killed first and last by the Indians while we were struggling to assert the titles we got from England, France, Spain, and Mexico, and hundreds of millions of money have been spent in keeping our flag afloat; but we never turned our backs upon any of the territory thus acquired, we never lowered our flag over a single square inch of it. The white-livered men who favored the policy of surrender are all dead, and are all forgotten. If they left any sons those sons have never been heard to boast of their cowardly fathers. And now, in this year, 1902, we have the grand satisfaction of knowing that great has been our success, and that a policy of surrender would have destroyed our country and blasted our future. A great destiny does not go hand in hand with cowardice and disloyalty.

THE DEMOCRACY OF JACKSON.

If Democratic editors and Democratic campaign orators want to find some lurid specimens of sulphurous invective, I commend to their attention the political assaults upon General Jackson for invading Florida in 1818, then Spanish territory, capturing the Spanish forts there, arbitrarily hanging Indian chiefs taken by artifice, seizing British subjects and summarily putting them to death, and in other ways showing that General Sherman's definition of war, while not found in the dictionaries, is often proved to be true. But Jackson was defended by the Democrats of those days, and the people of the United States afterwards elected him President. He was the first President elected as a Democrat.

What a difference between the Democracy of Andrew Jackson and the Democracy of William Jennings Bryan! The Jackson Democrats had backbone and patriotism and stood up for their country and the flag. The Bryan Democrats stand up for the enemies of their country and want its flag pulled down. Oh, for one hour of brave Old Hickory! How he would drive Bryan and his Populistic followers into their cyclone cellars! If Bryan and his fellow-Democrats, so called, had their choice between a visit from the devil and one from Andrew Jackson, they would prefer the devil every time. The difference between the Democrats of Bryan's day and the Democrats of Jackson's day is as wide as the distance between the rich man and Lazarus in the parable.

And a great hullabaloo has been raised over what these Democrats call "the atrocities" perpetrated by our soldiers in the Philippine Islands. Some red-handed murderers have been shot, it is said; some traitors have had water pumped down their throats to make them confess their crimes, we are told; some shanties made of poles have been burned, it is charged, and, worst of all, a cockpit was destroyed! And because of these alleged "atrocities," such an awful hullabaloo is raised that a foreigner listening to Democratic speeches would think that the whole American Army in the Philippine Islands were outlaws and villains, cutthroats and scoundrels of the blackest breed.

What an awful slander upon our constituents are these Democratic charges against our army in the Philippines! The men composing this army have gone out of our midst, the sons of our best citizens, well raised and well educated, brave, patriotic, enthusiastic and adventurous, the flower of our young manhood, the pride our country; and I boldly maintain that no army ever raised in any nation and at any time has ever had so large a proportion of honorable, well-educated, law-abiding, truth-loving, and crime-hating men as can be found in our Philippine army.

THE ATROCITIES OF WAR.

Speaking of these alleged "atrocities," none of which I admit, but which, if true, were no doubt justified by the circumstances, I call attention to the history of war among all nations. King Henry V, summoning the city of Harfleur to surrender, cried out:

> If I begin the battery once again,
> I will not leave the half-achieved Harfleur,
> Till in her ashes she lie buried.
> The gates of mercy shall be all shut up;
> And the flesh'd soldier, rough and hard of heart,
> In liberty of bloody hand shall range
> With conscience wide as hell, mowing like grass
> Your fresh fair virgins, and your flowering infants.

Mr. Chairman, if you peer into the details of warfare here in North America since its discovery by Columbus, you will find many atrocities by the English, and the French, and the Spanish, and even by the Americans. I remember when I was a boy reading about the Huguenots settling in South Carolina, French Protestants, and how an army of Spaniards found them and captured and hung every one of them, and put a placard over their heads, saying: "We do this not as unto Frenchmen, but as unto heretics."

And after a while another Huguenot expedition came along and found the bodies of their comrades suspended on gibbets. They captured the Spanish forces and hung every Spaniard and put this placard over their heads: "We do this not as unto Spaniards, but as unto traitors, robbers, and murderers."

Now, that is the way war was conducted in the early settlement of our country. Atrocity is one of the features incident to war—one of its most horrible and heartless incidents. These incidents Christianity has mitigated, but not abolished. Witness the retaliatory massacres of the Indians by the English. Witness the ravages by the British troops committed upon our people during the Revolutionary war. Witness the thousands of Americans done to death by the English in their prison ships at Brooklyn, a monument to whom we voted the other day. Witness the deeds of vengeance and retaliation perpetrated by royalists and patriots in North and South Carolina during the war of the Revolution. Witness the tens of thousands of Union soldiers starved to death in Confederate prison pens, and the deeds of atrocity and barbarity perpetrated by the Confederates in East Tennessee during the war of the rebellion.

ATROCITIES ON EAST TENNESSEANS.

East Tennessee was loyal to the Union; nine out of every ten men and women there were loyal to the flag. The Confederate Government sent their armies into that section to exterminate the Union people. They arrested hundreds and thousands of men merely because they were Unionists. They confined them in filthy and over-crowded dungeons and prison pens, fed them on poor and scanty food, so that many of them died of starvation and disease. The Confederates hunted the Union men in the forests and in the mountains, confiscated their cattle and horses, their crops and their provisions, burned down their houses, maltreated their families, hung many of the men and shot more, and filled that beautiful and loyal land with devastation, mourning, and death. Burning homes, new-made graves, weeping widows, and

wailing orphans marked the tracks of the Confederate soldiers all over East Tennessee in those dark and cruel and bloody days. Hon. N. G. Taylor, an ex-member of this House and the father of Robert L. and Alfred A. Taylor, ex-members of this House, estimated that from "2,500 to 3,000 noncombatants were massacred in East Tennessee for their Union sentiments."

Do you ask me why I call up these cases of horror. I call them up to show you Democrats, who are abusing our soldiers for a few alleged cruelties in the Philippine Islands, that cruelty is one of the incidents of war; and that we ourselves, in our war among ourselves, Christians and Americans as we are, committed and had committed against us far greater atrocities than any you Democrats charge upon our soldiers in the Philippine Islands, and that these alleged Philippine atrocities are far less than those the fathers of some of you Democrats perpetrated upon the loyal men and women of East Tennessee during the war of the rebellion, with this difference against you: The cruelties alleged in the Philippines were committed against people of a different race and different institutions and different religion, whereas the atrocities perpetrated by your fathers upon the people of East Tennessee were perpetrated upon men and women and children of their own race, of their own religion, and of their own institutions, and what is more, oftentimes upon their own kinsfolk, and for no cause except that the men thus imprisoned, maltreated, and murdered were true to their country and faithful to its flag.

For every outrage and atrocity charged upon our soldiers in the Philippine Islands a score of worse ones can be produced perpetrated by the Confederate soldiers, their aiders and abettors, upon the Union men and women of East Tennessee during the rebellion.

Oh, Mr. Chairman, cruelty and atrocity are concomitants of war, and, ordinarily, a patriotic man will draw the veil over them as Shem and Japhet covered the nakedness of their father. I do not admire that brand of patriotism that takes pleasure in holding up the alleged cruelties of our soldiers in the Philippines, and has no pleasure in telling of their deeds of valor, endurance, and devotion.

HISTORIES OF THESE ATROCITIES.

Mr. GAINES of Tennessee rose.

The CHAIRMAN. Does the gentleman from Tennessee [Mr. GIBSON] yield for a question?

Mr. GIBSON. Briefly; yes.

Mr. GAINES of Tennessee. My colleague will pardon me for interrupting him; I dislike very much to do so; but I must say I have never heard of those "atrocities" to which he refers. In justice to the people of Tennessee, who have honored both of us, will he please give names and dates and tell us about the tortures and outrages of those people of our State who have honored us and our predecessors——

Mr. GIBSON. I do not yield for a speech, but for a question. You will find the particulars in the Sketches of Secession, by Parson William G. Brownlow; you will find them in the Loyal Mountaineers of Tennessee, by Rev. Dr. Thomas W. Humes; you will find them in East Tennessee and the Civil War, by ex-Chancellor O. P. Temple, all three of which books you can get from the Congressional Library, and I hope you will get them and read them. The stories they tell are as terrible as the awful tragedies in Fox's Book of Martyrs. It is one stream of blood, barbarity, burning, and brigandage from one end of those three volumes to the other. It is estimated that no less than 2,500 loyal men of East Tennessee were butchered by the cohorts of the Confederacy, sent there——

Mr. GAINES of Tennessee. How were they butchered?

Mr. GIBSON. Sent there under such men as Wood, Leadbetter, and Ashby.

Mr. GAINES of Tennessee. How were they butchered?

Mr. GIBSON. By being shot down on their farms and on the roadside; butchered by being shot or hung in the mountains, or hung up along the railroads so that the people traveling on the cars might see their hanging bodies and beware of the fate of a Union man; butchered by being starved to death in prison pens.

Mr. GAINES of Tennessee. What time of the war was that?

Mr. GIBSON. I commend to my colleague from Middle Tennessee that he read Parson Brownlow's book; I commend to him the reading of the Loyal Mountaineers of Tennessee, by Dr. Humes——

Mr. GAINES of Tennessee. From what I know of that book there is nobody except the angels in hell that would enjoy reading it very much, or even be guilty of quoting it.

Mr. GIBSON. I would also enjoin upon him the reading of East Tennessee and the Civil War, by ex-Chancellor O. P. Temple. There he will find what sort of treatment was meted out in those days to the loyal men and women of East Tennessee.

Now, Mr. Chairman, I do not bring these things up for the purpose of recalling the terrible scenes of those awful days, but to show how atrocities are the incidents of our own wars, and how ill it becomes the sons and the grandsons of the men who perpetrated these outrages from 1861 to 1865 now to be here in this House bewailing the burning of a shanty or a chicken coop by our soldiers in the Philippine Islands. [Laughter on the Republican side.]

DEMOCRATIC ATTACKS ON OUR SOLDIERS.

Have any soldiers of the United States been waylaid and captured and put to death with the awfulest tortures? Yes; but these Democrats say nothing about them. They overlook every perfidity, every atrocity, every barbarity, every savagery, every murder, and every massacre perpetrated by the Filipinos; but if any American soldier is guilty of some inhumanity, no matter what the provocation or excuse, these Democrats at once denounce that soldier as a scoundrel and a villain, a vicious cutthroat and shameless ruffian, unworthy of the uniform he wears, and hold him up to the scorn and contempt of the world, and call down upon him the maledictions of mankind.

These Democratic Congressmen talk against our soldiers as though these soldiers were foreigners, fighting under a foreign flag, and fighting our friends. These Democrats seem to forget that these soldiers are our soldiers, are American soldiers, are our own fellow-citizens, and our own constituents, fighting under our own flag and fighting our enemies. It will not do, Mr. Chairman, to call our soldiers brutes, ruffians, outlaws, and murderers. Such charges are as false as ever were invented by the malignant tongue of slander, and the men who make them dare not repeat them anywhere on the stump. The people of the United States love their soldiers, respect, admire, and honor them, and any political party that undertakes to abuse, slander, and vilify our soldiers will find on election day that they do not understand the temper of the American people.

I predict, Mr. Chairman, that the Democratic party will soon hear from the people, and will soon find out that their attacks on our soldiers will prove to be boomerangs; and I will not be surprised when the next campaign opens to hear Democratic orators praising our soldiers and swearing that they have always been the friends of our soldiers. But the record is made up. Their speeches are all in print, their editorials have all been published, and the Democratic party will be confronted with the damning evidences and proofs of their venomous, mendacious, and unpatriotic assaults upon our gallant and devoted soldiers while campaigning in the Philipipnes in defense of our sovereignty and in support of our cause. It is a hard task to uphold the flag and honor of our country in time of war.

A SOLDIER'S BURDENS.

The soldier has many trials, many troubles, many hardships, many discouragements, many crosses to bear. It strengthens his heart to know that his country is praying for him. It smooths his path to hear the voices of approbation coming from his home. It thrills his soul to learn that his people regard him as a hero and a patriot.

Imagine, Mr. Chairman, the feelings of the American soldier worn out by the march, suffering with thirst and hunger, and weakened by the wounds of battle, in the mountains of Luzon, 10,000 miles from his home, reading the speech of a Democratic Congressman abusing the United States Government for having an army in the Philippine Islands, denouncing the cause for which that army is fighting, belittling the officers in command of it, and charging or insinuating that the soldiers are ruffians, cutthroats, and murderers, and unworthy of the respect of mankind.

Mr. Chairman, I denounce these attacks upon our soldiers as uncharitable, unwarranted, indefensible, slanderous, unpardonable, unpatriotic, and treasonable; they discourage our soldiers and encourage our enemies; they prolong the war in the Philippines; they cost us millions of dollars and thousands of precious and patriotic lives, all for no purpose except to enable the Democratic party to make a hullabaloo over the Philippine Islands to deceive the people. Shame on such politics!

I charge, Mr. Chairman, that if the Democratic party had rallied around our flag in the Philippine Islands, as they should have done, the war there would have been ended years ago, millions of money spent in it would now be in our Treasury, hundreds of American soldiers, now in their graves, would be at home honored and useful citizens, and many a widow would be a happy wife and many an orphan child would be playing in the sight of a proud father. Oh, Democracy, Democracy, what crimes and treasons lie at your door!

If you love your country and its cause and its flag, if you love and honor our soldiers fighting for our country and our flag 10,000 miles away, on the farthest side of the world, come out and say so, and act and vote so. On this issue, he who dallies is a dastard, and he who doubts is damned. The American people will never

indorse any party that tries to bring disgrace upon our soldiers in time of war. That has been proved many times.

DEMOCRACY'S KIND OF CHARITY.

To hear some of these Southern Democrats denounce our Government and our Army for what they are pleased to brand as their tyrannies toward the Filipinos, to hear them declare that our flag stands for liberty and just treatment wherever it floats, and that under our Constitution every man is a free man and a brother and entitled to equal rights and privileges, and to hear them plead for self-government in the Philippine Islands, one would never suspect that these same Democratic Congressmen represent a constituency who practically deny to the black men in their midst almost every political right of citizenship, the right to vote, the right to hold office, and the right to have a voice in the making of the laws by which they are governed.

To hear these Southern Democrats plead for the yellow-skinned men of the Philippine Islands one would think that they would be even more quick to plead for the black-skinned men of America; for the yellow-skinned men live 10,000 miles away, while the black-skinned men live in their own neighborhood.

And yet these same "oppressed" Filipinos have far more actual rights, privileges, and liberties under Republican rule than have these negroes under Democratic rule.

This being so, Mr. Chairman, I sometimes wonder whether these Southern Democrats, who are such friends of the Filipinos, who live 10,000 miles away, and such enemies of the negroes, who live in their very midst—I sometimes wonder whether these Democrats are really sincere, and whether they ever realize the glaring absurdity and grotesque inconsistency of their words in favor of the Filipinos and their actions toward the negroes. As I have said here on a former occasion, the charity of these Southern Democrats is of a very peculiar and extraordinary variety. Ordinarily charity is said to begin at home, but the charity of these Democrats begins 10,000 miles away from home and comes to an end at home. So I am afraid their charity is as sounding brass or a tinkling cymbal—mere sound and fury, signifying nothing—vox, et præterea nihil!

SOLDIERING IN THE PHILIPPINES.

Mr. Chairman, the duties of a soldier in time of war call on him for constant displays of endurance, heroism, and devotion; but our soldiers in the Philippine Islands have had obstacles to overcome, trials to withstand, dangers to confront, privations to endure, diseases to suffer, and deaths to meet unlike those ever encountered by our soldiers before. They are serving in a tropical climate, in a country full of jungles and marshes and largely without roads; they are surrounded on every side by treacherous enemies of a different race, whose language is unknown and whose customs are strange. These enemies have massacred many of our soldiers; these enemies have proved traitors in so many cases but little confidence can be reposed in them; these enemies resort to multitudes of artifices and intrigues.

In such a country, among such a people, under such circumstances, Mr. Chairman, it is not strange if some extreme methods have been resorted to; it is only strange that more have not been employed.

Far be it from me to judge an American soldier thus situated by those nice rules of propriety that govern a modern debating society or a progressive Sunday school. No general of any army, of any nation, of any age of the world, ever carried on a war in accordance with the rules of propriety promulgated by the Sunday schools, and it is safe to say that while wars exist, while men are made as they now are, soldiers who expect to conquer a hostile army will often be forced to resort to measures that in times of peace would be unwarranted and unnecessary.

And the man who takes pleasure in abusing our Army because of some seeming cruelties committed under trying circumstances and prompted by the exigencies of the situation is not the man I would pick out for a patriot, and not a man I would risk with the welfare of my country in a day of trial and danger.

REPUBLICAN POLICY VINDICATED.

But, Mr. Chairman, everything will work out well in the Philippines, just as the purchase of Louisiana worked out well, just as the acquisition of Florida worked out well, just as the acquisition of California and New Mexico worked out well, and just as the acquisition of Alaska worked out well. Fifty years from now, when the Philippine Islands are blooming like the rose; when there are ten or fifteen millions of people there, quiet and happy and contented and prosperous under the American flag; when the men that are now deriding our actions and vilifying our Government and abusing our soldiers are in their graves, another and a more patriotic generation will arise in this country and will deny here in this House that their ancestors ever antagonized the acquisition of the Philippine Islands, just as you will not find anybody to-day who will admit that his father or grandfather opposed the acquisition of Louisiana, or of Florida, or of Texas, or of New Mexico, or of California, or even of Alaska.

The Republican party will carry everything on smoothly and rightfully and along constitutional lines, and will bring things out all right in the end; and in conclusion, I will say, Mr. Chairman, that the flag that McKinley planted in the Philippine Islands is planted there to stay, and it will stay with the consent of the people of those islands; it will stay with our consent; it will stay with the hearty approbation and the good wishes of mankind the wide world over. It will stay as the outpost of a higher and nobler civilization, as the emblem of a better and firmer liberty, as the beacon of a grander and purer Christianity, as a sign of deliverance to the islands of the sea, and as an evidence that the American nation has taken one farther and long step toward the dominion of the world. [Applause on the Republican side.]

The Oleomargarine Bill.

SPEECH

OF

HON. CHARLES L. BARTLETT,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 11, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9206) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine—

Mr. BARTLETT said:

Mr. CHAIRMAN: I am opposed to this bill in every section of it, and if I could, I would strike out the first section as it has been amended. I do not grant that the Congress of the United States has the power to enact the first section, which declares that the State shall get permission from Congress in order to enforce within their own borders their own police regulations with reference to health. We have it. We have this power in spite of Congress by the right which we got when the Constitution was adopted, and the rights we reserved to ourselves when we entered into that compact with the Government. I do not stand upon my own opinion with reference to this. I am sustained by the solemn judgment of the Supreme Court of the United States in dealing with this question, in which they declare that the States of this Union, even with reference to oleomargarine and butter, even with reference to the coloring of oleomargarine in the imitation of butter, have the absolute right to regulate its sale, even though the oleomargarine and the substance colored in imitation of butter may be conveyed into a State from an adjoining State.

Further than that, I do not grant that the Congress of the United States has the power to say that a State within its own borders shall not manufacture and sell to its own citizens what it may declare to be the policy of that State through its legislature. More than that, Mr. Chairman, we have here an effort on the part of Congress to enact a law the purpose of which is to destroy a manufacture, not of a noxious or injurious food, not a food that the consumer has resolved that he does not desire to buy. I venture to say, Mr. Chairman, that of the many protests with which this Congress has been afflicted very few have come from those who purchase or consume either butter or oleomargarine. The whole cry for relief has come not from people who buy, not from people who consume, not from people whom it is pretended that this measure is for the interest and protection of, but in behalf of the people who have worked up, who have canvassed the various Congressional districts of this Union all over the country, and inaugurated an attempt to encourage the sentiment in behalf, not of the honest farmer, not in behalf of the thrifty housewife who makes the butter and sends it to the market, but it is in behalf of the dairymen, in behalf of the people who are now acting in conjunction with the trusts for the purpose of aiding this legislation and for the purpose of enriching themselves, and for the purpose of driving out of the markets of this country a wholesome and legitimate product of industry.

So, Mr. Chairman, my chief objection to this bill is that under the Constitution of the United States, as it has been construed by the Supreme Court of the United States, there exists already within the separate States the power to do that which shall protect our people from fraud or imposition in the matter of oleomargarine. So far as my own State is concerned, it has already enacted laws to forbid the manufacture and sale of substances in imitation of cheese or butter which are not sold for what they are in fact. And I stand here to say that the great Southern

State that I represent needs no assistance from Congress, needs no additional aid from the General Government to enforce its laws and punish those who violate them. More than that, Mr. Chairman, I deny the right and power of Congress, under pretense of raising revenue, to strike down a proper and legitimate industry existing in my State.

I believe, Mr. Chairman, that the Government which slips out of the ranks of the ordinary articles of consumption to select and lay under disproportionate burdens a particular one, because it is a comfort, pleasing to the taste, or necessary to the health, and will therefore be bought, is in that particular a tyranny.

Suppression of Train Robberies.

SPEECH

OF

HON. ARIOSTO A. WILEY,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 17, 1902,

On the bill (H. R. 11412) for the suppression of train robberies in the Territories of the United States and other places, and for other purposes.

Mr. WILEY said:

Mr. CHAIRMAN: It can not be denied that train robbing and wrecking, ofttimes accompanied by loss of life, have become so alarmingly frequent in this country within the past ten years that the grave and serious problem now confronts us. What is the most efficacious method of stopping this crime? The arming of train crews and the use by railway and express companies of so-called burglar-proof cars and safes have all proven of but little value or potency either as a means of prevention or suppression. It is manifest, therefore, that the most simple and effective way of resisting and checking, if not preventing, this growing evil is to have national legislation enacted on the subject. The people throughout the whole country have become alarmed and aroused. They realize the fact that the State tribunals as a general proposition are powerless either to prevent or punish these robberies. It will require national legislation to have a deterrent effect or influence on this diabolical class of criminals. Prosecution of these outlaws in the United States courts, with the comprehensive and powerful machinery of the Government behind them, will strike them with terror and do much toward the accomplishment of a purpose so ardently desired by the law-abiding and peace-loving people of the American Union.

The newspapers generally throughout the country—the influential, fearless, and aggressive leaders of public thought—have given earnest consideration to this important subject, with the result that there is to-day everywhere throughout our borders, from Maine to California, from ocean to ocean, from the Great Lakes of the North to the Gulf of Mexico, an almost universal demand that Congress shall immediately adopt some adequate measure of relief. Our leading Southern newspapers, with scarcely an exception, are urging Congress to take prompt action and to confer on the Federal courts jurisdiction and authority, concurrent with the State tribunals, to apprehend, try, and punish these desperadoes and cutthroats.

The late lamented Wade Hampton, a distinguished citizen and soldier of the Republic, for many years United States Senator from South Carolina, and the Commissioner of Railroads under the Cleveland Administration, in the December number, 1894, of the North American Review, under the head of "Brigandage on our railroads," used this emphatic language:

> The epidemic of train robbery seems to be spreading over the whole country, and no section appears to be safe from the attacks of the lawless desperadoes who commit this crime, and who, in many instances, add to their atrocities the crime of murder. Recently, in the near vicinity of the national capital, one of the most daring and most successful of these robberies was committed, and, but for the intelligent investigation of the detectives, the perpetrators would have escaped. In this alarming condition of affairs any suggestion which, while calling attention to it, proposes any remedy may deserve the attention of the authorities and of the public.
>
> Every citizen is interested in the effort to break up this fearful crime, and especially those whose business or pleasure calls them to travel on the railroads. Nor is it alone the duty of the citizens to devote all aid in their power to prevent this crime and punish the criminals, but it behooves the General Government to take active and decisive steps in the same direction. That the Government has authority to do this I think is perfectly clear. No one will deny that it is the duty of the Government to protect the lives and property of its citizens, to see that the transportation of the mails is unobstructed, and to guard against all violence that jeopardizes any of these objects. This being the case, it certainly is the duty of the Government to take prompt and active measures to put a stop to these cowardly and murderous crimes, perpetrated by thieves and assassins.

The declaration of this gifted and brilliant gentleman comes to us like a voice from the grave. It is a bugle call to the discharge of a patriotic duty.

I wish to say to my Southern Democratic friends on this side of the Chamber, some of whom are opposed to this measure manifestly through a misapprehension of its provisions, that whenever and wherever Gen. Wade Hampton, of the Old Palmetto State, has pointed the way you and I can afford to follow. A gentleman of dignity and honor, of truth and courage, of learning and integrity, he was known throughout the Union for his long and consistent devotion to the principles of Jeffersonian Democracy, and was recognized everywhere as an able and eloquent advocate of State sovereignty, home rule, and local self-government; a gentleman who was par inter pares among those whom the gifts of genius have placed in the front rank of Southern men; a gentleman who, by his varied accomplishments, as well as by his intimate acquaintance with the Constitution and laws of his country, presented to the world a magnificent type of what the Southern statesman, the solid foundation surmounted with the Corinthian column, was before the old romance had been dissipated and the spontaneous impulse had departed from Southern life in the disruption of Southern institutions.

> A tall man, sun crowned, who lived above the fog,
> In public duty and in private thinking.

No one who knew him or his antecedents ever doubted his wisdom or patriotism. He wore upon his brow the dignity and glory of kingly power. Above his head waved the white plume of a dauntless heroism. His stand was always on the side of law and order, for vested rights and social security. Having deliberately reached the conclusion that the State courts are well-nigh powerless to prevent these robberies and to bring these marauders to swift and condign punishment, he had the manhood and the courage not only to declare that fact, but also to recommend that Congress, which alone has power to legislate in respect to interstate commerce or to regulate the same, should not hesitate to confer upon the Federal courts, concurrently with the State courts, ample jurisdiction to arrest, try, and punish these devils in human shape.

The following is the record of train robberies in the United States for the past ten years:

1890	12	1899	15
1891	16	1900	29
1892	16		
1893	33	Total number of trains "held up" during eleven years	290
1894	34	Total number of people killed	95
1895	49	Total number of people injured (shot)	98
1896	28		
1897	30		
1898	28		

RECORD FOR 1900.

Number of train "hold-ups"	29
Number of stage robberies	8
Number of passengers and trainmen killed	2
Number of passengers and trainmen shot	10
Number of robbers killed	5
Number of robbers shot	2

I have not been able to obtain any statistics for the year 1901, but am advised that there was no diminution of this species of lawlessness. Even during the present year, 1902, a passenger train was "held up" and robbed near Charleston, S. C., where a great international and industrial exposition was being conducted; and within the past three or four months, almost under the shadow of this Capitol, near Quantico, a daring attempt was made to plunder an express car.

The statistics which I have just read show that during the past ten years a train robbery has occurred every eleven days on an average, and about 10 persons are murdered in every given year. This is an appalling state of affairs, and worthy the serious consideration of this House.

It is to be seen that these offenses, so destructive to life and property, are of increasing frequency. The vast extent of our country, comprising many States, some of which are sparsely populated, and which are penetrated by railroads carrying interstate traffic and the mails, makes it difficult either to capture or to bring to justice this class of robbers. State officials are not so well equipped for the apprehension of these depredators upon the country's commerce as are the marshals of the United States Moreover, these creedless, Christless banditti, by escaping across border lines from one State to another, can easily baffle and defeat the efforts of sheriffs and their posses to arrest them.

The passage of the pending measure would not interfere in any wise or manner with the jurisdiction of the State courts over the crimes described therein, because they are all punishable at the common law. To pass the bill will, in my judgment, give increased security to life and property, and will largely contribute to the

suppression of these cruel and inhuman crimes against the civilization of this enlightened age.

"The knight of the road," who, crouching by the wayside, springs from his hiding place as some unsuspecting victim passes by, and, with a drawn dagger in hand, glittering in the light of the moon, demands his purse or his life, is no more a felon, worthy of death, than the outlaw who wrecks a train, robs the mail, rifles the pockets of passengers, and burglarizes an express car.

The train wrecker in every instance is an assassin at heart. The atrocious scoundrel who will loot a defenseless passenger would not hesitate to kill a sleeping victim without a word of warning. He is not only a red-handed murderer but a black-hearted poltroon, and ought not to receive any consideration of mercy or indulgence either at the bar of public opinion or in the halls of Congress. There is no reason why a railway marauder, the most odious, in my opinion, of all criminals, should not be put upon the same level and be punished just as severely as the ancient robber of the king's highway. Romance has woven a charm about the names of Dick Turpin, Captain Hawk, Paul Clifford, Rob Roy, and many other bandits of the Old World, who live in song and story. They are pictured as worthy of the poet's pen and minstrel's lay. In roseate colors they are represented vividly as being brave, generous, and magnanimous; as ever ready to defend the weak and confront the strong; but as they "held no law in awe, they perished by the law." They were angels of heavenly light in comparison with the train robbers of recent years, like Jesse James, Rube Burroughs, and those of that ilk.

Some gentlemen, however, seem to manifest a peculiar, indefinable, inexpressible, and incomprehensible sort of sympathy for these incarnate demons who kill passengers, wreck trains, and pillage express cars. They show their sympathy by objecting to any and all efforts which seek to confer upon the United States courts, concurrently with the State tribunals, jurisdiction to try these heinous offenses, even where the person robbed or murdered is a passenger traveling from one State to another or where the matter of freight or commerce involved in the railway carriage is a shipment or consignment interstate in its character, and that, too, when every lawyer or well-informed man knows that the Constitution of the United States confers ample and exclusive authority upon Congress to legislate in respect to subjects of this nature.

Congress alone has the right or power "to regulate commerce with foreign nations, among the several States, and with the Indian tribes."

The reason why our forefathers conferred this exclusive authority upon Congress is most interestingly set forth by Chief Justice Marshall in the celebrated case of Brown *v.* The State of Maryland, reported in 12 Wheaton, page 445. He discussed this subject very ably and elaborately, and in delivering the unanimous opinion of the court used the following language:

> The degraded state of commerce previous to the adoption of the Constitution can scarcely be forgotten. It was regulated by foreign nations with a single view to their own interests; and our disunited efforts to counteract their restriction were rendered nugatory by want of combination. To construe this power so as to impair its efficacy would tend to defeat an object in the attainment of which the American people took, and justly took, that strong interest which comes from a full conviction of its necessity. The power to regulate commerce among the States is coextensive with the subject on which it acts, and can not be stopped at the external boundary of a State, but must enter its interior. * * *
>
> It has been observed that the powers remaining with a State may be so exercised as to come in conflict with those vested in Congress. When this happens, that which is not supreme must yield to that which is supreme. This great and universal truth is inseparable from the nature of things, and the Constitution has applied it to the often interfering powers of the General and State governments as a vital principle of perpetual operation.

The bill now under consideration expressly limits the jurisdiction of the Federal courts to the trial of robberies against railway trains engaged in carrying interstate commerce or operated within the Territories of the United States.

The favorable report of the Judiciary Committee, accompanying this bill, presents a clean-cut statement of this great and growing evil and the reasons for enacting legislation to suppress the same. It was prepared by the distinguished gentleman from California [Mr. KAHN]. I read it for the information and consideration of the House:

> The Committee on the Judiciary, to whom was referred the bill (H. R. 11412) for the suppression of train robberies in the Territories of the United States and other places, and for other purposes, submit the following report:
>
> The purport of this bill is to give the United States authorities jurisdiction in all cases of train robberies where the trains are engaged in interstate commerce or are operated within a Territory or district of the United States. The crime of train robbery has been for many years on the increase. While it is true that most of the States have passed legislation imposing heavy penalties upon those who are convicted for the commission of this offense, experience has demonstrated the fact that such legislation has been for the most part entirely inadequate and ineffective.
>
> To commit a train robbery requires no skill, but it does require a certain amount of courage and daring—qualities that often appeal to the vicious, ignorant, and depraved elements in a community. And thus it has happened in many localities that the offenders in such cases have been given protection and shelter when closely pursued by the officers of the law. As a rule the crime is committed in an isolated and sparsely settled locality, where pursuit and capture are dependent largely upon the efforts of volunteer posses, the latter being frequently stimulated by the offers of reward. Indeed, in many cases the size of the reward gauges the zeal of the pursuers. But it invariably happens that before the railroad and express companies can have offered a reward, considerable time elapses, and so by the time the posse is organized the robbers have had ample opportunity to cover up their tracks, and pursuit is futile.
>
> We are frequently accustomed to sneer at the impotent efforts of countries like Spain, Italy, Turkey, and Greece to break up the institution known as brigandage, but this system of robbery and often attendant murder is no more atrocious than is the crime of train robbery, and this great Government of ours should certainly afford the traveler on a railroad train, so far as security to his life and property is concerned, as great a measure of protection as we would expect the countries aforesaid to give to travelers along their roads and highways.
>
> We feel satisfied that the enactment of this bill into law will afford the necessary relief to railroad passengers and their property, and we therefore recommend its passage—

with certain amendments, etc.

Carlyle in his quaint way tells us that "Governing is man's highest work well done." The great object of government is to reconcile and recompense every disadvantage by some counter balance of good.

I ask the plain, sensible, practical question, Is there any valid or sufficient reason why this bill should not become a law? The railroads and express companies pay handsomely in the way of taxes for their protection. The Government ought, therefore, to make adequate provision for the capture of these highwaymen as it does in cases of mail robbery. Under present conditions, as pointed out in the committee's report, the greatest difficulty is encountered in securing the cooperation of the State constabularies in pursuing and capturing these marauders. Officers are human, and it is but natural that they should consult their own interests. They do not hold dangerous and responsible trusts for the sake of their health, but for pecuniary profit and gain. They generally wait, therefore, for large rewards, which they know will be offered, before trying to apprehend these desperate thieves. The burden falls heavily upon railroad and express companies, corporations having interstate relations, and I submit they ought to have the assistance in such cases of all means and instrumentalities at the command of the national authorities, such as United States marshals and their deputies and detective force, and, if necessary, of the Government's Secret Service Bureau also.

We would soon find, in my opinion, a great diminution in the matter of railroad "hold-ups" and express robberies, and, at the same time, the oppressive responsibility of affording protection to human life and personal property would fall where it rightly belongs, upon the Government and not upon private individuals and corporations.

Railroads, by reason of their cheapness and fleetness, have almost entirely superseded water transportation, and are to-day the great medium of commercial intercourse. Whenever and wherever the tracks of a railroad are put down upon the earth, there has begun to be laid a foundation for social security, general happiness, and the improvement and progress of our race. They pay their legitimate share of taxes to the Government and are entitled to its protection. Express companies also pay their legitimate share of taxes to the Government and are likewise entitled to its protection. Articles intrusted to express agencies for transportation can not be regarded as mere merchandise in the possession of an individual. Ofttimes such articles are more important and valuable than the mails themselves, and ought to be just as sacred in the eyes of the law; and precisely the same protection which the Government throws about the mails should be extended to all matters intrusted to the care and safe-keeping of express companies. In such cases, therefore, there is neither fairness nor justice in requiring the onus of prosecuting train robbers to fall upon either railroad or express companies.

In this connection I read, as a part of my remarks, an able editorial on this subject from the Savannah Morning News. It expresses the sentiment of the Southern people in regard to this question.

> The bill that is pending before the Judiciary Committee of the House, giving the United States authorities the same jurisdiction in cases of train robbers, where passengers and express companies are robbed, as they have in cases where the mails are robbed, is a good one, and should receive the approval of Congress at an early day. It seems to us that Congress should be prompt to take steps to check the crime of train robbery. It is a crime that is calculated to bring the nation into disrepute in foreign countries. It is not at all complimentary to have it said in Europe that it is no safer to travel in the United States than it is in Bulgaria; that train robbers are as bad as brigands. There ought to be a vigorous effort to put a stop to train robbing, and the only way a concerted effort can be made in that direction is for the General Government to take hold of the matter. It is worthy of notice that it is seldom that the mails are disturbed by train robbers nowadays. That is because the robbers are afraid to disturb the mails. They know that the Government has unlimited means at its command, and that

it will spare no expense to arrest and punish them. Pass the pending bill and a long step will have been taken in the direction of putting a stop to train robberies.

My only objection to this bill is that it is too narrow in its operations. Its provisions should embrace every case of robbery committed against person or property where the train is carrying the United States mail, whether within the limits of State sovereignty or between and across different State lines. For instance, would any good lawyer contend that the Congress could not constitutionally confer upon the United States courts jurisdiction to try and punish an offender who stole from a boy the horse upon which he was riding and carrying the mail, and thereby prevented its prompt delivery, simply because he did not rob the mail itself and because the animal was being used within the limits of a State and had not traveled across State lines?

In my opinion, therefore, the ends of justice would have been better subserved by a short bill, entitled "A bill to protect railroad trains conveying United States mails, persons, and property," providing in the first section—

That any person who shall maliciously rob, obstruct, or retard the passage of any railroad train upon which the United States mail is carried, and persons and property thereon, shall for every such offense be imprisoned at hard labor for not less than ten years.

And providing further in the second section—

That any person intentionally obstructing or retarding the passage of any railroad train upon which the United States mail is carried, and persons and property thereon, by any means whatever, with intent to rob the same, or any person traveling thereon, and, in consequence thereof, any such person traveling thereon is killed, shall be guilty of murder, and suffer the death penalty or be imprisoned at hard labor for life, in the discretion of the jury trying the same.

There can be no doubt that such a bill would be upheld as constitutional.

It is provided by the Constitution that Congress shall have power to provide for the common defense and general welfare of the United States. How it shall provide for the common defense and general welfare is not specified. The Supreme Court of the United States decided the national-bank act to be constitutional on the ground that Congress alone was the judge of the necessity of such an act. Under this "general-welfare" clause of the Constitution large powers are vested in Congress, and measures will generally be upheld as constitutional where in the judgment of a majority of this body they are needful, either for the common defense or the general welfare.

In practice Congress has been very liberal in the construction of its powers. It not only supports the Army and Navy, but the military and naval academies in which to educate young men especially for that service. It not only builds forts, but improves rivers and harbors so that they can be better navigated. It has passed the oleomargarine bills to prevent a discrimination against pure butter, and similar measures looking to the health and morals of the people, saying, in many instances even, what we shall eat and drink and wherewithal we shall be clothed. It has indorsed, and continues to indorse, the notes of national banks, in order to give them value, to the extent of hundreds of millions of dollars. It not only builds post-roads, but guarantees the bonds of railroad companies for millions of dollars to aid in constructing railways, on the ground that they may in time be needed for carrying troops. It has given subsidies to ships and railways, as well as bounties to sugar, made both from cane and beet.

A few years ago, upon the report of failure of crops in Oklahoma, it voted rations for the needy boomers, while at the same time it was engaged in constructing proper defenses against future overflows of the Mississippi River. It has laid out magnificent national parks and maintains soldier's homes and burying grounds. It has passed bills to require railroads to use safety appliances for coupling cars; to tax State bank money out of existence; to purchase lands, build warehouses, stock and care for whisky; to purchase Alaska; to donate millions of acres of the public domain to corporations; to appropriate money to fire and flood sufferers; to send expeditions to the North Pole; to lend and give money to industrial expositions and world fairs; to grant pensions to soldiers and their wives, and to make pecuniary outlays in many other instances where no provision is made therefor by any express warrant in the Constitution.

All this remarkable character of legislation (some of which I have never approved) is predicated upon nothing more nor less than the implied powers of Congress, and was enacted under what is known as the "general welfare" clause of the Constitution. Congress is the sole judge as to when and where and how these implied powers shall be invoked under this "general welfare" clause. In the light of these facts, surely no liberal-minded gentleman ought to object to a measure intended for the protection of the traveling public, and calculated to redound to the general welfare of the people, on the ground that the same is not justified by the organic law of the land, particularly where express and exclusive authority is vested in Congress under the Constitution to legislate in respect to such matters. Almost any and every thing intended for the common defense and general welfare lies within the province of Congress to be enacted for the benefit of the people.

In the great case of McCullough *v.* The State of Maryland, reported in 4 Wheaton, page 316, the question was whether or not Congress had the power to incorporate a bank. And it was held that Congress had the constitutional authority to establish a banking corporation, not in the exercise of a distinct sovereign power or end of government, but as a means of carrying into effect other powers which are sovereign.

Chief Justice Marshall, in the magnificent opinion which he delivered in that case, declared, among other things, the following great truths, to wit:

The Government of the Union is a government of the people. It emanates from them; its powers are granted by them, and are to be exercised directly on them and for their benefit.

While the powers not delegated to the United States nor prohibited to the States are reserved to the States or to the people, there is nothing in the Constitution which requires that everything granted shall be expressly and minutely described.

A constitution, to contain an accurate detail of all the subdivisions of which its great powers will admit and of all the means by which they may be carried into execution, would partake of the prolixity of a legal code, and could scarcely be embraced by the human mind. It would probably never be understood by the public. Its nature, therefore, requires that only its great outlines should be marked, its important objects designated, and the minor ingredients which compose those objects be deduced from the nature of the objects themselves.

Provision is made, in a constitution intended to endure for ages to come, and, consequently, to be adapted to the various crises of human affairs. To have prescribed the means by which government should, in all future time, execute its powers, would have been to change entirely the character of the instrument and give to it the properties of a legal code. It would have been an unwise attempt to provide by immutable rules for exigencies which, if foreseen at all, must have been seen dimly, and which can be best provided for as they occur.

What a grand and glorious judicial character was John Marshall, "the oracle of American law," not of Virginia alone, but the universal favorite and favored son of this splendid Republic of free, separate, independent, and sovereign States! With a mental vision as clear and strong as the eagle's brilliant eye while gazing upon the fierce splendors of the noonday sun, he foresaw and has outlined for all time to come, as no other man before or since his day has ever essayed to do, the dual yet distinct capabilities and potentialities of both State and Federal governments, acting together, jointly and severally, beautifully and harmoniously, without jar or friction, each seeking the greatest good to the greatest number, and neither abating one jot or tittle of the lawful authority belonging to the other or resulting legitimately from the combined action of both.

The extracts which I have just read, in the McCullough case, from the pen of that eminent jurist, demonstrate that it was an impossibility for the framers of the Constitution to have incorporated in its provisions all of the incidental powers of government, and hence that Congress in the exercise of these incidental and implied powers can rightfully enact almost any law which it judges to be useful or necessary for the common defense or general welfare of the "people" in the broadest and most comprehensive sense or meaning that may be applied to that term.

We are therefore "sticking in the bark" and giving to the Constitution a construction so narrow and technical as to render its provisions nugatory whenever we seek to deny to Congress the power to enact beneficent laws which will punish any person, no matter when or where, who commits a robbery in any State or Territory of the Union, against either person or property, while being transported anywhere on any railway train or car engaged at the time in carrying the mails of the United States.

While I think the train-robbery epidemic requires heroic treatment, and that, for this reason, the pending bill neither extends its provisions far enough, nor is sufficiently drastic to entirely extirpate the dreadful disease, I will not attempt to amend the same, but shall be content to support the measure in the shape in which it comes to this House from the Judiciary Committee, upon the principle that part of a loaf is better than none at all.

In conclusion, I desire to add to my remarks this emphatic declaration, that we ought not to temporize any longer with this atrocious evil, but should authorize the prompt expenditure of as many dollars in the National Treasury as may be necessary to protect the transportation of the mail trains of the country, as well as those carrying interstate passengers and commerce, in order to secure the humblest citizen of the Union in his pursuit of happiness and in the enjoyment of life, liberty, and property. This can only be done effectually by the exercise of the strong arm of constituted authority on the part of the National Government, by conferring concurrent jurisdiction on the courts of the United States to hunt down, capture, and bring to merited punishment these ugly-visaged Molochs of crime, by striking down forever these incarnate demons from hell—the modern-day train robbers, indigenous to American soil, the product of our glorious twentieth century American civilization.

Cuban Reciprocity Bill.

SPEECH

OF

HON. JOSEPH H. GAINES,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 17, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 12765) to provide for reciprocal trade relations with Cuba—

Mr. GAINES of West Virginia said:

Mr. CHAIRMAN: It is with a great deal of reluctance that I take a position on this question, or on any other, different from the leadership of my party on the Ways and Means Committee. I am impelled to this course, Mr. Chairman, solely because of my intense conviction that the proposed measure is wrong, and because, in my opinion, there is no occasion for it. It inaugurates a policy which seems to me to be vicious, and which will return in future times to plague us; and the proposition, as I look at it, is unrepublican.

In the first place, the Cubans begin their freedom and their independence under auspices more propitious than any other country or any other people ever began their separate existence. When our forefathers achieved the independence of this country they had no protecting arm to guarantee a continuance of their independence, much less to assure them of stable conditions at home. We did not even, Mr. Chairman, have a model by which to form our system of government. We had no friends abroad; we had troubles at home; we had a disorganized finance; we had a deplorable condition of trade and commerce, such as Cuba does not experience to-day. But there was no proposition to relieve this country. It had to work out its own salvation; and in the interest of continuing that form of government developed the strong American manhood and the spirit of independence that have been the characteristics of this country and of the greatest service to it ever since. It seems to me, since we have done so much for Cuba, since we have poured out American blood and American money to achieve her independence, that the best service we could render to her now is to leave her alone to develop her own manhood and develop her own spirit of independence, and become something like this country, if she can.

Mr. Chairman, we are told because of the Platt amendment we owe some kind of duty to Cuba. What did the Platt amendment accomplish? What are its promises and provisions? It seems to me that it simply secures to this country protectiou from the necessity of going to war at some future time on account of Cuba in order to maintain the integrity of the Monroe doctrine. We simply say to Cuba that it shall not, by selling itself to some foreign country, put us to the necessity of a still greater war than that by which we achieved her independence to protect our own rights and to maintain one of our well-settled national policies. It determines not that this country always must and will go down into that country to secure and guarantee stable domestic conditions in Cuba, but that we may do so if it should at any time become our duty, either from the standpoint of humanity, or to protect the rights of American citizens living there, or to preserve ourselves from foreign complications and even war by reason of their misconduct. In other words, the Platt amendment is not in any way a limitation upon Cuban independence, but simply a protection to our own country from foreign troubles which might be brought upon us by Cuba.

The provisions of the Platt amendment, by virtue of which it is claimed that we owe a duty to Cuba higher than our duty to our own people and more important than the policy of protection, are the first, second, third, and fifth sections, which are as follows:

I.

That the government of Cuba shall never enter into any treaty or other compact with any foreign power or powers which will impair or tend to impair the independence of Cuba, nor in any manner authorize or permit any foreign power or powers to obtain by colonization or for military or naval purposes, or otherwise, lodgment in or control over any portion of said island.

II.

That said government shall not assume or contract any public debt, to pay the interest upon which, and to make reasoable sinking-fund provision for the ultimate discharge of which, the ordinary revenues of the island, after defraying the current expenses of government, shall be inadequate.

III.

That the government of Cuba consents that the United States may exercise the right to intervene for the preservation of Cuban independence, the maintenance of a government adequate for the protection of life, property, and individual liberty, and for discharging the obligations with respect to Cuba imposed by the treaty of Paris on the United States, now to be assumed and undertaken by the government of Cuba.

V.

That the government of Cuba will execute, and, as far as necessary, extend, the plans already devised, or other plans to be mutually agreed upon, for the sanitation of the cities of the island, to the end that a recurrence of epidemic and infectious diseases may be prevented, thereby assuring protection to the people and commerce of Cuba as well as to the commerce of the Southern ports of the United States and the people residing therein.

The first section provides that the Cuban Government shall not sign away Cuban independence to any other nation or permit any other nation to obtain lodgment in or control over any portion of the island; and the second section provides that no such obligation shall be incurred as would justify a foreign nation in taking by force such lodgment in or control over any portion of the island in order to collect a debt. The two sections form a complete whole and secure Cuba and ourselves against the control of the island, in whole or in part, by any European nation. It is asserting and defending the Monroe doctrine by treaty with Cuba rather than by war with some one of the great European powers. It is a wise and statesmanlike provision, and one which it would have been the height of folly on our part not to insist upon.

The third section prevents similar complications with foreign countries which would come about if the Cubans should so far deny the rights of life, liberty, or property to the citizens of foreign countries as to justify or require the intervention on the part of such countries by military force for the protection of such rights. It is also a necessary provision under the treaty of Paris; and the failure to insert it would have been a violation of the treaty conditions which we ourselves imposed at the close of the Spanish war upon an absolutely helpless foe.

To illustrate the operation of these three clauses, suppose that the Cuban Government, through corruption, temporary necessity, or any other motive, should determine to place Cuba under the protection of England, France, or Germany, or the joint protectorate of all three, or that Cuba should contract a debt to any or all of these countries and it should become long past due and no effort should be made to pay it, or suppose the Cuban Government should unjustly imprison citizens of these countries, what would the United States do?

Would it abandon the Monroe doctrine and permit Cuba—situated as it is, just off our shores—to fall again into the control of European powers, or would it go to war for Cuban independence a second time? Will anybody say that we should have permitted Cuba to put us in a position where we must either abandon the Monroe doctrine or assert it by war against strong foreign powers, backed as they would be under the conditions supposed by a strong claim that justice and right were on their side? Or will anybody claim that it was not our right and duty to provide, as we have provided by the fifth section of the Platt amendment, that New Orleans and our whole Southern country should not be again scourged with yellow fever by reason of a relapse on the part of Cuba into unsanitary conditions after the American army of occupation had cleaned the island?

There is not a proposition in the Platt amendment which is not necessary to guarantee Cuban independence and the protection of our own rights. No obligation can rest upon us to Cuba for freeing them and guaranteeing their independence, and no obligation can rest upon us to anybody for taking care of the rights and interests and dignity of the United States, and for preserving, as far as possible, our own people from the probability of foreign war, with the attendant horrors and demoralization necessarily incident to war.

The proposition for Cuban reciprocity is this: To give a reduction of duty upon all Cuban products coming into this country in return for a reduction upon American products going to Cuba. The proposed bill fixes this duty at 20 per cent, and has the peculiar misfortune to satisfy nobody. The Cubans say it will do them no good, and the Western farmers, who have been induced by our tariff laws to engage in the production of sugar beets, say it will do them harm. And Republicans generally see in it an abandonment of the principle of protection and a perversion of the doctrine of reciprocity. Reduced to its last analysis the proposition amounts to this: It is offering an inducement to a foreign people to come into our own market and compete with our own people in a product with which we can, under proper protection, supply our own demand. It makes no difference that the foreign nation is one with which we have a large sympathy. That does not alter the principle in the least. If the foreign country is one to which we ought to give money it should come from the Treasury of the United States, and should be borne by the whole people, and should not be collected from one article and be borne alone by the people who are engaged in the production of that article.

The bill proposes to give up a part of our duties in order to stimulate competition by the producers of Cuban cane sugar with the producers of American cane sugar and beet sugar. That this is not protection needs no further argument to a protectionist.

Is it Republican reciprocity? The doctrine of reciprocity as contained in Republican platforms was made a live political issue in 1890 by Mr. Blaine in an open letter to Senator FRYE, in which he said:

If we now give away the duty on sugar (as we have already given away the duties on coffee, hides, and rubber) and get nothing in exchange which shall be profitable to the farm or the factory in the United States, what shall be our justification for this policy?

The three articles he mentions were by the McKinley bill placed upon the free list. By removing the duty entirely we were giving up the revenue which had before that time come into the Treasury of the United States from the importation of these articles. The Republican idea of a tariff is that when the revenue is no longer needed, which is derived from a tariff on an article not produced in our own country in sufficient quantities to supply our own demand, the tariff should be removed entirely, and the article placed on the free list. One who believes in a tariff for revenue only would not do this, but a protectionist could not possibly pursue any other course.

Mr. Blaine with great shrewdness noticed the fact that when we were giving up the old war tariff on an article like coffee, which we do not produce, we might use it as a lever to negotiate a desirable treaty with foreign countries interested in selling us the article. The proposition is perfectly simple. We were giving away something which others were anxious to buy. This, Mr. Blaine said, was not statesmanship. It did not "open up a market for another pound of American pork or barrel of American flour." He suggested the policy of reciprocity, which under these conditions and by this reasoning was the policy of securing reciprocal concessions from interested foreign nations in return for placing upon the free list those articles which are not fit subjects for the application of the protective policy.

Senator Sherman in a speech delivered at Columbus, Ohio, in 1891, defined reciprocity in this language:

Granting to foreign nations the reciprocal rights of free importation into our ports of articles we can not produce in return for the free introduction into their ports of articles of American production.

McKinley in an inaugural address defined reciprocity to be "granting concessions to the products of other lands that we need and can not produce ourselves." And in his Buffalo speech he said this:

If perchance some of our tariffs are no longer needed for revenue or to encourage and protect our industries at home, why should they not be employed to extend and promote our markets abroad?

The reciprocity plank in the Republican platform for 1890 read:

We favor the associated policy of reciprocity, so directed as to open our markets on favorable terms for what we do not ourselves produce, in return for free foreign markets.

That the articles which should enter this country under reciprocity treaties should be those upon the free list, and therefore those which we can not ourselves produce, was distinctly recognized by President Harrison in his second annual message, dated December 1, 1890, in which he said:

The reciprocity clause of the tariff act wisely and effectly opens the way to secure a large reciprocal trade in exchange for the free admission to our ports of certain products.

That Republican reciprocity means the using those articles which should be on the free list as a basis of commercial negotiations, and means nothing but that, was evidently the idea of Blaine, Sherman, Harrison, and McKinley. Thus understood, we were correct when we said that reciprocity was not antagonistic to the doctrine of protection, but on the contrary could only have its existence under that policy. Thus understood, the sentence so often repeated, "Reciprocity is the hand-maid of protection" was true. Under any other conception of the extent and limitations of reciprocity that statement would not be true. A policy of selecting certain American industries, and stimulating foreign competition with those industries in this country for the purpose of aiding certain other American industries is not reciprocity but discrimination. There is wanting only the bad intent to make such a policy resemble conspiracy.

I have endeavored to show that the proposed measure is not consistent with the policy of protection and reciprocity. That it would violate the pledges of the Republican party made in the last campaign is clear to my mind. On this point I content myself with reading the following extract from the Republican campaign text-book of 1900:

In the Republican campaign text-book for 1900, issued by the Republican National Committee and used by its stump speakers throughout the land, four pages are devoted to the question of beet sugar versus cane sugar. The following are some of the sentences:

"No subject interests the farmers of the United States more than that of the possibility of their being able to supply the $100,000,000 worth of sugar which our people consume annually, and some facts which have recently been presented showing the rapid growth in the percentage which beets are now supplying of the world's sugar shows that they are fully justified in their ambition.

"The farmers of the country have been encouraged by the Republican party in their ambition to produce the sugar of the country. The experience of other nations and of other parts of the temperate zone has shown that sugar can be produced from beets in great quantities and at very small cost and can successfully compete with cane sugar under the most favorable circumstances. Under the stimulus given to the beet-sugar production by Republican legislation, beet-sugar factories sprang up all over the United States, and the production of beet sugar has already reached large proportions and is increasing with wonderful rapidity.

That this statement in the text-book of 1900 was a just statement of the Republican position on the subject of protection to the sugar industry is apparent from the following declaration contained in the platform of 1896:

We condemn the present Administration for not keeping faith with the sugar producers of this country. The Republican party favors such protection as will lead to the production on American soil of all the sugar which the American people use, and for which they pay other countries more than $100,000,000 annually.

But, Mr. Chairman, I might be willing to waive my views on this subject to the extent of some relief to Cuba if it appeared to me from the facts that Cuba needed relief. But while it has been confidently asserted time and again on the floor of this House that Cuba was in distress the evidence taken before the Ways and Means Committee in the hearings on this subject and the evidence contained in Government reports do not disclose any such condition. Mr. Placé, of Cuba, appeared before the Ways and Means Committee in favor of reciprocity. On page 87 he gives the following evidence:

Mr. TAWNEY. At the present time, outside of Habana, there is no labor that is idle or unemployed?

Mr. PLACÉ. No, sir; the Central Railroad of Cuba will take anyone who wants work.

Col. Tasker H. Bliss, collector of the port, Habana, appeared for the reduction, and said:

I have not spoken of distress except to deny that any existed so far as I knew. It is a long time since I have seen anyone begging on the streets, or anyone who wanted work who was not at work at good wages.

Mr. Mendoza, a Cuban planter, the owner of 25,000 to 27,000 acres of land, with over 10,000 under cultivation, testified not only that the island was cleaned and made healthy and that American occupation had put them in better condition than they were ever before, but that the laboring classes are now generally employed in Cuba at good wages. He says that there is plenty of work for the laboring man in Cuba to-day.

The following statement, taken from page 2652 of the Summary of Commerce and Finance for January, 1902, by O. P. Austin, Chief of the Bureau of Statistics, shows the general condition of labor on the sugar plantations or "colonias" in Cuba:

Mr. P. M. Beal, manager of the Guabairo Colonia, in his statement before Hon. Robert P. Porter, gave some interesting data regarding labor conditions on the sugar estates. The following information is part of his statement:

SALARIES.

Average salaries paid by this colonia during normal times—that is, previous to the insurrection—were about as follows:

ALL THE YEAR.

[Salaries per month, in gold, and maintenance.]

Administration	$166.66	Assistant	$20.00
Servant	30.00	Hostler	20.00
Overseer	85.00	Assistant	15.00
Second overseer	35.00	Pumping water	6.00
Steward and bookkeeper	50.00	Cook	30.00
Assistant	25.00	Assistant	25.00
Carpenter	35.00	Night watchman	20.00
Montero	25.00	Mounted field guard	$25.00 and 30.00

DURING CROP TIME.

Mounted field guard	$25.00	Assistant	$23.00
Timekeeper	20.00	Foreman, with stevedores	28.00
Waiter for operatives' table	15.00	Cartman	23.00
Vegetable gardener	20.00	Plowman	23.00
Bueyero (teamster)	22.00	Cane cutters	21.00
Assistant	16.00 and 12.00	Cane lifters	15.00
Foreman with cartman	30.00	Cane loaders (stevedores)	21.00

During the summer months salaries for field labor averaged about $17 per month.

Cost for maintaining labor averaged about $7.50 per month in gold; cost for maintaining overseers, foremen, carpenters, cooks, stewards, guards, etc., amounted to about $12 per month.

RATIONS.

Rations for each man per day were as follows: Clear beef, 1 pound, or its equivalent in tasajo salt fish; rice, 1 pound, or its equivalent in beans, pease, macaroni, etc.; lard, 2 ounces; coffee, 1 ounce; sugar, 2 ounces; bread, 6 ounces, or, instead of bread, sweet potatoes, plantains, or melanga; sweet oil, bacon, salt, and spices sufficient to season the food. During the winter months cabbage, tomatoes, and turnips are being served every day without regard to rations.

RULES AND REGULATIONS.

When a laborer enters his name on the pay roll he receives his machete or hoe, tin plate, tin dipper and spoon, and same are charged to him and are credited when returned.

Timekeeper makes his rounds twice every day.

Away from the batey smoking is strictly prohibited, and the penalty is immediate dismissal.

Salaries are paid any day between 11 a. m. and 1 p. m., Sundays excepted, to those who desire the money.

Except in case of sickness, meals are charged to those who are not at work.

To the sick such medicines as we have are given free. The most prominent of these is quinine.

If a man remains in the barracon sick for more than two days, he is sent to his home or to a hospital. If it is an injury received in the service of the colonia, he is cared for until able to work again.

The bell tolls at 4 a. m. for the people to get up; at break of day, after having drunk a cup of coffee, they go to the field; at 11 o'clock they return to

breakfast; at 1 o'clock they again go to the field; at 6 o'clock they come in to dinner, and at 8 o'clock the bell sounds silence. After that absolute silence is enforced. The negro is fond of his music and dancing. This is permitted at seasonable hours, and sometimes the overseer gives special permission to prolong their amusements beyond the usual hour.

Gambling is prohibited, but the prohibition can not be successfully enforced.

In the dry season, at midday, when the people are in the batey, sentinels are stationed on the hills to give timely warning of cane fires.

Armed guards patrol the fields by day and guard the cattle at night. This applies in time of peace.

When farm laborers receive from $25 to $30 per month; when in addition to that they get board and lodging and medical attendance, and when they are paid at 12 o'clock on any day they demand what is due them; and when in addition to that the testimony of all the witnesses who appeared before the Ways and Means Committee seeking a reduction of our duties is that everybody in Cuba who wants work can get it, then I insist that no such extraordinary condition exists as will justify extraordinary relief and a departure from the principles of republicanism.

Even if an industrial depression already exists in Cuba it would not be our business to relieve it. Industrial depressions have from time to time existed in our own country, but we have not appropriated our revenues directly or indirectly to relieve them. Shall we do for Cuba what we can not for our own people?

It has been indicated in the literature with which Congress has been flooded on this subject that unless we do something for the Cubans which will give them financial assistance they will not keep the peace, but will have riot and disorder in that country. I do not believe it. I believe it to be a slander on the Cuban people. For if this is true they are not capable of self-government, and we did wrong when we intervened in their behalf against Spain, and a still worse thing when we gave them their independence. I repeat it: A people who will threaten a benefactor to revolutionize unless the benefactor gives them money are not worthy of self-government, and can not long maintain their independence or even their liberties.

So far as I am concerned, Mr. Chairman, I shall vote to amend this measure by adding a reduction of the differential on refined sugar, and whether that carries or not I shall then vote against the whole proposition. In my judgment it will be an unhappy day when we enter upon a policy of hiring the Cubans or anybody else not to revolutionize.

But, Mr. Chairman, the whole subject of Cuban reciprocity has had a degree of importance attached to it to which it is not justly entitled. We have hammered down the amount of proposed reduction to such an extent that if the bill should pass, while it would disturb, it would not destroy this important farming interest of the Western States. Perhaps the most threatening feature in the whole discussion is the disposition which has been manifested by some gentlemen representing Eastern constituencies to look with complacency on the proposition to reduce the tariff on articles which enter into the manufacture of their finished products. I know that tariff laws need revision from time to time by their own terms and by the theory of protection, but, so far as I am concerned, when we start upon this revision, I do not propose to give my vote to begin it on articles in which the farmers of the country are mainly interested.

I want to say to gentlemen, and especially to the gentleman from Massachusetts and the gentleman from Pennsylvania who spoke the other day, that whenever we have restored prosperity to this country by protection—when the people have been prosperous, and when the end of that prosperity and of Republican rule began to come—it has always, in my brief observation, come through the selfishness of the manufacturing interests, which, having protection for themselves, begin to have the avaricious dream of how happy their condition would be if they could have all the protection, and get all the articles they use in their manufactures free.

I want to say to gentlemen who represent here manufacturing sections, that they can not have protection continued unless they are willing to have protection go all around. It must go to the coal and lumber of West Virginia, as well as the steel and the iron of the East, And I am prepared, so far as I am concerned, to keep it in favor of the beet-sugar industries of the West, as well as on the manufactured products of the East. [Applause.]

It is in the very nature of protective-tariff schedules leading to increased home production, better machinery, and better methods of production, and a cheaper price to the consumer that they should tend toward the necessity of their own revision. I do not think the time for a revision of the Dingley law has yet come. I do not think the time for tinkering ever will come. But when the time for revision comes the revision must be by the friends of the law, and with an eye single to the glory of our own country and the prosperity of our own people, and absolutely unconfused by sentimental considerations for the people of any other country.

We have never abandoned protection as a policy without disaster. We have never returned to that policy without renewed prosperity. Under the banner of protection the country is safe, and under that banner the Republican party is safe. Protection is the life blood of the great Republican heart. It returns from time to time to that great heart to be purified, and is again sent out to warm with the rich glow of prosperity the remotest parts of the body politic—even as the blood of the human body returns to the heart to sustain that life which in turn gives it its vital power. And this reciprocal action is after all the most important reciprocity. This is the reciprocity which has brought happiness and plenty to the people, dignity and power to the Republic.

Rural Free-Delivery Service.

SPEECH
OF
HON. CHARLES L. BARTLETT,
OF GEORGIA,
IN THE HOUSE OF REPRESENTATIVES,

Monday, March 10, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 11728) to classify the rural free-delivery service and fix the compensation to employees thereof—

Mr. BARTLETT said:

Mr. CHAIRMAN: I shall not vote for this bill as it has been reported by the committee. I shall vote against the proposition contained in the bill to put carriers upon the contract system. I can not say what I desire to say with reference to this matter in the short space of time that I must occupy under the rules. I desire, however, before I take my seat, to call the attention of this House and to call the attention of the country to something that occurred here on this floor this afternoon. It was at the time when we had up the amendment proposed by the gentleman from Tennessee [Mr. PADGETT], proposed at a time when argument was not permissable under the rule. That amendment provided that ex-Confederate soldiers should occupy the same position that ex-Union soldiers do with reference to applications for carriers.

For myself I deprecate the fact that the amendment was offered, because we do not ask for the ex-Confederate soldier anything that we do not ask for our other citizens. This, however, is not the fact to which I wish to call attention. It is to the fact that the gentleman from Ohio [Mr. BROMWELL] offered as an amendment to the amendment offered by the gentleman from Tennessee, the words "and colored men," and that was voted for in this House, and there were found in this House 59 people who voted for it—voted for an amendment which proposed to put the man whose skin happened to be black high above both the Union soldier and every other man in the districts of this country. In other words, we saw the remarkable spectacle of the gentleman from Ohio [Mr. BROMWELL] endeavoring to have enacted in a law, and that effort sustained by 59 members on that side of the House, that if if a man's skin was colored or black he should have a privilege which no white citizen, no ex-Union soldier was entitled to under the law.

It is a significant fact that out of all these several thousand rural routes that have been established, out of all the colored people in the North, there has not been one appointed, and of the rural routes established in the district of the gentleman from Ohio, I apprehend he has not recommended to be appointed a single colored man.

Now, I want the country; I want the Union soldiers to understand, and I want the white Republicans in the gentleman's district, and all the North and the East and the South and the West to understand that the gentleman from Ohio [Mr. BROMWELL] endeavored to pass as a law, to write it upon the statue books, that a colored man was to be preferred East, West, North as well as South, over the ex-Union soldier and over his white constituency everywhere. That was the proposition and that is the proposition that 59 members on that side voted to sustain.

Now, Mr. Chairman, I can not properly discuss, in the time allowed, the propositions that are here to be discussed. In the last twenty years we have increased the annual expenditure for the carrying of mail on the railroads some $28,000,000. Whereas twenty years ago it was only nine or ten millions, it is now nearly $39,000,000. I represent a district composed of large cities and large towns and farmers and country people, but by no vote of mine will I endeavor to turn back this great advantage, this great boon which our people have received in the extension of rural free delivery.

The CHAIRMAN. The time of the gentleman has expired.

Bronze Statue of Count Casimir Pulaski.

SPEECH

OF

HON. JAMES R. MANN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 25, 1902,

On the bill (S. 2235) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes.

Mr. MANN said:

Mr. CHAIRMAN: I wish to call the attention of the Congress to a bill which is now pending in this House. I refer to the bill introduced by my Republican friend the gentleman from Indiana [Mr. BRICK] to provide for the erection of a bronze equestrian statue to the memory of the late Gen. Count Casimir Pulaski in this beautiful national city of Washington.

I could not submit to stoop before the sovereigns of Europe, so I came to hazard all for the freedom of America, and desirous of passing the rest of my life in a country truly free and before settling as a citizen to fight for liberty.

Mr. Chairman, the above is a copy of a letter written by Casimir Pulaski, dated Charleston, August 19, 1779, addressed to the Continental Congress, and read before that body October 1, 1779.

It was the intention of Pulaski to become an American citizen. He loved our country, its flag, and its people, and it was his declared purpose to spend the remainder of his days here after the independence of our country was achieved, a cause for which he had sacrificed his home and his fortune, and for which he finally gave his life.

I avail myself of this opportunity to recount some of the glorious achievements of this true hero of liberty during the downfall of Poland and the dark days of the American revolution.

Reared in a country surrounded by perfidious allies, who afterwards became her declared enemies, sired, as he was, by one of the most intrepid soldiers the world has ever seen, a man filled with a profound love of liberty, possessing an inborn abhorrence for governmental perfidy and greedy conquest, it is no great wonder that young Pulaski grasped eagerly the first opportunity to assist in checking the march of crime that was then being waged by Russia, Austria, and Prussia against his native land—a crime so considerable and relentless as to shock even the sensibilities of the bloodthirsty soldiers engaged in that awful war of extermination and dismemberment. No fouler blot stains the pages of history. Never before and never since have a civilized people waged a war so impure, unfair, and dishonest.

It was on the 29th day of February, 1768, when a little party of valorous Polish gentlemen met at Barr, at the instigation of the elder Pulaski, and signed the famous "secret compact," their object being to free their country from foreign influence. There were but eight persons all told at this meeting—the senior Pulaski, young Casimir, his two brothers, a cousin, the famous Krasinski, and two others.

The compact being signed, these men were ordered by the elder Pulaski to go in different directions, organize among the loyal Polanders such forces as they could, and march against, and if possible repel, the advancing forces of the three powerful nations determined upon the complete dismemberment of a country already suffering from internal strife, for Poland, Mr. Chairman, was at this time divided against herself.

In a very short time young Casimir found himself at the head of a considerable force of men, and then for four long years this young officer became the very terror of the invading armies. His intrepidity, his daring charges with a few hundred troops against an entire army, and his bold, brave, and ever-vigilant conduct when in battle won for him the unstinted praise and applause of all Europe.

His banishment from his native land because of the false charge of conspiracy against the life of the King, for which he had been sentenced to death, is one of the saddest pages of history, and fills all lovers of justice with astonishment and indignation.

Pulaski found himself in France about the time of the signing of the Declaration of Independence by the American Congress, and having read of the great sufferings of the American people, he at once determined to offer his genius, his experience, and his sword in defense of a people struggling to free themselves from a condition of oppression and wrong, such as he had so long fought to lift from the shoulders of his countrymen.

Accordingly, he presented himself to Dr. Franklin, our minister at Paris, who wrote to Washington as follows:

Count Pulaski, of Poland, an officer famous throughout Europe for his bravery and conduct in defense of the liberties of his country against the three great invading powers of Russia, Austria, and Prussia, will have the honor of delivering this into your hands.

The court here encouraged and promoted his voyage from an opinion that he may be highly useful in our service.

Again, in another letter he says:

Count Pulaski is esteemed one of the greatest officers in Europe.

Armed with these letters, Pulaski sailed at once for Philadelphia, arriving there in the summer of 1777.

He immediately enlisted as a volunteer, and by his daring, boldness, and splendid knowledge of all things military he soon won the sincere admiration of Washington and the other officers of the Army with whom he was associated.

During the early part of the war the Army was composed entirely of infantry. Cavalry was an unknown and untried method of warfare, except as it had been observed in the English army. It is said, and no doubt truthfully said, that our Army faced an approaching regiment of cavalry with fear and trembling, but that they were resolute enough when they met infantry.

Regular cavalry, I repeat, was unknown to our forces until Pulaski put in an appearance. His experience in Poland had been almost entirely with cavalry, and he longed for greater services in that capacity.

He laid his plans before Washington, who, without hesitation, having full confidence in the judgment of the brave Pole, acquiesced in the scheme, and upon the organization of the new Army at the end of the campaign, provisions were made for four regiments of cavalry. These regiments were filled up without difficulty, and the command of them offered to Pulaski, subject to the will of Congress. In his letter to Congress Washington said:

This gentleman has been, like us, engaged in defending the liberty and independence of his country, and has sacrificed his fortune to his zeal for those objects. He derives from hence a title to our respect that ought to operate in his favor as far as the good of the service will permit.

The battle of Brandywine was fought before Congress had taken any action on the recommendation of Washington concerning the appointment of Pulaski to the command of the cavalry.

This was his first battle on American soil, and his daring knew no bound. During the close of the engagement he conceived the idea that he could, if given command of Washington's bodyguard, render services of greater value than he could possibly give in the ranks.

He communicated his scheme to Washington, who readily consented, and then at the head of that small guard, 30 horse, all told, he executed one of the most daring charges ever recorded in the annals of warfare. His conduct so pleased Washington that he was given the further privilege of collecting as many of the scattered troops as he could, to use according to his own judgment and discretion. He did this promptly and completely, and with the troops so collected made such a determined stand before the enemy as to render the retreat of our Army easy of accomplishment.

His courage and excellent demeanor in this one battle won for him the praise of the entire world.

Soon after this event, Congress, at Washington's earnest solicitation, bestowed upon him the rank of brigadier-general, and he was given command of the cavalry.

His almost miraculous achievements at the head of the cavalry, his bravery and his quick foresight, together with his unerring judgment in the campaigns of Washington, made his services almost invaluable, and his successes were so marked and the compliments showered upon him so numerous and sincere that a certain jealousy was aroused in the breasts of some of our officers, who could not bear to have a foreigner who could scarcely speak our language the subject of such unusual praise. The murmurings of discontent among these officers became greater and greater, as did the achievements of Pulaski. At one time, stung to the quick by the animosities his intrepidity had aroused, he was on the verge of tendering his resignation and returning to Europe, when he received the following letter from Washington, which is self-explanatory:

I assure you that I have a high sense of your merit and services and the principles that influenced the part you have taken in the affairs of this country. The disinterested and unremitted zeal which you have manifested in the services give you a title to the esteem of the citizens of America and has assured you mine.

This letter, so full of praise for Pulaski, had the effect of causing him to reconsider his determination, and he remained the constant, brave, disinterested follower of Washington, who loved and honored him for his genius, for his courage, and for his upright persevering devotion to duty, and for his unbiased zeal for everything honorable and right.

He distinguished himself in every battle in which he participated. His lion-like courage made him the idol of his followers. His command when proceeding to give battle was "Follow me!"—not "Charge!"

Mr. Chairman, Pulaski did not live to enjoy the blessings of liberty he so dearly loved. His spirit took its flight heavenward just at the time when the sunlight of freedom was beginning to cast its warm bright rays through the dark and heavy clouds of oppression, which had overwhelmed the American colonies for so many years.

He received his death wound at the battle of Savannah, Ga., October 9, 1779, while making one of his famous charges against the enemy at the head of the combined American and French cavalry forces.

He was tenderly carried from the field and taken aboard the United States brig *Wasp*, and died at sea two days later. His body was buried at sea, and funeral services were held at Charleston afterwards.

A monument was erected to his memory by the patriotic citizens of Savannah, Lafayette laying the corner stone in 1824. on the occasion of his visit to this country.

Mr. Chairman, there live in the city of Chicago, which I have the honor in part to represent, many Polish-American citizens. They are a law-abiding, patriotic, God-fearing, peaceful people, who love their adopted country.

They, as all liberty-loving people, revere the name of Pulaski. To them his name is the synonym of bravery.

They fully understand that the name of Pulaski will outlive any statue erected to his memory, and while they believe, as I most firmly believe, that his services in the cause of American freedom fully justify the erection by our Government of a suitable statue to his memory, and while they would regard such action as a just recognition of the services of one of their countrymen, they well understand that so long as liberty is loved, so long as the American Republic lasts, so long as the praises of the revolutionary patriots are sung, the name of Count Casimir Pulaski will shine with ever increasing brightness.

Mr. Chairman, I am heartily in favor of the passage of the bill, and hope it will be considered and passed without opposition.

The Republican party has ever been the true friend and lover of liberty. It has given to the world more great leaders in the cause of liberty than any other cause or movement. It has spread liberty wherever its influence has reached. It is now spreading liberty in the Philippines and elsewhere. It has proven its devotion to liberty by its acts. I call upon you to give one more proof of our love of liberty by this tribute to the memory of Count Pulaski, and I have no doubt that this bill will be passed either in the few remaining days of this session or certainly at the beginning of the next session of the present Congress. [Applause.]

The Fifty-seventh Congress Reaches High-Water Mark in Appropriations—A Distinctly Profligate Congress—Appropriations Run $100,000,000 Beyond the Necessary Requirements of Economically Administered Government—More than $800,000,000 Appropriated Outright and the Solemn Pledge of the Government Given to the Payment of $260,000,000 More.

REMARKS

OF

HON. M. E. BENTON,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1902,

On the conference report on the bill (H. R. 15108) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1902, and for prior years, and for other purposes.

Mr. BENTON said:

Mr. SPEAKER: In the closing hours of this eventful first session of the Fifty-seventh Congress I feel that as a member of the great Committee on Appropriations I would be remiss in my duty to my colleagues and the country if I failed to call attention to the immense sum of the people's money which this Congress has appropriated.

The chairman of appropriations is an able and honest man. He has for seven months stood in the breach and fought with lion-like courage the hungry demands of his party administration. But he has been overborne in the battle. His great fight for economy was laughed to scorn and he and we face the awful fact of a single session of Congress passing the billion-dollar mark. The gentleman from Illinois is a partisan Republican. And though he sweat "drops of blood" in his efforts to stem the tide of profligate extravagance of his party, he now with acrobatic agility comes up smiling in defense of his party, with the declaration (in which he does not believe), "The appropriations of the session, in my judgment, compare favorably with those made at any previous session of Congress."

It is stated as a defense of the Republican party that "practically the last of the taxes imposed for the prosecution of the war with Spain have been removed." But I call the attention of the country to the fact that this legislation was deferred till we had piled up over $200,000,000 in the Treasury of idle money, and that we are still bound for $200,000,000 of bonds issued to carry on that war. It is true that during the last two sessions of Congress relief has been given in the repeal of Spanish war taxes; yet with prudent and economical administration the whole of such taxes could have been removed and a large decrease could have been made in the Dingley tariff.

The population of the country shows no phenomenal increase; the commercial interests of the country furnish no adequate reason for swelling expenditures. The Administration claims that the Philippine war is over; that the Army has been seriously decreased. We are at peace. Yet the appropriations for the coming fiscal year are increased by $20,000,000, and the promissory notes of the Government are given for $260,000,000 more. I shall print, appended as a part of my remarks, a table of appropriations for this session and for several previous Congresses.

Your attention has been called, gentlemen, to certain legislation of Congress which has been enacted by the majority, and it is paraded as being virtuous. This legislation comprises the repeal of part of the Spanish war taxes. A Panama canal lawsuit has been given us instead of the Nicaragua canal route, which this House passed and the people want; a Philippine government bill has been passed which does not give civil government to those unfortunate people. No voice is given the people of the archipelago in their legislation. Why? Because the bill provides a native legislature with restrictive powers only, and when a census is made after two years of peace, and then when convenient after such census.

True to its party history, the majority have passed a bill extending and enlarging the power of national banks, which the people have not asked. A permanent Census Bureau has been made to provide places for a regiment of officeholders. But this great Republican party, parading its "full dinner pail" (with strikes and lockouts in every section of the country), has failed and refused to provide legislation to stifle trusts, has declined to meet the demand of the people for a revised tariff, preferring to expend in needless and wasteful appropriations the taxes wrung from the people.

The very able and accomplished chairman of appropriations shakes hands with himself and the chairmen of the other great committees on the skill and cuteness with which they have shoveled out the cash, and congratulates them and his party on the profound (?) statesmanship of the majority in Congress to reach high-water mark in appropriations. But we hear no word from a Republican leader on this floor telling the plain truth that your party refused to pass a bill giving relief to the Cubans. And why? Because you are in full partnership with the trusts, and you did not want to relieve the people by taking off the differential on refined sugar, thus cheapening it to the consumer.

I assert here and now that this Government has not for thirty-seven years burdened the taxpayers of the country with appropriations equal to the first session of the Fifty-seventh Congress. The chairman of our committee, with all his acumen, can not get away from the hard, cold fact that his party has appropriated and pledged the solemn faith of this Government to the expenditure of more than a billion of dollars at one single session of this Congress. His old-fashioned notions of economy, of Government integrity, have been torn to tatters by the performances of this Congress.

We are an industrial people. Farming, mining, manufacturing, and merchandising are our chief pursuits. We are at peace with the world. Our flag is given entry to all the ports of the world. We produce from $500,000,000 to $900,000,000 to sell to other people more than we buy of foreigners. Every civilized people on earth are fully impressed with the tremendous strength of this Government as a world power. No power in the world wants other than friendly relations with us, yet our Army is to cost us for the coming fiscal year $100,000,000, and a naval bill of $78,678,943 is passed.

We have authorized the building of battle ships to cost $18,306,000 and $12,000,000 more to armor and equip them for sea service. Only one government on the earth to-day is as well equipped for sea service in war (and that a very friendly power) as we, yet we burden the taxpayers with $30,000,000 for new war vessels. All this on top of $80,000,000 worth of vessels in process of construction. We appropriate outright $2,627,324.42 for the Military Academy and prepare to follow it with $4,000,000 more.

This Congress appropriates $4,272,239.33 to reimburse certain Northern States for interest on expenditures during the civil war, despite the fact that the auditing officers of the Government refuse to concede these claims. More, this is done without fair, free, full, or any consideration in committee. Plain, unvarnished words are necessary here, Mr. Speaker. Juggling with figures shall not be permitted to conceal truth. The cold facts are that we have appropriated $800,195,000 in cash, and have further pledged the Government in a way that will be considered between business men as our promissory note for $260,000,000 more, and which must be met and will be met at further sessions of Congress.

The Democrats are attacked because we refused to vote for $500,000 for permanent barracks in the Philippines. Why? Because we know it is only the beginning of an immense sum yet to be expended in elaborate fortification in these islands, and because we stand for the principle that we should not permanently hold these

islands in colonial vassalage. Our duty to ourselves, to the people in those islands, and to the world demands that we declare the only true and honest American policy of helping the people there to establish a stable government and leave them to its enjoyment.

We are in name a Republic. The Democratic party holds to the fundamental ideas on which our Government was founded, that all people should decide for themselves what kind of government they want. We do not want to stay permanently in the Philippines. We are for helping to reestablish government in those islands, for we have destroyed what they had. You, Mr. Speaker, and your party have persistently declined to declare any policy.

Your intention is to make sport of liberty in the Philippines and enrich corporations by giving free hand to looters in those islands, and you take refuge when we attack your unholy purposes in the bold and false declaration that we are the enemies of the Army and the flag. We stand for the glory of our country, but we stand also for the perpetuity of free government here among our own people, and we believe that colonial government in the Philippines means in the near future curtailment of our own liberties. One of the bills to become a law at the next session of Congress is a militia bill, already passed this House, which ultimately carries $123,000,000 of appropriations from our Treasury and destroys the sovereignty of the States.

A bill is held up in this House (already passed the Senate) known as "the ship subsidy." You hold back this bill till after the elections this fall, but you will pass it and take out of the pockets of the people $190,000,000 without constitutional authority, but in line with the policy of the Republican party to feed private corporations from the Federal Treasury at the expense of the taxpayers.

A reasonable sum for rivers and harbors, for court-houses and post-offices is just and honest. A fair and free pension bill will be indorsed by the people. Liberal (not niggardly) appropriations to sustain the Army, the Navy, the courts, and the general civil service of the Government is not complained of by Democrats. We do not want to starve the public service. But you have created 460 new and unnecessary officials and have needlessly increased the pay of 500 others.

You have, without moral or legal obligation, appropriated $660,000 to reimburse private corporations for losses in holding expositions. Where the United States was held for nothing you give $500,000 to Buffalo and $160,000 to Charleston. It was a pure gift from the Federal Treasury.

The mouthpiece of your party, Mr. Speaker, argues that if the Panama route for a canal is not accepted that $40,000,000 will be covered back into the Treasury. Not so, Mr. Speaker. If we find, as we believe, a valid title can not be had for Panama, we must build at Nicaragua, for which $180,000,000 is to be provided, and which will not pay half its cost. The American people are for an isthmian canal. They are for the Nicaraguan route. The great transcontinental railroads do not want any canal. Power enough was exercised to switch the Congress from the route the people want to one not wanted; to one that will force a six-days haul by ship (even if established), thus helping the railroads.

I call your attention to the enormous deficiencies for this session, aggregating $28,039,911.42, overlapping appropriations for like purposes more than $12,000,000. Twelve years ago when the Republican Congress passed the billion-dollar mark in appropriations by $30,000,000 the people rose in their might and with a cat o' nine tails scourged that party from the political temple. To-day the country is confronted with appropriations for one session of Congress going beyond the wicked Fifty-first Congress and proposing to spend at one session $20,000,000 more than during the whole of the Fifty-first Congress.

Are we a two billion dollar country? Will the taxpayers stand idly by and see this party squander twice as much money as they did twelve years ago? If the Republican party have returned a majority in the Fifty-eighth Congress, they will have the right to believe that the people of these United States do not care for profligacy. They will take it as an indorsement of needless extravagance.

The actual cash outlay is already $24,000,000 more than is estimated to be raised by taxation, to say nothing of $260,000,000 for which we are mortgaged. It is idle to say that some of this money may be covered back into the Treasury. It is always reappropriated. The only hope is to return to first principles. Whatever the sins of the Democratic party, it has never run riot with the people's money. "Economy in the public expenses" is a cardinal doctrine of our party. I appeal to the middle classes. The small banker, the retail merchant, the miner, the mechanic, and the farmer to look at these figures and go to the polls, and by their ballots call a halt in this colossal extravagance.

A statement of appropriations made during the Fiftieth, Fifty-first, Fifty-second, Fifty-third, Fifty-fourth, Fifty-fifth, and Fifty-sixth Congresses, and the first session of the Fifty-seventh Congress for the fiscal year 1903, in which it will be seen that, notwithstanding the Fifty-sixth Congress paid for a war, neither of its sessions came within $270,000,000 of the present session, is as follows:

Title.	Fiftieth Congress (Democratic).		Fifty-first Congress (Republican).	
	Appropriations, 1889.	Appropriations, 1890.	Appropriations, 1891.	Appropriations, 1892.
Agricultural	$1,716,010.00	$1,669,770.00	$1,799,100.00	$3,028,153.50
Army	24,471,300.00	24,316,615.73	24,206,471.79	24,613,529.19
Diplomatic and consular	1,428,465.00	1,980,025.00	1,710,815.00	1,656,925.00
District of Columbia	5,046,410.32	5,682,409.91	5,769,544.15	5,597,125.17
Fortifications	3,972,000.00	1,233,594.00	4,232,935.00	3,774,803.00

Rural Free Delivery.

SPEECH

OF

HON. J. H. DAVIDSON,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 8, 1902.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 11728) to classify the rural free-delivery service and fix the compensation of employees thereof—

Mr. DAVIDSON said:

Mr. CHAIRMAN: The pending proposition proposes to place under the contract system the carriers on rural mail routes. For years we have had the contract system in the carrying of mails on what are known as "star routes." This system has never been particularly successful on star routes, and there are many reasons why, in my judgment, it would not be a proper system to establish on rural routes. Under the star-route system the carrier receives a locked pouch at one office and simply carries it to the next office. He has no key to the pouch, does not open it or handle the mail in any way. His responsibilities therefore are very light. We all know of instances where, by reason of the letting of star routes to the lowest bidder, persons have contracted for the carrying of mail at such a ridiculously low price that they could not properly equip themselves for the performance of their duties.

Very often the horses and wagons used on these routes are a disgrace to the community and to the country. Carriers on rural mail routes have all the responsibilities of ordinary postmasters. They handle all the mail which is distributed or collected on their route. They sell stamps, register letters, take orders for money orders, and deliver pension vouchers. In short, all kinds and descriptions of mail matter pass through their hands. These men therefore must be men of good character and education. They must be selected with care and with due regard for their fitness and ability for the performance of their duties. These positions are now under the civil service. They are not political jobs to be distributed as political favors, but they are to be filled by competent, capable men. Their compensation should be sufficient to enable them to maintain a suitable conveyance, good horses, a wagon especially built for the purpose, and then the carrier should have enough left after paying expenses to compensate him for the services performed and the responsibilities borne. When this system was first established the salary was $400 per year. It was then increased to $500, and now it is $600 per year. This is equal to $50 per month, and when it is remembered that a carrier is obliged to work every day, Sundays excepted; is obliged to invest in at least two good horses, because one horse will not stand a daily drive every week day in the year of 25 miles; is obliged to buy feed for his team and keep his outfit in repair, the amount is not too large. I for one would be glad to see the salary increased to $750 per year.

I think a rural mail carrier working every week day in the year ought to receive at least $50 per month net for his services, and if the salary was fixed at $750 he could do that and have an allowance of $150 to cover expenses.

The rural mail service has come to stay. This is a Republican institution, fostered and cared for by Republican Administrations. The first movement made for the establishment of rural mail service in the United States was under the Administration of Benjamin Harrison. Later, under the Cleveland Administration, an appropriation was made to continue the experiment, but the Postmaster-General refused to spend the money, probably because he did not believe the people residing in the rural districts had any rights which he or a Democratic Administration were bound to respect.

As soon as another Republican Administration came into power, steps were immediately taken to develop and extend this system. The result is, as shown by the last report of the Postmaster-General, there are now in operation over 6,000 routes distributed throughout 44 different States and serving 2,840,644 people.

Last year the appropriation for this work was over a million dollars in excess of the previous appropriation. This year I have no doubt the appropriation of last year will be more than doubled, because the people everywhere are demanding the extension of this system. And why should they not demand it? If it is proper to employ carriers to distribute the mail to people residing in the cities, why should not those in the country districts have their mail delivered also? The great agricultural sections have always been the backbone of the country. These sections can always be relied upon when the country's honor is at stake or the country's flag is in danger. They can always be relied upon to contribute of their means for the support of the National Treasury. By reason of their residence in sections remote from the center of population they have not been able to enjoy directly the benefits which come from appropriations made for general public improvements. Why, I ask you, should we not be reasonably liberal in providing for the extension of a service which does directly benefit the people living in these sections? As the country has become developed and the roads improved there has come this growing demand for rural mail service. It is a demand which must be met, a demand which ought to be met, and I believe no appropriations which we will make at this session of Congress will be of greater benefit to a larger number of people than will the appropriation for the extension of the rural mail service.

This system has not yet become perfect. Defects exist which must and will be from time to time overcome. One regulation of the present system, which I have no doubt was entered into by the officials of the Department with the best of intentions and for the purpose of improving the service, is, in my judgment, a defective one. I refer to the regulations which provide that the boxes erected upon rural mail routes must be of some one of 14 varieties which have been approved by the Post-Office Department. In justice, however, to the officials of that Department, it should be borne in mind that when rural routes were

first established patrons were permitted to erect any kind of an old box, and the mail was deposited therein. Some would put up tin boxes, but most of them would use wooden boxes, old cracker boxes or starch boxes or anything which might be handy, and very often the mail deposited therein was exposed to the elements and became damaged. To cure this defect the Department organized a commission to investigate the subject, to examine the boxes manufactured by different firms in the United States, and to recommend some kind of box as appropriate for this service. The result was that out of some 60 or 70 samples submitted the commission selected 14 different varieties, manufactured by different firms, and approved of the same.

Now, while it is true that the use of these boxes has worked an improvement in the mail service, yet it has actually given a monopoly to these 14 firms to manufacture all the mail boxes to be used on all the rural routes in the United States. When you consider the thousands of routes that will be established in the next few years and the hundreds of thousands of patrons thereof who will be purchasers of boxes, it can readily be understood what advantage these 14 firms have over others who might desire to engage in the same work. I believe, therefore, that this regulation should be changed. It seems to me if the Department would simply provide specifications for a box which would be suitable for this service and designate in the specifications not only the dimensions of the box and the general form in which it should be made, but the quality and kind of material to be used in its construction, and then furnish these specifications to any tinsmith, hardware merchant, or manufacturer who desired to engage in the manufacture of these boxes, competition would be stimulated and patrons of rural routes would be able to obtain their boxes at less cost than they now do. Every tinsmith in a town where a rural route was to be established could, if he so desired, secure a copy of these specifications and manufacture the boxes to be used on the routes in that vicinity. All this would tend to not only improve the service, but stimulate harmony and good feeling among those interested therein.

There are some sections of our country where this system can not be properly established; where the roads are not in good condition and the country is not sufficiently settled to justify the expenditure. To these sections the benefits of the system will come in time. Those residing therein must bear in mind that they have a duty to perform; that they can not simply petition the Post-Office Department for the establishment of a rural mail route and then quietly sit down and fold their hands and do nothing and expect the mail route to be established and the mail delivered at their door without further effort on their part. In my judgment, no one thing has done so much for the advancement of the "good roads" cause in the United States as has the establishment of the rural mail service. Let it be generally understood, let it be positively understood, that rural routes will not be established unless the people interested therein and who are to receive the benefits thereof will put the roads in such a condition that a carrier will have no difficulty at any season of the year in traveling over them at such a rate of speed as will enable him to cover his route in a reasonable length of time.

The present practice in establishing routes is to locate them on some main highway extending out from the post-office into the country a distance of 10 or 12 miles and returning on another highway perhaps 2 miles distant from the first. While this accommodates the people who live on the main roads, it does not as well accommodate those who may happen to live on the cross roads. Some of the people are obliged to place their boxes at the corners, sometimes a half mile or even a mile from their house. Everyone is particularly anxious to have any letters or other mail matter which may come to him properly and carefully handled, and it is with a good deal of reluctance that any person will place a box a mile or so from his house and provide for having his mail placed therein for fear some one may tamper with the box and destroy or steal the mail. This objection can not be obviated under the present system, but the establishment of the county system in those sections where it can be properly done will overcome all these objections. The county system is, in my judgment, the ideal system for the rural mail service. This system when established is intended to give to every farmer and to every person living at any distance from an established post-office his mail at his own gate. This means the extension of the mail service so that the mail can be carried from central distributing points in the county to each remote corner of the county and upon every cross road as well as main highway, so that each person will enjoy a benefit equal to his neighbor and all be placed on an equal and just footing.

I have the utmost confidence in the ability of the Postmaster-General and those under him to extend and promote this system in such a manner as will merit the approbation of every loyal American citizen. These men who have developed this system are entitled to a great deal of credit. They have labored patiently and earnestly and given thorough study to a subject which to all of us was entirely new. Let us uphold and assist them. Let us strengthen their hands; let us appropriate reasonable sums of money and place the same at their disposal so that they may go forward with this work to the end that the people may have the benefit thereof.

The passage of the bill now before us means a step backward; it means demoralization to the system and discouragement to those who have done so much for its establishment. I mean no disrespect to the committee which has reported this measure, but I do believe that it would be a mistake to adopt the contract system. We can not afford to make any mistake. We do know that the present system enables the Department to get good men for this service. We know that good men are needed in the work, and to get good men we must be willing to pay a reasonable compensation for their services. If these positions are to be let to the lowest bidder, irresponsible men, men of bad character and habits, or lacking in education or ability to properly equip themselves for their duties, might secure the contracts.

The experiment is, therefore, too dangerous. We can not afford to make it. Let us defeat this measure; let us continue the present system, and with good men as carriers, good men directing them, and with a Republican Administration back of them there will be no question about the future of the rural mail service. It will be one of the permanent institutions of our country; it will bring blessings to the rural sections; it will keep in touch all parts of our splendid country and will advance the cause of education; it will upbuild humanity; it will encourage and sustain those engaged in agricultural pursuits.

I believe in the rural mail service; I want to see it extended until a network of routes shall be established so that every American home, no matter how remote from a city or town, and every American family, no matter how isolated, will be reached by this service.

With these views on this subject, and believing that to put the carriers under the contract system would be a step backward in this enterprise, I shall vote against the pending bill. [Applause.]

Grazing Privileges on the Public Lands for Homesteaders and Small Landholders—Pastoral Homesteads.

SPEECH

OF

HON. JOHN F. LACEY,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 13, 1902,

On the bill (S. 3057) appropriating the receipts from the sale and disposal of the public lands in certain States and Territories to the construction of irrigation works for the irrigation of arid land.

Mr. LACEY said:

Mr. CHAIRMAN: "All flesh is grass and all the goodliness thereof as a flower of the field." Isaiah xl, 6. "The grass withereth, the flower fadeth because the spirit of the Lord bloweth upon it; surely the people is grass." Isaiah xl, 7. Man's existence depends almost wholly, either directly or indirectly, upon the grasses in their various forms. Voltaire's saying is often quoted: "Whoever makes two blades of grass to grow where only one grew before renders a service to the state," and this statement is no more true than that the public policy which makes one blade of grass grow where two grew before should be reversed.

We have now 600,000,000 acres of the public domain, without taking into account the Territory of Alaska. Of this vast region a very large portion is only suitable for pasturage, 46,000,000 acres have been set apart as forest reserves, 5,300,000 acres as national parks, a large area is embraced within the limits of mountain ranges above the timber line—but after all there remains an empire which is suitable only for pasturage. While a considerable area is yet to be put under cultivation by proper systems of irrigation, the land that would only be fit for grass would still amount to hundreds of millions of acres. How to utilize this best for our great and growing population is a problem well worthy of the consideration of the Congress of the United States. It is one, too, that is full of difficulty.

Prejudices are to be encountered, abuses have to be corrected, and it is high time that the people who are living in this great territory should seriously take the subject under consideration. They have begun to do so, but yet there is much difference of opinion as to what remedy, if any, should be adopted and applied. The purpose of my remarks to-day is to discuss the best attainable remedy for present evils—the best possible under existing circumstances—and I think I fully realize the difficulty of

framing a law dealing with this question. The home is the base of everything, and if we start reforms on this subject with the home as the foundation the structure will be safe.

In examining this question and preparing a bill upon it the home seeker and actual settler is the man for whom we should exercise our first concern. The actual settler is the strength of a new State. The nomadic herder who drifts with his flocks from State to State, paying taxes nowhere and having no care for the future of the State, should be accorded no rights which will conflict with the local interests of the community or which will deter the actual settlers from taking up permanent homes.

The protection of the forests has no longer much opposition. By saving the forests we preserve the streams. The benefits of the restoration of the herbage of the plains are more direct. Grazing is even more important than irrigation. The nakedness of the plains should be clothed with grass and the mountains with trees.

In reading the early history of the United States, especially of the far West, the mention of abundance of grasses suitable for grazing will always strike the attention of the reader. It is interesting to take the story of Lewis and Clarke's expedition, or the journals of the pathfinder, General Frémont, in his journey across the continent in the earlier days, and follow their descriptions of the abundance of animal life supported by the native grasses in the arid regions of the far West. This teeming life of the great plains was supported in the winter by the hay cured by the dry winds upon the native stalks.

There are in the grass family about four thousand species, from the greatest of all—the bamboo—100 feet high, down to the short buffalo grass of the arid plains. In this numerous family of plants is found the food of nearly all the animals which support the life of man. Civilized man draws his life and strength either directly or indirectly from the grasses of the field. The native grasses of America are amongst the most valuable known to mankind. When Timothy Herd discovered in the marshes of New England, and introduced to his neighboring farmers the native plant that long bore his name, now familiarly shortened into plain "timothy," he conferred a blessing not only upon New England but upon the whole American people.

The variety of these valuable grasses upon the Western plains has been steadily decreasing since the country has been opened to settlement. In the settled portions of the East the intelligence of man has improved the pasturage, whilst the natural herbage of the far West has been neglected because there was no one to care for it.

There has always been a fascination in the maxim of "free grass," and the fear of monopoly in the hands of the large cattle owners has arrayed many of the settlers, if not the most of them, in the grazing States, against any proposition whatever for the leasing or private control in any way of any portion of the grazing lands.

The legislature of the State of Montana has by resolutions expressed itself against any leasing proposition. The small landowner and the homesteader have looked with just apprehension upon any scheme which would enable the great cattle companies to fence in large tracts of the national domain and exclude the poor settler from enjoying the wild products of the public lands. This condition has existed for many years. There is a diversity of opinion upon the subject as to the extent to which the native pasturage has deteriorated, but the fact of its great decline is not disputed. That deterioration has been reasonably estimated amounting to the destruction of more than a million acres of grass land each year, and its conversion into a desert condition.

The homesteaders in western Kansas and other localities have taken up claims where it is impossible for them by cultivation to make a living for themselves and their families because of lack of rainfall. In taking these claims, however, they have plowed up considerable portions of the valuable native grasses, and while nominally improving the land, they in fact have injured it, because upon much of this land there is no product of any kind that can take the place of the native grasses and at the same time be a safe and reliable crop in usual dry seasons. Many of the ranges—in fact, most of them—have been heavily and persistently overstocked. Many varieties of the grasses are annuals, and in the fierce competition among the herders not a sufficient quantity of grass is permitted to go to seed to renew the plants.

The House Committee on the Public Lands has had this matter before them for many years. Personally I have realized the necessity for doing something toward the restoration of the natural pasturage, but in considering this matter I have always found myself confronted with the difficulty that the small settler and homesteader would probably be crowded to the wall under such system unless it should be guarded with exceeding care.

The State of Texas has for many years leased its grazing lands. The change from free grazing to the leasing system was attended with violence and bloodshed in that State, but public sentiment has steadily grown in favor of the leasing system, until the people there are practically unanimous in their commendation of the law. The only criticism there is that the leasing of the land in very large tracts has retarded the settlement of some parts of the State.

Experience, however, in Texas has shown that the leased tracts have produced an increased amount of grass, and that the land is capable of sustaining a much larger number of cattle under the leasing system than under the old method of free grazing. The reason for this is very evident. Where there is a proprietary interest in the pasturage, the owner will endeavor to manage it in such a way as to increase the product. On the other hand, where the range is free to all, with no proprietary rights in the future, each cattle and sheep owner endeavors to get all the grass he can without any reference to the future.

The annual grasses are eaten before going to seed, and the pasture of next year is not considered. A wise farmer would not feed his seed corn to his flocks, and the seed of many of these grasses is equally as necessary. I believe there ought to be a remedy for this, and after many years' service upon the Public Lands Committee I have thought it my duty to attempt to prepare a bill which I believe will overcome or minimize the evil to which I have referred and at the same time avoid the other evil of monopolization of the range. I have therefore prepared a bill that I believe will be just, by limiting the leasing rights in comparatively small tracts to the homesteaders and resident landowners only.

The bill provides for leasing only the arid and semiarid land which is not capable of irrigation, the leases to run only for a term of five years and be limited to 3,200 acres to any one person; they shall not be assignable or transferable and shall only be made to homestead settlers or actual freeholders whose lands are in the vicinity of the grazing lands to be leased. Where there is not sufficient land to supply the necessary amount for the various applicants, the same to be prorated, the annual rental to be 1, 2, 3, 4, 5, or 6 cents an acre, according to the grade of the land, the land being classified by the Department of the Interior for that purpose. The large landholder may also lease land, but the maximum of 3,200 acres applies to all alike. Corporations are not privileged to lease under this bill. The land remains open to mineral, homestead, or other lawful entry, and when entered the lease is to be canceled. Streams and watering places are not to be included in any of these leases, and the right of way through leased lands to and from watering places is reserved to other lessees.

The bill provides that the law shall be put in force in any State or Territory only by proclamation at the request of the State or Territorial legislature. This will prevent the operation of the act in such States and Territories as do not desire its benefits. It also provides that the net receipts of the leases shall be used for irrigation works in the State or Territory where collected.

From this brief statement of the scope of the bill it will be seen that for a very small rental the homesteaders and small landowners will be able to utilize their property by obtaining grazing rights which it will be to their interest to protect. The total amount of grazing lands in the country will be exactly the same after these leases are made as before, but the small settler, and large settler as well, will thus be able, upon a limited amount of the public domain, to protect the grass from improvident and destructive grazing. They will be able by shifting their cattle from one part to another to allow the depleted range to become restored, and the certainty that they will get the benefit of the increased production will induce them to care for the pasture with a view to its preservation.

There is only one experiment involved in this bill, and that is the attempt to limit its operation to the homesteader and the small landowner alone. This will work no hardship upon the large cattle owners, because the remaining land will still be open to free range, and the owners of the large herds can also subdivide their stock and let portions of the same out to graze upon the leased lands. It would result in a new impetus to homestead settlement, for settlers would locate homesteads in order to have the benefit of the appurtenant leasehold right who could not afford to make the attempt to live on 160 acres of land in a locality where the great sheep and cattle owners would consume all of the surrounding pasturage.

Many of the arid States are already trying the experiment of leasing State lands on their own account, and although these leases have not been in existence very long, the results in some of the States would indicate that the leased State range is already very much better than the public land in the same locality that has been subject to free and indiscriminate grazing.

The subdivision and exercise of proper care in the management of this immense area of pasture land is even more important in my judgment than the question of irrigation, for nearly all of

the arid lands can be made to produce pasture, while comparatively a very small portion can ever be used successfully in raising irrigated crops. The leases not being transferable, the amount of each lease being limited, the range would be preserved and at the same time protected from monopoly.

It is proposed in the bill that corporations shall not be permitted to lease. The reason for this is evident. A corporation is not a settler and has no family or home. Corporations can be created without number, and if leases were open to corporations under this bill they could readily locate tracts of 320 acres without settlement and then take leasehold privileges of 3,200 acres each appurtenant to their holdings, and effectually prevent the settlement of large areas that under this bill would become the home of ranchers. Under existing laws homesteads in the public lands are provided for farmers; this bill will open up the way for pastoral homesteads in a region where ordinary cultivation is not practicable.

I believe if this bill should be enacted into law it would be followed by very considerable increase in population in all the arid States, because we would have practically a new form of homesteader—a homestead settler who would take land because of its appurtenant rights, feeling confident that upon his homestead and leasehold lands he could be sure of a living for himself and family.

If I am right in my suggestion that intelligent and prudent management would increase the grass product, then it follows that more cattle could be supported upon the same amount of land than under the present entire lack of care, system, and method.

In Oregon the wheat farmer raises a wonderful quantity of grain to the acre; but the good farmer there only raises two crops in three years or one crop in two years and gives his land the benefit of a year's summer fallow. The Hebrews recognized that the land, as well as man, must have periods of rest. Pastures, too, must have rest from time to time or they will become worthless. A lessee will consider his own self-interest in the care of the grazing lands that he may control, and by shifting his cattle from time to time will allow the restoration of the native grasses. Regions where the herbage was once very rich have become desolate. Under proper care they can be again restored.

The grass of the land is the life of the land. Grass is the healer that covers the scars of nature. Grass makes all the difference between a desert and a meadow. The pastures of the West are of the first importance to the whole people of the United States. I earnestly plead for their care and restoration.

The bill which I submit to the consideration of the country is as follows:

A bill (H. R. 14108) to grant grazing privileges to homestead settlers and holders of small farms in the arid and semiarid land region, and for other purposes.

Be it enacted, etc., That the purposes of this act are to give to homestead settlers and holders of small farms the opportunity, in the arid region, to improve, use, and protect the grass upon the public domain in the vicinity of their holdings, so as to prevent the further deterioration and the monopolization of the range by the owners of large herds of live stock; and the rules and regulations to be made and promulgated by the Secretary of the Interior under this act shall be made with reference to its purposes as defined in this section.

SEC. 2. That so much of the arid and semiarid public lands not capable of irrigation as may be necessary for the purposes of this act may be leased for stock-grazing purposes, subject to the right of homestead, mineral, and other lawful entry under existing laws. Said leases shall be made under such rules and regulations as may be prescribed by the Secretary of the Interior and for the purposes of and subject to the limitations of this act.

SEC. 3. That all leases shall run for a period not exceeding five years. Such leases shall be limited to an area of not exceeding 3,200 acres to any one person, and such leases shall not be assignable or transferable, but in case of the death of the lessee shall inure to the benefit of the estate or legal representatives of such lessee. Such leases shall only be made to actual homestead settlers or to freeholders whose lands are in the vicinity of the lands to be leased by them. And the holder of a homestead prior to patent may obtain a lease for not exceeding ten times the area of land included in his said homestead, and the owner of lands in freehold may in like manner and under like restrictions acquire a lease for ten times the amount of his said freehold, but in no event to include more than 3,200 acres for any one lessee under this act.

SEC. 4. That during the continuance of any lease made under this act the lessee may fence the leased land or protect the same from trespass in any other lawful method.

SEC. 5. That no corporation shall be entitled to any lease under the provisions of this act.

SEC. 6. That where there are two or more persons eligible to acquire leases under this act who may desire leases upon the same land, and there is not enough public land in such locality to supply the said applicants, then such lands shall be apportioned among such applicants under rules and regulations to be prescribed by the Secretary of the Interior.

SEC. 7. That the lands to be leased under this act shall be classified and graded by the Secretary of the Interior into six classes, and the annual rental shall be 1, 2, 3, 4, 5, or 6 cents an acre, according to class or grade, payable at such times and in such manner as may be prescribed by the said Secretary. The proceeds of such leases shall be paid into the Treasury of the United States.

SEC. 8. That nothing in this act shall prevent the lessees or other persons and corporations from the privilege of grazing their stock upon the public lands not included in such leases.

SEC. 9. That nothing in this act shall apply to or change existing law as to forest or other reservations: *Provided*, That the Secretary of the Interior, under rules and regulations to be made and promulgated by him, may make and collect such charge per capita as he may determine for each horse, sheep, or other animal which he may permit to graze within the forest reservations.

SEC. 10. That when any mineral, homestead or other lawful entry is made upon leased land the lease shall be canceled thereon under rules and regulations to be provided by the Secretary of the Interior.

SEC. 11. That in leasing under this act the regulations shall provide for the reservation of watering places and streams where practicable, so as to render the same accessible from the leased lands in the vicinity; and such regulations shall also provide for the necessary right of way across other leased public lands in order to enable any lessee to have access with his stock to and from the lands leased by him.

SEC. 12. That leases may be renewed for further terms: *Provided*, That in renewing such leases the right to prorate by other applicants under section 6 shall be applicable.

SEC. 13. That this act shall take effect from and after its passage, but shall not be put in operation in any State or Territory until proclamation shall have been made by the President to that effect, which proclamation shall be separately issued as to each State and Territory: *Provided*, That no such proclamation shall issue as to any State or Territory until the legislature of such State or Territory shall by resolution request such action.

SEC. 14. That the net receipts after payment of the expenses of administration, arising from the leases under this act, shall be set apart as an irrigation fund to be expended in the State or Territory in which the same shall be collected.

Eulogy on Death of Hon. Peter J. Otey.

REMARKS

OF

HON. DAVID H. MERCER,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, June 29, 1902.

Resolved, That as a mark of respect to the Hon. PETER J. OTEY, late a member of this House from the State of Virginia, and in pursuance of the order of the House heretofore made, the business of the House be now suspended to enable his associates to pay fitting tribute to his high character and distinguished services.

Resolved, That the Clerk communicate these resolutions to the Senate.

Resolved, That as an additional mark of respect at the conclusion of these exercises the House do adjourn.

Resolved, That the Clerk be, and he is hereby, instructed to send a copy of these resolutions to the family of the deceased.

Mr. MERCER said:

Mr. SPEAKER: My presence here to-day is because of the friendship and respect I had for the deceased during his service in Congress, and until a few moments ago I had no intention of adding words to those so fittingly contributed by my colleagues as additional evidence of my love and respect for him and for his memory.

Mr. OTEY was an associate of mine on the Committee on District of Columbia, and during the years we served together I found him in daily attendance at committee meetings, ever mindful of the interests of his constituents and his country. He examined very carefully all bills referred to him for consideration, and in the hearings before the committee and in the discussions of measures brought before us for action he exhibited a deep knowledge, and his advice and suggestions were valuable and instructive.

On the floor of the House he was a unique character, especially in debate. He very seldom occupied the attention of the members by speech, but when he did his associates were prepared for an entertainment both amusing and instructive. His wit was refreshing. We always enjoyed it, even when it turned against Republicans, collectively or individually. In the closing days of Congress Mr. OTEY was a prominent figure in songs and jollification, and none of us will ever forget his rendition of "Dixie," one of his favorite songs. The Southern accent, the gesticulations, and the dance steps made his rendition of "Dixie" inimitable.

Otey was always young. Age in years never made him old in his associations. He loved children and always entered into their sports as one of them. He never forgot that he was at one time a boy, and he was full of excuses for the pranks of youth. The young men and women of his acquaintance found in him a companion and a friend, and were never chagrined by severe censorship on his part. Thus he obtained their confidence and officiated as their advisor, leading them into paths of rectitude and wisdom, rather than along the highways of recklessness and failure.

Mr. OTEY was a patriot. Although he and six of his brothers joined the Southern Confederacy and fought bravely and persistently for the stars and bars, when that unfortunate war came to a close he became a better American citizen than ever before, and in spite of the wounds and ailments received by him as a soldier in the Confederate army he was ever ready to fight for the Stars and Stripes.

Of late years Major Otey realized that he would leave this earth upon a sudden call. Only a few days before his death he

and I attended a banquet in Baltimore and he then informed me that his heart was bothering him and he was obliged to be very careful in his diet and comportment. That night at the banquet table he spoke as one realizing his near approach to another world. His words were eloquent, full of feeling, and left a most intense impression upon his auditors.

He referred to the boys in blue and gray who had gone before him, told of their patriotism and loyalty, and rejoiced that peace now reigned in the Republic, and that his eternal prayer was that never again should the country be embroiled in civil strife. He congratulated himself that he was at peace with all mankind. The announcement of his death was a sudden shock to his many friends as well as to his family, but it was only another reminder that none of us are here permanently and that we should be prepared at all times to receive a summons from the Great Master. Our friend is gone, but the world is better because he lived in it.

Civil Government for the Philippine Islands.

SPEECH

OF

HON. CHARLES N. FOWLER,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 26, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (S. 2295) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes—

Mr. FOWLER said:

Mr. CHAIRMAN: I am fully aware that this measure will be reported back to the House as it came into this committee, and yet I desire to here and now register my protest against one of its provisions and to express the hope that when the bill comes from the conference it will be immeasurably improved by the omission of the sections with reference to banking.

Should an intelligent and careful student of our monetary history set out to draw a measure containing those propositions—I will not dignify them by calling them principles—which have with the greatest degree of certainty led to disaster, he would, undoubtedly, produce this identical scheme of banking.

The most remarkable thing to me is how the committee could have helped avoiding it, unless perchance it was placed here as an antidote to something worse, even as deadly poisons are sometimes used as antidotes to still more deadly diseases.

If, therefore, happily, by chance or design, this vicious scheme shall have the effect of destroying the still more vicious scheme of the free coinage of silver contained in the Senate bill, we shall have escaped two unspeakable evils—the Scylla and Charybdis of Philippine legislation.

If I desired to call down upon the Philippine Islands the curse of curses, I should doom them to the silver standard, with the free coinage of silver. If I desired to raise a certain and complete bar to all progress and prosperity, I should subject them to the schemes and chicane of the bullion brokers, whose limit is measured by the last farthing of profit.

The free-coinage scheme contained in the Senate bill gives the lie to three of the most notable and glorious educational campaigns in American history, and reverses by legislative enactment three deliberate judgments rendered by the American people at the polls.

Instead of a brave advance, it is a cowardly retreat. May God grant that no such humiliating spectacle shall ever be charged to the Republican party, whose progress in monetary reform has been slow, but always onward and upward, and never backward and downward.

The coinage provisions of the House bill, though not without criticism, look in the right direction and are incomparably preferable to those in the Senate measure, which must prove, if enacted, an everlasting scourge and withering blight to that struggling people.

If American civilization is to be the salvation of the Filipino, you will lift him further and faster by the adoption of American money than by any other force.

It will teach him the lessons of the flag, and impress upon him the power and glory of the Republic, while the theoretical instruction of the schools is making comparatively slow progress; for through no American coin will he be filched of his legitimate gain.

Establish in the Philippine Islands the gold standard—the standard of the whole commercial world—thus placing them beyond a daily bullion tribute to the money changers, and you will start the Filipino on the sure road to a perfect confidence in the American people and in the justice and honor of our Government.

That French writer, indeed, spoke the truth when he said:

"The finances touch everything, help everything, and conclude everything. They are in the State what blood is in the human body. If it circulates, it carries along with it motion and life; if it stops, it paralyzes and death supervenes. Good organization, good administration, a good condition of the finances exert, therefore, imperiously, everywhere and always, a positive, healthful, and vivifying action upon the government of a country and the prosperity of its people."

How important, then, that we give to the Filipinos the best we have, not the worst we could conjure up were our purpose to undo and ruin them.

But let no man suppose that even the best we have can not be greatly improved, and indeed it must be, if we are to take the preeminent place in the financial world we are in all other respects entitled to occupy.

Good as many of our people think our financial system is, if indeed we have any financial system at all, and proud of it as some of us in our ignorance pretend to be, it is wholly unworthy of our intelligence, inadequate to our needs and unsuited to the commercial conquest of the world upon which we have entered.

Mr. Chairman, regarding this a most fit occasion to point out how we should adjust our finances and improve our banking and currency conditions if we would win grandly and hold our place permanently, I shall beg the indulgence of the committee while I lay before it those changes which I deem important, indeed essential, would we escape our annual currency panics, eliminate a perpetual fear felt by everyone, secure a banking system coordinated to the needs of our time, and place our standard of value beyond question or cavil.

In the United States Senate, on March 18, 1834, Daniel Webster said:

"Credit is the vital air of the system of modern commerce. It has done more, a thousand times, to enrich nations than all the mines of the world. It has excited labor, stimulated manufactures, pushed commerce over every sea, and brought every nation, every kingdom, and every small tribe among the races of men to be known to all the rest. It has raised armies, equipped navies, and, triumphing over the gross power of mere numbers, it has established national superiority on the foundations of intelligence, wealth, and well-directed industry. Credit is to money what money is to articles of merchandise."

If these words were true in 1834, how much fuller they are of meaning to-day.

The total clearings of the whole country last year were one hundred and eighteen and one-half thousand millions, or $118,500,000,000. Those of New York City alone were more than $77,000,000,000, and only 4½ per cent of them were paid in cash, while the clearings during five hours on May 10 were more than $598,000,000.

Such gigantic transactions in credit call for a solid and enduring foundation, a foundation about which men have no occasion to think, rather than a foundation about which they never cease to think, and that with the greatest solicitude and profoundest apprehensions.

Again, the clearings of 1901 were $32,000,000,000 or nearly 40 40 per cent greater than the clearings of 1900. Our clearings were $73,000,000,000, or nearly 150 per cent more in 1901 than they were in 1894, only seven years before, when they were $45,500,000,000.

Have we a currency system that automatically adjusts itself to these widely varying needs? Let the experience of every autumn answer.

The commercial transactions of to-day are in the millions, where yesterday they were measured by the thousands. Are our financial institutions suited to these marvelously changed conditions?

Our trade now encircles the globe, and our foreign transactions approach $2,500,000,000.

Should not American banking, under the ægis of the Government, follow every commercial missionary as he exploits the markets of the world for the products of American labor?

Mr. Chairman, never was there greater need than we now have of a financial system, built upon principles as unvarying and immutable as the law of gravitation.

Eighty millions of the most intelligent, ambitious, and productive people in the world, converting their talent and toil into $18,000,000,000 of products every year, which, in their swift and ceaseless changing from mine and mill and from forest and farm to the ever increasing wants of a grandly advancing nation, send the exchanges bounding beyond the $100,000,000,000 mark, are

entitled to, need, and must have something more and other than tentative monetary conditions, subject every two years to a party vote, and dependent almost every hour on the caprice or fancy of a Secretary of the Treasury.

The infinite and almost immeasurable commerce of this country should be grounded upon and anchored to the world's standard of value, and yet not a single transaction, however small or however great, of the countless trades involved in the whole $118,000,000,000 of exchanges must now be proved in gold coin. Indeed, nowhere does gold bear a direct compulsory relation to the business of the country.

The currency tools of smaller trade, as well as those of the larger commerce, should spring into being with each transaction and return to their source upon the completion of their mission.

These instruments of trade should always be equal to the needs of business, and always as good as gold, because convertible into gold upon the demand of the holder.

The banks of the country should prove the soundness of their credits by daily gold-coin redemptions.

Our banking system should be such as to make every dollar of money or credit available at the point where most needed, and that without charge or discount, if we are to have a mechanism of the highest utility, greatest economy, undoubted stability, and the most perfect efficiency.

In 1800, when our population was 5,308,483, our money in circulation was $26,500,000, or $4.99 per capita. The per capita circulation gradually increased throughout the century, from decade to decade and from period to period, being $6.96 in 1820, $10.91 in 1840, $13.85 in 1860, $19.41 in 1880, $22.82 in 1890, $26.94 in 1900, and to-day it stands at $29.

Generally speaking, I assume that the amount of money in circulation among the people has fairly represented their needs at the respective periods, although there have been times of redundancy alternating with scarcity, owing to conditions which led to unfortunate legislation or to unwise legislation which itself developed unfortunate conditions.

In 1800 the people led a plain, frugal, and practically an independent life; each family, in the great majority of cases, producing all it ate, wore, and used, and, therefore, the need of money was slight indeed.

To-day the life of the average American citizen is one of complex and interdependent relationships; no one producing what he himself eats, wears, and uses, but selling his product for cash with which to buy the things he needs.

Not until 1860 did the factory system make its appearance, but since then it has completely changed the order of things. The transformation is going on to-day at an amazing pace, and we are sweeping on, confounding the whole civilized world with our achievements.

In 1800 we were 5,000,000 of distinctively agricultural people, limited to a narrow strip of land fringing and fretting the Atlantic. To-day we are nearly 80,000,000 of as distinctively a manufacturing and commercial people, the products of our shops going to the ends of the earth, and the world being our field of action.

At home, from raw material to finished product, we buy and sell in amounts annually aggregating nearly two hundred billions; while our exchanges for commodities alone with the outside world approach the two and one-half billion mark.

With what equipment in our financial arrangements and banking facilities are we carrying on our own gigantic mechanism of production, as we throw down the gauntlet of commercial supremacy throughout the world to all comers?

Have we taken the last caution that will protect us against the destructive violence of overproduction and its consequent reaction?

Are we prepared to measure swords with our competitors when the last ditch is reached and the contest is reduced to a hand-to-hand fight?

Let us see.

To-day our per capita circulation is $28. No one can tell whether under the operation of wise economic laws it ought to be greater or less than that amount. But since it has gradually increased throughout a century we are bound to assume in all discussions of the matter that the amount is normal and certainly should not be less.

The measure reported by the Banking and Currency Committee has been drafted with the distinct purpose of meeting certain dangerous conditions springing out of the war legislation of the sixties and the political legislation afterwards, by which both the Republican and Democratic parties alike were trying to do something for silver.

No one before the civil war and subsequent to the adoption of Constitution had ever suggested the issue of fiat money. It was not even thought of during the war of 1812. The United States notes were born of an actual or supposed necessity; even those defending the issue at the time declaring that only the jeopardy of the life of the nation could justify them, and that their early retirement should follow.

The national bank note system which we have had for nearly forty years was constructed with a view of making a market for United States bonds at a time when it was extremely difficult for the Government to dispose of its securities.

When silver began to fall in price and there came to be a large profit in free coinage by the Government, wisdom and patriotism gave way to cupidity, ignorance, and political cowardice, and by main strength we forced into our monetary system more than $600,000,000 of legal-tender silver, of which to-day more than $350,000,000 are governmental fiat as distinctly and certainly as are the $346,000,000 of United States notes which went forth with the apology of necessity stamped upon them and bearing the solemn pledge that with that necessity their existence should end.

In 1878 our population was 49,598,000 and our per capita circulation was $15.32. On April 1, 1902, our population was 78,777,000 and our per capita circulation was $28.59, making a total increase in the money in circulation of $1,433,415,564.

The national bank note circulation in 1879 (see Appendix A) was $313,786,342, and on February 25, 1902, it was $314,439,680, resulting in an increase of only $652,338 in bank notes during a period of nearly twenty-five years. The gold increase amounted to $857,653,828, and the increase of silver amounted to $527,547,429 in standard silver dollars; while the balance of about fifty millions was in subsidiary coin and Treasury notes. Practically, then, this great increase of more than $1,400,000,000 was in gold and silver, there having been no increase in paper currency worth considering in this connection.

The average increase in our population during the last five years has been more than 1,600,000 each year. Since our present per capita circulation approximates $30, there must be in the succeeding years an annual increase in our circulation of about $50,000,000 if we are to maintain our present average circulation. From what source shall it come? (See Appendix C.)

Will our present system of finance (if indeed you can dignify it by calling it a system) automatically bring into use the requisite amount of money to meet the constantly growing needs of our people? If it will not, to what legislative legerdemain are we to resort in the future to provide the legitimate requirements of trade, the currency tools with which to perform our vast commercial work?

Before we proceed to inquire into the source of any addition to our money supply in the future, let us fix three facts clearly in our minds:

First. That our per capita circulation has increased from $15.32 in 1878 to $29 to-day, or has nearly doubled.

Second. That the average increase since 1878 has been $60,000,000 per annum.

Third. That this whole amount, to all intents and purposes, has been in gold and silver alone.

As already pointed out, to maintain our present average will call for an increase of at least $50,000,000 in circulation every year, which is $10,000,000 less per year than the average increase of the last twenty-four years.

Whenever any bank, finding that it is maintaining its circulation at an actual loss, proceeds to retire its notes and quit that part of its business because it is unprofitable, the Secretary of the Treasury, fearing the dangers of a currency panic, with patriotic impulse, honest intent, and evidently determined purpose to prevent the harm necessarily incident to an unnatural contraction of the currency, such as is now going on by the retirement of national-bank notes up to the maximum limit allowed by law of $3,000,000, feels compelled either to blackmail the banks into a retention of their circulation by threatening to withdraw Government deposits, or to bribe them, on the other hand, with promises of Government deposits.

Under the present pressure and in the light of prospective needs shall we proceed to purchase $600,000,000 more of silver? Shall we buy one dollar more of it? Shall we reverse the positive and overwhelming verdicts of 1896 and 1900? Even the silver Democrat will not ask for a reconsideration in 1904. Free silver, with all the changes rung upon it and the infinite differentiations and marvelous subtleties practiced upon it, is now ancient history, for the entire world has adopted the gold standard.

Shall we return to the dream of perpetual motion in money making and set the wood-pulp mills to grinding and the cylinder presses to humming the sickening song of ready-made success, only to come again to a rude awakening and find ourselves once more in sackcloth and ashes? (See Appendix E.)

Have the terrors of 1893, the last horror of fiatism, been so soon forgotten?

When coinage became a governmental function the subtle sin of debasement was practiced by kings, robbing their subjects under the cover of seigniorage.

From the time when Solon so reduced the silver in the drachma

that 133 pieces were only equal to 100 of the older coin, down through the Greek, Roman, English, French, German, and all other debasements, the penalties paid have been certain, uniform, and full of bitter experience.

But the debasement of a coin is only a pilfering, pocket-picking business compared to paper fiatism, which is open brigandage.

Make haste to recall the story of fiatism during the reign of Louis XV under the inspiration of the lawless John Law, and look off into the boundless and bottomless pit of misery and suffering indescribable into which the French Republic plunged through the revolution of 1789.

Anyone who has ever read the history of our own colonial times, noting well the varied attempts to make something out of nothing, and with a charitable extenuation for financial experiments, considering the heroic struggles under insurmountable difficulties, may feel inclined to approve, in such instances, at least, the old axiom, "necessity knows no law," but must, at the same time, be impressed with the fact that natural law recognizes no excuses or palliating circumstances. Her penalties are imposed with an unerring and inexorable hand. Her exactions are requited only when the last sin is blotted out and the last infraction is mended.

So, with hearts filled with gratitude, every thought clothed with pride and every word crowned with splendid encomiums upon the achievements of the immortal patriots of the sixties who saved the Republic and made the nation, let us take our stand to-day where they stood, when, only, as they declared, to save the life of the nation, they capitalized the governmental will and sent forth its fiat as a legal tender, carrying the solemn promise to the recipient that when the rainbow of peace appeared in the heavens and the showers of prosperity again visited the land the plighted faith of the nation should be redeemed.

Nearly forty years have come and gone with their splendid harvests, and the annual tithe has not yet been set apart to keep that plighted faith, because of Republican and Democratic party-cowardice.

Is there a man in this broad land to-day who would, if he could, increase the $346,000,000 of United States notes to $350,000,000; increase them, indeed, to the extent of a single dollar? If so, let him give a single reason for the issuance of that single fiat dollar that will not apply equally as well to the issuance of a thousand, a million, a billion, and so on to infinity itself.

No; we will not add a single greenback to the nation's fiat pledge which is already gangrened with the cowardly fear that the people would not approve of any act to redeem and keep their honor unsullied.

If we could only appreciate the American character and take it for what it is really worth, instead of basing our action upon what we fear it may be, the public welfare would be better conserved and more highly advanced. Let us remember that the American character is sound at the core and stands for intelligence, honesty, and courage.

Would to God that we could more fully comprehend this fact, this saving grace of the nation, and that we were more in the habit of linking our fortunes to an overwhelming sense of public duty rather than an overweening anxiety for personal and temporary party success! We are too tenacious of what we fear or suspect or possibly think the people want, and have too little respect for convictions, of which we ought to know they would approve, if we were only frank and brave enough to courageously appeal to them.

That we shall have no more of legal-tender silver, or any other silver for more than a half century, there is no possible doubt.

That we shall not add a solitary fiat paper dollar to the $346,000,000 now in circulation, everyone knows.

Then, from whence must come the annual increase of $50,000,000 to keep pace with our growing population?

It must be made up either of gold or of bank notes.

Can we confidently and reliably depend upon gold to meet our increased requirements for the tools of trade so long as the present financial situation continues?

There are very many who erroneously suppose two things:

First. That because we produce a vast quantity of gold we shall have enough to meet our own requirements, shipping away only what we do not want.

Second. That if the balance of trade happens to be largely in our favor we shall have sufficient gold for all our needs.

With reference to the first proposition, viz, that the production of a quantity of gold far in excess of our needs will insure our required supply, let it be distinctly understood that this will have no more effect upon the actual supply of gold for our monetary purposes than an amount of corn, beef, wheat, cotton, iron, or manufactured goods of the same commercial value would have.

From 1860 to 1879 we produced $879,350,000 of gold, but we had in the country in 1879 only $20,000,000 of gold. Nay more, we are supposed to have had in circulation in the United States in 1860, $200,000,000 of gold coin; but this, too, had disappeared before 1879; and therefore, there went out of the United States in the eighteen years between 1860 to 1879, all told, gold amounting to more than a billion dollars. (See Appendix F.)

Again, from 1880 to 1896 we produced $700,753,000 of gold; but we retained of this amount only $247,736,758. Therefore, it is clear that other factors than production determine the destination of gold.

Equally fallacious and misguiding is the other proposition that a large and favorable balance of trade will insure a gold supply.

From 1879 down to April 1, 1902, inclusive, our exports have exceeded our imports by $4,844,130,228, and our gold production has amounted during the same period to $995,083,000, and yet our accumulation of gold has only reached the sum of $879,350,000.

If both propositions were correct, our accumulated stock of gold ought to be $5,839,213,228, but it lacks five billions of such amount.

For authoritative information I desire to call your attention to the following communication from the Bureau of Statistics:

"TREASURY DEPARTMENT,
"BUREAU OF STATISTICS,
"*Washington, May 8, 1902.*

"SIR: In response to your request, I have to inform you that during the period from June 30, 1878, to March 31, 1902, inclusive, the total value of imports of merchandise was $17,170,746,499, and of exports of merchandise $22,014,876,827, showing an excess of exports over imports of merchandise of $4,844,130,228.

"According to the figures of the Director of the Mint, the total product of gold from mines in the United States during calendar years has been as follows:

From 1879 to 1900, inclusive	$914,898,000
1901 (estimate)	80,185,000
Total	995,083,000

"To the inclosed sheet of imports and exports since 1790, I have added figures of the first nine months of the fiscal year 1902, and brought the totals down to date.

"Very respectfully,

"J. N. WHITNEY,
"*Acting Chief of Bureau.*

"Hon. CHARLES N. FOWLER,
"*House of Representatives, Washington, D. C.*"

In confirmation of the assertion that the production of gold and favorable trade balances do not even suggest how much gold a country is accumulating, I desire to call the attention of the committee to the following facts:

"The Reichsbank of Germany had gold and silver combined in 1877 amounting only to $106,262,000. In 1886 its gold alone amounted to $91,630,000, and in 1895 reached $167,695,000; but for the past four years the amount has stood steadily at about $135,000,000, although the deposits and note issues combined have increased from $379,643,000 to $488,392,000.

"It should be observed in this connection that the Reichsbank of Germany has increased its gold by purchase as it has needed it, and precisely as it has purchased any other commodity for which it had use. This is evident from the fact that Germany does not produce any gold worth mentioning; her production for the years 1898, 1899, and 1900 aggregating only $73,600, while her imports of merchandise have exceeded her exports, since 1872, by $4,857,813,000.

"The Bank of England, which holds the commercial reserves of Great Britain, had $93,397,868 of gold in 1870, and has $192,082,770 to-day; yet England produces no gold to speak of, her production for the years 1898, 1899, and 1900 aggregating only $6,600, while her imports of merchandise have exceeded her exports, since 1870, by $26,864,715,152.

"From this statement of fact we are compelled to conclude that the Bank of England treats gold like any other commodity, buying just so much as and no more than its constantly increasing commercial credits require.

"The Bank of France, which furnishes the reserve for all the commercial credits of France, had of gold and silver combined in 1870 only $218,225,100, and in 1881, when the two metals were first separated in its accounts, had $116,688,500 in gold and $235,363,500 in silver; but to-day the amount of gold on hand is $465,168,600, and of silver $213,438,700.

"It is to be observed here, as in the case of Germany and Great Britain, that France, too, must purchase gold like any other commercial commodity, taking only as much as the obligations of the Bank of France require as a reserve to assure public confidence and to guarantee the credit business of France; for France produces no gold whatever, and her imports of merchandise since 1870 have exceeded her exports by $4,347,325,000.

"This vast accumulation of gold by three great commercial

nations, which produce no gold to speak of, and notwithstanding adverse merchandise balances amounting in the aggregate, during the last thirty-one years, to $36,069,853,152, would seem to be proof absolute that the banking interests of a country will amply protect all commercial credit if there are no unwise laws to interfere with their natural functions." (See Appendix H, Appendix I, and Appendix J.)

"There are," says Macleod, "three great economic quantities, products, bullion, and debts, all seeking to be exchanged, all flowing from where they are cheaper to where they are dearer."

He asserts that there are seven causes for the transmission of bullion:

"1. The balance of payments to be made to or by it (speaking of England).

"2. By the state of the foreign exchanges.

"3. By the state of the currency.

"4. By remittances made to this country, as the commercial center of the world, to meet payments due to other countries.

"5. By the political security of this and neighboring countries.

"6. By the state of the money market or the comparative rates of interest in this and neighboring countries.

"7. By the free and prohibitive commercial tariffs of this and foreign countries, as they permit or forbid our manufactures to be imported into them."

Again he says: "It used to be the common delusion of mercantile men that gold was only sent to pay a balance arising from the sale of goods, and that it must cease of itself whenever these payments were made. But this is a profound delusion."

"The exact balance of exchange between the United States and foreign countries is not easily determined, and this has made it difficult to judge of the real reasons controlling the movements of gold to and from this country. The great excess of exportations of products and manufactures during the past four or five years would appear to indicate that the general balance was in favor of the United States. But that there must be other causes at work to change, or at least to mask, the usual consequences is evident from the very erratic gold movements." (The Bankers' Magazine, June, 1902, p. 794.)

Certainly, enough evidence has been here adduced to demonstrate beyond the point of doubt or cavil that gold is a mere commodity in the world's commerce, like wheat, corn, beef, pork, cotton, and iron; and yet, in a single sense, it is unlike any one of these in the following respect:

It is the one commodity that is accepted in exchange for any other commodity anywhere in the world; and, therefore, all nations upon the gold standard are customers for this commodity up to the limit that will supply their commercial credits with a proper reserve, if their credit merchants or banking power are responsible for the creation and protection of that reserve; otherwise the entire mass of gold may disappear and the commercial credits be left without ample protection, if not, indeed, without any protection whatever.

It may be assumed, without any fear of successful contradiction, that the United States is absolutely without a natural and responsible guardian of an adequate reserve for our commercial credits. Indeed, a step further may be taken and the assertion confidently made that there is not, economically speaking, a commercial reserve in the United States at all.

On the other hand, there is no doubt that there is now more gold in the United States than would be required to constitute such a commercial reserve. But this fact would not protect us against a panic this fall, this summer, or even next week, if, for some unforeseen reason, a startling or considerable amount of gold should be taken away from us.

The same subtle powers and unseen and unknowable forces that kept and brought only $879,350,000 gold here from 1879 to 1902, notwithstanding the facts that the production of gold in the United States for that period amounted to $995,083,000 and the balance of trade in our favor for the same years was $4,844,130,228, may silently but surely take away $500,000,000 more, or all we have, simply because there is no self-interested and legally required power to protect and prevent, when the draft comes.

Is the American memory so short that it does not recall that we had $332,351,306 of gold in the Treasury in September, 1888, and yet were compelled to put into that seemingly bottomless pit $294,164,290.79 more by February, 1896; making a total of $626,515,596 of gold coin that practically went into and out of the Treasury by compulsion during the short space of seven years?

In the light of this experience, is there much ground for jubilation over the fact that there is in the Treasury to-day gold amounting to nearly $600,000,000; when we recall the fact that we do not have the slightest control over its movements and that a still larger amount proved as evanescent and as elusive as a midsummer dream, between the years of 1889 and 1896?

With all our superabundant gold and matchless prosperity, it is certain that we are living, nay, slumbering, in a fool's paradise, and may, at almost any moment, be suddenly and rudely awakened; because our financial system is only a fair-weather craft, wholly unsuited to carry, in a violent commercial storm, the vast sail of credit it now seems to so steadily sustain on the unruffled sea.

Although we added $857,653,828 in gold to our money supply, from 1879 to April 1, 1902, can anyone say with intelligent assurance that we shall add as much, or any, indeed, in the next twenty years?

We must not forget that American ambition and American enterprise now girdle the earth. The control of the shipping interests of all Europe has been transferred to New York. We shall hold the securities, upon which we must pay in consumable commodities, in gold, or partly in each.

Americans, too, are tunneling London in every direction for miles around, building trolleys in the Holy Land, railroads in China, and yearly expending hundreds of millions in other countries, all to be paid for in gold or its equivalent in consumable commodities.

Instead, therefore, of adding a single dollar to our money supply from our production of gold or the favorable balance of trade, vast as it is, we may even lose what gold we have at any moment, and the Government again be forced to enter the market for a few hundred millions, using, as the proper agent to buy it, the credit merchants, who ought to be compelled by law to furnish sufficient gold to test and prove at every nightfall the character of their credits.

However, as the law now stands, while gold may be added to our present money supply in the future, we may also lose all that we have at present unless the Government shall buy more.

Having pointed out that no part of our yearly requirement of $50,000,000 will be supplied by purchases of silver or by fiat issues, and that we may have less gold instead of more, it remains to inquire how such requirement shall be supplied.

A single source remains, and that is the natural one, namely, the banks. How, then, shall the banks supply this needed currency?

There are three systems, all equally safe, and each one has its advocates. None but an absolutely safe currency will be considered, for none other will do.

So long, however, as the demand obligations of the Government continue outstanding, these three systems are equally dangerous to the credit of the nation. The United States notes being retired, for no other course will be sane and safe, we may proceed untrammeled to test the various systems of bank notes, the only legitimate source of currency remaining to us, and determine, if we may, the comparative economy and utility of each. In all three systems the bank notes are redeemed upon demand in gold coin.

They are the gold-coin note, the bond-secured note, and the credit-note systems.

First, allow me to call your attention to the gold certificate or gold-coin note system, of which the Bank of England is the only representative, although we ourselves issue gold certificates both at the United States Treasury and at some of our clearing houses.

Since there is no law in this country compelling banks to redeem any of their obligations in gold coin, and, therefore, no possibility of a commercial reserve in gold coin, we can not have a gold-coin bank note, although we may have and use gold certificates, which are merely warehouse receipts, and, therefore, only obtainable so long as the gold happens to remain in this country.

Unlike our Government, which has no relation to business or commerce, neither receiving deposits nor lending money, the Bank of England is charged with the responsibility of keeping sufficient gold in England to prove an adequate commercial reserve for all her credits. To this end the bank manipulates and fixes the rates of interest, and is the controlling factor in the exchange markets of London, where the transactions of the entire world are cleared and settled.

Under present conditions, therefore, it is clear that we can not have a gold-coin note similar to that of the Bank of England even if we preferred it.

Second. We must choose then between a bond-secured note, of which our present bank note is the only illustration in the world, except in the Transvaal, and a credit note, which is the bank note of every other civilized country.

But can we retain the present bond-secured note even if we desired to do so? Let us see.

Only a few days ago the Hon. Leslie M. Shaw, Secretary of the Treasury, said: "This bond system must soon come to an end." Did he speak advisedly?

For six months the banks have been retiring their circulation as fast as the law permitted. Why? Because it was unprofitable to hold the bonds which have been deposited to secure the notes.

It is not a question with the banks whether our present notes

are needed in the business of the country, but whether it will pay them to continue to speculate in the bonds.

In other words, ours is a bond-speculating system and not a currency system. That this should be so is most natural, for it was created during the civil war for the express purpose of making a market for Government bonds, and a speculation in bonds it has ever since continued to be.

From 1881 to 1890, during a period of only nine years, while business was expanding in all directions, the banks contracted their note circulation from $320,200,060 to $122,928,084, or $200,000,000, simply because it was unprofitable to hold the bonds.

Again, from 1899 to 1901 the banks expanded their note circulation from $290,345,567 to $323,863,597 simply because they saw a good speculation in the new 2 per cent bonds, which have since risen to $110, at which price the banks are now selling out to realize their profits.

But no one can justly criticise a bank for selling its bonds and taking its profits, for to hold them means a continual loss.

When you are informed that the amount of national-bank notes redeemed at the United States Treasury last year was $147,487,000, or about one-half of all those outstanding, and that notes remain in the vault of the bank issuing them a portion of the time, you must reach the conclusion that all of our national-bank circulation is not out all of the time, if, indeed, on the average it is out more than half the time, in which event there is a constant loss to the banks to hold the bonds now deposited with the Government to secure circulation.

If we assume that the notes of any bank are kept out only half the time, or half the notes are kept out all the time, there is a loss of more than 1 per cent on every issue of bonds, the twos, the threes, the fours, the fives, in the locality where money is loaning for 4 per cent; there is a loss to the bank of more than 2 per cent on every issue of bonds in the locality where money is loaning for 6 per cent; there is a loss to the bank of more than 3 per cent on every issue of bonds in the locality where money is loaning for 8 per cent; there is a loss to the bank of more than 4 per cent on every issue of bonds in the locality where money is loaning for 10 per cent.[a]

On the other hand, even if you assume that all the notes are kept in circulation all the time, which can not be done, the highest possible profit the bank can obtain on any of the issues of bonds is seventy-nine one-hundredths of 1 per cent; while on several of the issues in localities where money loans for 6, 8, and 10 per cent the banks suffer an actual loss, and in one instance the loss exceeds 1 per cent.[b]

From this it is perfectly clear that the banks will continue to contract their circulation as fast as the law permits until each of them has the legal minimum, which, on September 30, 1901, aggregated $102,329,191.

Now, mark this, that if the national banks are compelled by law to keep more than $100,000,000 of their capital in Government bonds, upon which the income is only about 1½ per cent, on account of the premium paid, they must lose the difference between 1.6 per cent on $100,000,000, or $1,600,000, and the local rate; so that their net loss on the average rate of 6 per cent will be $3,400,000, which, directly or indirectly, must be borne by the people.

This thought naturally and necessarily brings us to consider the useless expense of any currency system that requires the deposit of bonds, such as our system, or the deposit of gold coin, such as that of the bank of England.

If three borrowers of equal and absolutely unquestioned standing visit the same bank to borrow a thousand dollars each, and the bank, after receiving their promissory notes, hands over to one a national-bank note secured by Government bonds and to another gold coin, it is evident that the bank thus far has in each case parted with $1,000 of actual property, as it has paid more than $1,000 for the bonds securing the bank notes and could have only obtained possession of the gold coin by exchanging $1,000 worth of property for it.

But the bank must charge something for the risk, or for insuring the credit of the borrowers, and something to pay its expenses in transacting the business.

Suppose the rate of interest charged to be 6 per cent, when we analyze it and separate it into its constituent elements we shall find three distinct and characteristic sources of cost:

First, the capital, equal to	4
Second, insurance of credit	1.5
Third, transaction of business	.5
Making a total of	6

Now, it is clear that if we eliminate the cost of capital, we should save two-thirds of the total cost to the borrowers, or 4 per cent, and they would then be entitled to have their loans for 2 instead of 6 per cent, which, under the circumstances, was perfectly reasonable.

To the third borrower, in exchange for his promissory note of $1,000, the bank delivers its credit notes, and by so doing only lends its credit, which is well known, and will be accepted by anyone, thus answering every commercial or business purpose of the gold coin or the bank note secured by Government bonds.

But, in the case of the credit notes, since the bank has parted with no actual capital, its legitimate charge would be limited to the insurance of the loan and the cost of transacting the business, or 2 instead of 6 per cent.

This is the reason why money, to use the ordinary phrase, becomes cheap in localities where deposits are large. Generally speaking, nine-tenths, or 90 per cent, of all deposits are in some form of credit, being checks or drafts, and, therefore, do not involve actual money, for the use of which an extra charge must always be made.

Being driven as we are, then, to bank notes as the only sure and reliable source for the necessary currency or tools with which to do our commercial work, do we want to make those tools as expensive as possible or as cheap as possible?

France, with a population of 38,500,000, has more than $800,000,000 of bank notes in circulation. Shall we, with nearly 80,000,000 of people, or more than twice the population of France, need less than a thousand millions in the near future?

Shall we want a United States bond-secured bank note, even if it is possible, as it is not? Let us see.

On the 29th day of June, 1901, at the close of our fiscal year, we learn from the report of the Comptroller of the Currency that the loans of all the various banking institutions of the country amounted to $6,491,630,743.

If we had one thousand million, or one billion, of bank notes in circulation it would require an investment of capital, at present prices of the 2 per cent bonds, of $1,100,000,000, which must be taken from the channels of trade and to that extent lessen the basis of credit.

It would not merely lessen the loanable funds to the extent of $1,100,000,000, but, taking the reserves of the national banks held at the end of the last fiscal year, which were 26.71 per cent, as a basis, it would restrict loans or deprive the people of credit aggregating nearly as much as all our present loans, or four times $1,100,000,000, or $4,400,000,000.

What effect would this additional credit of more than four thousand million have upon the rate of interest throughout the United States? Let the advocate of a bond-secured bank note answer.

If we shall hereafter demonstrate that the credit note we propose in the bill reported by the Banking and Currency Committee is absolutely safe, aye, protected with an insurance fund that will guard it for more than a thousand years against any possible loss—that it is the bank currency of the civilized world and has always proved itself safe when tried and perfectly adapted to the needs of trade under all conditions—it must be admitted that a bond-secured currency system is a most useless waste of capital, as it is a most expensive and burdensome mechanism for the transaction of business.

As well might we have constructed the Brooklyn Bridge of silver when steel was not only much cheaper, but incomparably better for many reasons.

As well might we construct the telegraph wires of gold instead of copper, which is not only vastly cheaper, but incomparably better for many reasons.

A bond security for bank notes is not only an unnecessary and wasteful use of capital, but it has never aided in the slightest degree in lowering the rates of interest, and has never been responsive to the ever-varying needs of trade.

Then why should anyone, as soon as he realizes that our national banks are disposing of their United States bonds as fast as the law permits and retiring their circulation, have the hardihood to suggest that the banks be authorized to deposit other bonds to secure circulation?

What bonds? What State bonds, what city bonds, what railroad bonds, what water bonds, what gas bonds, what electric-light bonds? What shall be the limit in this direction?

Let no man smile at this invoice, for it is in entire harmony with the legislation of that period when the so-called free-banking, or bond-secured, circulation held high carnival, and we had the age of wild-cat banking, and all the "red-dog" and "yellow-dog" money we ever knew was born of the bond-securing scheme.

Here, as in everything else, fear is born of ignorance and prejudices; it refuses to listen to the voice of experience, and shuts its eyes to the practice of nearly every civilized nation on this globe—certainly of all that we should be inclined to follow.

Upon us, whose duty it is to investigate, rests the responsibility for all this waste of capital and for the tragic calamities of the people growing out of our vicious system; for in no instance in

[a] See page 35 of report appended.
[b] See page 34 of report appended.

all our history has an appeal for right thinking and rectitude of conduct been made to the people in vain.

They are intelligent, honest, and earnest, and are entitled to something more on our part than self-seeking and cowardly evasion of that duty which commands us to have convictions grounded upon truth.

Therefore, I submit, in all candor, that, when it is demonstrated, beyond the least peradventure, that the system of currency proposed is absolutely safe, that it has stood the test of two hundred years, has never failed when invoked to respond to the commercial needs of the people, and is the only currency which has invariably and universally throughout two centuries proved itself the fit tool of trade and the specific remedy of currency panic; no man, I say, no man, whatever a craven politician may do, no *man* has a right to hesitate for fear lest his constituents may not understand.

It is for him to lead the way; for him to point out the pitfalls; for him to protect against the hidden dangers, the ever recurring evils, growing out of false principles and unsound methods.

In 1695 the Bank of Scotland came into existence, and from that day to this the bank notes of Scotland have found as ready acceptance as our gold certificates now do.

No holder of a Scotch bank note, during all that time, has ever lost a dollar, and there have been but three bank failures in the more than two hundred years that have come and gone; while in the United States, since our national-bank system was organized thirty-nine years ago but one-fifth of the time the Scotch system has been in operation, 404 national banks have failed and probably as many other banks organized under State laws.

Can any conscientious thinker compare these figures and continue indifferent to the vast interests of the 5,000,000 depositors who have claims against the banks aggregating $8,619,285,110?

It should not be forgotten that the three bank failures in Scotland, those of the Ayr, the Western, and the City of Scotland banks, were all due to extremely bad or dishonest management and not to any fault of the system.

During the reactionary period in English banking, which resulted in the passage of the English bank act of 1844, certain limitations were also imposed upon the Scotch banks, the most important one being that by which their outstanding circulation, amounting to $15,000,000, should not be exceeded unless the banks held coin equal to such excess.

The failures of the Western Bank, in 1857, and the City of Glasgow Bank, in 1878, reduced the circulation, which had been fixed at $15,000,000, to about $13,000,000. The act of April 21, 1879, relieved the stockholders from unlimited liability except as to outstanding notes. For these notes there is still an unlimited liability.

Another important fact, that should not be overlooked in this connection, is that the coin reserves against deposits amount to more than $135,000,000, and, therefore, the right of note issue reaches the considerable sum of $148,783,430, although the actual note issue is only $40,435,110. Now, it is perfectly clear that, although the right of issue is practically unlimited, yet the current daily redemptions keep the notes coordinated and limited to business precisely as checks and drafts represent actual transactions.

The all-important truth, that must be indellibly and everlastingly impressed upon the mind, is that a true bank note does not differ from the ordinary check in the slightest degree. Both are forms of credit.

Mr. Chairman, I hope I may be pardoned if I seem to be prolix in demonstrating this truth by illustrations.

If a man of unlimited means and unquestioned credit secures a loan of $1,000 at a bank, he may use the proceeds in one of several ways.

First. He may take a draft on London or on some distant city in the United States.

Second. He may ask the bank to place the thousand dollars to his credit, and obtain a pass book to prove it and a check book to use it. In the course of time he will exhaust his credit by issuing checks, which will in turn be presented by those receiving them.

Third. He may ask as before to have the thousand dollars placed to his credit, and call for the pass book and check book. But before leaving the bank, suppose he should draw ten checks of $100 each, payable to bearer, and, stepping to the cashier's desk, request him to certify them, as he desired to pay them to certain people who did not know him, although they were well acquainted with the cashier and had perfect confidence in the bank.

A single new element has entered into the transaction, viz, the fact that the person who draws the checks is not known in the community, and therefore a guarantee of his checks by the bank is necessary in order to make them acceptable and give them currency in the community.

Fourth. The same borrower may say, "Give me credit upon the books for $1,000," call for his pass book and check book, and, again drawing ten checks, present them to the cashier and ask him to exchange them for ten of the bank's credit notes of $100 each.

Under a rightly constituted banking system this would be done without hesitation, for the bank is in precisely the same position as to its liabilities whether it has guaranteed ten checks of $100 each or has outstanding ten of its own notes of the same amount; and the persons who accept the certified checks are in identically the same position as those who hold the bank's notes.

I submit, therefore, that there is not the slightest difference in the checks delivered to the drawee, the certified checks of the cashier, and the bank notes delivered in exchange for the checks.

Alexander Hamilton, with the unerring instinct of a financial genius, stated the underlying principle clearly and well when he said:

"Every loan which a bank makes is, in its first shape, a credit given to the borrower on its books, the amount of which it stands ready to pay, either in its own notes or in gold or silver, at his option. But in a large number of cases no actual payment is made in either. The borrower, frequently by a check or order, transfers his credit to some other person to whom he has a payment to make, who, in his turn, is as often content with a similar credit, because he is satisfied that he can whenever he pleases either convert it into cash or pass it to some other hand as an equivalent for it. And in this manner the credit keeps circulating, performing in every stage the office of money, till it is extinguished by a discount with some other person who has a payment to make to the bank to an equal or greater amount. Thus large sums are lent and paid, frequently through a variety of hands, without the intervention of a single piece of coin."

Though these words were uttered more than a hundred years ago, with what prophetic vision did Hamilton anticipate the practice of our own time, more than 90 per cent of our vast transactions being in some form of credit and less than 4 per cent in actual coin.

If the convenience of the people, in any locality or line of business such as that of the farmer or the manufacturer, prefers the bank note to the deposit and check, the bank note ought to be provided for all those whose credit entitle them to the favor of the bank.

The true bank note is not real money any more than a check is real money; each should entitle the holder to the amount it calls for in gold coin.

The great achievements of the Scotch system of credit notes is exceedingly well stated by Mr. Charles A. Conant in these words:

"1. It has provided Scotland with an elastic currency adapted to the condition of her industries and adequate in volume to their changing needs.

"2. It has enabled the people to carry on numerous commercial and agricultural transactions for which they could not have found the necessary quantity of coin, and has economized the locking up of capital in the precious metals.

"3. It has made the use of notes of small denominations familiar and popular, and has taught the people the distinction between bank notes as the representatives of credit and the precious metals as the measures of value.

"4. It has brought into active use the available savings and capital of the country.

"5. It has afforded an opportunity for entering upon business to thousands of poor but honest men and enabled them to lay the foundation of a comfortable home and in many cases of a fortune.

"6. It has convinced the people so conclusively of the value and safety of the banking currency system that no serious panic has ever lasted beyond a few days or has ever affected any of the banks except those which were justly the subject of distrust." (Conant's History of Modern Banks of Issue, p. 155.)

Standing out even more conspicuously as a representative of a pure credit system, the Bank of France surpasses in some respects even the Scotch banks, since certain trammels have been thrown around the latter in the name of safeguards, because, forsooth, the English banks had disastrous experiences due to unwise laws.

In 1803, when the charter of the Bank of France was under consideration for renewal, Napoleon, with his own hand, inserted in the draft of the bill these prerequisites for note issues:

"The notes shall be covered either by coin held by the bank, or by notes secured by collateral, or by notes signed by three responsible persons."

That is the law to-day with regard to its note issues. Nothing could be in more perfect consonance with sound banking. Nothing could be a truer and safer basis for a credit currency or for a credit at a bank against which to draw checks.

There is nothing in the law of France requiring the banks to carry any particular reserve; but experience has taught the managers of the Bank of France that a certain reserve is essential to insure confidence and protect the credit of the institution.

But the vast reserve of gold carried by the Bank of France is not a reserve to protect the notes as distinguished from the other

liabilities of the bank, but to protect them in common with all the other obligations.

If anyone supposes that the Bank of France carries $465,168,666, or more than 50 per cent of its notes, to protect its notes alone, he is laboring under a profound delusion, and his dream is rendered ridiculous when he is reminded of the fact that if the bank holds all this sum as a note reserve it has made no provision whatever for the protection of its other demand obligations, amounting to more than $200,000,000.

As well might we say that the banks of Scotland are carrying $135,000,000 of gold coin to protect their $40,000,000 of notes, and not to protect their other demand obligations, amounting to more than $600,000,000.

Let it be distinctly understood, once for all, that it requires just the same reserve to protect $100,000 of deposits, subject to check, as it does to protect $100,000 of credit notes; and that there is not the slightest difference between them as liabilities, both being current accounts and payable upon demand *in legal tender* should the creditor so require.

In France both the note holder and the depositor stand upon identically the same footing, neither being protected more than the other by a guaranty fund or a prior lien. Although the notes of the Bank of France amount to $814,441,268, or more than five times the deposits, which amount to only $157,377,340, the Frenchman has as much confidence in his note as any American has in our bank note, or any Englishman in a Bank of England note.

The note of the Bank of France, however, is the purest kind of a credit note. It rests entirely upon the credit of the Bank of France and is protected only by its general assets. It has always been a practically unlimited issue, because the limit has always been far above the requirements of trade, being to-day fixed by law at one thousand millions, while the actual issue is only $814,000,000.

In 1903 one hundred years will have expired since Napoleon prescribed the basis of this ideal credit note, which has done so much to give France the lowest interest rate in the world, thus proving that while she has had the cheapest tool with which to do her commercial work, that tool has been as good as the best in the world.

The Bank of France has a capital of $35,000,000, and carries a reserve of $465,168,000 gold.

This capital and gold reserve are, first, to protect all the liabilities of the bank—the current accounts, deposits, and notes; second, to guarantee the parity of gold and silver, and in that way the stability of the monetary system of France, and, third, to establish a commercial reserve for the protection of all French credits.

The Reichsbank, or Imperial Bank of Germany, was created in 1875 out of the Bank of Prussia, which had existed since 1765.

This bank is obliged to hold in its vaults, as security for the amount of its bank notes in actual circulation at any time, one-third in current German gold, government certificates, or in bullion or foreign coin (the pound fine being reckoned at $348), and the balance in discounted notes which bear a maturity of three months at the longest, and on which the names of three or at least two persons, known to be responsible, stand as indorsers. When the circulation exceeds the metallic reserve by the arbitrary amount of $112,500,000, a tax of 5 per cent is imposed.

No bond or guarantee fund stands between the note holder and possible loss. In case of the liquidation of the bank the note holder and the depositor stand on the same footing.

Here is a true credit currency, with a basis and a relation to the deposit identical with that of the Bank of France to all intents and purposes, the only essential difference being in the nominal limit upon notes of the Bank of France and the 5 per cent tax imposed, under certain conditions, upon notes of the Imperial Bank of Germany.

Throughout the year of 1900 the metallic reserve averaged 71.77 of the note issue and 49.48 of the total obligations of the bank, consisting of current accounts, deposits, and notes.

The entire capital of $37,500,000, with a surplus of $10,125,000 and a metallic reserve of $140,000,000, not only serves the purpose of protecting the bank's own liabilities, but is considered as the commercial reserve of German credits; therefore he who assumes that the entire metallic reserve is intended to protect the notes of the bank utterly misapprehends its purpose, for if the law made no requirement whatever, the reserve would not be a single mark less. Laws more powerful than written statutes control the motives and policies of the managers.

While neither bonds nor gold coin are set apart to specially protect the bank notes, does any American suppose that the German people hesitate to take them, or do not accept them with all the assurance he may possess when boasting of the American bank note?

Crossing the Atlantic, let us review the history of credit notes in our own country; and we shall find that during a period of seventy years, wherever tried, credit notes proved themselves the only perfect instrument of modern trade, whose cornerstone is credit.

In the very morning of our national life our experience began with a true credit currency issued under the charter of the first United States bank, granted February 25, 1791. The act was drawn by Alexander Hamilton and signed by George Washington.

This bank could "establish offices wherever they shall think fit in the United States for the purpose of discount and deposit only;" and the act further provided that "the total amount of the debt which the said corporation shall at any time owe, whether by bond, bill, or *note*, or other contract, shall not exceed the sum of $10,000.000" (which was the amount of its capital), "over and above the moneys then actually deposited in the bank for safe keeping."

The right of note issue, then, by the terms of the act was measured by the capital; and yet in 1811 the balance sheet showed only $5,037,125 of notes out, although the bank had the right to issue $10,000,000.

First bank of United States—statement of condition, January, 1811.

RESOURCES.

Loans and discounts	$14,578,294
United States 6 per cent stock	2,750,000
Other United States indebtedness	57,046
Due from other banks	894,145
Real estate	500,653
Notes of other banks on hand	393,341
Specie	5,009,567
Total	24,183,046

LIABILITIES.

Capital stock	$10,000,000
Undivided surplus	509,678
Circulating notes outstanding	5,037,125
Individual deposits	5,900,423
United States deposits	1,929,999
Due to other banks	624,348
Unpaid drafts outstanding	171,473
Total	24,183,046

At the end of twenty years there were only eight branches, located at New Orleans, Savannah, Washington, Charleston, Norfolk, Baltimore, New York, and Boston, together with the home office at Philadelphia, although they could "establish offices wherever they shall think best."

The curse of unreasoning partisanship was abroad in the land then as now, and a renewal of the charter was defeated in the House by a single vote, the motion to postpone indefinitely being carried by 65 to 64. The vote in the Senate was a tie, and the question was decided by George Clinton, Vice-President, voting against it.

Every note of the bank had been equal to coin in all parts of the United States, and when it was liquidated the shareholders received $434 per share, or a premium of $34, the par being $400.

In his message of December 5, 1815, James Madison urged a second United States bank as the proper instrumentality by which we should again resume specie payments, and immediately his Secretary of the Treasury, Mr. Dallas, submitted a detailed plan.

The second United States bank, with a capital of $35,000,000, was chartered by act of April 10, 1816, which contained these words:

"The total amount of debts which the corporation shall at any time owe, whether by bond, bill, or note, or other contract, over and above the debt or debts due for money deposited in the bank, shall not exceed the sum of $35,000,000."

Thus it will be seen that the issue of notes was limited to the amount of the capital, and by the act they were redeemable in coin. The directors were authorized to establish branches.

When the partisan rage of Jackson over the Portsmouth branch appointment had obscured every public consideration, the work of destruction began, which resulted in tearing down an institution of great usefulness, and setting back the evolution of a sound system of banking and currency for nearly a century.

For, evade it as we may to-day, the time will come when the underlying principles of that institution will be incorporated into the laws of the land, and every bank will be compelled to redeem its obligations in gold coin. Then the banks will take their place among the financial institutions of the world, and their notes will once more be accepted throughout all the civilized parts of the earth.

In 1829 Jackson assumed the duties of the Presidential office. James Parton, his eulogistic biographer, in speaking of the United States Bank at this time, says:

"Its capital was thirty-five millions. The public money deposited in its vaults averaged six or seven millions; its private deposits, six millions more; its circulation, twelve millions; its discounts, more than forty millions a year; its annual profits, more than three millions. There were 25 branches in the cities and towns of the Union. * * * In every county of the Union, in every nation on the globe were stockholders of the United States Bank. One-fifth of its stock was owned by foreigners, one-fourth of its stock was owned by women, orphans, and the trustees of charity funds, so high, so unquestioned was its credit.

Its bank notes were as good as gold in every part of the country. From Maine to Georgia, from Georgia to Astoria, a man could travel and pass these notes at every point without discount. Nay, in Sweden, Paris, Rome, Cairo, Calcutta, St. Petersburg, the notes of the Bank of the United States were worth a fraction more or less than their value at home, according to the current rate of exchange. They could usually be sold at a premium at the remotest commercial centers. It was not uncommon for the stock of the bank to be sold at a premium of 40 per cent. The directors of the bank were 25 in number, of whom 5 were appointed by the President. The bank and its branches received and disbursed the entire revenues of the nation."

Principal items of resources and liabilities of the Bank of the United States from 1817 to 1840.

The bank notes of this institution were pure credit notes, and yet were good for their face in gold not only at every point within our borders, but at every commercial center the whole world round. Can you say as much for the national-bank notes to-day?

The Bank of Virginia was chartered January 13, 1804, with a capital of $1,500,000, the shares being apportioned as follows: Three thousand five hundred to Richmond, 3,000 to Norfolk, 2,250 to Petersburg, 1,000 to Fredericksburg, 525 to Winchester, 450 to Staunton, and 525 to Lynchburg.

"The bank was well managed and was highly successful. Its notes, all payable in gold, had wide circulation and were at only one-quarter of 1 per cent discount in New York." (Knox's History of Banking, p. 528.)

Again, the Farmers' Bank was chartered by Virginia February 12, 1812, with $2,000,000 capital, and had branches at all the above places except Richmond and Staunton.

One after another, six branches were established by the same State, and were, indeed, great institutions, holding the complete confidence of the people.

"The law provided that the total amount of the paper circulation of these banks should never exceed five times the amount of the coin in possession and actually the property of the bank. If the coin of the bank was reduced below one-fifth its circulation it was required to stop all discounts until the ratio was restored. As a matter of fact, some of the banks issued as high as 8 to 1. These banks were subject to inspection by committees of the legislature, and sometimes examinations did occur. They were made the occasion of a dinner in the directors' rooms, and the figures were discussed over the champagne.

"The banks at such times kept their coin reserve up by keeping the discounts down. It is reported that at such periods drafts drawn on New York were placed in a safe to make up the balance and called 'coin.' Be that as it may, there is no case on record where a bank of circulation and deposit failed, and it is claimed by those acquainted with the banking of that day that no one ever lost a dollar by a Virginia bank note previous to 1861, and they were at a discount of only one-quarter of 1 per cent in New York." (Knox's History of Banking, p. 531.)

"One of the branches of the Farmers' Bank of Virginia was located at Blacksburg, a small village of two or three hundred inhabitants in Montgomery County, which is a blue-grass grazing region of country as fine as any in the world. This branch had a capital of $60,000 and a surplus of $50,000; that is, it had $110,000 of resources. But it had out its notes to the amount of $146,274, and it kept in its vaults only $29,555 of specie against these notes. With capital, surplus, and notes it had, therefore, $256,000, but its deposits were but $7,042. It had out loans, however, amounting to $227,000, which, added to the coin on hand, about balanced its resources.

"Now this trifling deposit account had a deep meaning. It means that the farmers around, who borrowed the bank's money, did not take their loans in the form of credits on which they checked. It means that they took the bank's notes and put them in their pockets and carried them home and paid them out to their neighbor, and as everybody had confidence in the bank, whose managers were the leading people of the community, nobody ever thought of going to the bank and demanding redemption of their notes in coin, so that once out they remained out indefinitely and circulated around among the people, performing the function of money as well as the purest of gold dollars. The result was that they could so multiply their capital that they could afford to charge very low rates of interest, and the people generally had an abundance of money at most reasonable rates." (Address of William L. Royall, before the Convention of the American Bankers' Association, 1898.)

The legislature of Kentucky, in the session of 1833–34, granted a charter to the Bank of Kentucky, with $5,000,000 of capital and the privilege of six branches. Charters were also granted to the Northern Bank of Kentucky, with a capital of $3,000,000, and the Bank of Louisville, with a capital of $5,000,000, each institution having the power or right to issue notes to double the amount of their capital.

While the Northern Bank of Kentucky liquidated in 1898 and the Bank of Louisville was merged into the Southern National Bank in 1899, the Bank of Kentucky had in the latter year a capital of $1,645,000 and a surplus of $1,103,000, giving indubitable proof that no one had ever suffered because of its branches or power of note issue. And there it stands to-day, occupying the building it purchased from the United States Bank, a monument to the sound principles upon which it was founded.

It may be most fittingly observed before passing that when in May, 1837, the blighting wave of suspension swept from New York across the country, these three banks of Kentucky held $1,900,000 in specie against $3,300,000 of notes in circulation—an

object lesson for those who may possibly fear that banks can not obtain sufficient coin to-day to protect the notes they are permitted to issue.

In 1858–59 the general assembly of the State of North Carolina chartered "The Bank of North Carolina," with a capital of $2,500,000, the power to have branches, and the right to issue its notes in double the amount of its capital, but not to exceed three times the specie on hand.

Branches were established at Wilmington, Fayetteville, Tarboro, Windsor, Milton, Charlotte, and Morganton.

In November, 1859, the statement showed that the bank held $683,842 in gold and only $13,148 in silver, or a ratio of 52 to 1. On October 20, 1860, the circulation was $1,311,301 and the specie $490,714, or a little more than $3 in specie for every dollar in circulation.

In 1859 the Bank of Cape Fear held $481,550 in specie, against $1,922,309 of circulation. The Bank of Wilmington held $66,462 in specie, against $498,642 of circulation. The Bank of Fayetteville held $61,104 in specie, against $233,375 of circulation.

What a splendid exhibition this array of figures furnishes of the right principles of banking! I hope that every banker in the United States and every layman who is compelled to borrow or is inclined to think about the subject of finance may read the charter and the by-laws of the Bank of North Carolina and fully understand the profound meaning of the above figures in the light of the times and circumstances.

The very year that Jackson made his violent attack upon the United States Bank the legislature of New York passed what is known as "the safety-fund act," which became a law April 2, 1829.

By that act the banks were required to pay into a safety fund, to be held by the comptroller and treasurer, a tax on the capital stock at the rate of one-half per cent per annum, until the amount paid in was equal to 3 per cent of the capital. They could issue notes to double the amount of their capital, while their loans could not exceed two and one-half times their capital.

From 1829 to 1841, notwithstanding the panic of 1837, no bank which had been organized under this law failed. The chancellor of the State, in construing the statute, unfortunately held that the safety fund, which was only intended by the author of the plan to protect the note holder, was applicable also to the other debts of the banks.

The Commissioners, commenting upon the decision, said:

"This peculiar feature of the law does not seem to have been generally understood either by the public at large or even by those engaged in the business of banking, and great doubt is entertained in regard either to its justice or its expediency. * * * The safety-fund act was primarily designed to secure bank-note holders, and not depositors or other creditors."

The Hon. Millard Fillmore, Comptroller in 1848, stated in his report of December 30:

"It is therefore apparent that the safety fund would have provided an ample indemnity to the bill holder, had it not been applied to the payment of other debts of the bank than those due for circulation."

But the notes issued under this safety-fund system of New York were of a purely credit character, and would have proved safe beyond any peradventure but for a misinterpretation or miscarriage of the law.[a]

The black shadow cast upon the commerce of the country by the persistent attacks of President Jackson upon the United States Bank projected itself over the Alleghenies and upon the fertile plains of the Mississippi Valley; and not until 1834 did Indiana take the first intelligent step forward by incorporating "The State Bank of Indiana."

The Bank of Indiana, which became a model, was chartered with a capital of $1,600,000, and the State was divided into 10 districts, afterwards increased to 17, there being a branch of the bank in each.

Under its charter the bank could receive deposits, buy and sell gold, silver, bullion, and foreign coins, discount commercial paper, and issue bills payable to bearer—a true credit note. A forfeiture of 12½ per cent was imposed upon all notes not redeemed in coin.

[a] The system did not meet with the success that the principle would seem to warrant, and this was chiefly due to the attempt to make all the debts of the insolvent banks chargeable to it. The heaviest failures took place before the change was made in the law by which the circulating notes alone were redeemed from the safety fund. The history of the fund from 1829 to 1866, a period of nearly forty years, indicates that if, from the first, the contributions of the incorporated banks had been applied to redeeming the notes of the insolvent institutions they would have been ample for the purpose, and would have made the circulation of the safety-fund banks more secure than that of the banks under the free-banking system. (Knox's History of Banking, p. 412.)

The institution was hardly under way when the panic of 1837 broke upon the country. The New York banks suspending compelled the Indiana bank to follow in order that it could protect itself. John Jay Knox says:

"No bank in the country stood higher than did the State Bank of Indiana during the panic. In all the Western and Southern States its notes commanded a premium, and in the East were taken at a small discount. * * * Its loans were made in small amounts and scattered all over the entire State, thus affording the greatest possible measure of relief."

Great as was the success of this splendid institution, the Jacksonian Democrats, coming into power, at once began an assault upon it precisely as their leader had laid the ax to the roots of the United States Bank.

The Indiana Democrats failed to destroy the Bank of Indiana, but succeeded in passing a general banking law permitting banks to be established upon filing with the auditor of the State the bonds or other evidences of debt of the Federal Government or of any of the States as security for the notes to be issued.

The State of Indiana itself went into the business of issuing notes, and even plank-road companies issued them. The Indiana State notes could be had for 60 cents on the dollar, and were called "red dog." The plank-road notes and others of similar value were called "blue pup."

The Bank of the State of Indiana, organized in 1855 with twenty branches to take the place of the Indiana State Bank, maintained the same high standard as its predecessor, going through the panic of 1857 without suspension, although every private bank in the State, except two at Indianapolis and one at Fort Wayne, went down.

[a] Before the reports of 1864 were made most of the branches had been converted into national banks, and others were preparing for the conversion. All but three became national banks.

[b] Includes United States notes.

On February 24, 1845, the legislature of Ohio passed a bank act, under which the Ohio State Bank was organized with the right to establish branches and to issue notes. Each branch was required to deposit 10 per cent of the amount of its circulation to create a safety fund to redeem the notes of any branch that might fail. In 1846 there were 17 branches; in 1848, 25 branches; in 1848, 38 branches, and in 1850, 39 branches.

The note issues were of a purely credit character, and were proportioned to the capital as follows: For the first $100,000 of capital there might be $200,000 of notes; for the second $100,000 of capital, $150,000 of notes; for the third $100,000 of capital, $125,000

of notes; for the fourth $100,000 of capital, $100,000 of notes, and for each additional $100,000 of capital, $75,000 of notes.

The evident purpose of the act was to give the people a uniform and sound currency, and the plan succeeded admirably. "The State Bank of Ohio was regarded as one of the soundest in the country." [a]

The essence of the act was in the requirement that the notes issued by the respective branches should be redeemed in gold or silver coin, the lawful currency of the United States, and in the insurance given of this result by a reserve equal to 30 per cent, of which at least one-half should be gold or silver and the balance equivalent to gold or silver coin.

In the fatal 1837 the Bank of the State of Missouri was established, with five branches, located at Lexington, Fayette, Palmyra, Cape Girardeau, and Springfield, and with authority to issue its credit notes without limit if it maintained a coin reserve of 33⅓ per cent. Its capital was $3,450,000, one-half of which was owned by the State.

This was the only bank in the South or West that did not even temporarily suspend specie payments. Its credit notes were always and constantly redeemed on demand in specie. Indeed, so good were these credit notes that they were preferred to specie in New Mexico, Utah, and on the Pacific coast; and a gang of counterfeiters, taking advantage of their high standing, struck off imitations of them in large quantities.

And yet the issues of the bank never equaled the maximum limit of three times the coin held; the amount in circulation in 1856 being only $2,200,000, while the coin in the vaults was $1,140,000, although it was the only incorporated bank at that time doing a regular banking business in the State.

In 1842 the State of Louisiana passed a bank act, which, though erring in one or two particulars, was nevertheless almost ideal, and under it "the State, in 1860, stood fourth in banking capital and held more specie than any other State except one." [a]

No limit was placed upon the amount of credit notes the banks could issue and no security was specially pledged for their redemption. The virtue and real substance of the act was in requiring a coin reserve of 33⅓ per cent of all liabilities, deposits as well as notes, and confining the loans outside of capital to paper running for ninety days or less.

Not a single bank organized under this law suspended specie payment during the panic of 1857, [a] and all were conforming to the requirements of redemption when General Butler marched down the streets of New Orleans.

Iowa, in the morning of her statehood, was opposed to banking as a business, her first constitution providing "that the general assembly shall provide for the organization of all other corporations except with banking privileges, the creation of which is prohibited."

The constitution also provided that "The general assembly shall prohibit by law any person or persons, association, company, or corporation from exercising the privilege of banking or creating paper to circulate as money," the penalty for each offense being one year in the county jail and a fine.

But during the intervening years down to 1857, when the new constitution was framed, Iowa had suffered so severely from *the bond-secured circulation* of Illinois in particular, known as "wild-cat," "red-dog," and "yellow-dog" money, that provision was incorporated permitting the legislature to create corporations with banking powers, subject, however, to a vote of the electors, and also to establish a State bank with branches, founded on actual specie basis.

It was provided that the branches should be mutually responsible for each other's notes; that the stockholders should be liable for an additional amount equal to their stock; that the bank could issue pure credit notes for double the amount of the paid-up capital; that in case of insolvency the bill holder should have a prior lien over other creditors, and that specie redemption must be maintained.

To secure this solvency beyond peradventure each branch was required to deposit with the State bank either coin, United States stocks, or interest-bearing State stocks at their market value in New York, but in no case above par. This deposit was known as "the safety fund" to redeem the notes of the branches in case any of them failed to do so. In addition, each branch must have on hand an amount of coin equal to 25 per cent of its notes outstanding and deposits held.

Here are all the prerequisites of a well-nigh perfect banking system; and the result proved the soundness of the plan.

"The notes were so good," an Iowa member of this House remarked the other day, "that they would not stay at home."

When the national banking system was established in 1865 and the 10 per cent tax on circulation was imposed the life was choked out of one of the most perfect banking systems that had ever existed; and every note of the $1,439,764 outstanding on January 2, 1865, was redeemed without the loss of a single cent to the holders.

State Bank of Iowa, statement January 2, 1865.

During all this varied experience in the West and South, there was a most conspicuous illustration of a true credit currency in process, demonstrating and proving every principle involved in adapting it to our 12,000 banks, state and national, should the former desire to come into the system. I refer to the Suffolk system of New England.

Here were six States, with laws varying in each, and portions of them far more remote from Boston where the Suffolk bank was located than any part of the United States is from any other part to-day, so far as business relations and convenience are concerned.

There were no railroads, telegraph lines, or long-distance telephones. Indeed, almost every essential to anything like a sound system of banking, as observed from the standpoint of to-day, was wanting. There was no law requiring a uniform reserve. There was no law requiring coin redemption. There was no law requiring a bona fide capital. There was no check upon the amount of notes any bank might issue if dishonestly inclined.

There were, in 1848, 306 banks deriving their authority from the six States, and 159 of them did not possess an average capital of $100,000; nor was the average capital outside of Boston more than $160,000, and including that city it was not more than $206,000.

By 1860 there were 504 banks. There are only 515 national banks to-day in the same States. Can any fair-minded, impartial man deny that the conditions to-day are vastly in favor of better results? One law for all, a bona fide capital, a required reserve, a system of redemption established by law, notes furnished by the Government, and a common national supervision all unite to compel the admission that any system that could prove its adequacy under such adverse conditions from 1840 to 1860 would certainly approximate perfection to-day.

Nowhere in the whole range of banking experience have so many things been demonstrated beyond cavil which the student of this subject wants to know.

To all intents and purposes the possible issues were without limit, the actual circulation in 1840 being only 23 per cent of that permitted, in 1850 only 40 per cent, and in 1860 only 36 per cent.

[a] Horace White.

During every year from 1840 to 1860, except one, the note issues were greater, and usually nearly double, than the deposits, illustrating with what certainty such a system adapted itself to the ever-varying needs of the people who were fortunate enough to have it, and how it invariably, with peculiar fitness, met the needs of the rural districts, where currency, and not checks, was especially required.

The States of New Hampshire and Vermont had bank capital amounting to $8,150,000 in 1850 and notes outstanding amounting to $7,300,000, while Boston, with $32,700,000 of capital, had out only $7,500,000 of notes.

CONTEMPORARY COMMENTS OF OFFICIAL REPORTS ON THE SYSTEM.

"The currency of this State is of the first order and can not be improved, being equal to gold and silver. This is strong language, we admit, yet perfectly true, for every bill holder can on demand convert his bills into coin." (Connecticut Bank Commissioners' Report, 1841.)

"If there was no check upon circulation there might be some danger, but the frequent redemptions at the Suffolk Bank and the rapid communications between different parts of the country will prevent any greater circulation than the natural business wants of the country will sustain. * * * Indeed, this system of par redemption seems to be a most perfect regulator upon all the New England banks. It would seem somewhat surprising that something has not been adopted in other parts of the country that should produce the same beneficial results." (Connecticut Bank Commissioners' Report, 1848.)

"We believe there is not a more sound and safe currency in existence than that furnished by the banks in this State. We know of no better system of banking than ours." (Connecticut Bank Commissioners' Report, 1849.)

"The bills of any country bank, redeemed at par in any commercial city, will always be current throughout the extent of region whose business channels flow to that city. Hence New England money is worth more in the cities of New York and Philadelphia than the bills of their own country banks. Vermont bills have uniformly borne a premium in the Eastern cities without loss, while bills of their own States are at a heavy discount." (Vermont Bank Commission's Report, 1852.)

"The 'Suffolk system,' though not recognized in our banking law, has proved to be the great safeguard to the public. Whatever objections may exist to this 'system' in theory, its practical operation is to keep the circulation of our banks within the bounds of safety. No sound bank can have any well-founded reason for refusing to redeem its bills in Boston, and a bank that is not sound can not long do business under that system and ceases to be in good credit when it is 'thrown out at the Suffolk.'" (Maine Commissioners' Report, December 31, 1857.)

"It is by no means wonderful that a system which has stood the test of time and struck its roots so deep as to have become incorporated with and formed a part of our banking system should be abandoned with hesitation for one which is new and untried." (Maine Bank Commissioner's Report, 1865.)

"The charters of the banks have been renewed. If the laws by which they are constituted the agents of the people to provide a currency, and by which their faithfulness in the discharge of such agency is secured, remain unchanged, there is every reason to believe that the currency of Massachusetts will be for the next twenty years what it has been for the twenty years past, as perfect as any in existence, as perfect as in the nature of things it can be. No reasonable man, no practical man, no man who is not bound hand and foot in the fetters of mere theory, can desire for the people a currency better adapted to meet all the circumstances of a business community than that which has been furnished by the banks of Massachusetts for the last quarter of a century. (James B. Congdon, cashier Merchants' Bank, New Bedford, in memorial to governor of Massachusetts, 1851.)

"The anomalous feature of the case is that the well-secured bond-protected bank issues of New York are at a greater discount at this point than the apparently unsecured circulation of New England, including places hundreds of miles off, and inaccessible, in a measure, for compulsory redemption. * * *

"We said that the Massachusetts currency was apparently unsecured. In reality, their bank paper is well secured. The experience of the last fifteen years has demonstrated that the losses from bank issues in the State of New York are four or five times greater than in Massachusetts. The system of the latter is better than our own." (New York Courier and Enquirer, 1854.)

"The State parts with these objects of her care and solicitude with many regrets, but with a just pride in their career, inspired by the belief that their capital has been highly instrumental in promoting the prosperity of the State, and that they have furnished as good a paper currency, based on individual credit, as any part of the country has ever enjoyed." (Massachusetts Banking Report, 1865.)

When the soundness of this system is tested by a comparison with the national system of to-day the result more than justifies the assertion that the former was incomparably the better; for, when you compare the conditions during the twenty years from 1840 to 1860 with those of the past thirty years, all must admit that argument is futile and the conclusion inevitable.

Mark this, that while a tax of one-eighth of 1 per cent on all the notes in circulation would have paid all the notes of failed banks from 1840 to 1860, it would have taken a tax of one-fifth of 1 per cent on all notes out to pay the notes of the failed national banks.

Nor is this all. The Suffolk system greatly lowered the rates of interest and thereby advanced the welfare of labor and brought a larger return to the producers through New England.

"It has been impossible for the banks of discount to find use for all their means in discounting good paper, and some, having the largest capital, have reduced the rate of interest, in a few instances, to 5, 4, and even 3 per cent." (Connecticut Bank Commissioners' Report, 1844.)

If the rate of 3 per cent was allowed in 1844,[a] what ought it to be to-day with our vastly increased capital in the banking business? But the fact is that we have the most expensive banking system in the world, which, if persisted in, may drive us from the coveted fields of the world's commerce.

It only now remains for me to call the attention of the House to one other instance before concluding my remarks upon the advantages and importance of adopting a system of credit currency, and that is the banking system of Canada, where the law provides for a guaranty fund of 5 per cent and also makes the note a first lien upon the assets of the bank.

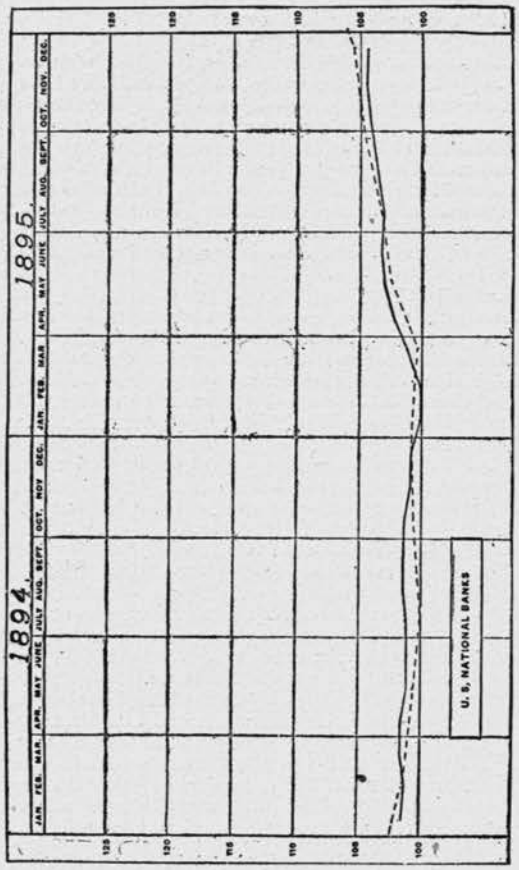
Those of our people who live along the Canadian border and can see our own system working to such great disadvantage as compared with that of Canada are compelled to wonder why we, too, do not adopt the natural tool of commerce rather than keep a relic of the war which some of us hold good—yes, the best—either because we have determined that we will not see, or because, though we may see, we fear we shall not be able to convince others.

The currency of the Canadian banks rises and falls with the needs of that country from year to year, from season to season, from month to month, and from day to day.

Can any man say that our currency reflects in its amount the demands of business? Must not everyone who has given the matter even a superficial thought confess that it is much or little according to the speculation in bonds, causing inflation half the time and panics the other half?

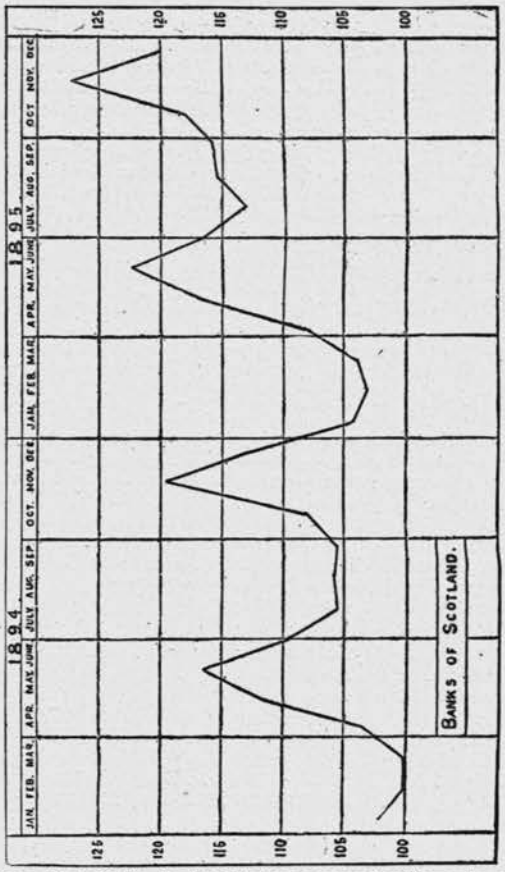
From this array of facts, I submit that every quality claimed for a credit currency has been demonstrated, proved, and substantiated.

First. That it is sound; and, upon this point, I submit the fact that it is the currency of France, Germany, Scotland, Belgium, Holland, Canada, Australia, and was the currency of the first and second United States Banks, the Bank of Indiana, the Bank of Ohio, the Bank of Iowa, all the banks of the State of Louisiana under the act of 1842, and all the banks of New England, 504 in number, from 1840 to 1860.



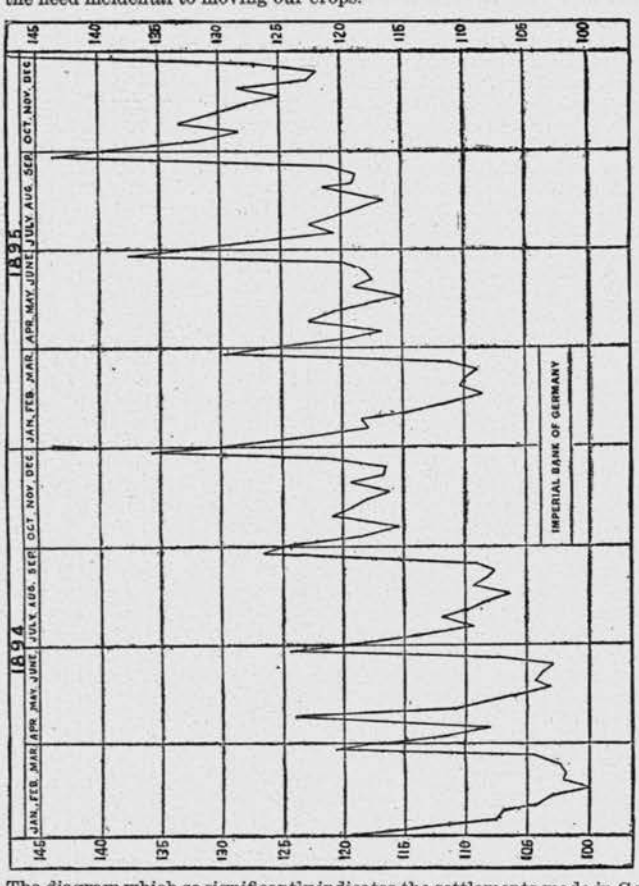
Nay more, I here and now challenge any member of this House to cite a single instance in American history where a single word or term of opprobrium or derision was ever used in relation to any true credit currency. On the other hand, I assert that all the wild-cat, yellow-dog, blue-pup, and every other kind of dog money, to which allusion is constantly made, was issued under conditions entirely different from those imposed in this bill, and that a careful and thorough investigation will disclose the fact that practically all of the so-called "dog" money was put out under the guise of State notes or bond-secured money, the bonds being United States bonds or stocks, the bonds or stocks of the several States with the addition, now and then, of other securities such as railroad bonds, as provided in the law of Wisconsin.

Let no man from this day forth, who cares for his reputation as a student of this question, try to link any of the opprobrious terms, including the word "dog," with the credit currency of our own or any other country; because whenever and wherever a true credit currency has been issued, in accordance with the provisions of this bill, it has been as good as gold or the coin of the realm, or the Government where issued.

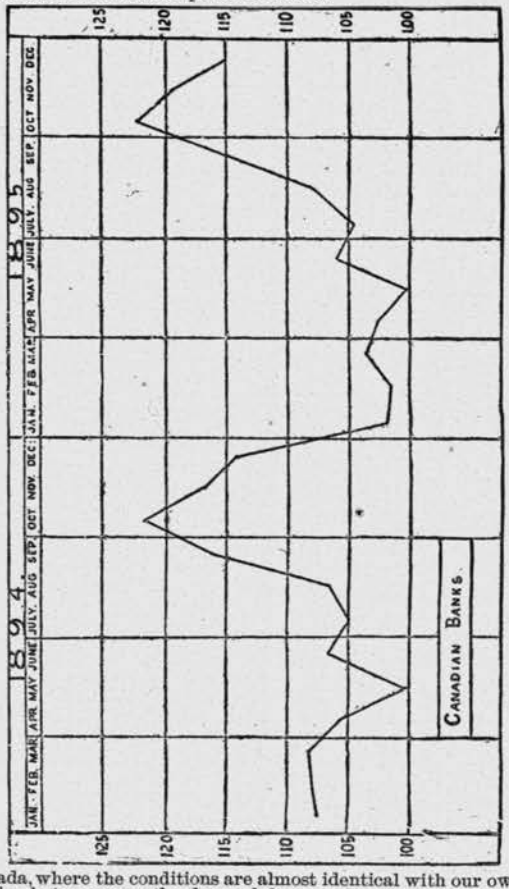


Has it adjusted itself to the ever varying needs of trade? Let us see.

The following diagrams show that a true credit currency, invariably, and without an exception, even to prove the rule, and with a mathematical certainty adapts itself to the demands of trade.



[a] For full detailed information on the Suffolk system, see Appendix A, p. 529.



It will be observed that during the entire period of two years there were no seasonal changes in the currency. If we had had a true credit currency August, September, and October would have shown a great increase because of the need incidental to moving our crops.

It has been the habit in Scotland to have general settlements on the first days of May and November, a fact that is graphically demonstrated by the preceding diagram, which indicates unerringly the exact amount of notes needed in those months as compared to others.

The diagram which so significantly indicates the settlements made in Germany every three months is in bold contrast to that reflecting the currency condition of our national banks.

In Canada, where the conditions are almost identical with our own, we observe with what accuracy the demand for notes to move the crops is registered, rising highest about October 15, and then gradually falling to the lowest point about May, when the least is doing in that agricultural country.

If anything could be added to increase the force of these illustrations, the following comparison, between what bank issues might have been and what they actually were, will supply it:

Country.	Possible issue.	Actual issue.
France	$1,000,000,000	$814,000,000
Germany	464,906,250	332,486,435
Scotland	148,000,000	40,000,000
First United States Bank	10,000,000	5,000,000
Second United States Bank	35,000,000	23,000,000
Bank of Indiana	6,600,000	4,900,000
Bank of Iowa	2,096,000	1,400,000
New England Suffolk system	123,000,000	44,000,000
Canadian banks	65,000,000	54,000,000

From this comparison of the possible and the actual issues, in every instance, every fair-minded and reasoning man must conclude that a natural and perfect relation must exist between a true credit currency and the work it is called upon to perform.

The average life of a true credit note is in bold contrast with that of our present national-bank note.

	Days.
The note of the Scotch banking system remains out	18
The note of the Canadian banking system remains out	30
The note of the New England (Suffolk) banking system remained out	45
The note of the National-banking system remains out	730

Or more than two years, which is about the time the paper itself lasts; when it must be returned of necessity for renewal.

The frequent redemptions of the credit notes reflect their relations to business transactions, while the redemption of the national-bank notes reflects little more than the life of the paper upon which they are printed.

That a credit note is just as economic in its use as a deposit, which is received to be loaned out, no one will deny, making the nominal allowance for the cost of the note and its redemption.

Recalling these facts, then—

First. That, owing to our constantly increasing population, constantly expanding business, and constantly contracting currency, provision must be made for about $100,000,000 annually;

Second. That this increase can not be silver in any form, for we shall not purchase another ounce of bullion, and that under present conditions we have no assurance of getting more gold—indeed, we may even lose what we now have at any moment—and that it would be unnecessarily expensive, even if we could rely upon an adequate supply;

Third. That our present bond-secured currency, while safe, is just as expensive as gold, bears no relation whatever to business needs, being a bond-speculation scheme pure and simple, and is now being retired at the rate of $3,000,000 per month, the maximum allowed by law, and that, too, in the very teeth of rapidly expanding business and increasing population.

Fourth. That the true credit currency, protected as provided in the measure reported by the Banking and Currency Committee, being as good as gold itself, adapts itself always and under all circumstances to the ever-varying needs of the people, and is as economical as a sound credit can be in any form.

A single conclusion alone is left as the result of this searching and exhaustive examination of present conditions, and running back for more than two hundred years, and that is that we need and must and will have sooner or later credit currency protected by a proper reserve and redeemable on demand in gold coin.

BRANCH BANKING.

The counterpart of a credit currency, and the most efficient machinery by which the borrowers can utilize its significant advantages, is a system of branch banks.

It will be apparent to everyone, after a moment's reflection, that if a bank at St. Louis had branches at Kansas City, Denver, and San Francisco on the west, at St. Paul and Duluth on the north, at Memphis and New Orleans on the south, at Cincinnati, Indianapolis, Pittsburg, Philadelphia, and Boston on the east, at the mere expense of a few telegrams sent at night, credit could be transferred from any one of these cities to any other, so that the loanable funds of the whole country would soon reach a sea level of interest rates and would rise and fall like the tides of the ocean, and every dollar would find its way every day, if indeed not every hour of every day, the whole year round, to the very spot where it could be of the most use—that is, could be most helpful and efficient in doing the commercial work of the country.

We should have a system of banking and currency that would keep all of our banking capital working everywhere all the time at the rate of 3 per cent, instead of working in one locality a part of the time at 24 per cent, and in another locality a part of the time at 16 per cent, and in another locality a part of the time at 12 per cent, and in another locality a part of the time at 6 per cent, and in another locality a part of the time at 3 and 4 per cent; and all the balance of the time, when the banks in the respective localities can not filch their 24, 16, 12, 10, 8, and 6 per cent, lying rotting and festering in the great money centers, breeding speculation, inducing panics, and leading to inevitable disaster.

This constant accumulation of unused capital makes it possible for speculators and gamblers to borrow at 1 per cent on call, when the call rate should invariably be higher than the commercial or time rate, a condition that would certainly follow if we had a system of branch banks which would bring to every city, village, and locality throughout the length and breadth of this land one uniform rate of interest during the entire year, and that not to exceed 3 per cent.

This is not a mere theory and experiment. Every civilized nation in the world, except our own, has such a system, and the call rates at London, Paris, and Berlin are, generally speaking, always higher than the commercial or time rates, just the reverse of what we find in New York, our money center.

An investigation by James H. Eckels, Comptroller of the Currency in 1896, disclosed the fact that the following countries have branch banking: Argentina, Austria-Hungary, Belgium, Brazil, Bolivia, Canada, Chile, China, Colombia, Costa Rica, Denmark, Ecuador, Egypt, France, Germany, Greece, Guatemala, Haiti, India, Japan, Mexico, the Netherlands, Newfoundland, Nicaragua, Paraguay, Persia, Peru, Portugal, Roumania, Russia, Salvador, Sweden, Switzerland, Turkey, the United Kingdom, Uruguay, and Venezuela.

Nor is branch banking confined to foreign countries, but 23 out of the 45 States permit it; that is, 9 expressly provide for it, while 14 are silent or do not prohibit it.

The 9 are Arkansas, California, Delaware, Kentucky, Michigan, North Carolina, Nevada, South Carolina, and Wisconsin.

The 14 are Arizona, Idaho, Illinois, Kansas, Louisiana, Maryland, Montana, New Mexico, Ohio, Oregon, Tennessee, Utah, Virginia, and Washington.

Nor has there ever been a time, from the foundation of the Government down to this hour, when branch banking has not been carried on in some form or other and to some extent in some part of the United States.

From 1791, when the first United States bank was organized, down to the time of the civil war it was under the system of branch banking that the safest and most satisfactory banking was done, excepting, possibly, the Suffolk system of New England alone.

By a resolution passed by the bankers of Kansas, in convention assembled, we receive the startling information that branch banking is un-American, unpatriotic, and unbusinesslike."

It is to be hoped that the gentlemen there assembled were far better bankers than historians. The charter of the first United States bank was drawn by Alexander Hamilton and signed by George Washington. But it may be retorted that Hamilton and Washington were not Americans.

This first United States Bank which they organized had branches at Boston, New York, Baltimore, Norfolk, Charleston, Savannah, Washington, and New Orleans. It was most successful in every respect, Senator Crawford, from Georgia, remarking, when a renewal of the charter was pending before the Senate:

"Sir, we have the experience of twenty years for our guide. During that lapse of years your finances have been, through the agency of this bank, skillfully managed. During this period the improvement of the country and the prosperity of the nation have been rapidly progressing. Why, then, should we, at this perilous and momentous crisis, abandon a well-tried system, faulty, perhaps, in detail, but sound in its fundamental principles? Does the pride of opinion revolt at the idea of acquiescing in the system of your political opponents? Come, and with me sacrifice your pride and political resentments at the shrine of practical good. Let them be a propitiary sacrifice for the promotion of the public welfare, the savor of which will ascend to heaven and be there recorded as a lasting—an everlasting—evidence of your devotion to the happiness of your country."

The establishment of the second United States Bank was urged by James Madison; its charter was prepared by Mr. Dallas, his secretary, and Madison signed the bill. But James Madison, who was the most efficient instrumentality in constructing our Constitution and securing its adoption, was *not an American.*

Subsequently, when the question was raised in the case of McCullough *vs.* State of Maryland et al., that this same United States Bank was un-American because unconstitutional, Chief Justice John Marshall said:

"After the most deliberate consideration, it is the unanimous and decided opinion of this court that the act to incorporate the Bank of the United States is a law made in pursuance of the Constitution, and is a part of the supreme law of the land.

"The branches, proceeding from the same stock, and being

conducive to the complete accomplishment of the object, are equally constitutional."

But John Marshall, the great interpreter and expounder of the Constitution, *was not an American*, you know.

This second United States Bank had 25 branches in 1830, located in many cities throughout the United States, whose populations were small, indeed.

It is perfectly evident from the size of those cities and their geographical locations that the remotest frontiers of well-settled communities were fortunate in having branches of this wonderful institution, whose pure credit notes were selling at a premium at every commercial center in the world.

Now, mark this, the law limited the rate at which the bank could loan to 6 per cent; and yet, under this limitation, in 1830 the bank had successfully established, one after another, 25 branches; some of them upon the extreme frontier and in small country towns of no more than 2,000 and 3,000 people; and yet the residents of these villages, planted in the very wilderness, had the advantage of the same rates of interest that the citizens of New York, Philadelphia, and Boston had.

The very first bank acts of Virginia, November 23 and December 23, 1792, authorized branches; and December 10, 1795, a special act was passed authorizing the president and directors of the United States Bank to establish offices of discount and deposit in the Commonwealth.

Then immediately followed that golden age of banking in Virginia, the first charter granted being that of the Bank of Virginia, on January 13, 1804, and subsequently five other banks being incorporated, all of them establishing branches.

The six mother banks had branches at the places designated, as follows:

The Bank of Virginia, at Norfolk, Petersburg, Fredericksburg, Portsmouth, Lynchburg, Buchanan, Danville, Charleston, and Union (the latter two places being now in West Virginia).

The Farmers' Bank, at Norfolk, Petersburg, Fredericksburg, Lynchburg, Winchester, Danville, Farmville, Charlottesville, Wytheville, Alexandria, Louisburg, and Blacksburg.

The Exchange Bank, at Petersburg, Clarksville, Alexandria, Abingdon, Salem, Weston, Lynchburg, and Richmond.

The Bank of the Valley, at Romney, Charleston, Leesburg, Staunton, Christiansburg, and Moorefield.

The Northwestern Bank, at Wheeling (now West Virginia), Wellsburg, Parkersburg, and Jeffersonville.

The Merchants and Mechanics' Bank (of Wheeling), at Morgantown and Mount Pleasant.

But old Virginia, you must remember, is the mother of Presidents, and *must be American*.

The general assembly of Tennessee, in November, 1807, established the Nashville Bank, which, by one of its statements, discloses the existence of six branches.

In 1838 the legislature of Tennessee chartered the Bank of Tennessee, which had branches at Athens, Clarksville, Columbus, Knoxville, Memphis, Murfreesboro, Rogersville, Shelbyville, Somerville, Trenton, and Sparta.

The State Bank of Indiana was chartered in 1834, with the power to establish ten branches, which number was afterwards increased to seventeen.

The Bank of the State of Missouri was chartered in 1837, with the right to have branches at five different cities: Lexington, Fayette, Palmyra, Cape Girardeau, and Springfield. The population of St. Louis was 11,500, and that of the entire State only 310,000.

In 1848 the Bank of the State of Georgia, with a capital of $1,500,000, had branches at Augusta, Eatonton, Athens, Washington, and Greensboro, with agencies at Macon and Griffin, while its home office was at Savannah, then the financial center of the State. Other banks located at the same center and also had branches.

The law by which the State Bank of Ohio was incorporated was passed in 1845, and by 1850 it had 37 branches.

On March 20, 1858, the legislature of Iowa passed a law incorporating the State Bank of Iowa, and authorizing it to have 30 branches, and many were established and flourished under the law, Knox stating that "to the branch banks of Iowa was largely due the prompt response of the State to the call of President Lincoln to put down the rebellion in 1861."

And, finally, it must not be forgotten that the national-bank act recognizes the principle of branch banking by providing that any bank having branches—indeed, any number of them—may come into the system and maintain the branches, although the conditions imposed are burdensome and ruinous.

Again, while the right to establish branches is denied to any existing national bank, we permit any foreign bank, organized anywhere, in any country on earth, to come here and establish its branches wherever it pleases. To-day these foreign banks are doing business in every one of our great money centers.

In the light of these facts it will hardly be contended that branch banking is un-American.

Nor will any sensible man who cares for his reputation try in a serious vein to demonstrate that branch banking is unpatriotic and treasonable in principle.

When we recall the fact that anyone engaged in any other legitimate line of business can go whithersoever he will and establish branches and agencies for the purpose of extending his trade, is it not strange that one who is engaged in buying and selling credits can not do the same thing?

Why should banking be singled out as the only business that must be shackled, fettered, and limited in the United States when it enjoys greater freedom in all other countries than any other line of commerce, if a comparison can be instituted at all?

Indeed, the Bank of France is compelled to establish a branch in every political subdivision or department of the Republic.

If we could be made to believe that every invention or device that would save expense and facilitate production is unbusinesslike, then we might conclude that branch banking is also unbusinesslike.

All will admit, I think, that any system of banking that will level the rates of interest will level the high rates down to the low rates, and will not even tend to raise the lower rates; therefore I assert that the adoption of a principle that will certainly equalize the rates of interest throughout the United States will give to every part of the country a rate as low as the lowest, or 4 per cent, at least—that being the rate of Boston, Brooklyn, and Cincinnati.

Nay, more. It would inevitably follow from innumerable and vast economies that our rate would approximate 3 per cent.

The Bank of France has branches or places of business in every department or political subdivision; and the rate throughout the length and breadth of the French Republic to-day is 2½ per cent to every borrower, from the man who wants $50 to the man who asks for and is entitled to $500,000.

So in Germany the rates for the Empire are made at the branches of the Reichsbank, which are to be found at 330 places, scattered throughout the country.

That the principle has been established and proved by these two illustrations any opponent might in fairness deny, since it may be rejoined that these are the only banks of issue and numerous branches in their respective countries, and that hence they have comparatively little competition.

In England there are several significant points of difference. The Bank of England, with a capital of $72,500,000 and a reserve of $15,000,000, is substantially the only bank of issue; but it only has 11 branches; while the other joint-stock banks, numbering 77, with a capital of $233,588,725 and a surplus of $165,515,845, have in England and Wales 3,836 branches.

But here, too, the rates of interest are uniform, and do not vary 1 per cent, being almost invariably lower throughout the country than the rate of the Bank of England, which is the regulator of the gold movement as well as a banking institution.

Our struggle to-day for free banking privileges in the United States is not the first attempt to give the borrowing public the advantages of the low rates prevailing at the commercial centers.

John Francis, in his History of the Bank of England, says: "The extension of the branches of the Bank of England was not viewed with favor by the country bankers. * * * They had previously charged 5 per cent discount, and in some places even an extra percentage as commission; the branches, by performing the same business at 4 per cent, had reduced these profits and compelled them to lower their terms."

However, here again our unwilling listener and too willing objector may complain of the presence of a central bank, as though it could possibly have a controlling influence upon the commercial rate, when its assets or loanable funds are only $500,000,000 of the $4,000,000,000, or one-eighth the amount of the other joint-stock banks doing a distinctive English or local business; for, in addition to those joint-stock banks of a purely local character, there are located in London 30 colonial joint-stock banks, having a capital amounting to $175,000,000, a surplus of $50,000,000, and total assets aggregating more than $1,300,000,000.

But there is no central or controlling bank in Scotland, and yet the 10 Scotch banks, with an aggregate capital of $46,000,000, a surplus of $34,000,000, and assets amounting to $688,000,000, through their 1,078 branches, touching every nook and corner of the Scottish domain, are lending money everywhere at identically the same rate of interest.

Again, it may be retorted, but with less and less of reason as we shall soon see, that conditions are different in Scotland. For one thing, that it is an old country, and that what might work perfectly well in an old and densely populated country would not do at all for a new and sparsely populated one.

Visit Australia, if you will, and there, throughout a vast extent

more sparsely settled than any part of the United States to-day, you can not find a variation in the rate to exceed 2 per cent.

Coming, too, to the Atlantic coast, you may start at Prince Edward Island, or the smallest fishing hamlet of Newfoundland, and go to the northernmost line of habitation on Hudson Bay, the lumbering camps along the streams upon whose bosoms the forests float, the mining fields just opening their wealth, or the salmon runs on the distant Pacific, and at each and every place you will find a branch of one of the 35 banks of Canada, lending money at a rate of interest not exceeding 2 per cent per annum more than in Montreal, the financial center of the Dominion, where there is no controlling or government institution, but 34 independent, joint-stock banks, with an aggregate capital of $68,596,166, a surplus of $37,364,708, and assets amounting to $499,091,985, loaned to the people through 747 branches.

Of this now almost perfect system of banking, Mr. B. E. Walker, manager of the Canadian Bank of Commerce of Toronto, said at the Congress of Bankers in Chicago in 1893:

"In Canada * * * capital marches automatically across the continent to find the borrower, and the extra interest obtained scarcely pays the loss of time it would take to send it so far were the machinery not so perfect."

To this peculiarly striking parallel our never failing objector has already been heard to say:

"Oh, those people differ widely from us. They are slower, more conservative, and while branch banking and a credit currency might suit them very well, they would never do for the American people, who are so speculative, restless, impulsive, and violent."

Did it ever occur to him that possibly our faulty system, which every American knows may break down at any moment, is largely the cause of that very speculation and proverbial uneasiness?

Does he not know that every American who thinks realizes that we are sleeping to-day upon a smoldering but living volcano more dangerous than Mount Pelee, and that its fires will only be put out by the retirement of the demand obligations of our Government and the adoption of a true credit currency?

Has he forgotten, or has he never learned, that when the United States Bank was chartered in 1816, the law permitted the establishment of branches and limited the rate of interest to 6 per cent?

Does our objector, who will not be convinced because he has determined not to be, know that under that 6 per cent limitation the United States Bank established and had in 1830 branches at the following cities, whose respective populations at that time were as follows:

Population of certain cities in the United States in 1830.

[From the report of the Fifth Census of the United States.]

Cities.	Population.	Cities.	Population.
Baltimore, Md	80,620	New York, N. Y	197,112
Boston, Mass	61,392	Norfolk, Va	9,814
Buffalo, N. Y	8,668	Philadelphia, Pa	80,462
Burlington, Vt	3,525	Pittsburg, Pa	12,568
Charleston, S. C	30,289	Portland, Me	12,598
Chillicothe, Ohio	2,846	Portsmouth, N. H	8,026
Cincinnati, Ohio	24,831	Providence, R. I	16,833
Fayetteville, N. C	2,868	Richmond, Va	16,060
Hartford, Conn	7,074	St. Louis County, Mo. (including St. Louis)	14,125
Lexington, Ky	6,026	Chatham County, Ga. (including Savannah)	14,127
Louisville, Ky	10,341	Utica, N. Y	8,323
Mobile, Ala	3,194	Washington, D. C	*18,826
Nashville, Tenn	5,566		
Natchez, Miss	2,789		
New Orleans, La. (including suburbs)	45,999		

*Total population in the present Territory of the District of Columbia 30,261.

Does our obstinate and obdurate objector know that these are all American cities and that the people were never better accommodated than then with loanable funds, and that, too, although our whole country was practically a frontier, with every part very remote from every other part, because we had neither telegraph, telephone, nor railway; and yet that no one even then in that primitive time, seventy-five years ago, *paid more than 6 per cent interest wherever there was a branch of the United States bank?*

What a graphic picture this is of what right principles will achieve if we will only permit the people to do their own business in their own way; simply compelling them to so use their corporate rights as to in no way injure others or encroach upon their prerogatives!

To-day no spot where business is done in the United States is so remote as were these branches from each other, when our means of communication and transportation are taken into account; and yet the rate is 4 per cent in Boston and 6 per cent in Vermont, 4 per cent in Brooklyn and averages about 6 per cent in New York State, 5 per cent in Baltimore and more than 7 per cent in South Carolina, 6 per cent in Savannah and 8 per cent in Florida, 5 per cent in Minneapolis and averages about 7 per cent in Minnesota, 4 per cent in Chicago and 6 per cent in Illinois, 5 per cent in St. Louis and 7 per cent in Missouri, 10 per cent in Arkansas and 14 per cent in Oklahoma, 5 per cent in San Francisco and 7 per cent in California, 9 per cent in Oregon and 10 per cent in Washington.

Can any intelligent, candid, patriotic man doubt or hesitate when confronted with these figures? Is he not compelled to admit that there is no way of escape except by the adoption of that principle which has never failed to mobilize the loanable fund and bring uniform rates of interest whenever properly applied?

Or, shall we find, lurking in the morbid imagination of our mental mossback, a horrid fear that we would better bear the gigantic burden of an annual interest account, approaching $200,000,000, rather than to suffer the ills of a money trust?

Very recently I read the pronunciamento of one McAshan, a banker, containing these direful words:

"Branch banking and asset currency is one move in the general direction of usurpation of privileges, concentration of wealth, monopoly of money, and eventually the control of the Government and the pauperizing of the people."

How perfectly easy it is for anyone to rant who does not measure his words, or who does not happen to know anything of the subject about which he may think he is talking!

This malediction sounds so much like the prophecy of a certain W. J. Bryan, who depicted a ruined, devastated, and enslaved country and a pauperized people if the gold standard should be established, that we can assume that McAshan is a devout follower of that now utterly discredited and already almost forgotten peerless leader.

Indeed, if that very leader be still remembered for anything it is because he stated more things about the money question that were not true than anyone living or dead. Nor is it of consequence that he was honest in his delusions, for a fool in office is more dangerous to the public welfare than a knave who knows that he is watched.

If anything should disgust an American citizen it is the assumption that he is very little, if any, above an idiot in comprehension, and that you can scare him by blowing hot air upon his supposed prejudice, which must be the natural outgrowth of a profound ignorance.

It is high time that we should take our citizenship at its true worth, and hold ourselves to a corresponding responsibility when attempting to lead and teach it.

A gold trust; nothing but the vapor of a superheated brain or the fancy of a diseased imagination! And why? Because gold is the poorest kind of property to hold, except as a reserve in a bank to serve as a touchstone to its credits.

Gold will not increase in value, therefore no one wants to hold it as a speculation. Gold earns no interest, therefore no one desires to hold it as an investment. Gold is easily carried away and always quickly disposed of, therefore it is dangerous to keep it in our homes. Indeed, unless one is in the banking business or the jewelry trade he does not want gold at all.

A money trust; the most impossible thing that can be conceived! If there is a helpless individual on the face of the earth it is the banker. He owes, practically, all he possesses.

On every side of him stand private money lenders or their agents from afar. If he makes profits, it is not because he hoards his capital and deposits, but because he lends them out. It is not because he has large capital in the business, but because he has large deposits to lend, and his success as a banker will depend upon his skill in dealing generously with his depositors. While he is prudent in granting credits, mutuality between depositor and banker is essential to signal success.

Again, outside of the national banks, trust companies are springing up everywhere, and savings banks are watching for opportunities to place their rapidly increasing accumulations. Foreign bankers have established themselves in the midst of us, and stand ready to take advantage of every favorable circumstance.

The charters of national banks run for the short period of twenty years only, so that from start to finish they are on their good behavior, and could not hope for a new lease of power if they abused their corporate privileges.

Bankers do not deal much in actual money, but almost entirely, at least in the ratio of 10 to 1, in credit; and credit is as free as air. and as little to be confined or controlled by a trust as the air we breathe.

The commission recently appointed to investigate trusts, so called, at home and abroad, made not a single mention of a banking trust in the world, although everything else is found to be combined somewhere in some country.

Where the banking powers are most exclusive, there the rates are lowest. But let no one suppose that I believe this is so because of the exclusive rights given to some one institution; for I

am convinced that the low rates are due to incidental economies, including a great saving of capital.

France, Germany, Belgium, Holland, England, Scotland, and Canada all have central banks or systems of large banks, but no suggestion of a banking trust has ever been intimated anywhere; on the other hand, competition is keen in every part of the banking world, and nowhere are the rates so high as with us.

May it not be possible that our restrictive laws have compelled our country banks to charge a higher rate of interest by not permitting large institutions to furnish money to the outlying districts at the rates prevailing at the commercial centers, precisely as they do in every civilized country except our own?

If 100 banks in the United States, with an average capital of $10,000,000 each, making a total investment of $1,000,000,000, with the right of note issue and the power to establish branches, could serve the American people far better than 12,000 small institutions, with an aggregate capital of $2,000,000,000, it is evident that the people would save 7 per cent on the extra billion or $70,000,000, as the banks are now earning an average dividend of about that rate.

In other words, every man, woman, and child is being taxed about $1 each every year for the liberty they enjoy of paying tribute to what the bankers call a "home institution," as though this same rule would not apply with equal force to a thousand toher things.

Independent railroad lines limited to each county, with large, splendid railroad offices and a full line of officials, would be a thing to boast of in every town; but freight rates would go up in consequence of such a policy from the lowest charges now attained, one-half a cent for moving 1 ton 1 mile, up, up, up, to possibly a charge of 25 cents for moving 1 ton 1 mile.

The result would be immediately to prevent any export of wheat, corn, pork, beef, cotton, iron, agricultural implements, and a thousand other products we are sending abroad to-day, and thereby bringing a prosperity to our people never before known.

But would these large banks establish branches? Would they lend their credit?

England and Wales have 58,310 square miles of territory, and in this little space the 77 joint stock banks have 3,846 branches; one for every 15 square miles and one for every 8,450 of population.

Scotland has 29,000 square miles of territory, but her 10 joint stock banks have 1,078 branches, providing a bank for every 29 square miles and to every 4,100 of population, surpassing the banking accommodations of any country in the world, all things considered.

But do they lend their credit freely? As well might you ask, will the farmer sell his wheat, corn, and cotton; the storekeeper, his wares; the physician and lawyer, their skill; a mechanic, his labor; the great wholesale merchants, their goods. That is just what the banker is in business for; and, precisely as the big jobbing houses send out their traveling men to drum up business, so the large bank must seek every opportunity to lend its credits, or, to use the better known and usual expression, its money.

Like the jobbing merchant, the banker must make a profit upon the cost of his goods after paying all expenses; but, doing a large business, he can afford to carry it on for a comparatively small profit, and the borrower gets the benefit of it.

A recent investigation made by the Comptroller of the Currency demonstrates that a given number of large banks were conducting their business at an expense of 1½ per cent of the loans, or $1.50 for each $100 loaned out; while 10 banks, with the minimum capital of $25,000 each were conducting their business at an expense of 7½ per cent of the loans, or $7.50 for each $100 loaned out.

Of course, every borrower will at once see that a merchant whose goods cost him only $1.50 per $100, can and will sell them much lower than the merchant who actually pays $7.50 per $100 for identically the same article.

In one breath, the superficial opponent of branch banking asserts that the branch bank will lend the money at so cheap a rate as to drive out the local banks, and at the same time locate itself in the country districts where money is highest, with the express purpose of drawing the money into the center where money is cheapest. His statement of the case carries its own contradiction and refutation.

Merchants sell their goods when and where they can get the best prices for them, with possibly a slight concession to their regular customers who buy year in and year out. So the banker, while lending his money where he can get the best rates, favors the regular commercial borrower as against the occasional chance and speculative customer, especially when this commercial borrower is also a good depositor, for he realizes that unless he meets the wants of the depositor he will lose his deposits, and so his business, which depends upon deposits, must prove unprofitable.

Bankers much prefer constant, reasonable, regular rates to widely varying rates, which indicate unsoundness, and always sacrifice, as they should, speculative borrowers on call to the just claims of the legitimate customer, who remains undisturbed, while the securities of the gambler go to the exchange.

Upon this point we have the clear and conclusive statement of Mr. E. S. Clouston, president of the Canadian Bankers' Association, and manager of the Bank of Montreal, one of the largest banks in the world.

He said, in replying to the old stock objection that branches would be sacrificed in times of panic:

"Mr. Walker's [Hon. Joseph H. Walker] fear that the customers of a country branch are in times of stringency sacrificed to the necessity of the parent institution is also a phantom of his imagination, for the loans of a branch being less liquid, the knowledge of the difficulty of realizing them and the small proportion they bear to the whole amount, leaves them practically undisturbed in the acutest panic, and their only knowledge of a stringency is imparted through the medium of newspaper articles."

Mr. Thomas Fyske, the manager of another large Canadian bank, has expressed himself as follows:

"The contention that in hard times the country districts would suffer because all the money would be wanted at the head offices could only be the case where the management was decidedly bad. A good banker would know well where his business was good and where it was not so good, and he would be too anxious to retain good local business to do anything to injure and so lose it. Competition makes that utterly impossible in this country. There is often more competition at small country places than in metropolitan centers, and the rates are sometimes lower."

Since, then, there is nothing substantial in the superficial observations of the statesman who hopes to remain in public life because he poses as the people's friend, cultivating their fears, nursing their prejudices, and striving to stay a progress which might end his party activities.

Since, too, the declaration of the Kansas City bankers' convention that "branch banking is un-American" is itself un-American, because manifestly untrue.

Since, moreover, patriotism itself demonstrates that branch banking is not "unpatriotic;" for, being founded upon liberty of action, it calls for the same freedom accorded to capital in all other lines of business and especially to the banking capital of all foreign countries.

And since branch banking can not be "unbusinesslike," because all of our borrowers may, through its beneficent privileges, have equal opportunities, under just laws, to secure their loans at rates of interest not exceeding 3 per cent.

I may safely proceed to consider the subject from both a national and an international point of view.

First. The banking interests of our country are not keeping pace with the other great, yes, gigantic, changes that are going on in the commercial world; and if, here and there, some indications are apparent of their efforts to coordinate themselves with the movements of the hour, it will be observed that these attempts are indirect and heavily handicapped by legal restrictions, imposing burdens and expense to be met only by interest charges on our producers.

To-day we have but to look around us and behold the power, effectiveness, and immeasurable advantages of the conservation of forces, the union of elements, the combination of factors, and the almost incomprehensible elimination of manual labor in the evolution of our material civilization.

It is hardly more than yesterday when it took 25 men to do the work of 1 man of to-day in sowing and reaping grain, 35 men to do the work of 1 man in making watches, 242 men to spin the yarn for gingham worsted now spun by 1 employee, 333 men to make the horseshoe nails to-day turned out by a boy, and 44,491 men to produce as many screw posts as the single toiler is making now.

The type-setting machine, under a single hand, takes the place of five men; while the printing press, watched by a single eye, surpasses the product of 16 skillful hands of yesterday.

In thirty minutes 150 tons of ore are lifted from the hold of a ship to the waiting cars.

The 50-pound iron rail has been replaced by the 100-pound steel rail. The single track has demonstrated the need of four tracks. The 30-ton locomotive of miniature proportions has disappeared, and in its stead has come the giant of 80 tons, only in its turn to give way to still more wonderful giants, one weighing 134 tons now being built.

The ships that lay at anchor when yesterday's sun went down were of but 3,000 tons burden; to-day they are fivefold as large; to-morrow, from our great Pacific coast will spring a monster of 21,000 tons, or seven times the size of the playthings tossed upon the waves in 1870.

Soon a mighty fleet of 25 ships, each of 21,000 tons burden, will be plying the waters of the Pacific, carrying from our shores in

each great bottom 2,500 carloads, and distributing every week upon the average 100,000 tons of the products of our farms and factories to the uttermost parts of the earth.

While the law of coordination, unification, and economic operation has made this age the wonder of the ages, and our own country has surpassed all others in marvelous achievements in all other directions, our banking system alone remains a monument of what we were in all things prior to this glorious development of which we boast.

Hardly a single financial or currency law graces our statute books that has been the result of cool, clear, dispassionate calculation and economic reasoning; but nearly all of them have sprung from the necessity of war, political purpose, or the shock incident to some commercial convulsion.

The result is that the banking business of the country is conducted in a most wasteful way, with machinery utterly inadequate to provide for the business at hand, and wholly unsuited to successfully withstand the storms of expanded credits and keep the debtors in safety while contraction rages and panics prey upon prices.

At the very time when banks should be of the greatest assistance our 12,000 integrated, so-called independent banks become the most dependent weaklings and destructive forces in the business organization. Each individual institution, conscious that all its creditors know its weakness, begins the desperate struggle of self-preservation, and ruinous liquidation must follow.

With what truth did George S. Pallain, manager of the Bank of France, say to me:

"In all crises small banks feed on commerce, but great banks feed commerce."

Very recently, Mr. James B. Forgan, president of the First National Bank of Chicago, in addressing the Bankers' Club of Milwaukee, pointed out with what deadly effect this struggle went on in 1893. How, while the balances due from banks, amounting to $409,523,000 in 1892, were reduced by $132,000,000 to $277,469,000 in 1893, yet the cash reserves increased by $22,000,000.

Under like stress of circumstances, what would happen to-day, with more than $800,000,000 due from banks, which "in times of financial distress, instead of standing together in aid of the public, are compelled by the very law of their existence, and by the law of self-preservation, to assume a hostile attitude toward each other?"

Mr. Forgan opened the address just referred to with these pertinent observations:

"In the evolution of the business methods of the country, so aggressive in other lines, what is to be our permanent system of banking? That such a question should remain unanswered in the present stage of our industrial development seems incredible. That it does so remain, however, is evidenced not only by the persistent agitation of the subject, but by the consensus of authoritative opinion in regard to it. We are not satisfied with what we now have.

"The development of a national system of banking in this country has twice been diverted from its natural course. In the first instance by erroneous politics when President Jackson refused to renew the charter of the Bank of the United States, and again, when for the purpose of creating a market for its bonds, the Federal Government established our present national system of isolated banks.

"Had banking, as in the case of other lines of business, been allowed to work out its own destiny untrammeled by politics and free from subordination to Government necessities, a system would ere this have been established which would have made itself felt as a potent factor in the financial affairs of nations. We would also now have a system that would stand together for the public benefit in times of financial distress. As it is to-day we have no banks that will compare in financial strength and power with those of other countries. While actively competing with other nations in the fields of commerce and industry, it must be admitted that in the world's finance we are away behind in the race; nor does our system even satisfactorily provide for our own domestic requirements. The need of coalition among our unit banks is urgent."

Only a few days since I received from one of the leading financiers and first thinkers of England, Sir William Fowler, a letter containing these significant words:

"Nothing in your existing law is more absurd than the prohibition of branches; and I am glad to see how strongly you and others feel about it."

Almost in the same mail I received a letter from Mr. J. Selwyn Tait, now a resident of this country, but for many years a Scotch and English banker, containing this apt sentence:

"There is nothing of such importance to this country as the legalizing of branch banks."

When we note the fact that Mr. Forgan was brought up under the Canadian system, that Sir William Fowler is to-day one of the leading bankers of London, and that Mr. Tait was trained to banking in Scotland, managed six branches in London, and is now a resident here, the observation of these gentlemen ought to have great weight, for they speak with the authority of wide and most successful experience in the very field now under discussion.

We might, if we would, learn a very important lesson from the great bridge now building over the East River between New York and Brooklyn. A single wire with a favoring breeze might float a kite over that waterway. But 8,000 wires bound together into a mighty cable 19 inches thick will, with its four fellows, sustain a gigantic structure 118 feet wide over a single span of 1,600 feet, furnishing a thoroughfare for hundreds and thousands of people to walk or ride, without a thought of its strength or weakness, because it outstrips the comprehension in its ability to sustain the burdens thrown upon it.

This should be the relation of our banking power to our business interests. But, if we are to continue the present restrictions, and by force of law limit their individual operation to a single town, the banks will never get beyond the single wire in strength which with difficulty sustains a single kite even with a favoring wind.

Again, those four mighty cables, containing only 32,000 wires, because combined are vastly stronger than a million or any countless number of wires stretched separately across the same expanse, each barely able to carry its own weight, to say nothing of sustaining and supporting almost immeasurable burdens.

One of the most essential rules to safe banking and sound business is that each individual or corporation shall have but a single account or banking relation, a principle which can find no recognition in our day, because the miniature affairs we call banks in no way correspond to the business of our times.

This is a period of great undertaking, and the young man with business perspective and large comprehension has comparatively little chance to consummate his purposes, because our laws prevent with arbitrary prohibitions the coordination of our banking facilities to our business opportunities and requirements.

At the very threshold of our business necessities we are met by the cry that a large banking capital will be dangerous to our liberties—a mere hobgoblin, born of the seething brain of the demagogue, seeking to prey upon the fear of the people.

The Pennsylvania Railroad has a capital of $202,200,800, and the New York Central a capital of $115,000,000.

Does any sane man think that they are dangerous to the liberties of the people?

These, and twenty other great railway lines, have given us by far the cheapest and incomparably the best passenger service in the world. They have reduced our freight rates to a point one-half that of the lowest of any in the world, being as low as 0.469 of 1 cent, or less than one-half of 1 cent, for carrying 1 ton 1 mile. They are bringing from Minneapolis, the great flour market of the world, to the toilers of New York a loaf of bread for one-sixth of 1 cent.

Oh, what a curse these giant railways have been to the great producing States of the West! Oh, what a curse to the toiling millions of the East, by making it possible for each section to do the very best and most for itself!

The great ship lines, with various amounts of capital reaching $170,000,000, have provided floating homes for travelers—a single ship, costing $3,200,000, carrying 4,850 tons of coal to push its mighty engines of 35,000 horsepower 22 knots per hour, while 600 persons are employed and busy in caring for this little floating world.

But the other day a vessel from New Zealand arrived at Southampton, and from its refrigerated apartments there were taken 77,000 carcasses of sheep, as fresh as the day they left the dock, a month before.

Herds of cattle leave their grazing grounds in the far West, take ship at some seaport on our Atlantic coast, and in a week are turned out to fatten in merry old England, preparatory to the sacrifice.

Since 1870 the ocean freights have fallen and fallen until now they are about one-quarter of what they were then.

Oh, what a curse these gigantic steamship lines have been to the American people! How they have threatened their liberty! How they have enslaved them with opportunities to be industrious, strive, struggle, and win gloriously!

All these things have been made possible only by the conservation of energy in the form of combined capital.

In banking alone are we struggling with a discredited system which bears the horrible scars of at least a score of tragedies of political origin.

Shall we not bring harmony between banking and business; bring strength, confidence, power, and a permanent condition to the National Treasury; bring to an almost limitless trade fit tools with which to do its delicate, intricate, and important work; and last of all so coordinate the broken and fragmentary parts

of our credit device as to insure the preservation of every solvent business, every profitable plan, every worthy purpose, while the contraction of credit may now and then put to the test the commercial soundness of the country?

At the recent meeting of bankers at Kansas City, Mo., already referred to, the following resolution was passed:

"*Resolved*, That the members of this association have carefully listened to the recent discussion of the subject of branch banks, as advocated by the able gentlemen from the East, and combated by some of the ablest and best-known members of this State association and of our neighboring State of Nebraska, and we hereby affirm our unswerving allegiance to that view of the proposition which condemns it in all its forms as being unpatriotic, un-American, unbusinesslike, and as tending to establish a monopoly from the great and honored business of banking in the hands of a few millionaires, to the exclusion of the men of the West, old and young, who have labored so faithfully and well to make our banking system what it is to-day, the best in the known world."

In the opinion of the particular bankers who voted for this resolution (for it must not be forgotten that there was a minority opinion of intelligence, based upon study and thorough investigation), branch banking is *unpatriotic*, *un-American*, and *unbusinesslike*, and would tend to create a monopoly *to the exclusion* of the men of the West, who have *labored so faithfully and well to make our banking system what it is to-day, the best in the world.*

There are four distinct thoughts couched in this pronouncement:

First. Branch banking is unpatriotic. This is more the dogma of a political convention than a bankers' meeting; more of an appeal to a supposed prejudice, based upon supposed ignorance, than an appeal to reason, resting upon a sound public intelligence.

Does it mean anything whatever, or does it have any purpose other than those fulminations we heard in 1896 about destroying the people's money in order that the goldbugs might have a gold trust and corner all the gold, and in that way oppress the people, gradually deprive them of their liberty, and finally enslave them?

What a sad, hard, prison life the American people have had since that memorable economic victory in favor of personal integrity and national honor! How they have been bound hand and foot by the chains and fetters of prosperity!

It is true they have been deprived of their liberty, because surrounded and overwhelmed by opportunities to toil, achieve, and prosper beyond their fondest hopes and highest ambitions.

Patriotism is love of country. Is there no patriotism, no love of country, then, among the people of any other country in the world except our own? Was there no patriotism, no love of country in the United States before the civil war, when the present banking scheme was devised for the express purpose of making a market for United States bonds? Is there no patriotism, no love of country in the 26 States where branch banking is now permitted?

Unpatriotic! Oh, that the bankers who voted for these resolutions were as accurate in their speech as they require their bookkeepers to be with their accounts!

Second, branch banking is un-American. This is some more sickly sentimentality of a political type, uttered in the face of the fact that 23 States now permit branch banking, and that it was the common practice of the country for seventy-five years—many great banking organizations being destroyed by the act creating the present national scheme.

Within a few days I received from a gentleman living in one of the great Missouri River towns not very, very far from Kansas City a letter containing this paragraph:

"Your report does not mention the cumbrous machinery by which the banks in this part of the world get around the lack of provision for branches. The plan may not be general throughout the country. It is this: The managing owners of the national banks form trust companies which own the stock, usually a control, frequently all, in country banks in the small towns. The country banks are usually under State charters. I do not think there is a national bank here which has not such a tail. You can readily see how cumbersome the system is, and that it is necessarily more expensive than even the people who use it realize. It has the additional disadvantage that in a place like this the real managers must keep conversant with three or four or may be five different systems of banking law."

So, if you can believe the contents of this letter, the bankers in the neighborhood of Kansas City are doing right now very *un-American* things.

Some bankers have become particularly conspicuous in their declarations against branch banking, and in so engineering bankers' conventions as to secure hostile resolutions. Prominent among these is Mr. S. H. Burnham, president of the First National Bank, of Lincoln, Nebr.

From the Nebraska State Journal, printed at Lincoln, the following article was recently clipped:

"AN IMPORTANT ALLIANCE—FIRST NATIONAL BANK GAINS BIG CONNECTIONS—LARGE BLOCKS OF STOCK IN THE LINCOLN BANK BOUGHT BY CHICAGO FINANCIAL INSTITUTIONS.

"It developed yesterday that the visit of President S. H. Burnham, of the First National Bank, to Chicago early in the week was connected with a financial transaction of much interest and importance to this city. It is well known that the larger banks of New York and Chicago are forming alliances with the most promising banks in the smaller cities. While President Burnham is strongly opposed to 'branch banking' or any change that will make the local banks mere appendages of the big city institutions, he does believe in an arrangement which will increase the business of all the banks concerned and will be a source of added solidity to those in the smaller cities.

"Mr. Burnham arranged for such an alliance while at Chicago with two of the largest financial institutions there, one of them a leading national bank, the other the Federal Trust and Savings Bank, a concern with a capital and surplus of two and a quarter millions. Both of these concerns bought large blocks of First National stock. The exact amount purchased is not announced, but it is said to be large enough to make the officers of the Chicago concern deeply interested in the growth and success of the First National of Lincoln. The stock acquired was nearly all held in the East. The control of the bank remains in this city. No changes are contemplated in the officers or the manner of doing business except to add T. P. Phillips of the Federal Trust Company to the directory. Mr. Phillips is a large property holder in this part of Nebraska, and is thoroughly conversant with affairs here. He is an uncle of W. C. Phillips, clerk of the district court.

"Mr. Burnham was asked about the sale of the stock yesterday, and confirmed the report. 'It is true,' he said, 'that I have negotiated the sale of two large blocks of stock, mostly the combined holdings of New England parties, to two of the strongest banks in Chicago. This will give us permanent connections that will be of the greatest value to us, and will not change our list of local stockholders or bring about any change in our policy or management. We are now in a chain of independent but allied banks extending clear to New York, and including the very largest and strongest concerns in the country. This bank is just as independent and as much a Lincoln bank as it ever was. The change simply transfers a large amount of the stock from scattered holdings, mostly in New England, to these two great Chicago banks, which will be of immensely more value to us in good times, as well as bad, than the individual stockholders could possibly be. I do not believe anything has occurred for years to give greater prestige to Lincoln banking than the purchase of this stock in Chicago.'

Does not this prove more than I have attempted to show? Does it not prove that Mr. Burnham, although at the head of a very successful bank, evidently feels the need of greater strength? He is conscious that there is something wrong in the present situation, but he is trying to do a right thing in a wrong way.

When a period of contraction comes, as it must in the very nature of things, he will find that instead of having done a wise thing he has in all probability done a very foolish thing, for I doubt not that if all the facts were known it would appear that he has connections not only with stronger banks in the East, but with weaker banks in the West.

His weaker connections will boast of their relation to his bank precisely as he boasts of his relation to the great banks of Chicago and New York. The failure of the smallest of them will be a reflection upon his bank, and he in turn may have to stand the assault of a run, because it will be said, "He must be weak or he would have saved an institution identified with his own."

In other words, this unnatural relation of banks holding stock in other banks will reduce them all to the weakness of the weakest; for no chain is stronger than its weakest link, nor the speed of a fleet faster than its slowest vessel.

Does Mr. Burnham not know that a branch of the First National Bank of Chicago would be vastly stronger in his own town than his bank could be, although it were known that the First National Bank of Chicago was the holder of some of its stock?

It now looks very much as if our country would have to learn the bitter lesson that will certainly be taught by the interdependent scheme of banking combinations now going on; for, while consolidation with half the capital eliminated would result in almost immeasurable strength, stockholding unions must prove disastrous in the highest degree.

But the bankers, doing this kind of business, within the very shadow of that convention, have their counterpart, everywhere, all over this land, and are but the forerunners of a universal practice that is to come, as an unquestioned gold standard came, to benefit and prosper the whole people.

Third. Branch banking is unbusinesslike. I apprehend that

this is purely a personal remark and emanated from their own point of view, that of selfishness; for all business is selfish, and not from any particular concern for the public welfare. Branch banking could not be objectionable to these bankers in any way except that it might interfere with their assumed vested rights, because, forsooth, they are in the business.

Since the rates of interest throughout the United States to all borrowers would be reduced to 3 or 4 per cent, it would seem to be *unbusinesslike* on the part of the bankers in convention assembled at Kansas City to permit branch banking. Did they imagine for a single instant that the cloven foot of this brazen assertion could be concealed from the *borrowing public?*

Do they forget that individualism is the purpose of our Government, and that the largest possible return for labor should be our daily solicitude?

Do they forget that interest rates are a tax upon production, and, therefore, a corresponding deduction from the wages of 20,000,000 toiling Americans?

Do they forget that the average rate of interest throughout the United States to-day is more than 6 per cent, when it ought to be as low as 3 per cent, and that this difference of 3 per cent upon the loans of the people, amounting to $6,000,000,000, means a charge of $10 each upon our 20,000,000 of workers and producers?

Of course it is easy to see that it would be *unbusinesslike* for the bankers to permit a cut of $200,000,000 in the interest they are squeezing from commerce, not because they are unjust or bad men, but because the machinery which the law compels them to use can not be run for less.

They fear the improvements demanded by our age and these progressive times; and this they admit in the fourth proposition contained in their resolutions:

Fourth. Branch banking would create a *monopoly* to the "*exclusion of the men of the West* who have labored so faithfully and well to make our banking system what it is to-day, the best in the world."

No one will be inclined to believe that their opposition was directed against a monopoly *per se*, but rather that it was directed against *their exclusion* from that monopoly, if there was to be one. If they were to have whatever monopoly there was, as they have to-day, they would have no objection to its immediate creation.

But I have already demonstrated that there can be no monopoly of credit if banking were made absolutely free, as everyone who has a dollar to lend is a competitor in the banking business, and all the loanable funds devoted to this department of commerce would be at his command.

The Kansas City bankers evidently are afraid of *being excluded* from the markets, where they are getting 6, 8, 10, 12, 16, and 24 per cent, by competing rivals who will lend money at 3 or 4 per cent, and as a justification of this assumed right, they tell us that through their long and faithful work they have produced the best banking system in the world.

I had supposed that our banking system, if you can call it a system at all, was one of the worst, if indeed not the very worst, in the world; that it had been produced by the laws passed to make a market for United States bonds during the civil war, and that the men engaged in banking under those laws to-day were in it for what they could make out of it.

It had never occurred to me that the bankers looked on their institutions as of a distinctly eleemosynary character, or that, when they were working "faithfully and well" to make every cent they could, they were actually engaged in the work of home missions.

No, Mr. Chairman, the proposition is a simple and plain one. It is a question of personal selfishness, tinctured possibly by a grain of prejudice, a grain of conservatism, and a few grains of pride. It is the battle of the ages, the opposition to progress, the old against the new.

In 1633 Galileo was convicted of heresy, because, after having invented a telescope, magnifying a thousand times, he observed things that convinced him that the world moved and that the sun was the center of the universe.

Arkwright's first mill was set on fire and burned down, and both Cartwright and Hargreaves, as well as Arkwright, drew upon themselves the displeasure of the mob, because of their inventions and improvements in spinning.

It was the common opinion that every machine that could do two men's work threw one man out of employment. In a sense, superficially speaking, that was true, but the grave mistake was in not perceiving that the demand for raw material was so enlarged that a great many more men were furnished with employment.

Thus, through the new methods in spinning, the demand for cotton was so increased that thousands were given work in growing, handling, and transporting it, and in providing for the many other industries springing out of the changed conditions.

Mob after mob attacked the Flemish weavers in England, because they brought many improvements in the art of weaving with them.

In France the mob attempted to drown Marie Jacquard, the inventor of the loom used to this day in weaving silk. They destroyed his machines and burned him in effigy. They drove him from his home at Lyons. But at last the people of Lyons were compelled to turn to this loom as to their salvation, finding that through it their business was increased, not ruined, and establishing that world-wide reputation for exquisite silk goods which has made the name of their city a household word.

Robert Stephenson, when making the first surveys for a railroad in England, had to face the ridicule of the newspapers. The following are a few, among many, of their assertions:

"At the rate of 15 miles an hour, if the engine or any forward part of the train should suddenly stop, the whole would be cracked like nut shells."

"The locomotives would prevent the cows from grazing and the hens from laying."

"There would no longer be any use for horses. The species would become extinguished, and oats and hay would be unsaleable commodities."

These forebodings remind me very much of the resolutions of the bankers at Kansas City to which I have alluded.

When the self-binding harvesters were introduced, a few years ago, they were broken and rendered useless as they stood in the fields. More recently, the typesetters waged a bitter war against the linotype. A thousand other instances could be cited to further illustrate the spirit and temper of the Kansas City resolutions.

However, it is to be observed in the long past that nearly all the evolutionary steps have been in the direction of eliminating hand labor, and that protest has been persistent until quite recently; although, generally speaking, comparatively little opposition has been made in America, where the great intelligence of our mechanics has enabled them to comprehend the uplifting power, ennobling influence, and beneficial effect of inventions, discoveries, and improvements within the scope of their endeavors.

A system of credit currency and the privilege of free branch banking means the elimination of unnecessary machinery and the transfer of much capital from banking to some other business, only to make it all vastly more efficient and profitable.

But the bankers who met at Kansas City do not seem to possess either the intelligence, spirit of progress, or patriotism that together have almost invariably marked the conduct of our mechanics and working people, who, on their part, have approved and accepted the marvelous devices conjured up to multiply their capacity to produce, only to find themselves in turn the best-paid artisans in the world; yes, veritable kings among toilers!

English labor, though slower to appreciate the value of any process of cheapening articles, from which there would result a greatly enlarged market and consequently a much higher order of living and a more than corresponding increase in wages, is now beginning to follow in our footsteps.

In the New York Sun of April 8, 1902, I read the following special cable dispatch:

"William Abraham, who represents the Rhondda Valley division of Glamorganshire in the House of Commons, and who is president of the South Wales Miners' Federation, and treasurer of the International Miners' Congress, again addressed his constituents to-day on the fruits of his recent American tour. He admitted that he had been thoroughly cured of his antimachinery prejudice, and said he was resolved to advocate in the future the use of machinery wherever it was possible as necessary to Great Britain's competition with the world.

"He declared that it was the duty of capitalists to introduce machinery and teach the workers to use it. He himself was prepared to dispel the prejudice against machinery."

The great battle of civilization is for better and better conditions of living for the laboring part of our population, which means higher and higher wages, yet at the same time cheaper and cheaper commodities. It follows, then, that what is most essential in securing this all-important object is constant employment for all of our people.

Last year about every tenth man was employed in the production of commodities which we exported. Can we hold that portion of our foreign market? Must we not make even larger sales if we are to keep all of our people at work all the time?

If we can adopt financial and currency principles that will reduce the interest charge from an average of 6 per cent to an average of 3 per cent, or from $400,000,000 to $200,000,000 annually, we shall achieve something for American labor and American capital of a most substantial character.

If Great Britain, Germany, and other countries that are our competitors in special lines adopt our best machinery, as they are beginning to realize they must do in order to be successful in the

trade of the world, we shall fail in the final trial of the deadly contest for commercial supremacy if compelled to pay double rates for capital and double wages for labor.

We must not lower our level of civilization by reducing American wages. We must compel our competitors to raise theirs to ours. We can not hope that their interest rates will rise to ours. We must lower ours to theirs, and trust, as we measure swords with all comers in the markets of the world, that the intelligent superiority of the American workman will more than make up for the difference of wages paid here and abroad.

BRANCHES ABROAD.

Not only must we secure this banking advantage at home, but we must not subject our trade in other lands to the disadvantage of sending our exchange through foreign channels.

At every point where the business of the world is being carried on, we want American bankers favoring American merchants and protecting American interests. The banker, who controls the bills of lading, can route the goods over American shipping lines. The increment of undeveloped opportunities should be turned American-ward through the use of American capital.

I want to see the time when a bill of exchange drawn on New York will be preferred, the whole globe round, to any in the world; when every tribute paid by an American for the consummation of a commercial transaction will go over the counter of a bank where English is spoken with an American accent.

AN UNEQUIVOCAL AND UNQUESTIONED GOLD STANDARD NECESSARY.

But neither New York nor any other American city can ever become the commercial center of the world until the remotest, aye, the last possible doubt has been removed with regard to the gold standard.

Indeed, not only must our current business be based upon gold, but the continuance of gold as a standard must depend, not upon the cowardice or courage of a Secretary of the Treasury, the caprices of a President, or the temporary policy of a party, but upon the settled policy of the country.

Nor can the gold standard rest alone upon the moral and political conditions of the country; but the remotest possibility of our shifting under any circumstances to a doubtful position must be eliminated by actual conditions, determined by law and universally acquiesced in and practiced by the people.

When merchants in the furthermost parts of the earth dispose of their goods, they will not accept in payment for them a bill of exchange that may or may not be paid in coin that is an absolute equivalent, the recognized, absolute equivalent of gold in every market on the globe.

The merchant in Hongkong may want to use the bill in France, Italy, Austria, Turkey, Russia, Germany, England, South America, or at some other point in the Orient, and, therefore, he, or any man, anywhere on God's footstool, who has a writing in the form of a letter of credit, draft, or bill of exchange, calling for an American dollar, must know that he is entitled to 25.8 grains of gold, nine-tenths fine.

If the "American eagle" is to take the place of the pound sterling in the markets of the world, the American dollar must become the symbol of truth and honesty, and itself be an actual verity.

"At the present moment throughout Europe," says Paul Leroy Beaulieu, "and even in France, prudent people try to have a part of their fortunes in pounds sterling, because it is known that pounds sterling are the only true money; that is to say, money that is not exposed to change by new legal arrangements. It is not known exactly what the dollar will be, or the mark, or even the franc. The whims of legislators may change them in the future, as they have changed them in the past. On the contrary, there is a rooted confidence among men engaged in finance the world over, that the pound sterling will always be a piece of gold of 7 grams and 988 milligrams, 916.66 fine, and that England will never commit the blunder of putting gold and silver on the same footing as money. Thus the pound sterling, all the world through, especially when long contracts are to be made, is not only the money par excellence, it is the only money, and in it alone can be placed almost absolute confidence."

The American dollar must be an unvarying, fixed, and unquestioned quantity of the world's standard of value. Then, and only then, will it become a fit emblem of the strength, power, and glory of the greatest and most potential, political, and moral force in the affairs of mankind.

To-day, wherever the flag floats, you can compel a man, who may have sold you gold bullion of a hundred dollars' value to accept for it 100 slugs of silver weighing 412½ grains, nine-tenths fine, and worth only $39; and he can not by law obtain the value of the gold bullion for the hundred slugs of silver.

Why should not the same creditor who has parted with his gold bullion be compelled to accept 100 slugs of copper, worth $3.90, or 100 slugs of iron, worth 39 cents, or 100 strips of paper worth nothing, the same being irredeemable?

Has the Government any more moral right to compel a man to accept 60 cents of fiat in a silver dollar than a hundred cents of fiat in colored paper?

Does not the same moral law that compels the Government in good faith to redeem its fiat obligation, written on paper, also compel it to redeem its fiat obligation stamped on silver?

Any nation whose commercial honor may be measured in gold, silver, copper, iron, or paper, according to the caprice of the hour, can not hope to become the clearing house of the world.

The complete confidence of business men the earth around can only be secured by retiring the demand obligations of the Government and making every silver dollar as good, under any and all circumstances, as a gold one.

First. The demand obligations of this Government must be retired.

Gold is the one commodity that is now accepted everywhere for everything. Gold is now the only commodity that pays the balance due from one nation to another; that pays all the balances due to all nations from all nations.

Gold, like all other commodities, will also go to the market where it will bring the best price; that is, where its *use* will bring the highest price, for gold is not bought like any other commodity in the world for the purpose of consumption, but for its use alone for monetary purposes, without lessening or destroying appreciably the quantity—thousands of packages being sent from one country to another and back again, the seals remaining unbroken.

It is perfectly clear, therefore, that the price paid for the *use* of gold for monetary purposes, or the rate of interest that can be obtained for it, will determine its destination.

To control the movement of gold, then, those who are compelled to supply gold must have the power to raise and lower the rate of interest; for in the absence of such power its selling price will always be the lowest and the purchase price will always be the highest. This is the exact position or situation in which the United States Treasury is placed, by having to redeem $346,000,000 of United States notes or greenbacks in gold coin.

There is no other place in the world where all the nations can go and get free gold by paying the value, insurance, and freight except the United States Treasury, which in turn must sell Government bonds to replenish its gold and then tax the people to pay them off.

Again, at every sign and signal of danger, arising from a scarcity of currency or a contraction of credit, every bank in the country hoards every dollar of gold it has and hurries to the United States Treasury for more, and so the Government must supply gold for export, for bank reserves, and for personal hoarding.

The weakness of the Government is in the fact that it does not receive deposits and make loans precisely as a banking institution. If it is to continue to supply gold it should do this. But no one at all familiar with Government banking would recommend the adoption of this additional function of receiving deposits and entering the loan market.

The financial history of the world has been punctuated with disastrous experiences along this line, and every other country except the United States has taken warning and paid its demand notes.

Paul Leroy-Beaulieu, in writing of the policy of France after the Franco-Prussian war, said:

"After the disastrous war of 1870–71 France regarded it as the most urgent if not the chief object of its financial policy to absolutely to repay to the Bank of France the advances made to the Government during the war, amounting to 1,500,000,000 francs, or $300,000,000. One of the greatest services rendered to the country at that time by M. Thiers was the energy with which he insisted that this debt must be paid before all others. Yet it bore interest at only 1 per cent per annum, and at that time the French Government was borrowing at 6 per cent on bonds in perpetuity. Nevertheless it was thought, and with reason, that it was far better for the country to discharge this debt at 1 per cent and to get back to a completely normal monetary circulation. M. Thiers secured an appropriation of 200,000,000 francs ($40,000,000) a year for the redemption of this paper. This policy was followed by his successors, and the 1,500,000,000 francs lent to the State by the bank was repaid in successive annual installments by the month of March, 1879—eight years after peace was declared. At this present moment not a trace of that fearful conflict remains in the French monetary system."

There is a strange coincidence in the time and amount between our demand notes still outstanding and those paid off by the French nation, both being about $300,000,000, but a most striking contrast between our present Government rate of 2 per cent and that of France in 1872–1879, which was 6 per cent.

Even little Japan, only just emerging from a feudal system, knew enough to pay off all its demand notes which were issued during its war with China.

The North American Review for May, 1902, contained this paragraph:

"*Currency redemption loan.*—This loan was raised with the object of withdrawing the Government paper money. In 1890 the

amount of Government paper money in circulation was 40,065,256 yen ($20,032,628), of which 32,000,000 yen ($16,000,000) were the notes with denomination over, and 8,065,256 yen ($4,032,628) the notes with denomination below, 1 yen, and 10,000,000 yen ($5,000,000) in silver was held as the reserve for the former. The Government then made a contract with the Bank of Japan, which advanced 22,000,000 yen ($11,000,000), thus making the total reserve 32,000,000 yen ($16,000,000). For the withdrawal of the latter notes the Government provided $500,000 annually in the budget. In this manner the redemption of the Government paper money was consummated. This loan bears no interest and is to be repaid within twenty years, at the option of the Government."

Commenting upon our apparent want of comprehension and proper appreciation of the ever present danger to our continued prosperity, Leroy-Beaulieu said:

"There is much surprise in France and throughout the Continent of Europe that a nation so great, so rapidly growing, and so richly endowed in character and in material resources as the American people should allow its development to be trammeled by frequent and severe crises, and that it should either be unable to discern their causes or lack decision to remove them from its path. The European accustomed to the study of financial phenomena is struck by two facts, peculiar at present to the United States. On the one hand, the issue of an enormous volume of paper money, redeemable in specie, it is true, by the public Treasury; on the other hand, the hesitation shown by the American people in according legal monetary preeminence to gold, and the dreams of bimetallism, national or international, in which they indulge."

In his message of December 6, 1897, President McKinley said:

"With the great resources of the Government, and with the honorable example of the past before us, we ought not to hesitate to enter upon a currency revision which will make our demand obligations less onerous to the Government and relieve our financial laws from ambiguity and doubt. * * *

"I earnestly recommend as soon as the receipts of the Government are quite sufficient to pay all the expenses of the Government, that when any of the United States notes are presented for redemption in gold, and are redeemed in gold, such notes should be kept and set apart and only paid out in exchange for gold. This is an obvious duty. If the holder of the United States note prefers the gold and gets it from the Government he should not receive back from the Government a United States note without paying gold in exchange for it. The reason for this is made all the more apparent when the Government issues an interest-bearing debt to provide gold for the redemption of United States notes—a noninterest-bearing debt. Surely it should not pay them out again except on demand for gold. If they are put out in any other way, they may return again, to be followed by another bond issue to redeem them—another interest-bearing debt to redeem a noninterest-bearing debt."

In his message of December 8, 1898, President McKinley renewed this recommendation, and said:

"In my judgment, the present condition of the Treasury amply justifies the immediate enactment of the legislation recommended one year ago, under which a portion of the gold holdings should be placed in a trust fund from which greenbacks should be redeemed upon presentation, but when once redeemed should not thereafter be paid out except for gold."

In his message of December 5, 1899, President McKinley said:

"In this connection I repeat my former recommendations, that a portion of the gold holdings shall be placed in a trust fund from which greenbacks shall be redeemed upon presentation, but when once redeemed shall not thereafter be paid out except for gold."

Hon. Lyman J. Gage, Secretary of the Treasury, in his annual report of 1901, said:

"Preliminary thereto I want to refer to the greenbacks and the desirability of relieving the Treasury from the responsibility which attaches to their redemption. This responsibility at the present time rests very lightly. It has been, however, a heavy burden in the past and may become in the future a source of public anxiety and financial embarrassment to the Government. Thoughtful men of affairs and financiers have long argued for the refunding of these notes into time obligations, but such arguments have failed to convince the people of the propriety of canceling a debt bearing no interest to create in its stead one equally charged with the burden of interest. If, however, in a modification of the law relating to bank currency the burden of redemption can be equitably transferred from the Treasury to the banks, without interest cost to the Government, then the objection to their retirement can no longer be urged. That this result can be attained there is substantial ground for believing."

President Cleveland, during his second Administration, when the occasion arose, never lost an opportunity of impressing upon Congress the urgent necessity of retiring the demand obligations of the Government. The following extract from his last message, dated December 7, 1896, well illustrates his convictions on this subject:

"The terrible civil war, which shook the foundations of our Government more than thirty years ago, brought in its train the destruction of property, the wasting of our country's substance, and the estrangement of brethren. These are now past and forgotten. Even the distressing loss of life the conflict entailed is but a sacred memory which fosters patriotic sentiment and keeps alive a tender regard for those who nobly died. And yet there remains with us to-day in full strength and activity as an incident of that tremendous struggle a feature of financial necessity not only unsuited to our present circumstances, but manifestly a disturbing menace to business security and an ever-present agent of monetary distress.

"Because we may be enjoying a temporary relief from its depressing influence, this should not lull us into a false security nor lead us to forget the suddenness of past visitations.

"I am more convinced than ever that we can have no assured financial peace and safety until the Government currency obligations upon which gold may be demanded from the Treasury are withdrawn from circulation and canceled."

On October 12, 1895, Hon. John G. Carlisle, then Secretary of the Treasury, uttered these significant words:

"One of the most important questions the people have now to consider is whether they can afford to adhere longer to a system which periodically augments the public debt for the purpose of securing gold to be exchanged for notes, which, when redeemed, are not retired and canceled, but are reissued and put in circulation, to be over and over again presented for redemption. * * *

"Gold can be procured only by sales of bonds or by voluntary exchanges of gold coin for other forms of currency by the banks, and it is scarcely necessary to say that these voluntary exchanges are most difficult to make at the very times when gold is most needed. When bonds are sold in our market, experience has shown that a large part of the gold to pay for them is taken from the Treasury reserve in the first instance, or withdrawn within a short time after the bonds have been paid for and delivered."

It is interesting to note the concurrence with these views of Hon. Hugh McCulloch, who was Secretary of the Treasury just after the close of the civil war.

In his report of 1866, Mr. McCulloch said:

"Prior to the passage of this act (the national-bank act), issues by the Government had been authorized and a large amount of Government notes put into circulation. But there is nothing in the acts authorizing their issue, or in the communications of the Secretary, or in the discussions in Congress to justify the opinion that they were intended to be a permanent circulation. On the contrary, the provision in the law for their conversion into bonds, and the arguments of the advocates of their issue, afford ample evidence that they were regarded as merely temporary, and justifiable only by an emergency which it was supposed nothing else could so adequately meet. Had it been proposed that these notes should be a permanent circulation and take the place of bank notes, there is good reason to suppose that the proposition would have had few if any advocates. * * *

"The policy of contracting the circulation of Government notes should be definitely and unchangeably established, and the process should go on just as rapidly as possible without producing a financial crisis, or seriously embarrassing those branches of industry and trade upon which our revenues are dependent. There is a great adaptability in the business of the United States, and it will easily accommodate itself to any policy which the Government may adopt. That the policy indicated is the true and safe one the Secretary is thoroughly convinced. If it shall not be speedily adopted and rigidly but judiciously enforced, severe financial troubles are in store for us."

That the issuance of the greenbacks, when authorized, was regarded as a temporary expedient, justified only by necessity, and that their retirement was intended to take place upon the restoration of peace, is clearly shown by the record of the Congressional debate, from which I desire to quote the following extracts taken from the speeches of both the advocates and opponents of the measure:

OPINIONS EXPRESSED DURING THE DEBATE IN CONGRESS ON THE ACT OF FEBRUARY 25, 1862, AN ACT TO AUTHORIZE THE ISSUE OF UNITED STATES NOTES—COMMONLY CALLED THE "GREENBACKS."

DEBATE IN THE HOUSE OF REPRESENTATIVES.

E. G. Spaulding, of New York: "The bill before us is a war measure—a measure of necessity and not a choice presented by the Committee of Ways and Means—to meet the most pressing demands upon the Treasury, to sustain the Army and Navy until they can make a vigorous advance upon the traitors and crush out the rebellion. These are extraordinary times, and extraordinary measures must be resorted to in order to save our Government and preserve our nationality. * * * The bill is simple and perspicuous in its terms and easy of execution. It is a Government measure, and the officers of the Government are required to execute its provisions.

"Our Army and Navy must have what is far more valuable to

them than gold and silver. They must have food, clothing, and material of war. Treasury notes, issued by the Government, on the faith of the whole people, will purchase these indispensable articles, and the war can be prosecuted until we can enforce obedience to the Constitution and laws, and an honorable peace be thereby secured. This being accomplished, I will be among the first to agitate a speedy return to specie payments and all measures that are calculated to preserve the honor and dignity of the Government in time of peace."

George H. Pendleton, of Ohio: "I believe that this Government has reached a crisis in its history. I believe that it is approaching a period in the history of its legislation which may determine the question of its continuance. By wisdom, it may overcome the evils of secession; by its great power and resources it may be able to defend itself against those in arms against it; but I firmly believe that it can not maintain itself against the shock of the accumulated and manifold dangers which follow inevitably closely in the wake of an illegal, unsound, and depreciated Government paper currency."

Justin S. Morrill, of Vermont: "The subject of issuing $150,000,000 of paper currency and making it a legal tender by the Government at a bound—the precursor, as I fear, of a prolific brood of promises, no one of which is to be redeemed in the constitutional standard of the country—could not but arrest my attention, and, having strong convictions of the impolicy of the measure, I should feel that I utterly failed to discharge my duty if I did not attempt to find a stronger prop for our country to lean upon than this bill—a measure not blessed by one precedent and damned by all.

"If this paper money is a war measure, it is not waged against the enemy, but one that will make him grin with delight. I would as soon provide Chinese wooden guns for the Army as paper money alone for the Treasury.

"What is it that we most need? Clearly we lack money and wish to inspire our own people with that confidence that will induce them to lend the requisite amount. But the very first step we propose is to destroy whatever of confidence yet remains among those who have a dollar to lend. We proclaim by an engraved advertisement—to be forced into the pockets of every man by the fiat of the Government—that we will hereafter liquidate all our debts with paper only. * * *

"I object to this bill on the ground, as I conceive, of its utter impolicy. I admit that from the contracts entered into, many of which now due, I regret have not been paid promptly as they deserve to be, and from the heavy monthly disbursements to our Army, that the Government can flood the country with even 150,000,000 of paper dollars. But from that moment you would vastly increase the cost of carrying on the war; prices would go up, and the addition we should pile on our national debt would prove that it might have been even wiser to have burned our paper dollars before they were issued. The inflation of the currency would be inevitable. In ordinary times few comprehend the Archimedean leverage of a very few millions added to or subtracted from the currency of a nation actively engaged in the affairs of the world. In the former case it produces a crisis and general bankruptcy, and in the latter it puts every speculator on tiptoe to buy out his neighbor—his horse, his ox, his ass, or anything that by keeping overnight will put money in his purse. Property becomes as volatile as alcohol at boiling heat, and can not be kept within its ancient boundaries. The poor man, accustomed to butcher's meat, and who has not counted tea and coffee as luxuries, suddenly finds their daily use beyond his means. The ecstacy of an inflated currency is enjoyed by the few only, and these are cruelly punished when the gaseous influence subsides. * * *

"By taking the first step in making paper a legal tender we shall sever all connection with any other fountains of supply. We can not retrace our steps, but must go on. No sound man would spontaneously take stock liable by the practices of the Government to be reduced the very next day 10 per cent, or any other per cent, in its value. So that if Congress should have the virtue to wish to cease the further issue of these notes, it would no longer be an open question. But having tested this facile method of paying debts, I fear the stern and honest mode of taxation would be repugnant to many constituencies, and that the doors of the temple of paper money would not soon again be closed."

Roscoe Conkling, of New York: "The whole scheme presupposes that the notes to be emitted will be lepers in the commercial world from the hour they are brought into it; that they will be shunned and condemned by the laws of trade and value. If this is not to be their fate, what is the sense, as was said in the Federal constitutional convention, in attempting to legislate their value up?

"Now, I do not believe that you can legislate up the value of anything any more than I believe you can make generals heroes by legislation. The Continental Congress tried legislating values up, even by resorts to penalties, but the inexorable laws of trade, as independent as the law of gravitation, kept them down. I do believe you can legislate a value down, and that you can do it by attempting to legislate it up. * * *

"When you clothe an individual with the power to give his own checks to pay his debts and supply his wants, when he has nothing with which to pay them, and when you ordain that every man shall receive his check, you have performed for that man the last sad offices of financial humanity; there is nothing left to be done for him; and, if he fails then, he is past resuscitation and past resurrection. So of a government; you may try any other expedient with impunity, and, if it fails, you have remaining a resort to other things; but if you once authorize the issue and compel the acceptance of its own paper, and that proves to be a failure, there is nothing left; the die is cast; the last link is broken. * * *

Thaddeus Stevens, of Pennsylvania: "This bill is a measure of necessity, not of choice. No one would willingly issue paper currency not redeemable on demand and make it a legal tender. It is never desirable to depart from that circulating medium which, by the common consent of civilized nations, forms the standard of value."

DEBATE IN THE SENATE.

Mr. William Pitt Fessenden, of Maine: "With regard to the particular bill now before the Senate, we all know that it was resorted to as a temporary measure, not in the beginning, but in consequence of the necessities of the Treasury, arising from a greater expenditure than the Secretary could have imagined, and arising from the necessary delay with reference to other measures. Can it be said that a measure like the one now pending before the Senate and the country is a measure of a day or an hour? Why, what does it propose? It proposes something utterly unknown in this Government from its foundation; a resort to a measure of doubtful constitutionality, to say the least of it, which has always been denounced as ruinous to the credit of any government which has recourse to it; a measure, too, about which opinions in the community are divided as perhaps they never have been divided upon any other subject; a measure which when it has been tried by other countries, as it often has been, has always proved a disastrous failure."

John Sherman, of Ohio: "I agree that this measure can only be justified on the ground of necessity. I do believe there is a pressing necessity that these demand notes should be made a legal tender if we want to avoid the evils of a depreciated, dishonored paper currency. I do believe we have the constitutional power to pass such a provision, and that the public safety now demands its exercise. * * * It is easy to criticise this bill. I dislike to vote for it. I prefer gold to paper money; but there is no other resort. We must have money or a fractured Government. If Senators can show me how they can raise money except in the way proposed I will join them in denouncing paper money."

James A. Bayard, of Delaware: "It is impolitic and inexpedient as well as unconstitutional. It is a mere temporary expedient. It may give present inflation and present relief for the hour, and a very brief hour indeed, but it will be followed by a weakening of the resources of the Government, a depreciation of its credit, and it will produce nothing but disaster and ruin to the country."

Charles Sumner, of Massachusetts: "Is it necessary to incur all the unquestionable evils of inconvertible paper, forced into circulation by an act of Congress; to suffer the stain upon our national faith; to bear the stigma of a seeming repudiation; to lose for the present that credit which in itself is a treasury, and to teach debtors everywhere that contracts may be varied at the will of the stronger? Surely there is much in these inquiries which may make us pause. If our country were poor or feeble, without population and without resources; if it were already drained by a long war; if the enemy had succeeded in depriving us of the means of livelihood, then we should not even pause. But our country is rich and powerful, with a numerous population busy, honest, and determined, and with unparalleled resources of all kinds—agricultural, mineral, industrial, and commercial. It is yet undrained by the war in which we are engaged; nor has the enemy succeed in depriving us of any of the means of livelihood. It is hard, very hard, to think that such a country, so powerful, so rich, and so beloved, should be compelled to adopt the policy of even questionable propriety."

Mr. President, let us not deceive ourselves. Our Government is sleeping upon the bosom of a veritable volcano, and it can not escape financial earthquakes so long as these United States notes or greenbacks are outstanding.

Shall we offset the constant terror of the American banker, who is always expecting that something awful is about to occur, and the periodic desolation of credit and immeasurable ruin with a plea of ignorance and cowardice? Or shall we, in the very heyday of prosperity, prepare for our unnecessary but ever-recurring shocks, panics, crises, and commercial horrors?

In his last report as Secretary of the Treasury, Hon. Lyman J.

Gage, who has left a deep impress upon the financial history of his time, gave this most salutary advice:

"It would, then, appear that the present is the most propitious hour in all our history, and as favorable a one as we may hope for in the future, to enter upon judicious measures to eliminate such elements of financial weakness as experience has brought into view, and to perfect, if possible, our now imperfect system of currency."

But it may be inquired, "Did we not pass a law in 1900 to overcome these threatened dangers?"

Prior to the passage of the so-called gold-standard law, the Government could, by the process of selling bonds and impounding the United States notes, stop the draft upon the Treasury; but by that law the maximum amount of United States notes that can be held by the Government is only $50,000,000, so that the actual result was to destroy the power of the Government to break the endless chain.

We authorized and instructed the Secretary of the Treasury to maintain the parity of our money, including our silver, with our gold, but gave him no power to do so.

By attempting, or pretending to attempt, to legislate effectively and conclusively upon the question of the standard, we achieved a moral victory, for we demonstrated that we dared to seem to do something, however futile and even worse than futile our action was.

We are to-day, then, barring this new disadvantage, just where we were in 1878, so far as the United States notes are concerned; and have, in addition, what there are remaining of the Treasury notes, about thirty millions, or a total of about $375,000,000, of Government obligations.

Unfortunately, however, since the national-bank notes, now amounting to more than $300,000,000, are redeemable in United States notes, this amount must be added to the Government burden; so that we have about $700,000,000 directly resting upon the Treasury gold, which is now fixed at $150,000,000.

Though our business is expanding every hour, and our credits at the banks have increased from $719,000,000 in 1879, when the reserve was $100,000,000, to $3,000,000,000, our Government reserve has increased only $50,000,000, and this, not by the force of that precaution and experience which always fix from day to day, according to circumstances, the relation between reserves and liabilities, but by the arbitrary force of law.

Indeed, no man can assert that the $150,000,000 in the United States Treasury was ever or is now a legitimate reserve to the commercial credits of the country.

Nor can any man say that there is an economic coin reserve in the banks to protect the commercial credits of the country, for no bank is compelled by law to hold or pay out gold coin for a single obligation.

The result is that the 12,000 banks of the country, conscious of their weakness, and realizing that their depositors are also conscious of the weakness of the banks, rush at the first indication of danger to the Treasury with United States notes and demand gold to increase the already useless hoard which they are not compelled to use under any circumstances; and so the direct and indirect burden resting upon the Treasury gold of $150,000,000 is, first, the United States notes, amounting to $346,000,000; second, the silver in its various forms, amounting to $535,000,000; third, the national-bank notes, amounting to $310,000,000, and fourth, the commercial credits or bank liabilities, amounting to $6,000,000,000, making a total burden direct and indirect of $7,200,000,000, to which the gold in the Treasury is supposed to be a touchstone and a reserve.

And yet, in no sense is it naturally related to any of these huge burdens, except to the United States notes, which in turn transfer to the Treasury the gigantic load it was never intended and is utterly unfitted to carry, being certain in the future, as in the past, to break down at the critical moment and precipitate panic, disaster, and commercial ruin, and sooner or later to bring repudiation and dishonor.

CASH IN THE TREASURY.

In the darkest days of the civil war the credit of the country never received such a blow as threatened it in the first week of February, 1895; and in February, 1896, only a few hours and a very few millions stood between this Government and a commercial tragedy without parallel in human affairs.

And yet nothing has been done down to this very day of a substantial character to avert its recurrence and prevent the overwhelming disaster of a silver or paper basis, which is almost certain to come whenever there is the coincidence of the same forces there in operation with political cowardice in the White House.

Nor should it be overlooked that the very incidents of 1895 and 1896 had been predicted by every intelligent and patriotic investigator and student, and by all the conspicuously able Secretaries of the Treasury holding office since the days of the war that brought the United States notes into existence.

The amount of gold held by the Treasury in June, 1878, was only $128,460,203; but by September, 1888, it reached the highest point before that fatal decline, namely, the magnificent sum of $332,351,306, and this was the condition, practically, when Benjamin Harrison became President, March 4, 1889.

By October, 1890, the amount in the Treasury had declined to $300,000,000; it was $160,000,000 in October, 1893, the net gold balance being only $83,000,000; by the latter part of January, 1894, it approached $50,000,000—just before the first bond sale, which brought $58,660,917 into the Treasury.

Overtrading and unsound speculation, not only throughout the United States but throughout the world, had precipitated "hard times" generally; and Grover Cleveland's attack upon our industrial system was the last blow of demolition to a trembling public confidence which, however, he more than offset later on by the courageous repeal of the Sherman act and his brave defense of the Treasury and the public credit.

Four distinct causes can be discerned if we look closely into the crisis of 1893.

First. The silver legislation of 1878 and 1890, but especially the latter, as the immediate and direct effect was to drive gold out of the country in strict obedience to the Gresham law.

Second. Overtrading, undue and unremunerative speculations, and almost a complete exhaustion of credit.

Third. The unfortunate assault on the industrial system of the country, particularly powerful to do harm at a time when confidence was shaken, capital timid and uncertainty filled the air.

Fourth. The shortage in the revenues, which in a well-ordered financial system would have had no more effect than a surplus on the situation; but, owing to the fact that we were threatened with a silver standard, that gold was mysteriously leaving us, that personal credit was practically exhausted, and that an earnest effort was being made to overturn the industrial system of the country, the want of sufficient revenue became simply an aggravating cause.

Under ordinary circumstances and a properly adjusted system of governmental finance, a shortage of $100,000,000 in our national revenues should have no more effect upon this country than a shortage of $100,000 in the revenues of New York City.

That the Republican contention so often heard on this floor that a lack of revenue produced the disorder is only a superficial observation born of a political imagination rather than of economic reasoning and a knowledge of the subject is demonstrated by the fact that when the great strain came in February, 1895, and the credit of the nation swung in the balance there was a great abundance of money, so-called money, "stuff" such as it was, in the Treasury, there being an available balance December, 1894, of $153,337,579.99, including the gold reserve, which was impaired or depleted by $14,814,515, although by a sale of bonds in the month of November just preceding we had purchased $58,719,710.20 of gold coin, raising thereby the reserve to $104,673,199.01.

In January, 1895, the available cash balance was $144,603,304.19; but of this amount only $44,368,907.27 was free gold, the balance either being in "chips and whetstones," mere "stuff," or might become at any moment.

In the following month more than $65,000,000 of gold was purchased to strengthen the Treasury.

During no month, from February, 1895, down to February, 1896, did the amount of available cash in the Treasury fall below $175,000,000; and when the last bond sale of $100,000,000 was made in February, 1896, the available cash balance was $191,000,000, of which, however, only $40,000,000 was free gold.

The following statement, prepared by Hon. Ellis H. Roberts, Treasurer of the United States, may serve several purposes:

Statement showing the expenditures for the support of the Government, and the surplus or deficiency of revenues for each fiscal year from 1890 to 1902, inclusive.

Fiscal year.	Net expenditures by the Treasury Department.	Expenditures from postal revenues by Post-Office Department.	Total expenditures.	Surplus.	Deficiency.
1890	$318,040,710.66	$60,882,097.92	$378,922,808.58	$85,040,271.97	
1891	365,773,905.35	65,931,785.72	431,705,691.07	26,383,541.96	
1892	345,023,330.58	70,930,475.98	415,953,806.56	9,914,453.66	
1893	383,477,954.49	75,896,933.16	459,374,887.65	2,341,674.29	
1894	367,525,279.83	75,080,479.04	442,605,758.87		$69,803,260.58
1895	356,195,298.29	76,983,128.19	433,178,426.48		42,805,223.18
1896	352,179,446.08	82,499,208.40	434,678,654.48		25,203,245.70
1897	365,774,159.57	82,665,462.73	448,439,622.30		18,052,454.41
1898	443,368,582.80	89,012,618.55	532,381,201.35		38,047,247.60
1899	605,072,179.85	95,021,384.17	700,093,564.02		89,111,559.67
1900	487,713,791.71	102,354,579.29	590,068,371.00	79,527,060.18	
1901	509,967,353.15	111,631,193.39	621,598,546.54	77,717,984.38	
1902	471,209,641.57	116,633,042.00	587,842,683.57	92,195,546.35	

NOTE.—The final figures for the fiscal year 1902 are not yet completed, but the amounts stated above are approximately correct.

OFFICE OF THE TREASURER OF THE UNITED STATES,
Washington, D. C., July 3, 1902.

It will be observed that, although we had been losing gold ever since 1888, there was no deficiency in the revenues until 1894.

In the second place, the deficiency for the three years 1897, 1898, 1899 was $143,000,000, while the deficiency for 1894, 1895, 1896 was only $137,000,000; and yet the larger deficiency of 1897, 1898, 1899 caused no trouble; therefore, we must look deeper and further if we would fathom the causes of the disappearance of gold.

It should be noted that during the seven years 1890–1896 we produced in the United States $275,000,000 of gold, and that our exports exceeded our imports during the same years by $707,819,000.

In other words, taking the gold in the Treasury in 1890, $300,000,000, and the excess of our exports over our imports, together with our gold production, we should have had, outside of some extraordinary influences, $1,275,000 of gold available; and yet there went out of the country, from 1889 to 1896, inclusive, $487,000,000 of gold.

In the light of these facts no sincere and intelligent man will claim that it was lack of revenue that produced our treasury difficulties, nor will he assert that it was due to an adverse balance of trade.

The fact is, we are dealing with far greater and more far-reaching problems than a lack of revenue, adverse balances, and gold production. These are mere trifles compared with a clear understanding of the principles involved and a full comprehension of the forces that drove us to the very brink of repudiation and national dishonor.

The apprehension was world-wide that possibly—possibly, I say—the strain would be so great that the Government, which ought to have absolutely nothing to do with the commerce of the country, of which the gold reserve should be an essential element, might move away from the gold standard and drift out upon the sea of fiatism, or, possibly, be stranded on the shoals of free-silver vagaries.

Not until there was a settled conviction that the last dollar of American credit would be exhausted before the first American dollar should be dishonored, and every influence and power known to the financial world, including the control of exchange, had been invoked, was confidence restored, and apparently certain disaster turned into a golden harvest of unparalleled prosperity.

What happened during the years 1893–1896 may recur at any moment. Do we want to take the chance; have we, the people's representatives, the right to take the chance, of always having a man in the White House of Mr. Cleveland's patriotism and heroic courage?

Should we not, here and now, end all possibility of what might happen under other circumstances?

We have no right to subject the interests, prosperity, and welfare of 80,000,000 of patriotic people who have trusted us to the hellish havoc that might have been and still may be.

Says Mr. McLeod in his Elements of Banking:

"It used to be the dogma of many commercial writers that bullion is only exported to discharge a previous state of indebtedness, and that, consequently, a drain of bullion comes to a natural end when the indebtedness is discharged. But this is a most grievous error. The sufficient difference of profit in possessing bullion at two places *will cause a fabrication of bills for purpose of exporting bullion, without any previous indebtedness; and of course this will continue as long as this possibility of profit exists. Consequently, unless the profit is destroyed, the drain of bullion will not cease. The effectual way of annihilating this profit is by* raising the rate of discount. * * *

"When the rates of discount differ so much as is supposed above, between London and Paris (3 per cent in London and 6 per cent in Paris), persons in London fabricate bills upon their correspondents in Paris for the express purpose of selling them for bullion, which they then remit to Paris, and which they can sell again for 6 per cent. And it is quite evident that this drain will not cease so long as the difference in the rates of discount is maintained. Moreover, merchants in Paris immediately send over their bills to be discounted in London, and have the cash remitted to them. Now, the only way of arresting such a drain is to equalize the rate of discount in the two places. These simple facts are a perfectly conclusive answer to those writers who complain of the variations of the rate of discount by the Bank of England and suppose it is possible to maintain a uniform rate. Consequently at the present day it is the imperative duty of the Bank of England to keep a steady watch upon the rates of discount in neighboring countries and to follow those variations so as to prevent its being profitable to export bullion from this country."

Again, I say, the demand obligations of the Government must be retired, and the burden of furnishing gold for export and to prove and measure all commercial credits daily must be thrown upon the banks.

But it may be asked by an honest inquirer, "Can they procure a sufficient supply for this purpose?" Let us see.

England wants no more gold, and neither does Germany; Russia has about $200,000,000 less now than four years ago, with no apparent desire to greatly increase her holdings, and France has vastly more than she will need if she will prove by a brave and bold policy that there is no possible danger of her going to a silver basis, it being the great quantity of silver in France that requires so much gold.

In our own country to-day there is undoubtedly twice as much gold as there need be, if it were concentrated and brought into a direct and natural relation to our business; but we have it scattered about in different places, and, so far as our commerce is concerned, it is almost a myth, for there is now no power anywhere in the United States to control the movement of the yellow metal.

The $60,000,000 of gold in the general fund of the Government may all be dissipated by appropriations or absorbed because of lack of revenue, while the $356,000,000 in the Issue and Redemption Division, for which certificates have been issued, may be drawn at any time and sent abroad.

The banks, which hold $105,000,000 of gold and $88,000,000 clearing-house gold certificates, may sell it for export, as they are not compelled to use it to redeem any of their obligations, and even if they were they would at once seek the United States Treasury with United States notes to replenish any losses due to exports or redemptions.

What we propose and actually accomplish by the measure reported by the Banking and Currency Committee is to completely relieve the Treasury by compelling the banking institutions to currently redeem their notes in gold coin, and by retiring the United States notes prevent the banks from resorting to the Treasury to supply their needs.

That the $600,000,000 of gold held by the banks under the provisions of this bill, to protect their credits, would make us the strongest of all commercial nations there can be no doubt, although we are helpless to-day with nearly twice that amount, or $1,200,000,000, lying around loose somewhere to float away whenever those mysterious forces are put in motion that have sent out or kept out of the United States more than $5,000,000,000 of this metal since 1879.

The Government holds $150,000,000 in the form of a reserve fund and $356,582,087 in trust for which certificates have been issued. In addition to this it has in the general fund $62,719,962 in gold coin.

On February 25, 1902, the national banks held in gold coin $105,572,676, in addition to $232,279,190 in gold certificates.

The clearing houses held in gold coin, $88,409,000.

Of this $753,283,718 of gold only $150,000,000 are held as a requirement of law, and not a dollar of it outside of that $150,000,000 has the protection of a compulsion, and never can have so long as the Government continues to meet without charge any demands that may be made upon it.

The banking institutions, if compelled to perform the function of redemption, would keep just as much gold as they wanted and needed and no more; and if experience should demonstrate that $600,000,000 was quite sufficient, the country would sell the other $600,000,000 for the things the people need.

Besides being able to spare $600,000,000, or one-half of all we have to-day, the products of the mines of the world, from 1905 to 1915, when it is now estimated that the annual output will at least equal $400,000,000, will amount to as much as all the gold of which we had any knowledge in 1890.

That is, the world will produce more gold in ten years than it produced in four thousand years prior to 1890.

Again, mark this: Down to 1860 there was not a single instance in American history where coin reserves and coin redemptions were required that any serious difficulty was experienced.

The banks of New England, redeeming through the Suffolk Bank of Boston, had no difficulty. The banks of Virginia had no difficulty. The banks of Louisiana had no difficulty. The Bank of Ohio, the Bank of Indiana, the Bank of Iowa, and the United States Bank met this requirement during the first half century of our history.

Therefore we need not fear to-day, with an almost unlimited supply of gold, the telephone and telegraph to call for it, and limited trains and ocean greyhounds to bring it to us when wanted.

GREENBACKS ARE NOT CHEAPER MONEY FOR THE PEOPLE THAN GOLD ITSELF.

This single objection can be invariably heard when the retirement of the greenbacks is urged—that they are cheap money.

There is undoubtedly an impression abroad in the land among the people that it cost them less to get money because the greenback exists. Is this true?

If it should appear and be demonstrated that it costs no more to borrow $100,000 in gold than $100,000 in greenbacks the whole contention that they are cheap money must necessarily fall to the ground.

How did the greenbacks come into existence? When the Government was in financial distress because of the cost of the civil war those in charge of its affairs felt that their necessities justified the issuance of greenbacks, or the compulsory circulation of the Government's credit without interest, and so they made the *debts* of the Government a *legal tender*.

If the Government hired a man for a day or bought a horse or a ship it gave for the day's work, for the horse, for the ship, a writing by which it agreed to pay the person who held the duebill a certain number of dollars. When? As soon as the war was over and the nation was saved.

Has this obligation, which sprang from necessity, and was greatly feared, regretted, and limited to necessity at the time, been redeemed in accordance with the intention of those who gave it birth?

I do not believe it; nor do I believe that the understanding of those who created the greenbacks will be carried out until every one of them has been honored by redemption and glorified by cremation.

These old receipts for goods received and services rendered should be treated precisely as an individual treats a duebill when taken up by payment—that is, canceled.

If the Government has any different moral right than an individual, and that right is clothed with power, then the Government should not pay for anything it purchases, but simply give its receipts and compel the people to accept them for any goods they happen to sell to each other.

Such a policy of arbitrary power would place in circulation more than seven hundred millions of Government receipts the coming year, and so on, for every year, probably, until we could paper our houses with these mementoes of our indescribable misery; precisely as our forefathers did when their receipts and duebills for goods, which they called money, became a shame, a hissing, a by-word, and a curse, leaving only the legacy of a sad recollection in the epigram, "It is not worth a continental."

But will it be replied that the amount is now limited, and, therefore, there is no danger? Limited by what? By the *sovereign will* of the party in power at any given time.

The same sovereign party power that keeps $346,000,000 of greenbacks in circulation under Republican rule could make the amount $700,000,000 under Democratic rule.

Did not the leader of the Democratic party in the House of Representatives introduce an amendment to the bill providing revenues for carrying on the Spanish war, authorizing the Government to issue $50,000,000 of United States notes, and did not that party, practically to a man, vote for it?

No experience in the world's history justifies the continued existence of these notes. No course of reasoning can fix a limit to their amount.

The limit is purely a matter of party caprice. If $346,000,000 were a proper amount in 1878, let some philosopher determine what it should be to-day.

The hesitation of the Republican party to wisely and bravely deal with this question and proceed to retire the United States notes does not differ, except in degree, from the insane folly of the Democratic party that would increase them.

But, on the other hand, the Republican party has partially redeemed its pledges made when the United States notes were first issued.

Under an act passed April 12, 1866, the United States notes, then amounting to $449,000,000, were reduced to $356,000,000; and by an act passed March 18, 1869, known as an act "To strengthen the public credit," the Republican party declared:

"That in order to remove all doubt as to the purpose of the Government to discharge all just obligations to the public creditors, and to settle conflicting questions and interpretations of the laws by virtue of which such obligations have been contracted, it is hereby provided and declared that the faith of the United States is solemnly pledged to the payment in coin of all the obligations of the United States not bearing interest, known as United States notes."

Again, by an act passed January 4, 1875, provision was made for the resumption of specie payments, the same to take effect January 1, 1879, and from that day to this the United States notes have been as good as gold, because redeemable in gold coin, and for the same reason they have been since that date just as expensive to the borrower of money as gold coin itself.

Cheap money may be cheap in two distinct ways or senses:

First. Money, or, more properly speaking, currency, may be cheap because it is comparatively worthless; as the Continental money was cheap when it became worth less than 5 cents on the dollar, or the Confederate money was cheap when it took a wheelbarrow full of it to buy a cow, or the greenbacks were cheap when worth only 40 cents on the dollar; but the experience of the world has proven over and over again that this kind of cheapness is the most expensive kind of cheapness, and that what has seemed to be gained has resulted not only in twofold losses, but in fourfold, twentyfold, and, when the seeming gain has been carried to its logical conclusion and the issues have been practically unlimited, in infinite or total loss, and consequences for which the actual loss was no adequate measure.

Second. Money may be itself as valuable as a commodity as it is as a piece of coin. For example, a $10 gold piece is as valuable when beaten into a ball or cube as when bearing the stamp of the Government. When the borrower obtains such money from the bank he must pay for the use of the property in the metal and also for insuring his credit.

In other words, the borrower must pay for the use of the $100 of gold he obtains and the insurance of his credit in addition. Money of this sort is neither cheap nor economical, and it is the only form of a medium of exchange that is entitled to be called money. All other forms and substitutes should be denominated as currency.

Third. Money, or speaking more properly, currency, may be in the form of a certificate of coin deposited, which is of the full value in bullion of the coin represented, such as a gold certificate. This is neither a cheap nor an economical form of money; for when the borrower obtains from the banker $100 in gold certificates he must pay both for the use of $100 capital and for insuring his credit; and if the banker charges 4 per cent for the capital and 2 per cent for insuring credit it would be reasonable, as he has paid $100 in gold coin, or exchanged property worth $100 in gold coin, for the $100 of gold certificates delivered by him to the borrower.

Fourth. Money, or more properly and accurately speaking, currency, may be a Government obligation other than a gold certificate, but redeemable, nevertheless, by the Government in gold coin, such as our United States notes are to-day and have been since 1879.

Now, it is perfectly clear that no bank can get possession of $100 in United States notes without paying $100 in gold coin for the same, or exchanging property worth $100 in gold coin for them; therefore it follows necessarily that a borrower can not obtain $100 in United States notes from a banker in the form of a loan without paying for the use of the capital and the insurance of his credit.

In other words, from the day of resumption, January 1, 1879, down to this hour greenbacks have been as expensive to the borrowers as gold would have been, and the word "cheap" can in no sense be applied to them. Nor have they been an economical currency, because every dollar of them represents a dollar of capital, and not of credit, while performing the function of currency.

The United States notes or greenbacks, therefore, are neither a cheap nor an economical currency as between the banker and the borrower, but are and have been ever since 1879 as expensive as gold itself would have been.

As distinguished from gold itself, gold-coin certificates, or United States notes, which are redeemable in gold coin, no one of them being cheap or economical, the credit note of a bank, currently redeemed in gold coin, is cheap in the sense that it is economical to the borrower, for when the banker delivers the credit note of his bank to the borrower, he can make as large a profit by charging only 3 per cent interest as he could by charging 6 per cent when delivering gold, gold certificates, or United States notes, all of which have cost him their face in gold coin or its equivalent in some kind of property.

In the one case he is lending only credit and in the other both credit and capital.

Since all national expenses are defrayed by duties or imposts and internal-revenue taxes, the burden borne by each individual citizen in redeeming and canceling $65,000,000 of United States notes would be infinitesimal as compared with what he pays in increased rates of interest where United States notes are delivered to him when making a loan.

Not only have the United States notes been a dear and expensive currency to the borrower, but even more so to the Government itself; the whole $346,000,000 having cost the Government more than 7 per cent per annum since 1879, although our 2 per cent bonds are now selling for $110.

Nothing but a most contemptible fear and most despicable political cowardice can explain our inaction, unless the circumstances be palliated by want of knowledge, which is no justifiable excuse.

Every year, on the average, since 1879 we have redeemed about 90,000,000 of these old receipts for goods had forty years ago, or due bills, called United States notes or greenbacks, having paid them already more than five times, and still they come, calling for their deadly redemption, and yet they are never redeemed.

The following statement, prepared by Hon. Ellis H. Roberts, fully explains what we have done in this direction, and what we may expect in the never-ending future.

If we could apply the same common sense to the affairs of this

Government that a prudent business man would and is compelled to apply to his own affairs these United States notes would be canceled when paid.

TREASURY DEPARTMENT,
OFFICE OF THE TREASURER OF THE UNITED STATES,
Washington, D. C., March 17, 1902.

Statement showing the redemption of United States notes, Treasury notes, silver coin redeemed or exchanged, the national-bank notes outstanding and redeemed by fiscal years from 1879.

Fiscal year.	Redemptions.		Silver coin redeemed or exchanged.	National-bank notes.		
	United States notes.	Treasury notes.		Average outstanding.	Redemptions.	
					Amount.	Per cent.
1879	$64,107,833			$324,244,285	$157,657,000	48.62
1880	81,302,563			339,530,923	61,586,000	18.13
1881	54,545,334			346,314,471	59,650,000	17.22
1882	79,520,424			359,736,050	76,089,000	21.15
1883	109,764,714			359,868,524	102,700,000	28.53
1884	85,948,236			347,746,363	126,152,000	36.27
1885	84,493,153			327,022,283	150,209,000	45.93
1886	63,000,000			314,815,970	130,296,000	41.38
1887	74,068,000			293,742,052	87,690,000	29.85
1888	63,652,000		(a)	265,622,692	99,152,000	37.32
1889	59,450,000		$48,726,649	230,648,247	88,932,000	38.55
1890	78,132,000		47,643,939	196,248,499	70,257,000	35.80
1891	70,792,000	$1,624,000	54,775,783	175,911,373	67,461,000	38.34
1892	66,264,000	8,646,770	56,018,389	172,113,311	69,625,000	40.45
1893	91,116,000	41,759,950	58,472,489	174,735,355	75,845,000	43.40
1894	90,960,000	46,397,000	65,550,976	205,322,804	105,331,000	51.30
1895	74,720,000	50,712,000	57,073,792	207,860,409	86,709,000	41.71
1896	68,924,000	61,564,000	60,820,051	217,133,390	108,261,000	49.85
1897	59,620,000	45,502,000	64,626,098	232,888,449	113,574,000	48.76
1898	54,260,000	43,302,000	58,275,905	228,170,874	97,112,000	42.56
1899	88,404,000	38,401,000	61,697,291	239,287,673	90,838,000	37.96
1900	80,676,000	33,499,280	68,911,547	260,293,746	96,982,000	37.25
1901	91,680,000	28,244,000	76,671,474	339,884,257	147,487,000	43.39
1902 (eight months)	67,600,000	12,437,000	55,953,138	358,775,526	108,194,064	30.16

[a] Not reported previous to 1889.

The following estimate was made by the Chief of the Loan and Currency Division of the Treasury Department:

COST TO THE GOVERNMENT OF MAINTAINING THE GREENBACKS.

Cost of the gold reserve, including liability for principal of bonds sold and interest thereon to their maturity.

Principal of bonds sold for resumption purposes:	
1877 and 1878	$95,500,000
1894	100,000,000
1895	62,315,400
1896	100,000,000
Total principal	357,815,400
Interest at 4 per cent on the average amount of the free gold in the Treasury from January 1, 1879, to January 1, 1895	93,440,000
	451,255,400
Interest from January 1, 1895, to July 1, 1907, on $95,500,000 4 per cent bonds of 1907	47,750,000
Interest from January 1, 1895, to February 1, 1904, on $100,000,000 5 per cent bonds	45,416,666
Interest from February 1, 1895, to February 1, 1925, on $62,315,400 4 per cent bonds	74,778,480
Interest from February 1, 1896, to February 1, 1925, on $100,000,000 4 per cent bonds	116,000,000
Total cost, including liability, except United States notes outstanding	735,200,546
Add amount of United States notes still outstanding	346,681,016
Total cost and liability	1,081,881,562

If the United States notes had been funded on the 1st day of January, 1879, into the thirty-year 4 per cent bonds of 1907, then being sold, the total cost to the Government therefor, including interest from January 1, 1879, to July 1, 1907, would be as follows:

Principal of bonds	$346,681,000
Interest from January 1, 1879, to July 1, 1907	395,216,340
	741,897,340
Difference in favor of converting the United States notes into bonds	339,984,222

Here is a direct loss to the Government of $339,984,222, which ought to be increased by at least $200,000,000 on account of increased rates of interest charged upon loans, because credit currency was not in use.

But these items are infinitesimal, indeed, compared to the commercial ruin and business havoc caused by the existence of the United States notes and the consequent danger to the public credit, which now involves every business in the land, from the little retailer to the gigantic railroad systems and mammoth commercial enterprises.

The United States notes are not a cheap form of currency for the borrowing public, being to-day as expensive as gold itself.

The United States notes threaten our prosperity every hour, precisely as dynamite in a cellar threatens the safety of the building and the life of its inhabitants. The moment of its explosion is only problematical, and the measure of the damages will be determined always by the contents of the building.

So, the extent of our business interests, always increasing, always broadening, always involving a greater and greater number of people, will invariably measure the possible danger when the threatened danger is precipitated and the standard of value imperiled by an assault upon the credit of the nation by the presentation of an endless amount of demand obligations.

I use the word "endless" advisedly, and with more truth and force than was possible before the passage of the act of March 14, 1900, for prior to that time the Government could limit the demand by impounding all the United States notes presented, while to-day, by the terms of that act, the Government can only impound $50,000,000 out of the $346,000,000 when the Secretary of the Treasury is compelled to turn these credit destroyers loose to again prey upon the vitals of commerce, and like vampires suck the life blood of the nation's credit, upon which the entire superstructure of American business enterprise and prosperity depends.

Shall we turn a deaf ear to the voices of all history? Shall we discard the experience of all the world? Shall we treat with a contempt born of ignorance the declared purpose of those great statesmen who reluctantly gave birth to the greenbacks in the hour of the nation's need?

Shall political cowardice overweigh the solemn warning of every President and Secretary of the Treasury from Lincoln to Roosevelt who have been confronted with this always impending and destructive peril?

Shall the awful experience of 1894–1896 teach us no lesson? Shall the ever-lurking suspicion in every banker's mind and the universal fear brooding over the land from ocean to ocean lead us to no solution and courageous action?

EVERY SILVER DOLLAR MUST BE MADE AS GOOD AS GOLD BY ELIMINATING EVERY CIRCUMSTANCE THAT COULD POSSIBLY LEAD TO A DISCRIMINATION AGAINST A DOLLAR BECAUSE IT IS A SILVER DOLLAR.

We are to-day nearly 80,000,000 of the most intelligent people in the world.

Our aggregate wealth at the beginning of the new century was approximately $120,000,000,000.

We turn into the channels of trade every year about $18,000,000,000 of consumable and useable commodities; or about $1,500,000,000 every month; or about $60,000,000 every working day; or about $6,000,000 every busy hour; or about $100,000 every single minute.

We are to-day the most potential political factor on the globe; the directing and controlling force among the nations of the earth.

Can such a nation, in honor or as a matter of prudence, afford to permit one of its dollars, with full legal tender quality, and bearing the superscription "E pluribus unum," with the signet of the Government on the reverse side, to be discredited and dishonored?

Have we purchased our absolution in advance for wholesale dishonor by cunningly appealing to God, in whom we say we trust? God helps those who help themselves. His curses follow those who disobey His laws. Common honesty is His first law.

No man living within the borders of this great Republic should be compelled to receive or accept any dollar, bearing the Government seal, which is not equal to $25\frac{8}{10}$ grains of gold, nine-tenths fine; and so long as this Government refuses to protect the silver dollar with its direct and unqualified pledge, and to throw over it the shield of golden honor, the commercial world will distrust and shun us because we distrust ourselves.

How can we expect others to have absolute confidence in our monetary system when we ourselves withhold it?

Nor will our own people be more charitable than others. So long as a justifiable fear, born of our own cowardly conduct, lingers that possibly, under some circumstances, some Secretary of the Treasury may repudiate the obligations of the Government expressed in its silver currency, so long will the public, upon the slightest provocation, discriminate against that form of our money and turn it into the Treasury, where the burden must ultimately rest, whether we would evade it or no.

Hon. Lyman J. Gage keenly appreciated the folly of our attempt at indirection and our skulking evasion when he said:

"Nothing can rise higher than its source, and if your confidence is not good and you will not take all the responsibilities of the parity between silver and gold, do not expect the public to take the risk. They will decline to do it. Therefore, as long as these conditions exist, silver, when it accumulates at the money centers, will not be held for a time when it may be used and distributed again. The bankers will send it into the avenues of present redemption. The Government might just as well face that redemption at the front door as to delay until it must take it under the revenue laws at the back door."

Mr. Chairman, there are other respects in which changes could be made with great advantage in our financial and currency laws, but I shall content myself with these observations, which have

been confined to principles, conscious that when the people come to realize the great importance of their application to our present conditions we shall have no trouble in harmonizing the various views with regard to method.

The question of present and vital moment is to secure right thinking, the necessary prelude to right doing.

Our Government was founded upon the theory that it existed for the people, in order that they might enjoy life, liberty, and the pursuit of happiness, therefore all municipal organizations necessarily exist for the same end.

Can it be possible that banks, which derive their power and authority from this Government, or from that of any of the States, have any other purpose than the service of the people?

If, then, the very object of their creation is the service of the people, it is a matter of the highest importance that that service be the best possible, and contribute in the utmost degree to their welfare.

Wise laws, however, are essential to the consummation of these ends.

Our banking institutions exist to facilitate and economize in the creation and distribution of the products of labor, and it is not only right but necessary that the Government in turn should facilitate their efforts in the undertaking.

The Government should cease to be a disturbing factor to commerce by unnaturally and unnecessarily withdrawing money that serves as a reserve to deposits, thereby contracting credits fivefold the amount withdrawn.

Since the Government has no power to control the movement of gold, which is the only commodity that can serve as a reliable touchstone to commercial values, it should cease to give it away without charge above its price and should compel the banks to apply this measure to their credits daily, thereby insuring soundness to them and giving permanence to our prosperity.

Since a credit currency is the only tool of trade that has unfailingly proved its perfect adaptability to the needs of business in all countries and under all circumstances, at the lowest cost to the borrower, the American toiler on the farm and in the factory should have the benefit of its advantages in his struggle for supremacy in the markets of the world.

Since this age of ocean greyhounds, of limited freights and almost unlimited passenger trains, of the telegraph, the telephone, and the flight of words through the all-pervading ether has resulted in a concentration of gigantic forces in the material world, eliminating waste at every point, banking organizations, which are expected to carry their credit and facilitate and effect their transactions, must be permitted to coordinate themselves with their demands and suit their strength to the burdens they are compelled to carry.

Reaching across our continent, they must every day draft every idle dollar to do duty where it is most needed at the lowest cost.

Reaching across every ocean and into every land, they must extend a helping hand to American effort and American enterprise wherever the genius and aspirations of the American citizen may lead him.

APPENDIX A.

[House Report No. 1425, Fifty-seventh Congress, first session.]

TO MAINTAIN THE GOLD STANDARD, ETC.

April 5, 1902.—Committed to the Committee of the Whole House on the state of the Union and ordered to be printed.

Mr. FOWLER, from the Committee on Banking and Currency, submitted the following report (to accompany H. R. 13363):

PURPOSE OF THE MEASURE.

The purposes of the measure are as follows:

To secure the advantage of long experience, and therefore a higher degree of intelligence and a more permanent policy in the supervision of our vast banking interests.

To protect the national credit against assault through the demand obligations of the Government by completely relieving the Treasury at once of a burden amounting to more than seven hundred millions.

To transfer from the Government to the banks the entire responsibility of providing and protecting the commercial reserve, and to impose upon the banks the burden of furnishing all the gold that may be needed for export or for any other purpose.

To place the Government in a position where its relation and duty to commerce is limited to fixing the standard, establishing a measure of value, furnishing all token money, and providing for a system of paper currency.

To simplify and limit the Government's fiscal operation by confining it to the collection of its revenues and the payment of its expenses, precisely as the several States and all municipalities collect and disburse their revenues.

To provide for a system of paper currency which is absolutely sound, uniform, responsive, always adequate, and perfectly adjusted to our trade everywhere and under all conditions.

To lower and equalize the rates of interest in all parts of the United States, so that the farmer and the manufacturer in our smaller cities and remote sections may be placed upon equal terms with the borrowers in our great commercial centers.

To give to our banking institutions the privilege of establishing themselves anywhere in the United States and its possessions and in all other countries, for the purpose of extending American trade, controlling foreign exchange, and insuring the successful development of our merchant marine.

To wipe the last stain of fiatism from the escutcheon of our nation's commercial honor, and remove the last doubt hanging over our national credit by providing for the redemption in gold coin of all the legal-tender money of the Government, including the silver dollar, as well as the United States and Treasury notes and the subsidiary coins.

That all these purposes are most desirable there is no possible doubt; that their attainment is essential to a complete reform of our financial and currency system everyone who has carefully studied the subject agrees. The accomplishment of any one of them would improve and strengthen the present situation, but each is largely dependent upon the other for its most material advantages, since all are not so closely related and interdependent.

Your committee therefore urges the measure as a symmetrical whole, confident that it will be observed, as we proceed to explain the various sections and advance the reasons for their adoption, that the essence of the measure is in its unity and the completeness of its combined purposes.

DIVISION OF BANKING AND CURRENCY AND BOARD OF CONTROL.

National banks now have a capital of $634,696,505, and a surplus of $266,520,594.87, while their total assets are nearly $6,000,000,000. The measure now submitted to the House provides that, with the consent of the board of control, national banks may establish places of business in our own country and possessions, in South America, in the Orient, in Europe, in any country, in fine, where American enterprise and capital may choose to go.

Considering the importance of these extensions of our banking interests and how dependent business conditions are upon a wise and conservative supervision of these institutions which control the credits of our vast commerce, your committee feels more than justified in recommending a board of control to take the place of the Comptroller of the Currency, whose term of office might end just at a moment of financial disturbance, when ripe experience was most needed and when a novice, born of political favoritism or of some political trade or debt, coming into office would add greatly to the doubts, difficulties, and dangers of the hour.

That any Comptroller, however able, can do much more than fairly fit himself during the present term of five years for a service of real usefulness to his country in the performance of such duties no one will assert who has studied and comprehended all that this important position involves.

On the other hand, the result of this measure will be, when in full operation, that the supervision of our national banking interests, domestic and foreign, will never be without one Comptroller who has served at least eight years, while his first associate will have served at least four years. Such an administration must inspire confidence and insure a steadiness of policy which is most desirable if, indeed, not essential to the best results.

BANKING OPERATIONS UNDER THE MEASURE.

The national banks are to assume the current redemption in gold coin of $130,000,000 of United States notes, and, in turn, will have the privilege of issuing their bank notes without depositing Government bonds to secure the same; but they must pay a comparatively heavy tax on the notes, which they are also required to redeem in gold coin.

The banks are required also to pay 1 per cent interest annually upon all Government deposits held by them.

The banks are required also to deposit with the Government a guaranty fund equal to 5 per cent of the amount of notes taken out for issue.

This 5 per cent fund, the tax upon the bank notes, and the interest upon the Government deposits are all, combined, set aside, and constitute a guaranty and redemption fund—a guaranty fund to protect all bank notes, and a redemption fund to pay off the $130,000,000 United States notes whose current redemption the banks have assumed.

A thorough investigation demonstrates that the whole amount will be paid off in less than twenty-five years. When this has been accomplished the tax upon the bank notes is reduced to a reasonable amount in accordance with its legitimate banking purpose.

BURDEN RESTING ON TREASURY.

The obligations for which the Treasury is directly and indirectly responsible amount to more than $1,200,000,000, consisting of

$346,000,000 of United States notes, $30,000,000 of Treasury notes, $319,000,000 of national-bank notes, and $530,000,000 of silver dollars or the certificates representing them.

The United States notes and the Treasury notes are redeemable upon demand in gold coin; while the national-bank notes, though redeemed by the banks in United States notes, are no less a burden upon the Treasury, since the same United States notes are redeemed by the Treasury in gold coin. Furthermore, the law specifically provides that the Government shall redeem the notes of failed banks in terms making the Government liable for all the national-bank notes at any time outstanding.

While it may be observed that neither a silver dollar nor the certificate outstanding in its stead is redeemable in gold coin, yet, since both are receivable for public dues, they are no less a burden upon the Treasury than they would be if directly redeemable in gold coin. Indeed, the last two Secretaries of the Treasury both declared openly and repeatedly that, if necessary, they would pay out gold coin for silver dollars.

But great as is this direct burden, it is light indeed compared with the indirect obligations growing out of the fact that every demand for gold coming from abroad must sooner or later find its way to the Treasury, and that, moreover, our entire commerce looks to the Government reserve—every bank in time of peril nursing whatever gold it may chance or happen to have and running to the Treasury for more.

The Treasury is completely at the mercy of every assault, because, not being a lender of money, it can not put a price upon the use of gold by fixing a rate of interest high enough to be prohibitive, for the time being, and so protect its reserve.

The result always has been and always will be that in times of stress and credit contraction gold will leave the Treasury until the acting Secretary of the Treasury, balancing commercial necessity on the one side and political expediency on the other, according as he is a patriot or a politician, may or may not act even after incalculable ruin has been wrought.

There are two causes of this ever-threatening danger:

First. The reserve in the Treasury was intended originally to protect only the United States notes, though now, by act of March 14, 1900, it also covers the Treasury notes amounting to $30,000,000.

Second. The reserve in the Treasury is not directly related to the commercial conditions of the country, and was in no way intended to protect them; but since the exporters of gold and the banking interests can lie down on the Treasury and compel it to supply their needs through the various forms of demand obligations at hand, without cost to themselves, our Treasury reserve under the present circumstances has become an actual menace to our national credit, and so long as these conditions exist the business interests of this country can never rest upon a solid and enduring foundation.

No one will claim that the gold in the general fund of the Treasury is a reserve, or can be considered as any part of a reserve, since appropriations may absorb every surpus dollar at the present session of Congress.

Nor will anyone pretend that the gold held by our banks serves as a reserve for our credits in general, as the banks are not required by law to use it as a touchstone of their soundness, but, on the contrary, they hug and hoard it at the approach of every financial storm, increasing it by golden streams which they start flowing from the United States Treasury by means of the outstanding demand obligations of the Government.

That the $150,000,000 of gold in the Treasury can have no direct and natural relation to the nine billions of current commercial credits held by our banks is clear from the fact that, the reserve being fixed in amount by law, does not rise and fall with the quantity of those credits, and can never be responsive to their ever varying needs. By law it is made dependent upon the caprice of the Secretary of the Treasury, a sale of bonds and taxes imposed upon the people.

We want a reserve in immediate touch and directly related to the ebb and flow of commerce; a reserve whose amount will be determined always by the experience of the passing years; equal always to the demands of safety, but never accumulating and piling up in useless millions, yes, useless hundreds of millions. We say useless advisedly; for if five hundred millions of gold properly related to our commercial credits should prove ample, one billion of gold, the amount now subdivided and scattered throughout the land, could mean only a wasteful use of five hundred millions every year.

The Reichsbank of Germany had gold and silver combined in 1877 amounting only to $106,262,000. In 1886 its gold alone amounted to $91,630,000, and in 1895 reached $167,695,000; but for the past four years the amount has stood steadily at about $135,000,000, although the deposits and note issues combined have increased from $379,643,000 to $488,392,000.

It should be observed in this connection that the Reichsbank of Germany has increased its gold by purchase as it has needed it, and precisely as it has purchased any other commodity for which it had use. This is evident from the fact that Germany does not produce any gold worth mentioning, her production for the years 1898, 1899, and 1900 aggregating only $73,600, while her imports of merchandise have exceeded her exports, since 1872, by $4,857,813,000.

The Bank of England, which holds the commercial reserves of Great Britain, had $93,397,868 of gold in 1870, and has $192,082,770 to-day; yet England produces no gold to speak of, her production for the years 1898, 1899, and 1900 aggregating only $6,600, while her imports of merchandise have exceeded her exports, since 1870, by $26,864,715,152.

From this statement of fact we are compelled to conclude that the Bank of England treats gold like any other commodity, buying just so much and no more as its constantly increasing commercial credits require.

The Bank of France, which furnishes the reserve for all the commercial credits of France, had of gold and silver combined in 1870 only $218,225,100, and in 1881, when the two metals were first separated in its accounts, had $116,688,500 in gold and $235,363,500 in silver, but to-day the amount of gold on hand is $465,168,600 and of silver $213,438,700.

First. It is to be observed that the managing director of the Bank of France admitted to two of your committee that a large part of this gold reserve was carried because it was required to maintain so great a body of silver at a parity with gold.

Second. It is to be observed here, as in the case of Germany and Great Britain, that France, too, must purchase gold like any other commercial commodity, taking only as much as the obligations of the Bank of France require as a reserve to assure public confidence and to guarantee the credit business of France, for France produces no gold whatever, and her imports of merchandise since 1870 have exceeded her exports by $4,347,325,000.

This vast accumulation of gold by three great commercial nations, which produce no gold to speak of, and notwithstanding adverse merchandise balances amounting in the aggregate, during the last thirty-one years, to $36,069,853,152, would seem to be proof absolute that the banking interests of a country will amply protect all commercial credit if there are no unwise laws to interfere with their natural functions.

When we recall the achievements of the Bank of England in conducting the Kingdom through all her financial affairs, the splendid and almost miraculous conduct of the French Government through the great difficulties and burdens of the Franco-Prussian war by the Bank of France, the stupendous waste due to governmental operations and a consequent depreciated currency suffered by our own country during the civil war, and the humiliating spectacle in later years of the United States Government hiring for a stipulated sum a syndicate of bankers to come to its rescue and save its credit from utter and everlasting dishonor, we are compelled to admit that our system is wrong.

But Grover Cleveland was a patriot and did his duty, and that act alone should make his name immortal. The shame was in the ignorance or political cowardice, or both, that rendered such a condition possible.

Who was it that protected Great Britain—indeed, the whole world—from the shock of the largest failure in mercantile history, the Baring default? None other than the great credit merchants of London, known as bankers.

Who was it that shielded this country in its splendid and unparalleled sweep of prosperity from a financial cataclysm when William McKinley was struck down and the soul that was the inspiration of our most glorious age was called away? It was the great credit merchants of New York, known as bankers, under the leadership of Frederick D. Tappan.

Your committee has no hesitation whatever in asserting that the gold reserve, which is to always prove and guarantee the soundness of our commercial credits, should not be limited and fixed by law and held under governmental supervision and manipulation, but be an actual part of our trade, a daily touchstone to current credit.

With this in view, the bill provides that the Government shall cease to issue or pay out gold certificates and that this function shall be left to the clearing houses.

RELIEF OF THE TREASURY.

If the national banks will assume the current redemption in gold coin of one hundred and thirty millions of United States notes, and the Government will redeem and cancel one-half of that amount, or sixty-five millions, the whole three hundred and forty-six millions will be completely disposed of; for the remaining one hundred and fifty-one millions of notes will be much more than covered by the one hundred and fifty millions of gold coin in the reserve fund, since it is known that several millions of these notes have been lost or destroyed.

That the national banks will assume, in accordance with the

provisions of the bill, an amount of United States notes equal to 20 per cent of their capital there can be no doubt for two reasons:

First. Contrary to a very general impression, the national banks make no profits worth mentioning from circulating the bank notes now outstanding. Indeed, it is doubtful whether anything whatever is made upon our present note circulation, taken as a whole.

The actuary of the Treasury Department estimates the profits as follows: On 2 per cent bonds, in localities where money loans at 4 per cent the profit is 0.791; where it loans for 6 per cent it is 0.666; where it loans for 8 per cent it is 0.529; where it loans for 10 per cent it is 0.382; and the same is equally true of the threes, fours, and fives, as shown by Appendix A, part 1.

But even these small profits are only obtainable when all the notes are kept out all the time. It is therefore evident that if the notes are kept out only half the time, or that only half the notes are kept out all the time, these profits would wholly disappear and there would be an actual loss instead of a profit to the bank. This conclusion is verified by the estimate of the actuary appended to this report. Can anyone criticise the national banks for retiring their circulation to-day as fast as the law will permit? See Appendix A, part 2.

Upon the notes the banks are to receive under this bill, in consideration of their assuming to redeem in gold coin an amount of United States notes equal to 20 per cent of their capital they will make just as much as they would upon a corresponding amount of deposits less the tax against the notes and the Government charges for preparing the plates and printing them.

Second. Since the United States notes which the banks assume to currently redeem may still be used as reserves, they may reasonably calculate that such notes will circulate but little and the redemption will not be burdensome, as all the gold desired would be obtained through the presentation of national-bank notes, which are to be redeemed in future by the banks in gold coin.

Concurrently as the banks assume the burden of one hundred and thirty millions of the national debt, the Government, which now has in the general fund more than one hundred millions in gold coin and gold certificates, is asked to apply sixty-five millions to the redemption of one-half the amount of United States notes the banks have undertaken to carry.

Would not this be most wise on the part of the Government, when you consider that by paying sixty-five millions of its own demand debt it will relieve itself of the burden of carrying obligations amounting to more than seven hundred millions, and thus escape the constant breaking strain resulting from the maintenance of a reserve, for the vast commercial credits of the country, which was intended to cover only its own demand notes?

To those who may be inclined to oppose the retirement of the United States notes, forsooth, because they are cheap money, notwithstanding the fact that the banks, in taking one hundred and thirty millions of them, are paying nearly two-fifths of them, we desire to submit an estimate of their cost to the Government up to the present time. This calculation was made by the Chief of the Loan and Currency Division of the Treasury Department.

COST TO THE GOVERNMENT OF MAINTAINING THE GREENBACKS.

Cost of the gold reserve, including liability for principal of bonds sold and interest thereon to their maturity.

Principal of bonds sold for resumption purposes:	
1877 and 1878	$95,500,000
1894	100,000,000
1895	65,315,400
1896	100,000,000
Total principal	357,815,400
Interest at 4 per cent on the average amount of the free gold in the Treasury from January 1, 1879, to January 1, 1895	93,440,000
	451,255,400
Interest from January 1, 1895, to July 1, 1907, on $95,500,000 4 per cent bonds of 1907	47,750,000
Interest from January 1, 1895, to February 1, 1904, on $100,000,000 5 per cent bonds	45,416,666
Interest from February 1, 1895, to February 1, 1925, on $62,315,400 4 per cent bonds	74,778,480
Interest from February 1, 1896, to February 1, 1925, on $100,000,000 4 per cent bonds	116,000,000
Total cost, including liability, except United States notes outstanding	735,200,546
Add amount of United States notes still outstanding	346,681,016
Total cost and liability	1,081,881,562

If the United States notes had been funded on the 1st day of January, 1879, into the thirty-year 4 per cent bonds of 1907, then being sold, the total cost to the Government therefor, including interest from January 1, 1879, to July 1, 1907, would be as follows:

Principal of bonds	$346,681,000
Interest from January 1, 1879, to July 1, 1907	395,216,340
	741,897,340
Difference in favor of converting the United States notes into bonds	339,984,222

But this direct loss of $339,984,222 to the Government is as nothing compared with what the people have suffered from the consequent panics and ruinous liquidations growing out of the unfortunate relation of the Treasury to our business interests.

SILVER CURRENCY.

If the silver bullion, now amounting to over thirty millions, be used for subsidiary coin, which is so much needed by the trade of the country, that factor will be eliminated and the number of silver dollars will not be increased.

The total amount of the $5, $2, and $1 bills, and the silver dollars and subsidiary coins now in use by the banks, storekeepers, and people is $595,701,058.

The total amount of silver dollars and silver certificates in circulation was on January 1, 1902, $532,955,428. From this it is clear that if all other $1, $2, and $5 bills are eliminated from our currency system our silver currency represented by the silver dollars and silver certificates will then remain in constant use, being necessary to the daily transactions of the business of the country.

This would be especially true if by law, as now by necessity and indirection, the Government should exchange gold coin for silver dollars, precisely as it does in the case of subsidiary coin.

NATIONAL-BANK NOTES.

To-day the Government is bound by law to currently redeem indirectly in gold coin all national-bank notes, although there is neither justice nor reason in throwing this burden of three hundred and twenty-five millions on the Treasury, since it is the debt of the banks and should be met by them in gold coin, just as the present measure provides.

Your committee confidently asserts that by the consummation of these ends the Treasury will be entirely relieved and that the vast burden, which it is wholly unfitted to carry, will be transferred to the banks, where it belongs naturally and must go, if not to-day, then after still more bitter and disastrous experiences.

CHARACTER OF CREDIT CURRENCY.

A credit currency does not differ in the slightest degree in principle from a deposit subject to check.

A bank which has a capital of $100,000 and deposits amounting to $100,000 subject to check is in identically the same position as a bank with $100,000 capital and $100,000 of its notes out.

Each bank owes exactly $100,000 and may be called upon at any instant to pay the whole of it; but the average banking experience proves that deposits remain in the banks a certain length of time, and that credit notes remain in circulation a certain length of time.

It is upon this average of time that deposits remain unchecked and that credit notes remain in circulation that the banking business of the world is carried on.

Barring the effects of unwise laws, from an economic point of view, the habits or practices of a people determine whether the note issues of banks exceed their deposits or their deposits exceed their note issues.

For more than one hundred and forty years the banks of Scotland did not have a deposit, but their business consisted wholly of exchanging their credit notes, which were well known, for the promissory notes of their customers, which were little known.

About sixty years ago the Scotch people began the practice of making deposits and checking against them. On October 19, 1901, the deposits held by the ten Scotch banks amounted to $536,736,750, while their credit notes were only $40,435,110.

On October 19, 1901, the incorporated banks of England and Wales had deposits amounting to $3,171,731,200, but the entire note circulation was only $153,919,645.

On the other hand, on January 30, 1902, the Bank of France held deposits amounting only to $157,377,340, while its credit notes outstanding amounted to $814,441,268.

Again, on December 31, the Reichsbank of Germany held deposits amounting only to $126,236,457, but had credit notes outstanding amounting to $332,486,435.

On December 31, 1901, the 38 banks of Canada held deposits amounting to $335,740,226, and had credit notes outstanding amounting to only $54,372,788.

In 1840 the 306 banks of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut, with capitals ranging from $25,000 to more than $700,000, held deposits amounting only to $7,943,127, but had credit notes outstanding amounting to $16,461,947.

In 1860 there were in these same New England States 504 banks, which held deposits amounting to $41,208,190, and had credit notes outstanding amounting to $44,653,095.

In the light of this array of historical facts will anyone assert that a true credit currency differs in the slightest degree in principle from deposits subject to check, or that it does not adapt itself to current transactions with the same facility and fluidity that checks and drafts do?

Precisely as deposits subject to check rise and fall every day and every season of the year, so a true credit currency will expand and contract, and, like checks and drafts, always prove just equal to the commercial work to be done.

In verification of this assertion let it be noted that the total possible issue of the institutions cited was more than $2,073,290,480, but in fact was only $1,434,515,072, being, respectively, as follows:

The Scotch banks were entitled to issue $148,783,430 of credit notes, and had only $40,435,110 in circulation.

The Bank of France was entitled to issue $1,000,000,000 of credit notes, and had only $814,441,268 in circulation.

The Bank of England was entitled to issue $272,082,740 of credit notes, and had only $153,912,645 in circulation.

The Reichsbank of Germany was entitled to issue $464,906,250 of credit notes, and had only $332,486,435 in circulation; and in addition to a qualified limit can have any amount subject to a tax of 5 per cent, virtually making the issue unlimited with that condition.

The Canadian banks were entitled to issue $65,154,994 of credit notes, and had only $54,372,788 in circulation.

The New England banks in 1860 were entitled to issue more than their capital of $123,563,066, and had only $44,653,095 in circulation.

It will be observed that not only was the permissive issue of all the institutions combined $638,745,410 greater than the actual issue, but in every individual instance the permissive issue was very much greater than the actual issue.

From this array of facts we are bound to conclude that the same economic law controls the amount of the credit-note issues that determines and limits the amount of checks and drafts against deposits, to wit, the work to be done by the peculiar instrument in each given case.

With a credit-note system the bank notes spring into being precisely as checks and drafts do, to perform some particular transaction, and then, with the same certainty and almost with the same swiftness, return to their creators or issuers for redemption, just as checks and drafts are returned to the authors or drawers to be honored by payment.

With such a system those sections of our country like the Northwest, when harvesting its great wheat crops, or the South, when gathering its 10,000,000 bales of cotton, would always have an ample supply of those peculiar tools or instruments of trade, credit bank notes, which they must have to properly and economically carry on their vast work of production.

Their needs call for the ready and facile credit note, while the great commercial centers of our country by universal practice depend almost entirely upon the check.

With such a system in operation here we should see the same divergence between the different sections of our great country, the cities and rural districts, that there is between the practices of France and Germany on the one hand, where they use comparatively few checks, and England, Scotland, and Canada on the other, where the check so greatly preponderates over the bank note.

The amount of checks, drafts, and credit notes must be equal to the total deposits made up of gold, gold certificates, silver, silver certificates, United States notes, Treasury notes, national-bank notes, indorsed checks, drafts, and rediscounts, and the personal notes of the depositors; and, as we have demonstrated, it is wholly a matter of custom with each individual country or section of a country whether the checks and drafts exceed the credit notes or the credit notes exceed the checks and drafts. It should be noted in this connection that only about 10 per cent of all deposits are in cash, the balance being in some form of credit, which is the soul of modern commerce.

With a currency as directly and perfectly related to the business of our country as are checks and drafts, there can not be such a thing as a currency panic.

Germany has just gone through a commercial depression, but there has not been a suggestion of a currency panic.

France has had no such trouble.

Canada will have no such trouble.

Your committee believe that we should end ours.

SAFETY OF CREDIT CURRENCY.

The certainty that the obligations of any financial institution will be paid is measured by the doubt or certainty that the institution will survive all financial storms; and if the credit notes of a bank are not specially protected by a guaranty fund, or preferred in case of liquidation, the holder of them will stand with the rest of the creditors; no better, no worse.

It ought to be observed that since the credit notes pass by delivery and leave the immediate vicinity of the bank issuing them, performing the quasi function of money and therefore carrying with them a moral and practical compulsion of acceptance, they should not stand upon exactly the same footing as deposits.

It is evident that a note holder residing 1,000 miles away, in some other State than the one in which the bank of issue is located, should be specially protected as against the depositor who lives in the immediate neighborhood of the bank and can, if he chooses, inquire about its soundness from day to day.

Again, public policy demands that the bank notes, which must of necessity perform all the functions of paper currency, should be safe beyond all question or any peradventure.

The credit note holder and the depositor of the Bank of France and the Reichsbank of Germany stand precisely alike, both being general creditors.

Beyond the first $80,000,000, which are based upon British credit, the Bank of England notes represent gold coin.

The forty millions of credit bank notes issued by the 10 banks of Scotland are not preferred in any way whatever, and yet in two hundred years no note holder has ever lost a shilling. It should be noted, however, that up to 1879 there was an unlimited liability attached to bank stock in Scotland.

In Canada, where there are 35 banks doing business, a deposit of 5 per cent of the notes taken out is required and provision made for an extraordinary tax in case of any unusual failures, and the notes are, in addition, made a first lien upon the assets of the respective banks.

This plan has worked admirably and no one has ever lost a dollar. The credit notes of the Canadian banks stand on a par with our national-bank notes in public confidence and in general and unquestioned acceptance.

The wide difference between a great central bank like those of France, Germany, and Great Britain and 12,000 comparatively small ones, some of them having only $25,000 of capital, is thoroughly appreciated by your committee; and we recognize that in providing for their inherent weakness, the inherent guaranty of a great institution must be met and provided for in accordance with the principle of insurance, which is based upon the law of general average.

Life insurance policies amounting to more than $12,000,000,000 rest entirely upon this law of general average.

Last year the fire insurance companies wrote risks amounting to more than $20,000,000,000, relying entirely upon well-known principles applied to the average of losses.

Men in all positions of trust to-day are covered by bonds insuring their fidelity, and every undertaking can find a guarantor for its completion in a given time.

No field of inquiry along this line of investigation furnishes a more complete and comprehensive statement of facts than the records of our national-bank system.

In 1863, the year the national-bank act was passed, 66 banks were organized, with a capital of $7,188,393, and held deposits amounting to $8,497,681.

On February 25, 1902, there were 4,357 national banks, with an aggregate capital of $667,381,231, and individual deposits amounting to $2,982,489.33, with $314,438,680 in notes outstanding.

Many things have been demonstrated by the experiences of the intervening forty years, but nothing more clearly than what would have been a perfectly sound basis for the issuance of an absolutely safe credit currency.

A detailed report furnished your committee by the Comptroller of the Currency, covering every national bank failure from the beginning of the system, discloses the fact that an annual tax of twenty-two one-hundredths of 1 per cent, or a little less than one-quarter of 1 per cent upon the notes outstanding, would have paid in full all the notes of the failed banks.

This investigation discloses, further, the fact that if all the United States bonds which had been deposited to secure the payment of the national-bank notes from the very inception of the system down to 1902 had been lost, and the notes had been a first lien upon the assets of the respective banks, as provided by this bill,[a] a tax of eight one-thousandths of 1 per cent per annum upon the outstanding circulation from year to year would have paid all the notes not paid out of the assets. Indeed, there have been only 30 cases in which the notes would not have been paid in full out of the assets. (See Appendix B.)

Upon such a showing certainly no one will deny that if there had been a guaranty fund of 5 per cent deposited with the Government and an annual tax of one-eighth of 1 per cent per annum imposed, in accordance with the provisions of this act, upon the notes in circulation, the protection to the note holder would have been much more than ample.

Mark this: That if all the United States bonds deposited to secure circulation had been lost the 5 per cent guaranty fund would have been six hundred and twenty-five times as much as the annual tax required to redeem the notes of failed banks. Again,

[a] NOTE.—Our present national-bank notes are a first lien. Not only are the United States bonds to secure them set apart and held for that purpose, but if the bonds should prove insufficient for any reason the notes then become a first lien on the balance of the assets.

the tax of one-eighth of 1 per cent per annum would have been sixteen times larger every year than necessary to insure the payment of the notes.

In other words, under the bill submitted, if the experience of the national banks for the last forty years should repeat itself continuously in the future, it would take six hundred and twenty-five years to exhaust the 5 per cent guaranty fund, if no annual tax whatever was paid upon circulation, and a single tax of one-third of 1 per cent upon the average amount of notes for each year for the next forty years would redeem all the notes of failed banks.

THE SUFFOLK SYSTEM.

But, fortunately for the cause of a scientific bank currency, we are not compelled to rely upon calculations and inferences drawn from the records of the national banking system alone.

From 1840 to 1860 there existed in the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut a perfect system of credit currency, so far as its working features were concerned. It only lacked the insurance principle, which is absolutely essential to a multitude of banks, to place it abreast with the best system of credit currency in the world.

The circumstances under which it developed should not be overlooked.

There were no telegraph lines, no telephones, no railroads.

There were as many different banking laws as States.

The supervision of the banks, such as it was, did not extend beyond State limits.

The banks of the various States obtained their charters from the respective legislatures, and the capital ranged from $25,000 to $700,000 and upward; and while there were only 301 of them in 1840, there were 504 of them in 1860. There are only 555 national banks in the same States to-day.

There were no provisions then, as now, for verifying the capital and protecting the public against fictitious or unpaid capital.

Each bank provided its own notes, getting them from the nearest printing office, or writing them out by hand, if it chose to do so; and there was no protection, as we have to-day, against a fraudulent overissue of circulation.[a]

In 1840 the capital of the 301 banks was $61,142,482. The highest possible issue of notes was $70,323,000, but the actual issue of notes was only $16,570,000.

In 1850 the capital of the 307 banks was $65,443,378. The highest possible issue of notes was $75,533,000, but the actual issue of notes was only $31,709,051.

In 1860 the capital of the 506 banks was $125,315,148. The highest possible issue of notes was $131,310,000, but the actual issue of notes was only $47,539,877.

With this practically unlimited right of note issue, for in no instance during the whole twenty years did the amount of notes in circulation approach the maximum permitted, and with almost a complete absence of those safeguards now regarded as essential—uniform laws, uniform supervision, and uniform currency furnished by the Government—the Suffolk system of daily coin redemption of notes developed a banking system equal in most respects to the best the world has furnished.

It lacked only one element to make it practically perfect, so far as a sound and uniform currency was concerned, viz, the element of insurance by the establishment of a guaranty fund to protect the note holders.

The experience of that twenty years demonstrated the fact that the system was sounder in principle than that of to-day, for, while it would have taken twenty-two one-hundredths of 1 per cent tax per annum from 1863 down to 1902 to protect our present note issues, it would have taken only one-eighth of 1 per cent per annum to protect the note issues of the 504 New England banks from 1840 to 1860.

[a] The maximum limit to circulation was, in the early days of the New England banks, established by the State legislatures in the case of each individual bank and varied widely not only from State to State, but also among the different charters in the same State. The differences between charters granted in the same State had, however, for the most part been done away with before 1840, and between 1840 and 1860 the relation between circulation and capital was fixed in the New England States as represented in the annexed table:

Massachusetts	per cent of capital	125
Vermont, after 1840	do	200
New Hampshire, per cent of capital, less loans on pledge of the bank's stocks		100
Maine, to 1846:		
Banks with a capital of $50,000 or less	per cent of capital	100
Banks with a capital of from $50,000 to $150,000	do	75
Banks with a capital of more than $150,000	do	66⅔
Maine, after 1846	per cent of capital plus specie held	50
Connecticut:		
Before 1855	per cent of capital	150
1855-1858	do	125
After 1858	do	75
Rhode Island:		
Banks with capital of $50,000 or less	do	75
Banks with capital of $50,000 to $120,000	do	65
Banks with capital of $400,000 to $500,000	do	20
Rhode Island, after 1859	do	65

L. CARROLL ROOT.

THE ECONOMY OF A CREDIT CURRENCY OR ITS EFFECT ON INTEREST RATES.

Interest, like taxes, is a necessary evil, and the country wants as little of it as possible, for all interest is a tax on production.

If one system of currency will give to the borrowers, the toilers, the producers of our country lower rates of interest than any other, we should adopt it, because it will promote the general welfare, bringing the greatest good to the greatest number.

At the close of business December 10, 1901, there were deposited with the Government to secure circulation United States bonds amounting to $324,507,180.

It must be apparent that if this vast sum had not been invested in United States bonds the people would have had just that much more to borrow, or the banks just that much more to lend; and so great a sum would, in the nature of things, necessarily lower the rates of interest in the localities from which the bonds came. Again, let it be understood that if this $324,507,180 had not been loaned out directly, but held as a reserve against credit given to the people, the banks could have accommodated the people with loans amounting to at least four times $324,507,180, or $1,298,028,720—a sum nearly equal to one-half of all the loans and discounts of the national banks, the same being $2,818,288,346.45.

What effect it might have upon the price of wheat to add 250,000,000 bushels to the 522,229,505 bushels produced last year the consumers of bread may conjecture.

What effect it would have upon the price of cotton to add 5,000,000 bales to last year's production of 10,425,000 bales let every purchaser of cotton cloth conjecture.

During the whole thirty-nine years from 1863 to 1902 there has been withdrawn from the channels of trade and locked up in the vaults of the Treasury, in the form of United States bonds to secure national-bank notes, an average of $239,875,327 of capital, when it ought to have been serving the purposes of a reserve for more than a billion of credit every year.

If demand and supply control the price, certainly one billion of loanable funds on the market during the past forty years would have greatly affected the price of credit or the rates of interest.

If it be objected that in that event so much capital would not have gone into the banking business, the answer then is that the amount of dividends upon capital would have been correspondingly reduced and the borrower correspondingly benefited.

Not only has the locking up of this vast capital been a heavy burden upon commerce, but the currency produced by the system has been the most expensive possible, and in no sense responsive to the demands of trade.

First. It has been the most expensive kind of currency, because when a national bank exchanges $1,000 of its notes to-day for the $1,000 note of a customer it must charge interest upon $1,000 of capital, and in addition charge a certain sum for insuring the credit of the customer.

If, on the other hand, the bank could exchange its credit notes, which have cost it no more than a corresponding amount of deposits, the borrower would pay only for insuring his credit.

To illustrate: If capital is worth 4 per cent per annum and the average cost of insuring commercial credits is 2 per cent per annum, the rate of interest to the borrower in the former case must necessarily be 6 per cent, while in the latter case it should be only 2 per cent, or limited to the cost of insuring the credit.

Second. Our bond-secured currency has never been responsive to the demands of trade, but controlled absolutely by the profit or loss on the bonds. It was $320,200,069 in 1880, $122,928,084 in 1890, and $200,345,567 in 1899. To-day it is $323,863,597, and though our business is increasing daily, the banks are retiring their notes as fast as the law will permit, viz, at the rate of $3,000,000 per month.

The effect of such a system upon business is most disastrous, because we are constantly passing from an abundance, even a useless surplus, of these tools of commerce at one time to such periods of want of them at another as almost to constantly produce currency panics, a condition which is nothing more than a general fear that there will not be enough currency to carry on the legitimate business of the country.

Such a fear begets a general apprehension, and men who have been doing business on credit are compelled to respond in cash, which, because of our faulty system, has been growing scarcer, its unnatural decrease causing the trouble which a proper currency would absolutely prevent. Then follow acute liquidation, failures, ruin, and devastation of values, not because our people have not property, but because it can not be made available under our present system in times of panics and crises.

We do not want a currency dependent on a speculation in Government bonds and as expensive as the cost of capital and the insurance of credit will make it. We want a currency guaranteed by the six billions of liquid assets in our national banks, upon

which it is a first lien, and as cheap as the insurance alone of credits will make it.

Such was the currency of the Suffolk system from 1840 to 1860, regarding which the Connecticut bank commissioners, in 1844, commented as follows:

"It has been impossible for the banks of discount to find use for all their means in discounting good paper, and some, having the largest capital, have reduced the rate of discount, in a few instances, to 5, 4, and even 3 per cent."

Such, also, is the currency system of France, Germany, Scotland, Canada, and Australia to-day.

A BANK IS A CREDIT MERCHANT, OR A DEALER IN CREDITS.

Precisely as the individual, firm, or corporation that is buying and selling wheat is a grain merchant, or the one buying and selling cotton is a cotton merchant, so the individual banker, firm, or corporation engaged in banking is a credit merchant, or dealer in credits.

Let it be carefully noted that when a deposit of $1,000 is made with a bank, the bank has purchased that credit—or, perhaps, we should say, the use of that credit—of $1,000, and has paid a price for it.

This price may be any one of several things, or all of them put together.

First. Its safe-keeping, or protection against fire and robbery.

Second. The care of it and duty to pay out at any time all or any part of it in money, bank notes, drafts, or bills of exchange.

Third. To give its own credit, which is well known, in exchange for the credit of a customer, which may not be known at all.

Fourth. To allow a rate of interest on such deposit.

A bank having purchased the use of a large amount of credit upon these terms proceeds to sell credits to an amount equal to about three-fourths of all that it has purchased, because experience has proved during the past two hundred years that in all ordinary times, at least, a stock of convertible credits or cash amounting to about 25 per cent of what a bank owes is quite a sufficient supply to meet the demands of those who have sold credits to the bank.

It generally happens that those who sell credits to a bank are its best customers when the bank in turn has credits to sell. The deposits with the bank are made upon faith that it will return them. They are credits sold to the bank, and rest upon confidence. The sale of credits by the bank, or loans made to borrowers by the bank, rests upon confidence, and in the last analysis it is a question purely of confidence resting upon the honor of the borrower, and gives a truer and better expression to our exalted civilization than aught else. The banks of our country are owing the people nearly $9,000,000,000, and the people in turn are owing the banks more than $6,000,000,000, and the guaranty of each is American honor—the first and best asset of this Republic.

A bank is an essential element of our civilization, and the most potential factor in offering opportunities to the aspiring and capable in the neighborhood where it is located.

It collects all the fragments of inheritance, the savings of toil, the profits on production, and the scattered capital into one reservoir, from which men of enterprise and the natural captains of industry can draw to build larger factories, open new fields of employment, broaden the scope of possibility, and brighten the chance of achievement.

In each individual community the banks gather all the golden threads of thrift, and American genius, with the warp of energy, weaves them into the garments of prosperity.

What banks are constantly doing in this way for the people of each individual community they can do equally well for all the different communities and widely separated sections of our whole country, if we will only loose the bands that bind them hand and foot and permit them to engage as freely in their commercial pursuits as do the individuals, firms, and corporations engaged in all other lines of business.

Can anyone justify the limitation imposed to-day upon the right of a bank to have more than one place of business when no such restraint confines the operations of other mercantile pursuits?

Remove this unjust and unwise prohibition, and our banking system will automatically, without cost to the people, transmit the idle capital and unused credits from the sections where they are not temporarily needed to those parts where the demand is urgent and the rates of interest are high. (See Table C in Appendix.)

But it may be asked whether the banks are not doing just this thing to-day? Our answer is yes, to a degree and in a way, but with all the expense to the borrowers of capital—farmers and manufacturers—incident to the commissions of 12,000 middlemen, who are buying and selling the people's debts and making a profit upon every transfer of credit, and to that extent taxing the productive industries of the country and reducing the compensation of labor correspondingly.

It is simply a question for the more than 5,000,000 borrowers and the laborers upon the farms and in the factories, scattered all over this Republic, to decide whether they will buy their credit, or, in other words, borrow their money in the future at the wholesale rates of the great commercial centers, or to continue to pay retail prices, which vary from 2 per cent per annum in one locality to 2 per cent per month in another, averaging all around not less than 6 per cent, when it ought not to exceed 3.

Since the total amount of the commercial debt of the people is $6,491,630,743, as shown by the Comptroller's report, the interest paid by our producers must approach $400,000,000 annually, when, as matter of fact, it ought not to exceed $200,000,000, or an average rate all around of 3 per cent instead of 6.

Loans, capital, deposits, surplus, and undivided profits of each class of banks in geographical divisions, and in the United States on or about June 29, 1901 (from official and unofficial sources).

Location and character.	Number of banks.	Loans.	Capital.	Deposits.	Surplus.	Undivided profits.
United States:						
National banks	4,165	$2,981,053,588	$645,719,099	$3,035,662,506	$274,194,176	$142,545,642
State banks	5,204	1,214,106,759	271,085,198	1,637,564,351	105,627,395	45,188,942
Savings banks	1,007	1,219,740,360	18,681,405	2,518,599,536	185,858,754	30,309,636
Loan and trust companies	403	948,341,238	145,592,586	1,278,202,674	120,705,186	49,050,982
Private banks	2,193	128,388,798	56,963,846	149,256,043	7,079,584	3,760,051
Total	12,972	6,491,630,743	1,138,042,134	8,619,285,110	693,465,095	270,855,253

To your committee it seems obvious that the same course of reasoning that would justify the present prohibition upon banks, confining them in their operations to some one particular city, would compel the complete dismemberment of such great transportation companies as the Pennsylvania and New York Central railroads, for banks are only transportation companies, transmitting, through bills of lading and otherwise, credits which are the titles to the very same property that the railroads are transporting from one section of the country to another.

If by law we could and should cut one of these great trunk lines into as many fragments as there are counties between New York and Chicago, compelling the organization of as many independent lines as there are counties, with a full staff of highly paid officials, what effect would it have upon the present almost inconsequential charge of one-half a cent per ton per mile? Would it then be less than the disastrous and ruinous charge of 10 cents per ton per mile? What effect would such a freight charge have upon the price of cattle, corn, wheat, and cotton? What effect upon the price of the 10,000 manufactured articles which the different sections of our country are daily exchanging with each other as one of the necessary incidents of our complex and interdependent life?

But we should take no such backward step, even if we had the power.

The question is, Shall we not take this upward and onward step, now under consideration, by correspondingly cheapening and equalizing the cost of transporting the vast credit transactions of our country at present passing the $150,000,000,000 mark in a single year? Your committee thinks we should.

To the Hon. Cornelius A. Pugsley, a Democrat, and the Hon. Charles N. Fowler, a Republican, both members of your committee at the present time, Mr. George Pallain, the managing director of the Bank of France, stated last August that at every one of the branches of the Bank of France, located in all parts of the Republic, from the Mediterranean to the English Channel, there being at least one branch in each one of the 87 departments or counties, the rate of interest was absolutely the same. He informed them that the smallest tradesman on the Spanish border,

borrowing but $50; the well-to-do storekeeper of Calais, borrowing $500; the manufacturer of Lyons, borrowing $5,000; and the great merchant of Paris, borrowing $50,000, all paid the same rate of 2½ per cent.

Throughout Germany the rates of interest are practically the same at all of the 316 places where the Reichsbank does business.

Throughout Great Britain the rate varies but little, while in Australia and Canada, new and partially developed though they are, the variation in rates sometimes reaches the trifling difference of 1 and possibly 2 per cent, because of the great distances and expensive conditions.

On the 26th day of March the Hon. Joseph H. Walker, when appearing before your committee, took occasion to repeat some of the superficial, stock statements which are usually put forward by those who are utterly unfamiliar with this subject. He said in part:

"The putting of the local agent of a city bank in a place means that no independent local bank managed by its citizens can be established and maintained in the town, and if one is there it must go out of business.

"In times of stringency, loans or renewals will be refused.

"The customers of the country branch will be sacrificed to the necessity of the parent city bank.

"Our choice must be made between one great United States bank, with 10,000 branches, and 10,000 independent banks united together.

"While any five citizens anywhere who can get together $25,000 as a guaranty of the safety of their operation in banking can form an independent bank, there is no excuse for permitting branch banks."

Mr. Walker's statement in full was submitted for consideration and reply to E. S. Clouston, esq., president of the Canadian Bankers' Association and general manager of the Bank of Montreal, an institution with a capital surplus and undivided profits amounting to $20,000,000—one of the largest corporate banks in the world.

The following is Mr. Clouston's reply in full:

"LETTER FROM E. S. CLOUSTON, ESQ., GENERAL MANAGER OF THE BANK OF MONTREAL AND PRESIDENT OF THE CANADIAN BANKERS' ASSOCIATION.

"MONTREAL, *March 26, 1902.*

"MY DEAR SIR: I am favored with a copy of the views of the Hon. Joseph H. Walker on 'branch banks,' and note your request for specific replies thereto.

"I can only write from the point of view of a Canadian banker, and I am not prepared to say offhand that criticism of mine on Mr. Walker's remarks applies to the condition of affairs in the United States or that the branch-bank system of banking would be successful there, although I confess I should dearly like to make the attempt.

"Mr. Walker says, 'The authorization of branch banks is exceedingly bad economics' and 'still worse statesmanship.' Incidentally, he displays his preference for what he calls 'local independent institutions,' and he fails to find any justification for branch banks, apparently regarding the latter as a menace to the 'free banking system' of the United States. He also doubts the wisdom of permitting powerful city banks to establish branches in places containing a population of only 4,000 or less. The reasons advanced for his condemnation of a branch-bank system, which has been so eminently successful in Great Britain and the Dominion of Canada, are apt to raise a doubt in the minds of those familiar with that system whether he intends them to be taken seriously or whether they are only given with a view to bringing out the views on the opposite side. However, his evident unfamiliarity with the subject must be a sufficient excuse for a brief memorandum on a few points.

"The bank of Montreal has 50 branches established at all the principal points in the Dominion of Canada. The management of these branches is intrusted to officers who have been trained from boyhood in the service of this bank, and by the time they are ripe for the position of manager they should have acquired experience, ability, and a degree of wisdom which keeps them absolutely free from 'political consideration,' which Mr. Walker fears might influence their judgment in the conduct of the bank's business. I may say that, so far as I know, banking in Canada is entirely nonpolitical, and no official of the bank is permitted to take active part in politics, though he is allowed absolute freedom in voting. The chief desire of the country bank manager is to make his branch a source of profit to the parent institution, and as a rule the size and resources of that parent institution enable him to render more financial aid, *at a lower rate of interest*, to enterprises such as Mr. Walker mentions, viz., 'the street railway, the electric-light plants, the new factory, the new town hall, and better roads,' than the small local banks, formed by the few public-spirited citizens, who are more likely to further their own individual enterprises than those of the general community.

"Mr. Walker's fear that the customers of a country branch are in times of stringency sacrified to the necessity of the parent institution is also a phantom of his imagination, for the loans of a branch being less liquid, the knowledge of the difficulty of realizing them and the small proportion they bear to the whole amount leaves them practically undisturbed in the acutest panic, and their only knowledge of a stringency is imparted through the medium of newspaper articles.

"Equally fallacious is the statement that no 'independent local bank' can exist in a town after the establishment in that town of a branch of a larger bank. Many Canadian instances could be cited to prove the contrary, and local banks exist and flourish in the Dominion as next-door neighbors to branches of the largest banks in Canada.

"It is difficult to treat seriously the reference made to the necessity of a choice between one bank with 10,000 branches and 10,000 independent banks. There is no sign in Canada of the absorption by any one great bank of its rivals in business. The whole Dominion is dotted with branches of what Mr. Walker terms 'city banks.' These branches are established in agricultural, mining, ranching, and fishing districts, as well as the center of trade and manufacturing industries, and they all assist in accomplishing the purpose which Mr. Walker states local independent banks are alone qualified to effect. In fact, the branches of Canadian banks are doing the very work which he fears might be prevented were the same system introduced into the United States. They are putting within reach of those with no capital, but energy and enterprise, the capital of the wealthier classes.

"They economize capital. I quote from my annual address as president of the Canadian Bankers' Association:

"'A quarter of a century ago the paid-up capital stock of banks of Canada was $66,800,000. To-day it is $67,480,000, or practically the same amount. In the interval the "rest," or reserve profits, has risen by more than 50 per cent, and now stand at $36,900,000. We have therefore been able to conduct an immensely increased domestic and foreign trade upon a stationary bank capital stock, a result due to the excellence of our banking system, and affording crowning evidence of the adaptability of that system to the requirements of a young and growing country.'

"They equalize the rate of interest, and the establishment of a branch bank in a country town means that the borrower obtains his loans at a rate not much above the city borrower. In outlying districts, owing to difficulties of transport, increased cost of living, inferior security, there is sometimes a difference of 1 or 2 per cent.

"There can be no doubt, also, that to the depositor—a class that the Government aims to protect—the security of the bank with the large capitalization necessary to do the branch-bank business is much greater than the local bank with a petty capital of $25,000 or $50,000.

"At the head office, with larger experience, and freed from local influences and atmosphere, the executive is often better able to judge of the desirability of lending a proposed local enterprise, and, I do not hesitate to say, has frequently been the means of preventing serious losses to the small community by timely advice and warning.

"Much more might be said, but this letter has already run to greater length than I anticipated, and I must apologize for intruding on so much of your time.

"Yours, faithfully,

"E. S. CLOUSTON,
"*General Manager and President*
"*Canadian Bankers' Association.*

"CHAS. N. FOWLER, Esq.,
"*Chairman Committee on Banking and Currency,*
"*House of Representatives United States,*
"*Washington, D. C.*"

Your committee has no hesitation in asserting that sound reason on the one hand and the experience of the world on the other more than justify the proposed amendment to the national-banking law, authorizing national banks to have more than one place of business.

Such is the practice of every civilized country in the world, and many of our States extend the same privilege to their local institutions.

We submit that traditional prejudice and selfishness should give way to reason, experience, and the common interest of the whole people.

INTERNATIONAL BANKING.

Our exports last year were $1,897,755,657 and our imports $822,673,016, making a foreign trade aggregating $2,310,428,573,

which must constantly increase if we are to keep our men and mills working all the time.

We have already attempted to point out where a gain in interest rates could be made, which may, at no distant day, be the determining factor whether we shall increase our foreign trade or be actually driven from the markets of the world because our cost of credit, upon which almost everything is produced, is too high and makes our commodities too dear to successfully compete with our rivals, when the contest becomes fiercer, the strife hotter, and the survival of the fittest is the deadly ultimatum.

Hardly second to this consideration is the importance of having American men and American money engaged in the banking business all around the globe, wherever American goods can be sold, not only to secure a better foothold and advance American interests, but to route the goods over American shipping lines as the bills of lading are passing through American banks.

PUBLIC OR GOVERNMENT DEPOSITS.

If during the next three months the Government should collect twenty-five millions more than it spends, one hundred millions at least of the loans owed by the people to the banks must be paid.

In other words, every dollar to-day tied up in the United States Treasury results in withholding at least $4 of loanable funds from the people.

Your committee is of the opinion that the time has long since passed, if indeed it ever existed, when the operations of the United States Treasury should be a constant menace to the commercial interests, which involve, in a greater or less degree, every day's labor our people have to sell and every dollar they have to invest.

Our practice, through the forms of taxation, of abstracting from the channels of trade a certain portion of the reserve money every twenty-four hours, is a certain and deadly process, which, if pursued, must result in greater and greater contraction and end in disaster.

The relation between the collection and disbursement of the Government moneys and the commercial interests should be as natural and undisturbing as the inflow and outflow of the hundred millions annually required to carry on the government of New York City.

Nor will this problem be completely solved until every dollar the Government controls for its current use shall flow undisturbed in the arteries of trade, and the Government, like every municipality or corporate institution, shall cease to be a disturbing factor in the conduct of the business of the country. Therefore provision is made in the bill for the deposit of all the public moneys above $50,000,000 in the banks, in order that the people may have the use of it.

SUBSIDIARY COINAGE.

In a recent communication, Hon. George E. Roberts, Director of the Mint, made the following observations:

"The facts of the situation briefly stated are that, prior to the passage of the act of March 14, 1900, the total stock of subsidiary coin in the country was limited to $80,000,000, and by that act the limit was raised to $100,000,000. The demand for subsidiary coin during the past two years has been very heavy, and the total stock in the country is now nearly $92,000,000, almost all of which is outside the Treasury in active circulation.

"It seems quite probable that unless this Congress takes some action to again raise the limit, the entire amount authorized will be absorbed before another Congress can act, and the Treasury will be unable to meet the legitimate wants of trade. It is, therefore, of urgent importance that some measure be passed by the Fifty-seventh Congress, and, if practicable, during the present session, to relieve the situation. It scarcely need be said that nothing can be more annoying or embarrassing in business circles than to be unable to make change. There is no gainsaying or arguing against the demand for subsidiary coin. The business men call for it because they want it, and when they call for it are exceedingly annoyed if unable to obtain it. No reason exists why their needs should not be completely supplied, and it is unwise and inconsiderate to neglect the situation and not allow the Treasury to provide for their constantly growing requirements."

This statement discloses the fact that more subsidiary coin is much needed immediately, and every one at all familiar with the situation realizes that we have far too many silver dollars, both for the requirements of trade and the highest degree of confidence in the safety of the Treasury; therefore, your committee would stop the coinage of silver dollars at once, which is going on at the rate 1,500,000 every month, and use the balance of the bullion in the Treasury, which is now represented by Treasury notes outstanding, amounting to $35,247,000, to supply this most urgent demand for subsidiary coin.

Such a course will convert what is worse than useless, an actual burden, indeed a threatening danger, into much-needed tools or means for conveniently carrying on the business of the country.

Your committee would continue to coin from the legal-tender silver dollars all the subsidiary coin that the public will absorb; thus relieving the Treasury on the one hand and greatly benefiting trade on the other.

Caution and prudence suggest this course, and business requirements demand it.

OUR STANDARD MUST BE UNEQUIVOCAL.

In a recent report the Hon. E. J. Hill, of this committee, said, with truth:

"The purpose of the act of March 14, 1900, was to establish the gold standard in the United States, and to that end it made the dollar consisting of 25.8 grains nine-tenths fine the standard unit of value, and declared it to be the duty of the Secretary of the Treasury to maintain all forms of money at parity therewith, but it did not, aside from providing for the redemption of United States notes in gold, prescribe any method by which such parity should be maintained."

In a recent hearing before the Committee on Coinage, Weights, and Measures, the Hon. Lyman J. Gage, then Secretary of the Treasury, described the present situation as follows:

"It seems to me that the question which is involved in this bill is comparatively simple. The law now provides by declaration for the maintenance of the parity between the silver money and the gold money. And there is also an avenue provided which tends to maintain that parity through Government action. That avenue is one provided by the law, too, namely, that silver on the same basis as gold shall be receivable by the Government in the payment of all taxes and customs dues. Therefore, there is a method through which the silver dollars may be kept equivalent in value to the gold dollars.

"Now, because of the present stock of silver money, a large portion of which is absorbed in circulating among the people, the probabilities are that any returning volume of silver toward the centers, which will certainly set in, as Mr. White has described, in the time of dull trade, will find an avenue for practical redemption in this way. Bankers, finding themselves embarrassed, if they do find themselves embarrassed, at the centers with a surplus of silver as compared with gold, will cause it to be paid into the Treasury for excess taxes and customs dues and will retain their gold.

"Now, why will they do that instead of paying gold or silver indiscriminately at such a time? I think the reason that they will make that discrimination is that the Government itself in its legislation seems to avoid the direct responsibility that rests upon it to maintain the parity. All discussions and all statements and all expressions of desire by those who represent the Government to shuffle off upon the community the responsibility for silver affects the public mind with distrust.

"We ought not to be squeamish about meeting the parity in a square, straightforward manner. It is thus discredited more than the facts warrant, and if you ask the people of the United States to have perfect faith in the parity of these two metals and to treat one with all the respect and confidence accorded to the other, then the Government of the United States, that is responsible for the situation as it is, itself must set the example.

"Now, here is an illustration. The act of March 14 was passed. The House bill proposed to make the two metals exchangeable with each other at the Treasury. The Senate amended it. Why? That is the question that every financial man in the United States asks. Why? If you, the Government, are afraid, can you expect us to have more courage than you possess? Do you ask us to have confidence when you yourself will not lay down the basis of confidence? You complain all the time about the wicked money sharks and their discriminations against silver. They can and will answer: Cease to discriminate against it yourselves, and we will no longer discriminate.

"Nothing can rise higher than its source, and if your confidence is not good and you will not take all the responsibilities of the parity between silver and gold, do not expect the public to take the risk. They will decline to do it. Therefore, as long as these conditions exist, silver, when it accumulates at the money centers, will not be held for a time when it may be used and distributed again. The bankers will send it into the avenues of present redemption. The Government might just as well face that redemption at the front door as to delay until it must take it under the revenue laws at the back door."

Your committee herewith submits a statement, prepared by the Hon. Ellis H. Roberts, Treasurer of the United States, showing the revenues of the Government received at subtreasury offices and percentages of the kinds of money deposited, by fiscal years from 1889.

Statement showing the revenues of the Government and kinds of money deposited.

Fiscal year.	Revenues received at subtreasury offices.	Percentages of kinds of money deposited.		
		National bank, United States, and Treasury.	Gold coin and certificates.	Silver coin and certificates.
1889	$246,053,566	17.94	68.61	13.45
1890	251,846,033	16.77	72.32	10.91
1891	238,549,235	22.25	64.05	13.70
1892	191,926,330	54.90	26.86	18.24
1893	217,754,509	64.62	10.20	25.18
1894	157,934,761	36.94	20.28	42.78
1895	165,085,378	52.67	4.79	42.54
1896	173,383,744	52.88	4.09	43.03
1897	193,512,984	52.35	3.09	44.56
1898	194,982,090	52.54	15.69	31.77
1899	231,131,302	15.40	62.34	22.26
1900	259,570,737	12.13	68.64	19.23
1901	268,017,575	18	68.69	13.31
1902 (6 months)	136,589,275	11.76	80.30	7.94

It will be observed that in 1896, when the policy of the Government was in the balance, only 4 per cent of Government duties was paid in gold coin, 43 per cent being paid in silver coin and silver certificates, and the balance, 52 per cent, being paid in national-bank, United States, and Treasury notes; while to-day, the policy of the Government being to maintain the gold standard, 80 per cent of the revenues is paid in gold coin and gold certificates, 11 per cent in national-bank, United States, and Treasury notes, and the balance, or only 7 per cent, in silver and silver certificates.

This comparison of 1896 with 1902 will convince anyone that the Government can not escape its responsibility—even if it desired to do so—without either repealing the law by which it is now compelled to receive as dues its outstanding silver in some form or other or by an act of direct repudiation. These two ways of escape are equally dishonorable, and no one supposes for an instant that the Government will ever resort to either.

Since the Government put this vast bulk of silver—now amounting to $530,000,000—into circulation and received full value for every dollar of it, can anyone say that the Government has any moral right to compel any citizen to take a piece of this money, which is not intrinsically worth its face, in what it has established as the standard of value?

Can anyone, by any course of reasoning, show that the Government, as a matter of good faith and good morals, is bound to redeem a piece of fiat paper, representing no value whatever, such as the United States notes were, and yet is not bound to redeem its own obligation expressed in a silver dollar, for which it has received full value, because, forsooth, what? That it carries a value of 45 cents and the Government can compel the holder to carry the balance of 55 cents; or that the Government is broken and its Treasury is beggared?

Can anyone explain why the Government bound itself to redeem the Treasury notes, whose face value is about 80 cents in gold coin, and refused to honor its obligation of 55 cents in every silver dollar?

Can anyone reconcile the Government's position in undertaking to redeem its silver half, quarter, and 10-cent pieces, its nickels, and even its pennies in gold coin, with its persistent refusal to bravely meet its moral obligation and honor the silver dollar in the same way; especially since this obligation would be a legal one if the Government stood in the position of one of its private citizens, for then the proof would be forthcoming that the silver dollar was issued for actual and full value received?

If there is a government on this globe which would stand for absolute integrity and ideal honor that government is our own, and your committee believes that the time has long since passed when the good faith and possible conduct in a business transaction of the United States should be a subject of discussion and debate at every money center in the world and around every fireside within its own borders.

We do not believe that anyone, anywhere, should be justified in giving expression to that cowardly and evasive sentiment, "Well, it would seem as though the United States intended to maintain all its forms of money at a parity." But we believe that all men, everywhere, should rather give utterance to that courageous sentiment, born of duty and honor, "The United States does redeem every form of its plighted faith in gold coin."

To reduce the possible burden of assuming to pay out gold coin for silver dollars, if indeed not to eliminate it altogether, caution has been taken to absolutely remove the United States notes, amounting to $346,000,000; the national-bank notes, amounting to $325,000,000, and the Treasury notes, amounting to $35,000,000 from the obligations of the Treasury and to limit all the forms of paper currency to denominations of $10 and upward, reserving for the different forms of our silver money the entire field below the denomination of $10.

Your committee is of the opinion that these precautions, together with the fact that every dollar will hereafter be, not by an inference, an argument, or a practice, as good as every other dollar, but in truth the equivalent of 25.8 grains of gold, will forever end the suggestion of discrimination and danger that lurks in governmental cowardice and a studied attempt at evasion.

CONCLUSION.

Your committee is confident that should this measure become a law the following results would be assured:

First. An unequivocal and unquestioned gold standard.

Second. That the commerce of the United States will always have an adequate reserve in that standard.

Third. That the credit of the nation will no longer be threatened, nor the people taxed to protect it against assault.

Fourth. That the credit merchants or bankers will furnish gold for export, if it can be spared from the country, will protect it if it should be needed at home, and will purchase it if it be required to sustain commercial credit.

Fifth. That our paper currency will constantly adjust itself to trade and prove adequate under all circumstances but never redundant.

Sixth. That the rates of interest will be greatly reduced and so equalized throughout the whole country as to give all of our people, the farmer and the manufacturer, the same opportunity, practically, to obtain capital and on equal terms.

Seventh. That our enduring success in competing in the markets of the world will be assured, because we shall have a commercial rate of interest as low as the lowest of any rival.

Eighth. That we shall secure banking relations in all parts of the world, and thus furnish the most important means of building up an American merchant marine.

Ninth. That, all doubt with regard to our standard of value having been removed, we shall secure the complete confidence of all the nations of the earth, which is absolutely essential before we can hope to make New York, instead of London, the exchange market and consequently the commercial center of the world.

[H. R. 13363. Fifty-seventh Congress, first session.]

A bill to maintain the gold standard, provide an elastic currency, equalize the rates of interest throughout the country, and further amend the national-banking laws.

DIVISION OF BANKING AND CURRENCY.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there shall be, and is hereby, created and established in the Treasury Department a division of banking and currency, which shall be in charge of a board consisting of three members, and shall take the place of and shall have, exercise, and enjoy all the powers and authority heretofore lawfully vested in the Comptroller of the Currency, and any other power and authority authorized by this act and shall be known as the board of control of banking and currency.

BOARD OF CONTROL.

The members of said board of control shall be appointed by the President, by and with the advice and consent of the Senate. The term of office shall be for a period of twelve years, except that the terms of the first three members shall be for twelve, eight, and four years, respectively. The member appointed for four years shall be known as the first comptroller and shall preside over the board of control, and the two remaining members shall be known as associate comptrollers, and thereafter that member of the board whose term next expires shall become the first comptroller.

The salary of each member of said board of control shall be $7,500 per annum, which shall be paid out of the taxes collected from the banks upon their note circulation; and the members of said board of control shall be removed only for cause stated in writing.

CURRENT REDEMPTION OF UNITED STATES NOTES.

SEC. 2. That if any national bank shall assume the current redemption, as hereinafter described, of an amount of United States notes equal to 20 per cent of its paid-up capital, it shall have the right, without depositing United States bonds as now provided by law—

TAX ON CIRCULATION.

First. To immediately take out for issue and circulate an amount of bank notes equal to 10 per cent of its paid-up capital, by paying a tax, on the first days of January and July of each year, of one-eighth of 1 per cent upon the average amount of such notes in actual circulation during the preceding six months.

Second. To take out for issue and circulate an amount of bank notes equal to 10 per cent of its paid-up capital at any time after the expiration of one year from the date of the assumption aforesaid; and it shall pay into the Treasury of the United States, on

the 1st days of January and July of each year, a tax of one-eighth of 1 per cent upon the average amount of such notes in actual circulation during the preceding six months.

TAX SHALL NOT BE INCREASED.

The foregoing taxes shall not be increased so long as said bank shall continue to currently redeem said United States notes, but whenever any United States notes the current redemption of which has been assumed by any national banking association shall be finally redeemed, as provided in subdivision 2 of section 11 hereof, such bank shall pay into the United States Treasury, on the 1st days of January and July of each year, a tax of five-eighths of 1 per cent upon the average amount of such notes in actual circulation during the preceding six months which it has been permitted to issue on account of the assumption of the current redemption of the United States notes thus paid, until all the United States notes the current redemption of which has been assumed by all the national banking associations shall have been finally paid, as provided in said subdivision 2 of section 11.

Third. To take out for issue and circulate an amount of bank notes equal to 10 per cent of its paid-up capital at any time after the expiration of two years from the date of the assumption aforesaid: and it shall pay into the Treasury of the United States, on the 1st days of January and July of each year, a tax of five-eighths of 1 per cent upon the average amount of such notes in actual circulation during the preceding six months.

Fourth. To take out for issue and circulate an amount of bank notes equal to 10 per cent of its paid-up capital at any time after the expiration of three years from the date of the assumption aforesaid; and it shall pay into the Treasury of the United States, on the 1st days of January and July of each year, a tax of five-eighths of 1 per cent upon the average amount of such notes in actual circulation during the preceding six months.

Fifth. To take out for issue and circulate an amount of bank notes equal to 10 per cent of its paid-up capital at any time after the expiration of four years from the date of the assumption aforesaid; and it shall pay into the Treasury of the United States, on the 1st days of January and July of each year, a tax of five-eighths of 1 per cent upon the average amount of such notes in actual circulation during the preceding six months.

Sixth. To take out for issue and circulate an amount of bank notes equal to 10 per cent of its paid-up capital at any time after the expiration of five years from the date of the assumption aforesaid; and it shall pay into the Treasury of the United States, on the 1st days of January and July of each year, a tax of five-eighths of 1 per cent upon the average amount of such notes in actual circulation during the preceding six months.

EMERGENCY CIRCULATION.

Seventh. With the approval of the board of control, to take out for issue and circulate an amount of notes equal to 20 per cent of its paid-up capital at any time after the expiration of six years from the date of the assumption aforesaid; but it shall pay into the Treasury of the United States, on the first days of January and July of each year, a tax of 1½ per cent upon the average amount of such notes in actual circulation during the preceding six months.

Eighth. With the approval of the board of control, to take out for issue and circulate an amount of notes equal to 20 per cent of its paid-up capital at any time after the expiration of seven years from the date of the assumption aforesaid; but it shall pay into the Treasury of the United States, on the first days of January and July of each year, a tax of 2½ per cent upon the average amount of such notes in actual circulation during the preceding six months.

FORM OF INDORSEMENT.

The manner and form of the assumption of the current redemption of the United States notes, as aforesaid, shall be as follows: Each note shall bear the indorsement:

"For value received, the National Bank of [city], [State], will currently redeem this note in gold coin until the same has been paid and canceled in accordance with the provisions of law."

Any notes so indorsed shall be a legal tender for all debts, public and private, except duties on imports and interest on the public debt, as heretofore, and upon presentation and demand be redeemed, as now, out of the issue and redemption division, and the bank which has assumed to currently redeem the same shall, immediately upon the demand of the Secretary of the Treasury, transmit to the Treasury an amount of gold coin equal thereto, and when received shall be paid into the issue and redemption division, and the notes shall then be returned to said bank.

SURRENDER OF UNITED STATES NOTES TO THE GOVERNMENT.

Whenever a national bank shall present any United States notes at the United States Treasury for indorsement, as aforesaid, it shall at the same time surrender to the United States Treasury an additional amount of United States notes equal to one-half of the United States notes presented for such indorsement and receive in exchange therefor gold coin; and the United States notes so redeemed shall not be reissued, but shall be canceled and destroyed.

WHEN BANKS SHALL NOT PAY OUT UNITED STATES NOTES.

SEC. 3. That when the national banks of the United States shall have assumed the current redemption of United States notes amounting in the aggregate to $130,000,000, and the United States has redeemed and canceled United States notes amounting to $65,000,000, no national bank shall thereafter pay out any United States notes the current redemption of which has not been assumed by some national bank, but shall return the same to the United States Treasury for redemption, and the Secretary of the Treasury shall redeem the United States notes so returned out of the gold coin in the issue and redemption division of the Treasury, and they shall not be reissued, but shall be canceled and destroyed. But it shall be the duty of the Secretary of the Treasury to maintain the reserve fund at an amount not less than 33⅓ per cent of the United States notes at any time outstanding.

GOVERNMENT SHALL NOT PAY OUT OR ISSUE ANY GOLD CERTIFICATES.

From and after the first presentation for redemption and cancellation of any United States notes in accordance with the provisions of this section, the Secretary of the Treasury shall not pay out or issue any gold certificates.

WHEN OTHER NATIONAL BANKS MAY TAKE OUT CIRCULATION.

SEC. 4. That after the national banks shall have assumed the current redemption of one hundred and thirty millions of United States notes, and the United States shall have redeemed, canceled, and destroyed sixty-five millions of United States notes, in accordance with section 2 of this act, any national bank which has not assumed the current redemption of any United States notes, as hereinbefore provided, may then take out an amount of circulation equal to 10 per cent of its capital, and from year to year thereafter additional amounts of circulation in accordance with the provisions of section 2 of this act; but upon the first 20 per cent of the total circulation to which it is entitled under this act it shall pay into the Treasury of the United States on the first days of January and July of each year five-eighths of 1 per cent upon the average amount of such notes in actual circulation during the preceding six months, and upon all such notes taken out for issue in excess of said 20 per cent the taxes prescribed in section 2 of this act.

GUARANTY FUND.

SEC. 5. That before any national bank shall receive any of the bank notes referred to in this act it shall first deposit in the Treasury of the United States, as a guaranty of the payment thereof, an amount of United States bonds or gold coin, or both, equal to five per cent of the amount of notes so taken out, and such deposit shall be counted as a part of the lawful reserve of said bank. The interest upon said bonds shall be paid to the bank so depositing them, and if said bank shall retire said circulation, or any portion thereof, an amount of bonds or gold coin, or both, equal to 5 per cent of the notes so retired, shall be returned to said bank: *Provided, however*, That if it should be necessary to sell said bonds for the purpose defined in section 11 of this act, the Secretary of the Treasury is hereby authorized to dispose of the same and use the proceeds in accordance with the provisions of law contained in said section.

NOTES SHALL BE FOR $10 OR MULTIPLES THEREOF.

SEC. 6. That all the bank notes taken out for issue in accordance with the provisions of this act shall be furnished by the United States at the expense of the respective banks issuing them, and shall be in denominations of $10 and multiples thereof.

NOTES SHALL BE FIRST LIEN—RECEIVABLE FOR DUES BY THE GOVERNMENT.

SEC. 7. That such notes shall be a first lien upon the assets of the respective banks issuing them, and shall be received upon deposit and for all purposes of debt or liability by every national bank at par and without any charge of whatsoever kind, and such notes shall be receivable for all public dues except duties on imports, and when so received may be paid out again.

UPON DEPOSIT OF LAWFUL MONEY BANK MAY ISSUE AT ONCE.

SEC. 8. That the total amount of circulating notes of all kinds of any national bank may equal, but shall not at any time exceed, the amount of its paid-up capital.

SEC. 9. That any national bank having notes outstanding to secure the payment of which United States bonds have been deposited may, upon the deposit of lawful money for the redemption of said notes, take out for circulation the notes provided for in this act, in the manner and at the times specified, without reference to the limitation of $3,000,000 each month prescribed in section 9 of the act approved July 12, 1882.

DEPOSIT OF PUBLIC MONEYS.

SEC. 10. That the Secretary of the Treasury is hereby authorized, in his discretion, to deposit all the money of the United States in

excess of $50,000,000, except that in the issue and redemption division of the Treasury, in national banks, upon the condition that said banks shall first deposit in the United States Treasury United States bonds equal in amount at par to the sum to be so deposited; and such banks shall, on the first days of January and July of each year, pay interest thereon to the United States at the rate of 1 per cent per annum upon the average balances of the preceding six months, but such banks shall not be required to hold any reserve against such deposits.

GUARANTY AND REDEMPTION FUND.

SEC. 11. That the United States bonds and the gold coin deposited by the banks in accordance with the provisions of section 5 of this act, all the money received for taxes upon all bank-note circulation (except that herein otherwise appropriated), and all the interest upon the deposits of the United States with national banks, when paid into the Treasury, shall be set aside and constitute a fund which shall be designated as the guaranty and redemption fund.

First. A fund to pay the circulating notes of any national bank outstanding at the time of its failure. But the United States Treasury shall recover from the assets of the failed bank an amount equal to its outstanding notes, and the same shall be paid into the guaranty and redemption fund.

Any national bank desiring to go into liquidation shall first pay into the guaranty and redemption fund an amount of gold coin equal to the amount of its notes then outstanding.

If said fund shall for any reason fall below an amount equal to 3 per cent of the total amount of the bank notes taken out in accordance with the provisions of this act, the board of control may impose an extraordinary tax, not exceeding 1 per cent in any one year, upon the amount of the notes at the time outstanding; but such extraordinary tax shall be refunded to the respective banks whenever such repayment shall not reduce said fund below an amount equal to 5 per cent of all the notes outstanding.

Second. A fund the accumulations of which in excess of an amount equal to 10 per cent of all the notes taken out of circulation under the provisions of this act shall be applied to the redemption for cancellation of those United States notes which the banks have assumed to currently redeem; but this redemption shall be in the inverse order of the assumption of their current redemption by the banks: *Provided*, That no such application of said fund shall be made as will reduce the same below $5,000,000.

REDEMPTION OF UNITED STATES NOTES IN CASE OF FAILURE OR LIQUIDATION OF NATIONAL BANK.

SEC. 12. That if any national banking association which has undertaken to currently redeem any United States notes as aforesaid shall fail or liquidate, such United States notes shall be redeemed by the Government out of the issue and redemption division, and shall not be reissued, but shall be canceled and destroyed; but as soon as the amount so paid out can be transferred from the guaranty and redemption fund to the issue and redemption division without reducing the same below an amount equal to 10 per centum of all the bank notes taken out in accordance with the provisions of this act, the same shall be done: *Provided*, That the amount in the guaranty and redemption fund shall in no case be reduced below $5,000,000.

WHEN BANKS SHALL NOT PAY OUT OR HOLD UNITED STATES NOTES.

SEC. 13. That no national bank, after notice in writing has been given that the United States is prepared and desires to redeem any particular United States notes whose current redemption has been assumed by any national bank, shall pay out or hold the same in its reserve, but shall forthwith return them to the Treasury for redemption.

AMOUNT OF TAXES AFTER UNITED STATES NOTES HAVE BEEN REDEEMED.

SEC. 14. That when all of the United States notes whose current redemption was assumed by national banks have been redeemed, canceled, and destroyed, or provision has been made for their redemption by depositing in the issue and redemption division an amount of gold coin equal to the amount of those notes still outstanding, in which case they shall be redeemed out of said fund, and shall not be reissued, but shall be canceled and destroyed, the taxes upon the bank notes taken out for issue in accordance with the provisions of this act shall thereafter be one-eighth of 1 per cent per annum upon the note circulation up to 60 per cent of the capital of the respective banks issuing it, and all the accumulation in said guaranty and redemption fund in excess of said 10 per cent shall be paid into the general fund of the Treasury.

FUND INVESTED IN UNITED STATES BONDS.

The Secretary of the Treasury is hereby authorized, in his discretion, to invest said guaranty and redemption fund invested in United States bonds.

SEC. 15. That the said board of control may grant charters to clearing houses running for twenty years, with such capital and powers to effect clearances between banks, bankers, trust companies, and other financial associations, and to do and perform such other business and service incident to clearing-house business as said board of control may approve.

CLEARING HOUSES MAY ISSUE GOLD CERTIFICATES.

And such clearing houses are hereby authorized to receive deposits of gold coin and to issue certificates therefor in denominations of not less than $20 each. The coin so deposited for or representing the certificates of deposit shall be retained by the respective clearing houses issuing the same for the payment of said certificates on demand. Said certificates shall be receivable for customs, taxes, and all public dues, and when so received may be paid out again; and such certificates when held by any national banking association may be counted as part of its lawful reserve. Such certificates shall be furnished by the Government at the expense of the respective clearing houses issuing them.

PENALTY FOR OVERISSUING GOLD CERTIFICATES.

Any person who shall knowingly issue or in any manner aid or be concerned in the issuance of any such clearing-house gold certificate or certificates when gold coin of the United States to the full amount thereof has not been deposited with such clearing house and remains therewith on deposit and not covered by outstanding clearing-house gold certificates shall be imprisoned at hard labor not less than five years and not more than twenty years.

PENALTY FOR COUNTERFEITING GOLD CERTIFICATES.

Every person who falsely makes, forges, or counterfeits, or causes or procures to be made, forged, or counterfeited, or willingly aids or assists in falsely making, forging, or counterfeiting, any clearing-house gold certificate, or who passes, utters, or publishes, or attempts to pass, utter, or publish, any false, forged, or counterfeited note purporting to be a gold certificate issued by a clearing house, knowing the same to be falsely made, forged, or counterfeited, or who falsely alters or causes or procures to be falsely altered, or willingly aids or assists in falsely altering any such clearing-house gold certificate, or passes, utters, or publishes, or attempts to pass, utter, or publish, as true any falsely altered or spurious clearing-house gold certificate issued or purporting to have been issued under this act, knowing the same to be falsely altered or spurious, shall be imprisoned at hard labor not less than five years nor more than fifteen years and fined not more than $1,000.

CLEARING-HOUSE DISTRICTS.

SEC. 16. That the said board of control shall divide the United States into clearing-house districts and each clearing-house district shall have one clearing-house city for all the bank notes issued by the banks located in said district, and every bank which has taken out circulation for issue in accordance with the provisions of this act shall belong to some particular district, and the notes so taken out shall bear in bold and clear figures the number of the district to which the bank issuing them belongs; but any national banking association may have an agency for the redemption of its bank notes in each of the clearing-house cities.

NOTES REDEEMED IN GOLD COIN, HOW AND WHERE.

SEC. 17. That the bank notes taken out for issue in accordance with the provisions of this act shall be redeemed on demand in gold coin at the home office of the bank issuing them, and if said bank is located outside of a clearing-house city it shall then select a national bank as its agent in the clearing-house city of the district to which it belongs, which shall upon demand redeem said notes in gold coin, or it may make said clearing house its agent for such redemption or for the transaction of any other business, and any money deposited at said clearing house by any national banking association for such purposes may be regarded as a part of its lawful reserve.

NOTES OUTSIDE THEIR OWN DISTRICT.

SEC. 18. That if any national bank shall receive such circulating notes of any other national bank located outside of its own district it shall not pay them out over its own counter, unless the bank of issue has an agency in said district for the redemption of said notes in gold coin, but shall forward them either to some bank in the district to which the notes belong or to the clearing house, or to some bank located in the clearing-house city of its own district, and then they shall be returned to the bank issuing them or to the clearing house or to some bank in the clearing-house city of the district to which the bank issuing them belongs, unless the bank of issue has in said district an agency for the redemption of its notes in gold coin.

WHEN UNITED STATES SHALL CEASE TO REDEEM NATIONAL-BANK NOTES NOW OUTSTANDING.

SEC. 19. That from and after the 1st day of July, 1907, all national-bank notes to secure the payment of which United States bonds have been deposited and which are being redeemed by the

United States Treasury shall be redeemed only at said clearing houses, or at national banks located in clearing-house cities, in accordance with the provisions of this act; and the United States shall not thereafter be held responsible for such redemption except in the case of the failure of any bank issuing them.

PLACES FOR DOING BUSINESS.

SEC. 20. That subdivision second of section 5134 of the Revised Statutes is hereby amended so as to read as follows:

"Second—Location: The places where its banking operations are to be carried on, designating the particular villages, towns, cities, counties, States, Territories, districts, possessions, and foreign countries.

CAPITAL OF $5,000,000 REQUIRED TO ESTABLISH BRANCHES IN FOREIGN COUNTRIES.

"Any national banking association may amend its articles of association with reference to the places where its banking operations are to be carried on upon the unanimous vote of its board of directors by and with the approval of the Board of Control of Banking and Currency: *Provided, however*, That authority to establish branches in the possessions of the United States and in foreign countries shall be given only to banks having a paid-up capital of not less than $5,000,000."

EVERY BANK MUST HAVE AN AGENCY FOR NOTE REDEMPTION WHERE IT HAS A PLACE FOR DOING BUSINESS.

SEC. 21. That every national banking association shall have an agency for the redemption of its notes in gold coin in the clearing-house city of every clearing-house district in which it has a place where its banking operations are carried on, and if there be no such clearing-house district established, then in the chief commercial city of the Territory, possession, or country.

TREASURY BULLION TO BE COINED IN SUBSIDIARY COIN.

SEC. 22. That the Secretary of the Treasury is hereby authorized to coin all the bullion in the Treasury into such denominations of subsidiary silver coin as he may deem necessary to meet public requirements, and thereafter, as public necessities may demand, to recoin silver dollars into subsidiary coin; and so much of any act as fixes a limit to the aggregate of subsidiary silver coin outstanding, and so much of any act as directs the coinage of any portion of the bullion purchased under the act of July 14, 1890, into standard silver dollars is hereby repealed.

SILVER CERTIFICATES MUST BE $5 AND UNDER.

From and after the passage of this act the Secretary of the Treasury shall not deliver to any national bank a note for issue of any lower denomination than $10, and shall not issue any silver certificates of greater denomination than $5, and silver certificates of higher denominations than $5 shall, whenever received at the Treasury or redeemed, be retired or canceled, and certificates of denominations of $5 or less shall be substituted therefor, and he is hereby directed to keep in the issue and redemption division an amount of gold coin equal to 5 per cent of the silver dollars at any time thereafter outstanding, and for that purpose he is authorized to transfer from the general fund to the issue and redemption division any gold coin therein.

PARITY MUST BE MAINTAINED.

The Secretary of the Treasury is hereby directed to maintain at all times at parity with gold the standard silver dollars of the United States; and to that end he is hereby authorized and required, at the demand of the holder, to exchange gold coin for standard silver dollars when presented to the Treasury of the United States in sums of $100 or any multiple thereof; and for the purpose of carrying out this provision the Secretary of the Treasury, when in his judgment there is not sufficient gold coin in the general fund of the Treasury to justify a further use of it for exchange for standard silver dollars, shall be authorized and required to employ any part of the reserve fund of gold coin established by section 2 of the act of March 14, 1900, entitled "An act to define and fix the standard of value, to maintain the parity of all forms of money issued or coined by the United States, to refund the public debt, and for other purposes," and the standard silver dollars received in the reserve fund in exchange for gold coin under the provisions of this act shall be held in said reserve and not paid out except in the manner provided in regard to United States notes in said section 2 of the act of March 14, 1900; and all provisions of law for the use and maintenance of said reserve fund relating to United States notes are hereby made applicable to standard silver dollars in said reserve fund.

PENALTY FOR BREACH OF LAW.

SEC. 23. That all powers granted by existing law to the Comptroller of the Currency and Treasurer of the United States in regard to the issue of notes to national banks, the collection of taxes and the infliction of penalties for noncompliance with law are hereby extended to the Board of Control of Banking and Currency in respect to bank notes authorized by this act, so far as such powers are not inconsistent with other provisions of this act; and all judicial processes authorized by existing law in regard to notes issued by national banks are hereby made applicable in regard to the bank notes herein authorized so far as they are not inconsistent with other provisions of this act.

If any national banking association violates any of the provisions of this act in reference to the redemption of United States notes it shall thereby, in the discretion of the Board of Control of Banking and Currency, forfeit all its rights, privileges, and franchises. Such violation shall be determined and adjudged as provided in section 5239 of the Revised Statutes.

SEC. 24. That all laws and parts of laws which are inconsistent with the provisions of this act are hereby repealed.

TABLE A.—*Profit on national-bank note circulation, $100,000 invested, March 15, 1902.*

PART 1.—It is assumed in this table that all the notes taken out are kept in circulation.

[– indicates loss.]

Bonds, par value.	Average circulation, 100 per cent.	Receipts.			Deductions.				Net receipts.	Interest on capital.	Profit on circulation.

TABLE B.

The number, capital stock, and national-bank notes outstanding (secured by bonds) of active national banks, by years, 1863-1901, inclusive.

The number of insolvent national banks, their capital stock, and national-bank notes outstanding, by years, 1863-1901, inclusive.

Number of insolvent national banks, the affairs of which have been finally closed, their capital stock, amount realized from assets, bonds (at par) held to secure circulation, and national-bank notes outstanding at date of failure, secured by bonds, by years, 1863-1901, inclusive.

Number of insolvent national banks, by years, whose circulating notes outstanding at date of failure were in excess of the amount realized from assets (eliminating bonds and premium), and percentage of such excess to circulation of active banks, by years.

Year.	ACTIVE BANKS.			ALL INSOLVENT NATIONAL BANKS.				INSOLVENT NATIONAL BANKS, THE AFFAIRS OF WHICH HAVE BEEN FINALLY CLOSED.									
	Number of banks.	Capital stock.	National-bank notes outstanding secured by bonds.	Number of failures.	Capital stock.	National-bank notes outstanding at date of failure secured by bonds.	Rate of tax on total national-bank notes each year sufficient to pay national-bank notes of failed banks of that year.	Number of banks.	Capital stock.	Amount realized from assets (dividends + offsets + loans paid after failure).	Par value of bonds held at date of failure.	Total value of assets and bonds.	National-bank notes outstanding secured by bonds.	Number of banks.	Excess circulation over assets (bonds out).	Per cent of circulation, active banks.
